Traditional Chinese historiography has been decidedly ambivalent about Huizong, undoubtedly because his reign came to a tragic end when his armies could not fend off the invasion of the non-Chinese Jurchen from the north, and he and three thousand members of his family and court were taken captive, to end out their lives in the far north. Although some historians reveal admiration for Huizong's talents, the moral framework of Chinese historiography makes explaining what went wrong the main task for historians. Huizong's many passions then become his vices, not his virtues. His love of art is seen as self-indulgence and his faith in Taoism as self-delusion. His passions, in this view, not only indicate a dangerous indifference to the serious business of governing, but also led him to waste so many resources that the country was in no condition to put up an adequate defense against the Jurchen, making the debacle that ended his reign all but inevitable. This view of Huizong was found in late Song sources and is still commonly repeated today.³

Art historians rarely object to this portrayal, but some historians of Taoism have tried to counter it by presenting Huizong as a deeply religious man who was convinced that he would benefit everyone through his promotion of the true religion.⁴

In this essay my goal is not to judge whether Huizong's Taoist faith or art mania had deleterious effects on his ability to govern, but rather to use them as a vantage point for considering the complexities of the relations among Taoism, art, and emperorship in imperial China. Emperors in China were the grandest of all patrons. They could and did order the construction and decoration of temples in the far reaches of the empire. They commissioned and collected art on a scale no private individual could match. A ruler like Huizong, moved by both art and Taoist teachings and willing to devote vast resources to promoting them, had the potential to make a great impact on the development of religion, art, and religious art.

The links between Taoism and imperial rule date far back in China's history. Many of the gods of Taoism were conceived of as emperors. They had titles redolent of imperial majesty and, wearing imperial garments, sat on thrones in temples called palaces. Those who wished to communicate with them used the ritual forms (prostrations, written petitions) employed by those addressing emperors. Emperors, for their part, found much to value in Taoist philosophy, cosmology, and ritual, ranging from the early Taoist notions of the emperor who achieves everything by doing nothing, to grand Taoist rituals of cosmic renewal, to projects to establish Taoist temples throughout the realm. But emperors did not have an exclusive relationship with Taoism—they had to preside over the state cult, for which Confucian ritualists presented themselves as the experts, and they were expected to support the Buddhist establishment as well. In fact, emperors more committed to Taoism than to Confucianism or Buddhism were the exception rather than the rule.

The links between Taoism and art in China are no less complex. Taoist ideas were pervasive in art theory and practice, especially in calligraphy, painting, and garden design, even if in somewhat diluted secular form. Taoist religious art, however, such as images of deities, developed in a context in which Buddhism was an overwhelming presence. There were many times more Buddhist than Taoist temples in the land, and the artists called on to decorate Taoist temples usually did most of their work for Buddhist temples. As a result, distinctively Taoist styles of painting or sculpting deities were slow to emerge.

Court patronage of both religion and art is also a complex subject. Until relatively modern times, royal courts the world over have been major sites of cultural production, sponsoring much of the finest architecture, metalwork, music, painting, poetry, religion, philosophy, science, furniture, textiles, and so on. There is no mystery to this: it is only to be expected in periods when wealth, power, books, treasures, talent, and other resources are concentrated in the capital and court. In China, at least, there was also a strong cultural validation for the preeminence of the court. In Confucian theory, in the best of all possible worlds, the Son of Heaven (the emperor) would be a perfect exemplar of all the virtues, and his court would be a center for music, poetry, art, ritual, and everything refined and beautiful. Nevertheless, over the course of time, in China as elsewhere, royal patronage became a less dominant element in higher culture. The eventual decline in the cultural preeminence of the court is a complex phenomenon connected to such developments as changes in the technology of transmitting culture, new forms of wealth, the emergence of great cities far from the capital, and more. In the Chinese case, the Six Dynasties period (the Southern Dynasties; 420–589) and Tang are viewed as high points of court culture, and a subsequent decline is vaguely associated with the rise of the literati. We have long known that Song literati such as Su Shi (1036–1101) challenged court taste in painting with their promotion of the “amateur ideal,” the idea that painting done by artists outside the court and outside the art market was superior to painting done by professional or court artists.⁷ Recently Amy McNair has shown how during the early Song the court as the arbiter of taste in calligraphy came to be challenged in a similar way by scholars such as Ouyang Xiu (1007–1072), who extolled the bold and direct style of Yan Zhenqing over the highly polished Wang Xizhi style associated with the court since early Tang times.⁸ But what about other domains of art, such as temple and garden design, illustrated books, porcelains, or textiles? Or other domains of culture, including religion, scholarship, and science? Was the court better

able to leverage its vast resources toward shaping cultural developments in these fields?

Other scholars have looked at some of the artistic activities I deal with in this essay without playing up their connections to Taoism on the grounds that there was nothing exclusively Taoist about them. Peter Sturman has argued that one does not have to consider Huizong's Taoist activities to understand his paintings of auspicious subjects such as *Cranes of Good Omen*, since auspiciousness was a matter of concern to Confucians as well as Taoists.⁹ Similarly, James Hargett has downplayed Taoist connections to Huizong's huge garden, the Genyue, preferring to put it in the context of prior imperial pleasure parks.¹⁰ In this essay, however, I approach the Taoist aspects of these ventures from a different perspective. Taoists were not obligated to make art totally unlike the art non-Taoists made. Once we recognize that Huizong had a strong interest in Taoism from early in his reign, many of the art-related projects he undertook can be seen as precisely the ones an emperor with such Taoist interests would undertake. Our understanding of them can only be deepened by seeing how they fit into a Taoist agenda.

In this essay I am not concerned with the unanswerable question of how much of what was produced under Huizong's name at his court was done by him acting alone, without any assistance from the thousands who served him in one capacity or another.¹¹ Just as we assume that court officials regularly drafted most of the edicts that were issued in Huizong's name, it is reasonable to assume that he turned to other sorts of specialists either to draft or complete other works (and evidence of just that practice will be given below). Huizong was the CEO, impresario, general editor—the one who decided what was to be done, how it should be approached, and whether the finished product met his standards. We do not have to believe that Huizong moved each rock to credit him with the Genyue garden, nor do we have to think he came up with each allusion in the poems that circulated under his name or made each stroke in every painting that he signed. An emperor with grand goals had every reason to draw on the talents of those serving him.

Still, it is worth noting in the story that follows the emphasis Huizong placed on his personal participation, especially his personal brush. A major way an emperor showed the level of his interest and support was by getting personally involved and by symbolically giving a piece of himself—usually something he had personally written. Other themes that run through Huizong's involvement with both the arts and Taoism are concerns with potency and efficacy. In the spheres we label Taoist and those we label art the techniques of gaining power by naming or

embodying seem to have played rather similar roles, and skills Huizong learned in one arena he could carry over to the other.

A chronological survey of Huizong's engagement with art and Taoism must start with his youth. Born the third son of the reigning emperor, Shenzong (r. 1067–85), Huizong was still a toddler when his father died and his eldest brother, then eight years old (ten *su*), succeeded to the throne as Zhezong.¹² Huizong continued to live in the palace, where he was prepared for the life of the wealthy prince.

In the world of Huizong's youth, the resources of art and religion were available in abundance, but individuals were free to choose which resources to draw on. Shenzong had taken considerable interest in the work of court painters, and artists like Guo Xi and Cui Bo thrived under his patronage. Shenzong's mother, the Empress Dowager Gao, who took over the court after his death, had less interest in painting, and Zhezong, once he took personal charge of the government after her death in 1093, does not seem to have had any special interest in painting either. Several of Huizong's aunts and uncles, however, had strong interest in the arts, some excelling in calligraphy or painting, others taking more of an interest in connoisseurship and collecting. For a few of them, Taoism was one of many interests, like medicine, music, and antiques.

Huizong and the four brothers he grew up with in the palace were given literary educations in the classics and histories. A set of linked mansions was built for them, designed by the famous architect Li Jie, so that by the time they were in their mid teens they could move out of the palace. Huizong's interests in painting and calligraphy began in this period. He studied with good teachers and modeled himself on major masters. He also began to collect old works, and found that his high rank and kinship connections gave him entrée to key circles of connoisseurs and collectors, including relatives such as Wang Shen (widowed husband of Shenzong's sister) and imperial clansmen such as Zhao Lingrang.

Politics in this period were decidedly unpleasant. Empress Dowager Gao, who had never approved of Shenzong's support for the reformer Wang Anshi, brought in the most vocal of Wang's opponents once she had the chance. After she died, in 1093, Zhezong returned the favor, expelling the conservatives and returning the reformers to power. Princes were expected to stay distant from all of this political maneuvering—nothing would be viewed as more threatening to the throne than a possible heir becoming friendly with men who had a stake in succession at court. It was astute of Huizong as a prince to act more interested in art than politics.

Huizong was seventeen (nineteen *su*) when Zhezong died without an heir at age twenty-five, early in 1100. Shenzong's two eldest surviving sons were only three months apart in age, and Shenzong's widow, who was the mother of neither of them, selected Huizong over his elder brother on the grounds that his brother had problems with his eyes (emperors were expected to do a great deal of reading). During Huizong's first year as emperor, he was somewhat tentative, deferring to his stepmother and attempting a reconciliation of the two main political factions by inviting representatives of each to join the small circle of leading officials. But by 1103 he had decided to favor the faction identified with his father and Wang Anshi (the reformers). He appointed Cai Jing (1046–1126) as chief councillor and in 1104 approved a plan to bar from office all of the "Yuanyou partisans" who had been brought to office by his grandmother after Shenzong died.

From his earliest years on the throne, Huizong acted on his interests in art. When he had the Taoist Temple of the Five Peaks (Wuyue Guan) built, he recruited several hundred painters from all over the realm to paint its walls. According to Deng Chun, Huizong's dissatisfaction with the quality of their work gave him the idea of setting up a painting school to raise standards.¹³ Thus, in 1104, when he implemented an ambitious expansion of the school system, he set up schools within the palace for both painting and calligraphy. The eminent connoisseur Mi Fu was brought to court as an erudite of painting and calligraphy.¹⁴ Rigorous training programs were instituted, with calligraphy students studying different scripts, and painting students studying both texts and different genres of painting. The students in these schools were promoted on the basis of examinations, putting them on more of a par with those who studied the classics in order to become civil servants.

Huizong quickly showed he had a collector's passion for acquiring fine things. In 1105 he set up a bureau in Suzhou to forward rocks, flowers, and trees from the southeast for the imperial gardens.¹⁵ Huizong also began collecting art objects on a large scale. He acquired many items from Mi Fu and Wang Shen, including both calligraphy and paintings. His collection of antique bronzes grew so fast that already in 1107 the first edition of his illustrated catalogue was published.¹⁶ Two years later he published a set of calligraphy reproductions, the *Specimens of the Daguan Period* (*Daguan tie*).

Huizong's well-developed interest in the exceptional drew him to both learned Taoist masters and *fangshi*, men capable of tapping into mysterious powers to work wonders.¹⁷ Early in his reign, in 1104, he put into practice some of the proposals of the

seer, wonder-worker, and musical theorist Wei Hanjin, who advocated not merely the codification of new musical scales, but also the casting of nine bronze tripods using water and soil from the nine regions of the realm. The tripods were installed in a special temple where they were used in sacrifices to the Yellow Emperor, the Duke of Zhou, and others, using a complex scheme of color and direction correlations. In response, an especially auspicious sign appeared: several thousand cranes circled above the palace surrounded by colored clouds.¹⁴

The Taoist master who had the most frequent contact with Huizong in his early years was Liu Hunkang (1035–1108), twenty-fifth patriarch of the Highest Purity (Shangqing) lineage at Mount Mao (Mao Shan) in Jiangsu province. Mao Shan had been a Taoist center since the fourth century, the form of Taoism associated with it distinguished above all for its focus on the stars. During the Tang, Mao Shan Taoism was close to the official religion.¹⁵

Liu Hunkang had already been favored at court under Shenzong and Zhezong.¹⁶ Huizong summoned him to court soon after taking the throne, but in 1103 Liu asked to return to Mao Shan. Between then and Liu's death in 1108, Huizong kept up an active correspondence with him; several dozen of Huizong's letters to him have been preserved in the history of Mao Shan.¹⁷ These letters deal both with ordinary matters and with issues of religious ideas and practice. Huizong repeatedly urged Liu to come to the capital. The two discussed the construction of buildings Huizong was providing at Mao Shan. Liu encouraged Huizong to support Taoism in its competition with Buddhism, and they carried on a correspondence concerning the problem of Buddhist temples incorporating shrines to Taoist deities.¹⁸ Cai Tao (d. 1147), son of Cai Jing, thought it was Liu's slanders of the Buddhists that turned Huizong away from Buddhism.¹⁹

From the letters Huizong sent Liu, we see the range of topics Huizong considered within the purview of a Taoist master. Huizong inquired about methods for curing illness, the names to be given newly constructed temples, and how to deal with misfortunes such as the continuous rains that were harming farmers. He repeatedly asked for detailed analyses of disasters and anomalies. He once noted that "the matter I prayed for previously still has not had a response."²⁰ Huizong made reference to his own religious practices, particularly the use of talismans. We do not have Liu's responses, but sometimes Huizong cited a statement Liu had made in previous letters, such as the statement that gentlemen cannot become *fangshi* by force.²¹

Art occasionally entered into the relationship between these two men. In 1106 Huizong sent several items for the new temple,

including a plaque with the title of the temple in his own calligraphy and an essay written by the high official Cai Bian (1058–1117; Cai Jing's brother). He also sent ten fans with his own painting and calligraphy on them, telling Liu to use them to summon a breeze on a hot day.²² These fans seem to have been personal gifts, much like the fans Huizong gave to leading officials on other occasions.²³ For the temple, Huizong gave art that was more distinctly religious. Cai Bian's essay mentions that Huizong sent as gifts for the new temple several chapters of Taoist scripture that he wrote out himself as well as a painting of Laozi that he painted himself.²⁴ The next year, when Huizong was sending another group of presents, he included two more paintings he had done himself, of two of the most important Taoist deities, the Celestial Worthy of Primordial Beginning (Yuanshi tianzun) and the Supreme Lord of the Way (Taishang daojun). Huizong wrote that if these were put together with the painting he had done the year before of Laozi, they would make a complete set of the Three Purities (Sanqing), the highest gods of Taoism (see cat. nos. 65–67).²⁵ In another letter Huizong mentioned the completion of an image of the Third Mao Lord (San Mao jun), one of the principal deities of the Highest Purity movement, which would be given to Liu when he returned to the capital.²⁶

Huizong's calligraphy seems to have been valued even more than his paintings. At one point Liu asked permission to have some of the calligraphy Huizong had done for him carved on stone at the temple. Huizong responded that the commemorative essay he had written for the temple and the seeing-off poem he had recently sent could be engraved, but not the letters that were in his hand.²⁷ Apparently Huizong would not have been so open in his letters to Liu if he had expected them to be carved on stone for all to read.

From these early years on, Huizong took an interest in Taoist liturgy. In 1108 he ordered that liturgies for the Rite of the Golden Register be collected in order to send them to each county and prefecture with a Taoist temple where the prefect or magistrate would select a Taoist priest to perform them.²⁸ According to Michel Strickmann, "The purpose of the Rite of the Golden Register ever since its inception in the fifth century had been to guarantee the welfare of the imperial house. Thus the distribution of a newly codified redaction of the Golden Register Rites was intended to ensure that a vast chorus of supplication of the interests of the Song would rise from every corner of the empire."²⁹ Preparing this compendium took time, and two years later Huizong handed over to his chief councillor, Zhang Shangying (1043–1121), what had been assembled. He told

Zhang that the Taoist masters to whom he had entrusted the job disagreed on many points and that he wanted Zhang to correct, complete, and polish what they had submitted.³⁴

From about the beginning of the Zhenghe period (1111–17), Huizong began taking on more ambitious projects, many with Taoist connections. By this time he was in his early thirties, full of confidence and energy. He began building on a large scale, had paintings of auspicious signs done by the hundreds if not thousands, and started collecting rare Taoist texts, to mention only some of the most ambitious projects.

Building projects certainly must have consumed a lot of energy and resources. In the fourth month of 1113, the building in which Huizong had been born was converted into a Taoist shrine. In that same month, a new palace complex was begun, called Precious Harmony Hall (Baohe Dian). Decorated in an understated style with unpainted wooden beams and rafters, it had pavilions for the storage of books, antiques, paintings, calligraphy, and musical instruments.³⁵ But the largest palace-related project was the huge extension of the palace to the north, creating the parklike Extended Blessings Palace (Yanfu Gong). Writing half a century later, Hong Mai (1123–1202) described Extended Blessings as the most extravagant palace project done in Song times. It had seven halls, thirty pavilions, and a 110-foot artificial mountain with a pavilion on top. A pond measuring 400 by 267 feet was dug, and the cranes, deer, and peacocks kept

there numbered in the thousands.³⁶ In 1115 Huizong also restarted a long-set-aside plan to build a Hall of Enlightenment, which the architect Li Jie had planned for him in 1104.³⁷

Given the scale of these construction projects, it is perhaps not surprising that Huizong set court painters on an ambitious project as well: making visual records of all the auspicious phenomena of his reign. A couple of Huizong's poems refer to summoning painters to make visual records of auspicious objects and events:

Fine crops are a sign that this is a special time.

There are even numinous mushrooms at the base of the Halcyon Arch.

Passing through, one sees their brilliance and knows they are an exceptional thing.

A painter is summoned to create a new picture.³⁸

No day passes without auspicious items brought for submission. With bows they present grains and grasses, each different in some way.

Sometimes I call for an expert in red and green pigments.

In each case I give him the plan and have him make the painting.³⁹

If we are to take at face value the accounts of art chroniclers such as Deng Chun and Tang Hou, Huizong must have called on painters to record auspicious occurrences rather frequently,

not to mention taking up the brush himself from time to time. Deng Chun, in his *Painting Continued (Huaji)* of 1167, mentioned that paintings were made of unusual phenomena deemed to be of good omen, such as a red crow, white magpie, and double-stemmed bamboo, as well as rare objects sent from distant lands. These pictures were made up into a series of albums of fifteen leaves each.⁴⁰ Tang Hou, writing over a century later, claimed that hundreds of albums of thirty pictures each were made in this way and concluded that court painters must have done much of the work.⁴¹

Of the dozen or more surviving paintings believed to be by Huizong's hand, three are thought to have originated in this project: *Five-Colored Parakeet* (fig. 3), *Cranes of Good Omen* (fig. 4), and *Auspicious Dragon Rock* (fig. 5). The size of these short handscrolls (perhaps originally large album leaves) varies from 51 to 54 centimeters in height and 125 to 138 centimeters in width. The coupling of lengthy inscriptions and exacting painting means the auspicious phenomenon is documented in both word and image. On the two that have fully legible inscriptions, Huizong claimed not merely to have "designed" the painting but also to have painted it and done the calligraphy ("Imperially designed, imperially painted, and inscribed" *jyu zhi yu hua bing shu*).

Taoist associations are strongest in *Cranes of Good Omen*. The painting depicts eighteen cranes flying above the southern front gate to the palace, with two more cranes perched on the roof ornaments. Clouds surround the gate. Above the clouds the sky is painted an azure blue, something quite unusual in a Chinese painting. The roof is drawn in the standard style for rendering architectural subjects, with the lines of the tiles and the brackets of the eaves all drawn with a ruler. The cranes, although small, are carefully depicted, the black and red feathers of their heads, necks, and tails scrupulously indicated. Their heads are all seen in profile, but the wings of those in flight are seen from above. They are flying in several directions, suggesting that they were circling around above the roof. This impression of action is countered by an equally strong impression of elegant patterning. The cranes are distributed fairly evenly over the sky in a two-dimensional pattern, with none blocking the view of another, creating the sort of pattern one might find on a textile or lacquer box.

The inscription on *Cranes of Good Omen* instructs us to view it as a visual record of an extraordinary event witnessed by thousands of residents of the capital:

Fig. 4
Emperor Huizong, *Cranes of Good Omen*. Northern Song dynasty, early 12th century. Handscroll; ink and colors on silk; 51 × 138.2 cm. Liaoning Provincial Museum, Shenyang.

Fig. 5
Emperor Huizong, *Auspicious Dragon Rock* (detail). Northern Song dynasty. Handscroll; ink and light colors on silk; 53.8 × 127.5 cm. Palace Museum, Beijing.

On the evening of the day after the *shangyuan* festival in 1112, auspicious clouds suddenly formed in masses and descended about the main gate of the palace, illuminating it. Everyone raised their heads to gaze at them. Suddenly a group of cranes appeared flying and calling in the sky. Two came to perch atop the "owl-tail" ridge-ornaments of the gate, completely at ease and self-composed. The others all wheeled about in the sky, as if responding to some rhythm. Residents of the capital walking about all bowed in reverence, gazing from afar. They sighed at length over the unusual sight. For some time the cranes did not disperse. Then they circled about and flew off, separating at the northwest quarter of the city. Moved by this auspicious event, I wrote the following poem to record the facts:

Brilliant multi-hued rainbows caress the roof's ridge.
The immortal birds, proclaiming good auspices, suddenly arrive
in favorable response.
Wafting about, originally denizens of the Three Immortal Isles,
Pair after pair, they go on presenting their thousand-year-old
forms.
They seem to be imitating the blue *luan* phoenix that roosted atop
the jeweled halls.
Could they possibly be the same as the red geese that congregated
at Heaven's Pond?
Lingering they call and cry at the Cinnabar Tower,
Thus causing the ever-busy common folk to know of their
presence.⁴²

The vocabulary employed in this poem is similar to that in the large body of poetry by Huizong, which has many references to auspicious or multicolored clouds, rainbows, phoenixes, cranes, flying, the auspicious, the numinous, and places such as Cinnabar Tower and the Three Immortal Islands.

It is the painting, however, that makes *Cranes of Good Omen* so powerful. Peter Sturman, in his study of this painting, draws attention to how the meticulous fashion in which the cranes and building are painted makes the auspicious event somehow more real.⁴³ There seems a ritual dimension here: not only does representation call powers into being, but getting every detail right is essential to success.

Cranes appear in other paintings and poems by Huizong. An album of six depictions of cranes in various poses signed by Huizong was published in the 1930s, though its current whereabouts is unknown (fig. 6). Years ago Benjamin Rowland proposed that this album was a copy of a well-known but no longer

extant wall painting by Huang Quan, a painter Huizong admired.⁴⁴ Huizong also wrote a set of ten poems on cranes. The following two show something of the range of themes:

The halls of the Five Clouds Palace allow one to pace the void at length.
The Dipper revolves and turns the empyrean before the night is done.
The white crane flies here carrying an auspicious missive.
The pure sounds one after the other—the fragrance of returning spirits.⁴⁵

They assemble at Penglai, then scatter—the immortals returning.
Feathered riders breeze by—the white cranes flying.
In brilliant ages people are used to seeing such auspicious sights.
Why must we wait for folk ballads to sing of the golden-clothed?⁴⁶

Huizong's interest in the visual depiction of auspicious signs was also manifested in other ways. Several times between 1114 and 1117 he had special flags commissioned so that representations of these phenomena could be carried in the grand processions that accompanied the imperial carriage when the emperor left the palace to perform rituals.⁴⁷

The early and middle Zhenghe period also marked an intensified interest in Taoism on Huizong's part. Cai Tao, who, as the son of Cai Jing, had as good an opportunity to know what went on at court as anyone, thought a dream marked the turning point:

Early in the Zhenghe period the emperor was ill. After a hundred days he was on the mend, then one night he had a dream that someone summoned him. In the dream it was like the time when he lived in his princely mansion and attended Zhezong's court. In response to the summons he entered a Taoist temple where two Taoist masters acted as ushers. They arrived at an altar where the exalted one told Huizong: "It is your destiny to promote my religion." Huizong bowed twice and accepted the command. As he left, the two ushers led him away. When he woke up he made a record of the dream and sent it to Cai Jing, who at the time was living in Hangzhou.⁴⁸

It was after this dream, Cai Tao claimed, that Huizong stepped up the construction of Taoist temples in the palace and brought in more Taoists to perform ceremonies. It was then, too, that he personally composed the "Pacing the Void" hymns still extant.

The two Taoist masters who attracted the most notice at court in this period were both surnamed Wang. Wang Laozhi was an ascetic who ate only one meal a day and wore only a single

garment winter or summer. In the ninth month of 1113, he was summoned to the palace and given the title Master of the Cavern Tenuity (*Dongwei xiansheng*). Huizong had Cai Jing house him in the southern garden of the house he had given Cai Jing. Once, according to Cai Tao, Huizong asked Wang about his consort Liu, who had recently died.⁴⁹ Wang told him she was the Sovereign of Exalted True Purple Emptiness (*Shangzhen zixu yuanjun*). For some time Wang served as a medium and carried messages between Huizong and Consort Liu. One of the other consorts, who also missed Consort Liu, asked Wang Laozhi whether Liu still remembered her, and the next day Wang brought a letter from Liu discussing things the two consorts had talked about the previous autumn. Many literati treated Wang Laozhi as a seer and visited him to have him write characters for them, which were interpreted as cryptic prognostications. Huizong did a piece of his calligraphy for him, which read "Illuminated Perfected who Observes the Marvelous" (*Guanmiao mingzhen*).⁵⁰

After Wang Laozhi died, in 1114, another clairvoyant, Wang Zixi, took his place, both at Cai Jing's house and at court. At the time there was a drought. When the emperor prayed for rain, he would send a messenger to Wang to get him to write a prayer for rain on a plain piece of paper. Once when this occurred, Wang Zixi suddenly wrote a small talisman with a note to the left: "Burn this talisman, put the ashes in hot water, and wash with it." The palace messenger was afraid to take it, but Wang insisted. This talisman water turned out to be an effective cure for the pink-eye then afflicting a favored consort.⁵¹ Through his

uncanny prescience of this sort, Wang developed a reputation for being able to foresee events. Cai Jing, however, grew tired of him and complained to Huizong about being asked to support *fangshi*, whereupon Huizong had Wang sent instead to a Taoist temple he had just built.⁵²

Huizong's fascination with these extraordinary individuals did not lead him to neglect the more text-oriented side of Taoism. Late in 1113 Huizong issued a general call for the collection of Taoist texts, ordering prefects and circuit intendants to conduct wide searches and priests, laymen, gentlemen, and commoners all to submit their Taoist books promptly.⁵³ Moreover, in the third month of 1114 he ordered every circuit to send ten Taoists to the capital for advanced training.⁵⁴

Some of the learned Taoists who arrived in the capital were brought into the project of editing a new Taoist canon. This editorial project did not just look for the best editions of old classics, but incorporated the key texts of relatively recent teachings, such as the *Celestial Heart*, *Thunder Rites*, and *Divine Empyrean schools*.⁵⁵ As the work on the canon was completed, other editorial jobs were found for the assembled Taoists, including a *History of the Tao* (*Daoshi*) and an *Institutes of the Tao* (*Daodian*). The *History* was to cover the period through the Five Dynasties, with chronicles of the rulers who had attained transcendence, twelve monographs on Taoist subjects, and biographies of male and female immortals. The *Institutes* would cover the Song period.⁵⁶

Although these text-oriented projects were taking Huizong's

interest in Taoism away from dreams, auspicious signs, and communications with the dead, they also led to his meeting Lin Lingsu, the Taoist master who Huizong came to feel had powers greater than any of the others he had met over the years.⁵⁷ Lin came to the capital in 1113 or 1114, probably in response to Huizong's call for unusual texts and adepts. Originally from Wenzhou (Zhejiang), Lin was a master of Thunder Rites and an exponent of a new sect of Taoism, Divine Empyrean (Shenxiao) Taoism, which he had learned from a Taoist master in Sichuan.⁵⁸ The Divine Empyrean, they proclaimed, was a celestial region far superior to those that governed the other Taoist orders. In Isabelle Robinet's words, "The style of this movement was essentially liturgical. A complete cycle of recitations ensures the salvation of humankind, equivalent to a Return to the Origin. It breaks the circle of life and death and permits rebirth in the Taiping heaven. An important place is reserved for the cosmic and apotropaic power of thunder and lightning, which the master must interiorize in order to make use of its power."⁵⁹

One of the earliest and fullest accounts of Lin Lingsu again draws attention to Huizong's belief that dreams reveal truths. One night Huizong dreamt that in response to a summons from the Eastern Flowery Sovereign he traveled to a Divine Empyrean Palace. When he awoke, he asked the Taoist official Xu Zhichang to find out what the terms referred to. After asking around, Xu learned of a Taoist from Wenzhou named Lin who talked of the Divine Empyrean and had written poems about it. Xu reported this to Huizong, who summoned Lin. At his audience, Huizong asked Lin what techniques he possessed, and Lin rather immodestly claimed to comprehend the Heavens, the world of men, and the subterranean regions. Huizong granted Lin titles and built the Penetrating Truth Temple for him to live in.⁶⁰ Lin's first job was to work on the *History of the Tao*, but soon he was giving monthly lectures in the palace for court officials and imperial relatives.

What makes Lin Lingsu notorious in Chinese historiography is his revelation in 1116 or 1117 that Huizong was an incarnation of the elder son of the Jade Emperor, named the Great Lord of Long Life (Changsheng dadi).⁶¹ Huizong was so pleased with learning this from Lin that he had the palatial Supreme Purity Precious Treasure Temple built for him. He also ordered Divine Empyrean temples established in every prefecture to house images of the Great Lord of Long Life and his brother, the Sovereign of Qinghua. Existing Taoist temples could be used for this purpose. In places without any Taoist temples, Buddhist ones could be converted, and there is evidence that Buddhist temples were in fact taken over by Taoists in this period.⁶² The construc-

tion or conversion of these temples must have created a lot of work for painters and sculptors, since they typically had twenty-two immortals depicted on their eastern and western walls, in addition to images of the main deities at their altars.⁶³

Twice in 1117 Lin Lingsu was involved in the descent of heavenly spirits. The first occurred in the second month when Lin Lingsu announced that the Sovereign of Qinghua had descended to earth. Huizong assembled huge numbers of Taoist priests at Precious Treasure Temple to hear Lin tell of this great event.⁶⁴ This is the Assembly of the Thousand Taoists commemorated on the wall of the Eternal Joy Temple.⁶⁵ From then on Huizong made frequent trips to this temple and would always distribute large quantities of cash. Wanting his subjects to know of the strength of his commitment to Taoism, in the fourth month of 1117 Huizong issued an edict stating that he believed he had been given the mission of saving China from the foreign religion (i.e., Buddhism) and returning it to the correct way.⁶⁶

The second visitation of heavenly spirits occurred in the twelfth month. The *Dynastic History of the Song* (*Song shi*) merely records that heavenly spirits came down to Earthly Tranquility Hall (Kunning Dian) and that a stone was carved to record the event.⁶⁷ One stele in Huizong's calligraphy with the full account of the event survived in a temple in Shaanxi, showing that rubbings of the stele in the capital must have been distributed for copying around the country (fig. 7). This four-foot-tall stele is perhaps the most unambiguously Taoist work among the surviving examples of Huizong's art. It is visually striking because of the "dragon-emblem cloud-seal" script used for the poem by Lin Lingsu at the top.⁶⁸ The lower part, in Huizong's slender gold calligraphy, records that on the evening of the full moon in the twelfth month of 1117, heavenly spirits again descended to Earthly Tranquility Hall, creating a scene even more numinous and extraordinary than the time before. Amidst thunder, lightning, and colored clouds, a procession appeared, and marvelous music and unusual fragrances were perceptible.

Suddenly among the tables there was a twenty-eight character poem in dragon-emblem, cloud-seal script. The vocabulary was as marvelous as spirits and immortals, unlike that of the human world. Before the ink was dry, I looked at it closely. Chu Hui, the Senior Officer of the Western Terrace, had signed the end of it. Chu Hui is none other than the Feathered Guest, Lin Lingsu, who is the Senior Officer of the Western Terrace of the Royal Headquarters of the Exalted Supreme Divine Empyrean Jade Purity Right Extreme, the first among the regions of Heaven's administrations of the immortals. At this time he was far away in Penetrating

Truth Temple sleeping soundly, yet he was able in the night to communicate with the spirits like this. The next day when questioned about this incident, he smiled but did not answer, so I knew one cannot communicate in words how the great Way shows its vast powers, which is to be found specifically in the conjunction of ideas. Accordingly I have engraved this on stone to record the facts. Written in Proclaiming Harmony Hall (Xuanhe Dian) on a day in the middle of the month.⁶⁹

Huizong's confidence in the potency of his own calligraphy—both its inherent power when judged by the aesthetic standards of the time and its added power as a manifestation of the Son of Heaven—undoubtedly encouraged him to agree to let his calligraphy be widely displayed. As seen above, he had earlier allowed Liu Hunkang to erect stelae with his compositions in his handwriting. Later, in the eighth month of 1119, Huizong composed and wrote in his own hand a record of the Shenxiao Jade Purity Longevity temples that was carved on a stele, and copies were distributed throughout the realm so that stones could be erected at Shenxiao temples everywhere.⁷⁰

Huizong did not confine his compositions to commemorative pieces. Like Xuanzong in the Tang, he wrote a commentary on the *Laozi*. This text, which has been preserved in the Taoist canon, cites a range of authorities, including Confucius and Mencius, but draws most heavily on the philosopher Zhuangzi and the *Book of Changes* (*Yi jing*).⁷¹ Liu Ts'un-yan, who studied the commentary in depth, finds in it evidence that Huizong looked on the *Laozi* as a guidebook for rulers on how to govern.⁷² Huizong's commentary was engraved in stone at the Shenxiao temple in the ninth month of 1118 and printed in 1123.⁷³ Scholars were encouraged to read and comment on it. The Taoist Canon contains commentaries on Huizong's commentary written by two contemporaries, one a low-ranking official, the other a student at the imperial academy.⁷⁴

Huizong's enthusiasm for Lin Lingsu's teachings occasionally intersected with his interest in painting. The late Song hagiography of Lin Lingsu records that after Lin had redecorated a hall at a temple, Huizong asked to see Zhenwu, the martial god of the north. Lin Lingsu spent the night at the temple fasting. At noon the next day dark clouds obscured the sun and there was thunder and lightning. Huizong burned incense, bowed, and prayed to see Zhenwu, who eventually appeared to him wearing a long black robe, gold shield, and jade belt. Huizong sketched his likeness, then summoned a court painter to finish the painting for him. Almost immediately Zhenwu disappeared. The next day Cai Jing suggested comparing the painting just made of Zhenwu

Emperor Huizong. Ink rubbing of a Taoist stele from Yao county, Shanxi province. Northern Song dynasty. Ink on paper.

to the one that had been made under similar circumstances during Taizong's reign (r. 976–97) and kept sealed up ever since. The two, we are told, turned out to be identical.⁷⁵

Huizong's interests in the visual found an outlet also in the Taoist Canon project. He wrote a preface to a set of illustrations in the *Lingbao wuliang durenjing futu* (Talismans and diagrams of the wondrous scripture of supreme rank on the infinite salvation of numinous treasure). In Judith Boltz's words, "Designed to introduce the rudiments of the Shenxiao reenactment of the Lingbao revelation, the treatise supplies the essential diagrams, talismanic inscriptions, sacred recitations, and lengthy registers of the celestial bureaucracy."⁷⁶ The talismans have obvious visual interest, especially to someone so devoted to calligraphy as

Fig. 8
Zhao daming jiuhua zhi fu (The talisman of summoning the nine transformations of great obscurity). From *Lingbao wuliang duren [shangpin miaojing] futu* (Talismans and diagrams of the wondrous scripture of supreme rank on the infinite salvation of numinous treasure; woodblock-printed, accordion-mounted book; Ming dynasty, 1444–45; reprint of a lost Northern Song dynasty book, early 12th century). From ZTDZ, vol. 4: 588.

Fig. 9
Yuandong yuli zhang (Stanza of the jade eon of the primordial cavern; detail). From *Lingbao wuliang duren [shangpin miaojing] futu* (Talismans and diagrams of the wondrous scripture of supreme rank on the infinite salvation of numinous treasure; woodblock-printed, accordion-mounted book; Ming dynasty, 1444–45; reprint of a lost Northern Song dynasty book, early 12th century). From ZTDZ, vol. 4: 581.

Huizong (see figs. 8 and 9). One of the seals used by Huizong (fig. 10) seems to draw inspiration from these sorts of talismans.

After promoting the Shenxiao teachings for a couple of years, Huizong began placing curbs on Buddhist establishments. In 1118 the Taoist Bureau reviewed over six thousand volumes of Buddhist texts to discover ones that slandered Taoists or Confucians. Nine volumes were singled out to be destroyed, though a copy of each was to be preserved as evidence. Lin Lingsu wrote a treatise detailing the slanders in these texts, which was printed and circulated.⁷⁹ Anti-Buddhist measures went a step further in the first month of 1119 when Buddhist temples and monasteries were forbidden to increase their land or buildings. Then the foreignness of Buddhism was to be erased through a process of renaming. Buddhist monks were renamed "scholars of virtue" (*deshi*, to correspond to *daoshi*, Taoist priests). They were to wear Taoist-style robes, use their original surnames, and salute with raised fists, not joined palms—in other words, they were to make themselves visually indistinguishable from Taoist clergy. Buddhas, bodhisattvas, and arhats were all given new names—Shakyamuni, the historical Buddha, was to be called the Golden Immortal of Great Enlightenment. Temples could retain the old

statues of these newly renamed deities, but had to clothe them in the robes and caps of Taoist divinities.⁷⁹

Not surprisingly, Huizong's support of Lin Lingsu and Divine Empyrean Taoism provoked resistance and protest. Huizong's eldest son, the heir apparent, a young man in his mid teens, was the most direct, calling Lin a fraud who used tricks such as paper cranes to create the illusions with which he dazzled Huizong.⁸⁰ Cai Jing went along with most of Huizong's projects, dutifully offering praise whenever called for, but he too began complaining. Supporters of Buddhism circulated texts ridiculing the Divine Empyrean, and even Huizong's former chief councillor, Zhang Shangying, wrote a text defending Buddhism.⁸¹

Lin Lingsu had become a political liability, and Huizong may have lost faith in his powers as well. In the eleventh month of 1119 Lin Lingsu was sent back to Wenzhou and the following year most of the restrictions on Buddhism were removed.

Even at the height of his enthusiasm for the Divine Empyrean, Huizong's interest in Taoism was never exclusive, and he continued to find pleasure in many other sorts of wonderful things, from rare books to fine calligraphy and ancient bronzes. This can be seen from the entertainment Huizong offered his guests at a banquet held in the ninth month of 1119, a couple of months before Lin was sent away. His guests, including a son and two brothers as well as eminent officials such as Cai Jing and Wang Fu, were brought to Preserving Harmony Palace, the compound built in 1113. The treasures Huizong had laid out to show them included not only "Taoist books of the golden casket and jade book box, along with the various secret Heavenly texts of the Divine Empyrean sect" but also Confucian works, the stone drums of the Zhou, ancient bronzes, and many scrolls of painting and calligraphy from the Tang and earlier.⁸²

Not only did Huizong show off his collections, but in this period he put many scholars to work on the catalogues of them. The *Xuanhe Painting Catalogue* (*Xuanhe huapu*) has a preface dated 1120, and the *Xuanhe Calligraphy Catalogue* (*Xuanhe shupu*) must date to a couple of years later, probably 1123.⁸³ Huizong's commitments to Taoism are reflected throughout the *Xuanhe Painting Catalogue*. As Xiao Baifang has shown in a detailed study, this catalogue of the imperial painting collection was compiled and edited in a way that gave Taoism a more elevated position than it occupied in any earlier work on painters or painting.⁸⁴ First, and perhaps most important, it listed over 350 paintings on Taoist subjects, the majority in the Taoist-Buddhist section, but a large number also were listed under artists classified as figure, landscape, or architecture specialists. Typical of the Taoist paintings listed in the *Painting Catalogue* are paintings

of the star and constellation gods, paintings of major deities such as the Three Purities, the Celestial Worthy of Primordial Beginning (*Yuanshi tianzun*; see cat. nos. 65, 68), Laozi, astral deities, immortals (*xian*), and realized beings (*zhenren*). Most of these were undoubtedly originally made to be hung at altars in temples, so it is of note that they had been removed from their religious settings and turned into art objects to be kept in the palace, where they were probably kept rolled up most of the time.⁸⁵

Another way the catalogue elevates Taoism is by giving it priority. Taoist and Buddhist paintings were made the first category in the catalogue, something no earlier work had done.⁸⁶ Then, in the lists of paintings by individual artists, Taoist paintings are generally listed first.⁸⁷ Taoist language and Taoist ideas are found throughout the work. The death of the painter Guo Zhongshu, for instance, is referred to as his "becoming an immortal."⁸⁸ Moreover, the *Painting Catalogue* gives more attention to paintings by Taoist masters and more attention to their status as Taoist masters than any earlier works on painters did. The Tang master Zhang Suqing, for instance, had been described by Guo Ruoxu, author of *Experiences in Painting* (*Tuhua jianwen zhi*), as a Taoist adept attached to a temple, but nothing more is said of his Taoist status. In the *Painting Catalogue*, however, his status as a priest is highlighted by a recounting of the imperial honors he received.⁸⁹

Two Taoist priests still active when the catalogue was compiled were given listings in the *Painting Catalogue*. Xu Zhichang, the Taoist priest who introduced Lin Lingsu to court, was said to have the "style of a literati gentleman." He was described as a skilled musician who had a reputation for techniques of curing illnesses without the use of drugs. Knowledgeable in both the Taoist and Confucian texts, he was employed on the canon editing project. His paintings of gods and immortals were said to be right in every detail, but the imperial collection had only one of them.⁹⁰ Xu's contemporary Li Derou was also employed on the canon project. He was said to have had a natural talent for painting and to have been especially good at capturing likenesses. The twenty-six paintings by him in the palace collection included one of each of the Mao Lords, Zhuangzi, Lü Dongbin, Tao Hongjing, Sun Simo, Wang Ziqiao, Liezi, and many other key figures in Taoist traditions.⁹¹ Cai Tao, in his account of Li Derou, adds something not in the catalogue: Li was sent away from the capital for having made fun of the Divine Empyrean affair.⁹²

In the last five years of Huizong's reign (1120–25), he did not initiate any new pro-Taoist projects, but he does not seem

to have lost faith in Taoism or even in the revelation that he was an incarnation of the Great Lord of Long Life. He found new Taoist adepts to talk to, such as Wang Wenqing, another follower of Divine Empyrean Taoism.⁹²

Another interest that Huizong continued to pursue after the departure of Lin Lingsu was the magnificent garden Genyue (Northeast Peak). Genyue has generally been interpreted as the supreme example of Huizong's megalomania. Begun in late 1117 or early 1118, this garden surpassed even Extended Blessings Garden.⁹³ Genyue was built away from the palace, in the northeast quarter of the Old City, and had a circumference of "more than ten *li*" (i.e., it was over three miles around, which if square would mean it was less than a mile on each side, making it considerably smaller than the Summer Palace in Beijing, the last of the imperial pleasure parks). A forty-six-foot-tall stone, named Divine Conveyance Rock, was just one of many named rocks in the park, all admired for their unusual shape and the way they represented the forces of nature. Behind this rock was an artificial mountain about one hundred feet tall. There were also streams, pools, waterfalls, and grottos, all given names, many of which carried Taoist overtones, such as "Propitiating the Perfected Ones Lodge" or "Eight Immortals Lodge." The park was stocked with rare plants and a great variety of birds and animals, including gibbons from Sichuan and hundreds of deer.

The artificial mountain and streams, the collection of specimens from across the country, and the labeling of sites to correspond to famous places in distant regions make Genyue rather like a small version of the huge cosmic park (400 *li* in circumference) created by Emperor Wu of the Han and celebrated in many Han literary pieces. Emperor Wu's Shanglin Park was said to have three thousand species of plants and valuable exotic stones, including a coral tree with 462 branches. As Lothar Ledderose has written, gardens like this drew on "the magical belief that by artificially making a replica of something one wields power over the real object."⁹⁴

Huizong wrote an account of Genyue that was inscribed on a stele placed near the entrance of the park, much as he wrote accounts to be inscribed on stone at Taoist temples (and on paintings of auspicious signs). Huizong began on a very general level with a discussion of the geographical locations of the capitals since the Zhou, and the connections between the security of dynasties, the military vulnerability of their capitals, and their virtue. He then discussed earlier royal parks, including the 70-*li*-square one of King Wen (celebrated in Confucian texts because the people shared its joys). Huizong added that "in the sea there are the three islands of Penglai, which the sovereigns make their

capital and where the immortals and sages dwell. They do not stay there unless the configuration is right."⁹⁵ His own park, he seemed to imply, would be a similar paradise that would attract immortals and sages. Huizong next discussed how the garden re-created the great sights of the realm—specific bodies of water and mountains are named, as well as the plants from all over, such as loquat, orange, tangerine, lichee, magnolia, and jasmine. But much more space is devoted to the naming and description of the man-made structures, such as the Documents Lodge, shaped like a half moon, the round Eight Immortals Lodge, and the massive Longevity Mountain.

In creating Genyue, Huizong strove to match the extent of the realm and the diversity of phenomena found in it, and to gain mastery over them through naming them. I suspect that Huizong spent enormous resources on this project because he saw it as efficacious, not just sensually satisfying.

What was the impact of Huizong's active patronage of both artists and Taoists? Court patronage is never a simple phenomenon and certainly was not simple in twelfth-century China. Huizong had vast resources at his disposal to give material and institutional support to doctrines, styles, and trends he favored. For instance, he changed the curricula used to train court artists and introduced government schools for Taoists. He subsidized temples that honored particular deities. He organized huge text-editing and publishing programs, which enabled him to see to it that his views received wide circulation. But resources are not everything. Huizong, like other emperors, could not ensure that everyone approved of his choices. Sometimes influential circles turn against what the court favors, precisely because they distrust court patronage. The long-term impact of Huizong's support for Taoism, the arts, and Taoist art is not all that he would have desired.

Huizong's initiatives in the training of court artists are usually viewed positively. He insisted that court artists learn to join poetry and painting and to observe nature closely. Through the Southern Song, the court maintained a successful painting academy that built on traditions Huizong had introduced. Major artists such as Ma Yuan, Xia Gui, Li Song, and Li Di thrived in this environment.⁹⁶ One could also argue that Huizong's collecting had positive, if unintended, consequences. The huge collection of art and antiques Huizong amassed made possible the preparation of catalogues that helped advance knowledge for centuries to come. The art and antique market was already well developed when Huizong took the throne, but the huge purchases made by the court could only have stimulated this market further.⁹⁷ One might have feared that by taking so many

paintings and calligraphies out of circulation, imperial collecting would hurt art, but, as happened in Europe, not everything that entered a palace collection stayed there forever.⁹⁸ Even though the Jurchen seized the collections, pieces gradually reentered circulation.

We often cannot know for sure what Huizong expected to accomplish from his larger projects. He commissioned Taoist art for all the temples he had built and promoted recognition of Taoist paintings in his *Painting Catalogue*. Probably it is fair to assume that he wanted to see Taoist art gain stature. If so, he seems to have been unsuccessful. None of the Taoist paintings in the *Xuanhe Painting Catalogue* are extant today, and the Southern Song imperial collections were not strong in this field.

Historians of Taoism are divided on the long-term impact of Huizong's massive support. Twenty years ago Michel Strickmann called the early twelfth century a period of renaissance for Taoism. He saw Huizong's reign as the "beginning of another great wave of Taoist revelation, comparable in some sense to the fourth-century movements," and argued that "in the same way that fourth-century scriptures provided the substance of Taoist practice throughout China's Middle Ages, the re-establishment and revivification of the religion during Huizong's reign is responsible for much in the shape and complexion of Taoism in modern times."⁹⁹ One reason Strickmann placed so much importance on Huizong's patronage is the weight he gave to the textual traditions of Taoism. Huizong's collection of Taoist texts and expansion of the Taoist Canon, and, above all, his printing of it, had an undeniable impact on the survival of Taoist texts. On the other hand, Shenxiao Taoism by no means became a dominant strand of Taoist teachings. To the contrary, it probably was tainted by its failure to save Huizong and his empire from the Jurchen. The contemporary historian of Taoism Ren Jiyu sees a reaction against Huizong's emphasis on ritual-oriented Taoism in the decades after his reign. This allowed more ethically oriented strands of Taoism, such as Quanzhen (Complete Realization) Taoism, to gain strength in the mid-twelfth century.¹⁰⁰

Huizong himself seems to have been aware of the danger that imperial support for one among many competing styles, doctrines, or traditions could do more harm than good. For a year and a half he experimented with subordinating Buddhism to Taoism. But through most of his reign he sought less confrontational forms of merging or fusing traditions. Several times he tried to diminish or mitigate rivalry between Taoism and Confucianism. There were many arenas in which there was at best a blurry line between Confucian and Taoist ideas and rituals, rang-

ing from the state cults to heaven and other deities, to studies of the *Yi jing*, prognostications, and numerology, to shrines to local heroes. Huizong seems to have wanted to make this line even blurrier. In the fourth month of 1118 he issued a memorial on the reform of the school system that began by asserting the common origins of Confucianism and Taoism. The Tao, he asserted, is everywhere, in the way Confucians (*ru*) rule the state and the way scholars (*shi*) cultivate themselves. The separation of the way of Laozi and the mythical Yellow Emperor from that of Confucius and the ideal rulers Yao, Shun, and Zhou Gong did not occur until the Han dynasty. His personal mission, Huizong asserted, was to bring the two traditions into harmony. Toward this end, those pursuing the traditional curriculum should also study two Taoist texts and those in the Taoist curriculum should study two Confucian texts.¹⁰¹

Huizong's patronage of court painting and calligraphy involved much less in the way of resources than did the construction of temples, palaces, and parks, and therefore evoked less protest. Nevertheless, I interpret many of the editorial choices that went into the *Xuanhe Painting Catalogue* as attempts to create a "big tent" for art lovers, a tent large enough to accommodate those who loved the bird-and-flower paintings of Huang Quan and Cui Bo as well as those who considered them vulgar and preferred sketchy monochrome paintings of symbolically rich materials such as bamboo or plum. It gave Taoist subjects a place of honor, but in a universe that contained much that was far from the centers of Taoist interest. Huizong never subordinated art to Taoism. He did not convert the painting academy to a Taoist art academy, or make painters study Taoist scriptures. In fact, much of Huizong's own art work fits the literati model of work made for one's own enjoyment. Of the surviving calligraphy by him, besides a couple of government documents, most of the rest consists in poems or exercise texts of the sort Northern Song literati commonly did. He painted in a range of styles, including ones categorized as literati. There is no sign that at any time he switched entirely to Taoist subjects or approaches. His aim always seems to have been a synthesis in which the arts of the literati, the arts and techniques of the Taoist masters, and the arts and techniques of those with all sorts of other skills, from court painters to clock makers, could be pursued side by side.

- I would like to thank Chris Dakin for help with the poetry used in this paper and Maggie Bickford for helpful suggestions.

 4. The only comprehensive study of Huizong I know of is Ren 1998, which is strongest on politics. There is, however, a large literature on Huizong as a painter. Scholars now largely concur that the paintings attributed to Huizong are a mixed bag; among them are ones by his hand alone, ones he did in collaboration with court artists, ones done by court artists acting under Huizong's instruction, later copies of paintings from his court, and later imitations and forgeries. See Rowland 1951, Sirén 1956–58, Xie 1989, Ecke 1972, Xu 1979, J. Cahill 1980, Li 1984, Deng 1985, Chen 1993, and Bo 1998.
 5. For a late Song view, see the historical romance *Xuanhe yishi*, translated in Hennessey 1981, especially 13–14. One reason this view has not undergone much revision in the twentieth century is probably its resonances with Qing history. Huizong, it seems to me, is often interpreted in Chinese scholarship as a combination of Qianlong and Cixi—all of the grandiosity of Qianlong combined with the militarily disastrous self-delusion that Cixi displayed when she built a marble boat and tried to use the Boxers against the Western powers.
 6. E.g., Xiao 1990a, 1990b. Some other historians of Taoism give a more conventional, judgmental view. See, for instance, Ren 1990: 481–82.

5. Inner Alchemy and Its Symbolism
6. The Sacred Landscape

1.1 LAOZI AND THE ORIGINS OF TAOISM

IN CHINESE, TAO (PRONOUNCED "DAO") means a road, and is often translated into English as "the Way." The Way of all things, the Tao is described as an empty void that spontaneously generates the cosmos. Beyond time and space, beyond the ability of words to describe, the Tao is the source of reality. In the Tao, all opposites are unified. Taoism teaches that in the pure emptiness of the Tao there is an infinitely powerful force that those with sufficient moral virtue can use to transform the world.

Taoism traces its origins to the sage Laozi (Lao-tzu), a royal archivist believed to have lived in the sixth century B.C. The book attributed to Laozi, the *Classic of the Way [Tao] and Its Power* (*Daode jing*, or *Tao-te-ching*), introduces the concept of the Tao and serves as a guide for human behavior and experience. The *Daode jing* teaches the importance of cultivating simplicity, detachment, and virtue, and of living in harmony with the natural world. The *Daode jing* achieved the form in which it is known today in the third century B.C.

Significantly, Taoism teaches that there is no supreme being, but instead the Tao that underlies and permeates reality. Despite its later transformation into a religion with a vast pantheon of gods, conceived as divine emanations of the Tao, Taoism would always hold true to this belief.

Laozi on an Ox

Ming dynasty, early/mid-16th century
Hanging scroll; ink on paper
101.5 × 55.3 cm
National Palace Museum, Taipei

TAOISTS TRACE THE ORIGINS of their philosophy and religion to Laozi, the ancient sage traditionally believed to have transmitted the *Classic of the Way [Tao] and Its Power (Daode jing)* to the frontier official Yin Xi in the sixth century B.C., during the Eastern Zhou dynasty. Laozi was seen as perfectly embodying the Tao, and was deified in the late Han dynasty (second century; see cat. no. 29). While it cannot be proven that Laozi ever existed as a historical figure, he has been credited with being the first person to articulate the concept of the Tao. Since his deification, he has been seen as both a sage and a god. By the Tang dynasty (618–906), he had become one of the Three Purities (Sanqing), the highest gods of religious Taoism and pure emanations of the Tao. These images of the sage, by the Southern Song dynasty (1127–1279) Buddhist monk-painter Fachang Muqi and the Ming dynasty (1368–1644) Zhe School painter Zhang Lu, depict Laozi as a human being, in contrast with other images of Laozi enthroned as a god. Both paintings reflect the image of Laozi recorded in Sima Qian's *Records of the Historian (Shiji)* (104 B.C.):

Laozi was a native of the hamlet of Quren in the village of Li in Hu County of [the state of] Chu. . . . Laozi cultivated the Way [Tao] and its virtue. His teachings emphasized hiding oneself and avoiding fame. After living in Zhou for a long time, he saw Zhou's decline, and left. When he reached the pass [at the western border of China], the Prefect of the Pass Yin Xi said, "Since you are going to retire from the world, I beg you to endeavor to write a book for us." Laozi thus wrote a book in two sections which spoke of the meaning of the Way [Tao] and its virtue [de] in five thousand and some characters and then departed. No one knows where he finally ended. . . .

Supposedly, Laozi lived to be 160 years old, some say over 200; his great longevity came through cultivating the Way [Tao].¹

In Muqi's painting, a haggard Laozi clutches his hands and robe in front of him, and stares into space with a world-weary expression. Here Laozi the philosopher is depicted as an unkempt, wise old man, his mouth hanging open, hairs sprouting from his nose, and a long, curved fingernail extending from his thumb. While his robes are painted with dragged lines of dark ink, the head is outlined with finer translucent lines. This is one of the earliest and most powerful painted portraits of Laozi known. Zhang Lu's painting in the National Palace Museum is also in ink on paper, and depicts Laozi as he is more often shown, riding an ox as he departs China for the Western Regions. A bat, a symbol of good fortune, flies overhead.²

Fachang Muqi was one of the outstanding Buddhist monk-painters of the Southern Song dynasty.³ He was born in Sichuan, but moved to the capital of Lin'an (Hangzhou), where he worked at the Liutong Temple. According to the fourteenth-century writer Wu Taisu, Muqi died in the early Yuan dynasty, during the reign of Khubilai Khan (r. 1260–94).⁴ His works enjoyed much greater renown in Japan than in China, and most of his surviving works are found in Japanese collections. The famous triptych by Muqi depicting the bodhisattva Guanyin (Kannon), monkeys, and a crane in the Daitoku-ji, Kyoto, for example, entered the collection of the Muromachi period (1392–1568) Shōgun Ashikaga Yoshimitsu (r. 1368–94) about one hundred years after the artist's death.⁵ In the upper left corner of the painting is a seal of the artist, reading *Muqi*. In the lower left corner of this scroll is a seal of Ashikaga Yoshimitsu, reading *Dōyū*, indicating that the painting has been in Japan since at least the late fourteenth century.⁶ During the Edo period (1615–1868), the painting was owned by a branch of the Tokugawa family.⁷

Zhang Lu, the artist of the National Palace Museum scroll, was a professional painter of the middle Ming dynasty.⁸ Active in Kaifeng, Henan province, he married into the imperial family, and was the leading Zhe School master of the sixteenth century. Many of his surviving works depict Taoist themes.⁹

Laozi's Scripture of the Way, Upper Roll

From Dunhuang, Gansu province

Tang dynasty, 8th century

Handscroll; ink on paper

26 x 380 cm

Bibliothèque Nationale de France, Paris (Pellicot Chinois 2584)

THE *DAODE JING*, also known as the *Laozi*, is the oldest and most revered text of the Taoist tradition. It is traditionally attributed to the sage Laozi (sixth century B.C.). The earliest known manuscript of the text, dating to the late fourth century B.C., was discovered in 1993 in a tomb at Guodian, Hubei province.¹ Despite its great age, the *Daode jing* has remained the fundamental text of Taoism. One has to appreciate the irony of its opening passage:

The Way (Tao) that can be spoken of is not the constant Way (Tao);
The name that can be named is not the constant name.

Despite this warning, a substantial commentarial tradition developed around Laozi and the *Daode jing* in later times.

By the Han dynasty (206 B.C.–A.D. 220), the *Daode jing* and Laozi (see cat. no. 1) were already revered at the imperial court. During the Six Dynasties period (420–589), the ritual recitation of the *Daode jing* was standardized, several commentaries based on Taoist doctrines were written (see cat. no. 34), and a preface was added to the beginning of the scripture.² The present manuscript (*Laozi Dao jing, shang*)³ reflects many of these developments, and is representative of the way in which the *Daode jing* would have been transmitted to new disciples in the late Six Dynasties and Tang periods. In its present state, it is incomplete, since it consists only of the first half of the *Daode jing*, together with the preface mentioned above; the second half of the *Daode jing* is represented elsewhere in this catalogue (cat. no. 4).

The Pelliot Collection text is written on nine joined pieces of yellow paper. The characters of the text are inscribed in a pale grid of ruled columns. At the end is written "A Daoist seeking the Cavern Mystery scriptures"; similar inscriptions are found on other Tang dynasty Taoist manuscripts from Dunhuang.⁴

The preface to this manuscript is a valuable resource for understanding the medieval context of the *Daode jing*. It singles out two events in the history of this scripture to illustrate the significance of Laozi and his writings. The first is the initial revelation of the scripture to the Guardian of the Pass, Yin Xi, in the sixth century B.C. The second comes in the time of the Han dynasty emperor Wen (Wendi; 179–157 B.C.). Emperor Wen was fond of the *Daode jing*, but neither he nor his ministers could fully understand its meaning. Consequently, the Way (Tao) sent a realized being (*zhenren*) known as the Lord on the River to descend to the Yellow River, where he met with the emperor and transmitted a commentary on the *Daode jing* to him. This commentary was the *Stanzas of the Lord on the River* (*Heshang gong*

zhangju), one of the standard commentaries on the *Daode jing*, and the first to divide it into sections; these sections are still used today.

The preface emphasizes two aspects of the *Daode jing*. The first is its political significance. Laozi left China because of the Zhou dynasty's failure to support the Way; as a consequence, this dynasty faltered. On the other hand, when Emperor Wen venerated the *Daode jing*, then the Way enabled him to secure the rule of his family. This aspect of the preface resulted from the time when it was written, as the fortunes of Taoism became increasingly dependent on the patronage of the ruling house.

The second aspect is the use of this scripture as a tool for personal cultivation. The preface ends with a standardized ritual for the recitation of the *Daode jing*, which shows the way this scripture was actually practiced during the Six Dynasties and Tang periods. Before initiates began to recite the scripture, they would first visualize Laozi, Yin Xi, and the Lord on the River. Yin Xi was often depicted as a companion to Laozi in sculptures from the Six Dynasties period, as in a stele in the Field Museum (see the essay by Stephen Little in this volume, fig. 4); together with the Lord on the River, these three figures were the highest deities of the *Daode jing* in medieval Taoism. Then the meditator would visualize the animals that correlate to the Five Elements or Phases (see cat. no. 17) surrounding him, a tortoise with the Eight Trigrams (symbols of *yin* and *yang* from the *Book of Changes* [*Yi jing*]; see cat. no. 14) on its back beneath his feet, and thirty-six lions kneeling before him. The seven stars of the Northern Dipper (Ursa Major; see cat. nos. 18 and 78) were wrapped around his head, and his five vital organs emitted ethers that represented the energies of the Five Phases. This meditation, which represents a culmination of centuries of visualization techniques, would have been one of the very first taught to new initiates, and as such it is one of the most important practices to come out of the Six Dynasties period.

Laozi's Scripture of Power, Lower Roll

From Dunhuang, Gansu province
Tang dynasty, Jǐnglóng reign, dated 709
Handscroll; ink on paper
28 x 323.5 cm
Bibliothèque Nationale de France, Paris (Pelliot Chinois 2347)

THIS HANDSCROLL (LAOZI DE JING, XIA) consists of the second part of the *Daode jing*, the "Scripture of Power" (*Dejing*), and a short scripture known as the "Scripture of Ten Precepts" (*Shijie jing*), as well as "oath texts" (*mengwen*) accompanying each of these scriptures.¹ In its present form, it is incomplete; however, taken together with the manuscript described in the previous catalogue entry, it gives a fairly complete picture of the *Daode jing* as it would have been transmitted to Taoist disciples in the Tang dynasty (618–906).

As the number of Taoist scriptures increased during the medieval period, protocols were established for their transmission. Eventually, the transmission of scriptures became one of the primary means for distinguishing different ranks in the church hierarchy. Despite the large number of scriptures written in this period, the *Daode jing* remained the most fundamental scripture of Taoism, and the ordination rite surrounding its transmission was of particular importance to both the disciple and the church. For the former, it represented formal recognition as a full lay member of the Taoist community. For the latter it represented an affirmation of the supremacy of the church hierarchy, since disciples were required to accept the authority of the church and its teachings as part of their ordination.

The oath texts found after both scriptures are remnants of the ritual in which they were transmitted to a new initiate into the Taoist community, a ritual that was codified over a century before this particular manuscript was written.² Most remarkably, these oath texts contain biographical information about the recipient of the scriptures, a seventeen-year-old girl from the town of Changsha in Dunhuang county (modern Gansu province). The oath text shown here summarizes the first transmission of the *Daode jing* by Laozi to the Guardian of the Pass, Yin Xi, of which this young woman's ordination would have been a symbolic reenactment; indicates the lineage into which she is being initiated; and ends with her recognition of the Taoist church as the sole authority to transmit scriptures. The signature of the priest who supervised the ordination is visible towards the end of the text. Finally, there is a single stroke resembling the character for "one" in red ink over the entire oath text. This stroke is not described in ordination rites for the *Daode jing* in the Taoist Canon, but is described in ordination rites for other scriptures from the medieval period.³ It would have been drawn together by disciple and master, each of whom would have held the brush, and would have served as an additional oath with the same significance as the oath text. The choice of the color red for the stroke may have derived from the early use of blood smeared over the mouth when an oath was taken.

Confucius Visiting Laozi

Ink rubbing of a stone panel from the Wu Liang Shrine, Jiaxiang county, Shandong province
Eastern Han dynasty, 2nd century
Ink on paper
42 x 212 cm
The Field Museum, Chicago (244697)

THIS INK RUBBING is taken from a stone discovered at the Eastern Han funerary shrine of Wu Liang (78–151) in 1786.¹ The two central figures are labeled on the stone as Laozi (to the right) and Confucius (to the left). To either side of these figures are their chariots and attendants. This is one of the earliest known depictions of Confucius visiting Laozi, a famous event.² Early texts of the Taoist tradition such as the *Zhuangzi* made a point of belittling Confucius, who, like Laozi, lived in the sixth century B.C. Confucius taught a philosophy that provided a basis for achieving a harmonious society.³ In his teachings, he focused on proper human behavior and rituals that reinforced social hierarchies. According to the Confucian *Analects*, “The Master [Confucius] took four subjects for his teaching: culture, conduct of affairs, loyalty to superiors and the keeping of promises.”⁴

Confucianism was elevated to a state philosophy in the early Han dynasty (second century B.C.), and maintained this position until very recently.⁵ From the Taoist point of view, Confucius’s preoccupation with the human realm neglected larger, more fundamental issues, such as the place of man in the universe.

The story of Confucius’s visit to Laozi is recorded in the *Zhuangzi* and in Sima Qian’s *Records of the Historian* (*Shiji*; 104 B.C.). In each case, Confucius goes to Laozi to seek advice on ritual, and each time Laozi mocks Confucius’s preoccupation

with social order. Laozi’s answers to Confucius’s questions mystify the latter, who later compares Laozi to a dragon (a symbol of the Tao).⁶ In the description of the two sages’ meeting in the *Records of the Historian*, Laozi says to Confucius,

Cast off your arrogant airs and many desires, sir, your contrived posturing and your overweening ambition. All of these are of no benefit to your person. What I have to tell you is this, and nothing more.

Later, Confucius tells his disciples, “Today I have seen Laozi; is he perhaps like the dragon?”⁷

—S. L.

6

LU ZHI (1496–1576)

Zhuangzi Dreaming of a Butterfly

Ming dynasty, mid-16th century

Leaf 1 from an album of 10 leaves; ink on silk

29.4 × 51.4 cm

Palace Museum, Beijing

ZHUANGZI IS CONSIDERED the most important Taoist philosopher after Laozi, and the *Zhuangzi* is one of the great classics of world literature. Sardonic in tone, Zhuangzi is perhaps best known for his insistence on the relativity of all things. He openly mocked Confucius and his followers for being preoccupied with achieving social harmony at the expense of a greater ontological equilibrium. While Zhuangzi is believed to have lived in the fourth century B.C. (Warring States period), the book attributed to him was probably compiled in the second century B.C., during the Western Han dynasty.¹ In the text that has come down to us today, only the first seven chapters (the "Inner Chapters," or *neipian*) are traditionally believed to be by Zhuangzi himself. In the year 742, during the reign of Tang Xuanzong (Minghuang), an imperial edict was issued to honor Zhuangzi, and from that time onward the *Zhuangzi* was also known as the *Nanhua zhenjing*, after one of Zhuangzi's alternate names.

In traditional Chinese painting, Zhuangzi is often depicted asleep. Such images illustrate the story of the philosopher's dream of the butterfly, found in the second of the "Inner Chapters." This tale illustrates Zhuangzi's belief that all things are relative:

Once Zhuang Zhou (Zhuangzi) dreamt he was a butterfly, a butterfly flitting and fluttering around, happy with himself and doing as he pleased. He didn't know he was Zhuang Zhou. Suddenly he woke up and there he was, solid and unmistakable Zhuang Zhou. But he didn't know if he was Zhuang Zhou who had dreamt he was a butterfly, or a butterfly dreaming he was Zhuang Zhou. Between Zhuang Zhou and a butterfly there must be some distinction! This is called the Transformation of Things.²

Lu Zhi, the painter of this album leaf, was one of the finest Wu School artists of the sixteenth century.³ A student of Wen Zhengming (1470–1559; see cat. no. 147), Lu lived on Mount Zhixing near Suzhou, in Jiangsu province. Lu Zhi's painting of Zhuangzi is one of ten leaves in an album on miscellaneous themes.

7

ZHOU DONGQING (ACTIVE LATE 13TH CENTURY)
The Pleasures of Fishes

Yuan dynasty, Zhiyuan reign, dated 1291
Handscroll; ink and light colors on paper
30.8 × 593.7 cm
The Metropolitan Museum of Art, New York, Purchase, Fletcher Fund
(47.18.10)

ONE OF THE BEST-KNOWN STORIES in the *Zhuangzi* is a tale of two men walking by a river. Seeing fish swimming in the water, Zhuangzi remarks on their freedom and happiness. The Confucian Huizi challenges Zhuangzi: "How do you know what fish enjoy?"¹ After a moment of verbal sparring, Zhuangzi states that the answer is obvious to anyone standing by the river and seeing the fish. This story, contained in the chapter entitled "Autumn Floods," has been long perceived as one of the clearest articulations of a Taoist worldview. According to Zhuangzi, true understanding should be acquired intuitively, without the need for explication. Huizi, a man obsessed with logical explanations, is unable to grasp this point.

Zhou Dongqing, the artist who painted this scroll, was a native of Linjiang, Jiangxi province. Very little is known about his life. Nonetheless, he was recognized by the last Southern Song dynasty prime minister, Wen Tianxiang, who wrote poems on his paintings.² Described by Wen Fong as a Song loyalist, he is best remembered for his paintings of fish.³ This handscroll is his only known surviving work. The aquatic creatures and water plants are painted in carefully controlled washes of pale ink,

with occasional touches of blue and red color in the fish. The subtle gradations of ink and color successfully convey the illusion of an underwater realm in which the fish move freely and happily about.

That Zhou Dongqing's scroll alludes to Zhuangzi's tale of fish is clear from the artist's inscription at the end of the scroll:

Not being fish, how do we know their happiness?
We can only take an idea and make it into a painting.
To probe the subtleties of the ordinary,
We must describe the indescribable.⁴

The scroll bears three seals of the Qianlong emperor (r. 1736–95), and two seals of the nineteenth-century collector Wu Yuanhui.⁵ Mounted after the painting is a colophon by Wu Rongguang (1773–1843), dated 1836.

—S. L.

5. Despite the presence of the Qianlong seals on the scroll, the painting is not recorded in the imperial Qing painting catalogue, *The Precious Satchel of the Stone Channel* (*Shiqu baogui*), or its successors. The painting may have been given away by the emperor as a gift before being recorded in the imperial catalogue.

IN ANCIENT CHINA, the term "Heaven and Earth" meant "the universe." According to Taoist cosmology (the study of the origin and structure of the universe), in the beginning was the Tao (pronounced "dao"), conceived of as an empty void of infinite potential. Then, over a period of many eons, out of the Tao emerged *qi* (vital energy or breath; pronounced "chee"). Taoists believe that all things are made of *qi*, which is in a constant state of movement and flux. Originally the universe was in a state of chaos, but eventually the light *qi* rose and formed the heavens, while the heavy *qi* sank and formed the earth. Taoists believe that physical matter cannot be distinguished from its basic substance, *qi*, and that thus matter and energy are interchangeable. Taoism also teaches that, in order to be content, human beings must accept the reality that the only constant in the universe is change. The shifting patterns of *qi* are governed by the shifting balance of *yin* and *yang*, two complementary forces that emerged from the primordial Tao, and whose interaction defines and regulates the mechanisms of the universe. The concept of *qi* lies at the heart of traditional Chinese medicine, for example, which views illness as caused by imbalances of *yin* and *yang*, resulting in blockages of the free movement of *qi* through the human body. Acupuncture and other remedies are designed to restore the proper movement of *qi* through the body, thus restoring health. In ancient China, *yin* and *yang* were respectively symbolized by the tiger and the dragon, and in later times by the *taiji* diagram (commonly known as the *yin-yang* diagram), which represents *yin* and *yang* unified by the Tao from which they emerge.

Clothing Chest with Celestial Diagram of a Tiger and Dragon, the Northern Dipper, and the Twenty-eight Lunar Mansions

Excavated in 1978 from the tomb of Marquis Yi of the state of Zeng, Hubei province
Eastern Zhou dynasty, Warring States period, c. 433 B.C.
Painted lacquer
40.5 × 82.8 × 47 cm
Hubei Provincial Museum, Wuhan

AMONG THE MANY LACQUER OBJECTS discovered in 1978 in the Warring States period (475–221 B.C.) tomb of Marquis Yi of Zeng (buried c. 433 B.C.) near Suizhou, Hubei province, was this extraordinary chest.¹ The designs painted in red on black lacquer on the top include the earliest known arrangement of the characters representing the constellations known as the Twenty-eight Lunar Mansions (*Ershiba xiu*).² The Lunar Mansions are situated along the moon's path of rotation around the earth and are significant as divisions of the heavens and of time. This archaeological evidence proves that the concept of the lunar lodges known today was fully evolved by the fifth century B.C. By the Han dynasty (206 B.C.–A.D. 220), the Lunar Mansions were used to mark the movement of the planets. The earliest known complete depiction of the Twenty-eight Lunar Mansions, in which the asterisms are shown as dots connected with lines, was found in 1987 in a late Western Han tomb (first century B.C.) near Xi'an.³ By the Six Dynasties period (420–589), these asterisms had been deified and absorbed into the Taoist pantheon.⁴

The central design on the top of the chest is an archaic form of the character *dou* (dipper), representing the Northern Dipper. This is surrounded by the names of the Twenty-eight Lunar Mansions in a ring, flanked on either side by a tiger and a dragon, symbols of *yin* and *yang*, respectively. A cyclical date, "third day of [the month] *jiayin*," appears under one of the constellation's names. The designs on either end of the box depict a mushroom-shaped cloud, stars, circles, and a toad, while one of the long sides depicts two confronting animals.⁵

The Northern Dipper was venerated as a deity as early as the late Shang dynasty (thirteenth/eleventh century B.C.).⁶ According to Han dynasty beliefs, the Northern Dipper was the conduit for the primal energy (*qi*) dispensed by the god Taiyi (Supreme Unity; see cat. no. 75), who lived in the circumpolar region. The Dipper's significance can be explained in part by its proximity to the Pole Star, and by the fact that the annual sweep of its handle around the sky acts as a celestial clock.⁷

Roof Tiles with Symbols of the Four Cardinal Directions

Han dynasty (206 B.C.–A.D. 220)

Molded earthenware

Dragon: 18.7 x 2.2 cm; bird: 15.5 x 1.65 cm; tiger: 19 x 2.75 cm;

Dark Warrior: 19.3 x 2 cm

Shaanxi History Museum, Xi'an

BY THE HAN DYNASTY (206 B.C.–A.D. 220), if not earlier, the animal symbolism of the four cardinal directions had been codified. The ancient Chinese in fact conceived of five directions: east, south, west, north, and center; these were directly correlated to the Five Phases or Elements and to their animal symbols as follows:

East	Wood	Dragon	yang
South	Fire	Bird	yang
West	Metal	Tiger	yin
North	Water	Dark Warrior	yin
Center	Earth	(no symbol)	neutral

The east was represented by the Azure Dragon (Qinglong or Canglong), the south by the Vermilion Bird (Zhuque), the west by the White Tiger (Baihu), and the north by the Dark Warrior (Xuanwu), comprising an entwined turtle and snake.¹ These four animals were known as the Four Divinities (Sishen or Siling), and were often depicted as a directionally oriented group on the backs of Han dynasty bronze mirrors. The 1978 discovery in the tomb of Marquis Yi of Zeng (c. 433 B.C.) of a lacquer chest decorated with the dragon and tiger on either side of the Northern Dipper and the Twenty-eight Lunar Mansions (cat. no. 8) indicates that the symbolism of the tiger and dragon, corresponding respectively to yin (west) and yang (east), was well established by the Warring States period (475–221 B.C.).

As John Major has shown, however, the Four Divinities, representing all four cardinal directions, became widespread only in the Han dynasty.² Nonetheless, rituals to the gods of the four directions are known from as early as the Qin dynasty (221–207 B.C.).³ During the Han dynasty, the roofs of many official buildings were decorated with stamped tiles adorned with the animal symbols of the four directions.

Two Panels from a Sarcophagus: Tiger and Dragon

Northern Wei dynasty, c. 500/534

Limestone with traces of pigment and gilding

Tiger panel: 71.2 x 228.6 cm; dragon panel: 68.6 x 228.6 cm

Private collection

SINCE AT LEAST THE ZHOU DYNASTY (c. 1050–256 B.C.), the tiger and dragon have been the primary symbols of *yin* and *yang*, respectively, in China. These two cosmic forces direct the movement and transformations of *qi*, the vital energy that makes up all things. Evidence that the paired tiger–dragon symbolism extends back to the Neolithic period (c. 3000 B.C.) was found in the 1988 excavation of a funerary shell sculpture depicting these animals, flanking a corpse in the Neolithic burial at Puyang, Henan province.¹

In the context of religious Taoism from the Six Dynasties period (420–589) onward, paired tigers and dragons symbolized *yin* and *yang*. It was not until the Song dynasty that the now-ubiquitous *taiji* diagram (the so-called *yin–yang* symbol) came into being (see cat. no. 11). In addition to symbolizing *yin* and

yang, the tiger and dragon also symbolize west and east, and the elements (or phases) fire and metal. In Taoist chemical alchemy (*waidan*, or “outer” alchemy), the tiger and dragon also represent two of the most powerful elixir ingredients known, lead and mercury, while in the Inner Alchemy (*neidan*) tradition, the two animals symbolize *yin* and *yang* as they are brought together in the inner (human) body through visualization and transformed to create a divine embryonic form of the practitioner.

These two sarcophagus panels are carved in relief and intaglio with designs of the tiger and dragon flying among scudding clouds. Appropriately, the tiger is ridden by a female (*yin*) figure, and the dragon by a male (*yang*) figure. Other celestial figures holding lotus flowers and fans fly among bear-headed monsters in front of and behind the tiger and dragon. While it may be impossible to know whether the person for whom the sarcophagus was made was a Taoist believer, in a funerary context it is almost certain that the paired image of the tiger and dragon symbolized *yin* and *yang*, and that these animals may have been intended to protect the deceased.²

ZHANG HUANG (1527–1608)

Diagram of the Supreme Ultimate, from the Compendium of Diagrams

Ming dynasty, Tianqi reign, dated 1623

Woodblock-printed book; ink on paper

26.3 x 15.5 cm (each page)

The University of Chicago Library, East Asian Collection

THE *TAIJI* DIAGRAM (*taiji tu*) first appeared in a Taoist context at the beginning of the Song dynasty (960–1279). Several Song sources state that it originated with the Taoist Chen Tuan (c. 906–989), although Isabelle Robinet has shown that an antecedent for the diagram appeared in the work of the Tang dynasty Buddhist monk Zongmi (780–841).¹ Prior to this, *yin* and *yang* were symbolized by the tiger and dragon, and this symbolism has continued through the history of later Taoism.

The diagram symbolizes the unity of the forces of *yin* and *yang* within the Tao. *Taiji* means “supreme ultimate,” and as such the diagram symbolizes the fundamental Taoist view of the structure of reality, namely that beyond the duality of phenomenal existence, created through the interaction of *yin* and *yang*, is the unity of the Tao, which exists beyond time and space.²

The term *taiji* also appeared in the apocrypha (*weishu*)—cosmological and philosophical texts that flourished in the Han dynasty (206 B.C.–A.D. 220)—where it was associated with the concept of “primal chaos”; in other texts of the late Han and Six Dynasties (420–589) periods, *taiji* was also associated with the “primordial breath” (*yuanqi*), and ultimate truth as embodied in the Tao.³ In Taoist texts of the later Six Dynasties and Tang periods, *taiji* refers as well to a heaven and one of the stars of the Northern Dipper (*Beidou*).⁴ In a further elaboration, in the Six Dynasties Taoist text known as *Scripture of the Cavern of Mystery Numinous Treasure Essence of the Tao* (*Dongxuan lingbao daoyao jing*), a series of steps in the creation of the world are envisaged, starting with the Tao and leading sequentially to the primordial breath (*yuanqi*), then to a state called *taiji*, then to Heaven and Earth.⁵

The *Compendium of Diagrams* (*Tushubian*) is a 127-chapter encyclopedia on cosmology, geography, and human life compiled in the early Wanli reign (1573–1620) by the scholar Zhang Huang.⁶ Because of its length, it was not published until 1613, when the printing blocks were carved under the supervision of Zhang’s pupil Wan Shanglie. Significantly, the *Diagram of the Supreme Ultimate* is the first image that appears in the book.

QIU YING (c. 1495–1551/2)

The Divine Forms of the Five Planets, Twenty-eight Lunar Mansions, and Five Sacred Peaks

Ming dynasty, c. 1520/30
Handscroll; ink and colors on paper
19 × 396.2 cm
The Metropolitan Museum of Art, New York, Gift of Douglas Dillon
(1989.235.4)

CATALOGUE NO. 12 is attributed to Zhang Sengyou, a painter of Buddhist images during the Liang dynasty (502–557). There are reasons for doubting this attribution (see below), but there are two seals of Emperor Huizong (r. 1100–25) of the Song dynasty (960–1279) at the end of the scroll, and the scroll was recorded in the catalogue of Huizong's collection, the *Xuanhe Painting Catalogue* (*Xuanhe huapu*),¹ so it dates to no later than the Northern Song (960–1126). Catalogue no. 13 is an early-sixteenth-century copy of the first scroll by Qiu Ying (c. 1495–1551/2). Catalogue no. 12 is incomplete, with images of the Five Planets and only twelve of the Twenty-eight Lunar Mansions, but the painting by Qiu Ying depicts the Five Planets, all twenty-eight of these constellations, and the Taoist talismans (the True Forms, or *zhenxing*) of the Five Sacred Peaks. The Osaka scroll has colophons by Dong Qichang (1555–1636) and Chen Jiru (1558–1639), respectively attributing the scroll to Wu Daozi (active c. 710–c. 760) and Yan Liben (d. 673), while the Qiu Ying scroll has inscriptions written by Wen Boren (1502–1575), and a frontispiece by Zhao Fu dated 1837.²

The stellar deities depicted in these two scrolls were absorbed into the later Taoist pantheon. They appear, for example, in the entourage of the Emperor of Purple Tenuity (Ziwei) in the early-fourteenth-century murals of the Hall of the Three Purities (Sanqing Dian) of the Eternal Joy Temple (Yongle Gong) in southern Shanxi province, a Taoist temple of the Complete Realization (Quanzhen) sect.³ Dong Qichang's colophon at the end of the Osaka handscroll gives the painting the Taoist-sounding title of *Illustrations of the True Forms of the Twenty-eight Lunar Mansions*,⁴ and identifies its author as Wu Daoshi, a reference to the great Tang painter Wu Daozi, a painter of Taoist themes active at the court of Emperor Xuanzong (r. 712–56). Dong further states that this painting was owned by Emperor Huizong due to his interest in religious Taoism (Daojiao) as much as his interest in painting. In addition, the copy of this painting by Qiu Ying incorporates Taoist talismans, all of which indicate that later viewers understood the subject of the Osaka handscroll to be Taoist.

However, the images depicted in this handscroll are neither Taoist, nor, strictly speaking, Buddhist in origin. They represent a combination of Chinese cosmological beliefs and western astrology that was brought to China together with Buddhism. The Osaka handscroll begins with depictions of the Five Planets, together with a description of the attributes of each planet written in elegant seal script. These attributes seem to suggest the influence of western astrology. For example, Jupiter, ruler of the gods in ancient Rome, is described as "righteous with great authority," a "lordly prince" whose shrine was placed at the

"Lord's Gate." Mars, the most martial of Roman gods, is a "willful and violent noble" whose shrine was placed at the "Soldier's Gate." Saturn, who had strong agrarian connotations in ancient Rome, is described as "appropriate for matters concerning water and earth," and his shrine was placed "next to a field or a small river islet." Venus, the most feminine of Roman deities, is an "imperial consort" whose worship required female musicians and whose shrine was placed in the "Women's Palace." Finally, Mercury, messenger and scribe for the gods of ancient Rome, is an "official" whose shrine was placed in the "Minister's Residence."

While these attributions closely follow western traditions, they have little precedence in traditional Chinese astrology; in addition, the color attributions of each planet do not follow the Chinese Five Phase system (see cat. no. 17). The similarities between the Osaka handscroll and Sogdian-inspired Buddhist sources suggest that the images of the five planets in this scroll were inspired by a Central Asian source, perhaps from Sogdiana.⁵ This Central Asian iconography of the Five Planets was probably first introduced into China during the Tang dynasty (618–906).

The second part of the scroll contains images of the Twenty-eight Lunar Mansions, the constellations through which the moon passes on its circuit through the sky. These images also show the influence of western astrology, linking the twelve western zodiac figures with the Twenty-eight Lunar Mansions. The first image of the mansion Horn (*Jiao*), which corresponds to Virgo, is depicted as a woman, while the second, Neck (*Kang*), which corresponds to Libra, holds the scales of Libra in his hand. The mansions Chamber (*Fang*) and Heart (*Xin*), the fourth and fifth images, which both correspond to Scorpio, bear scorpions on their heads. Tail (*Wei*) and Winnower (*Ji*), the sixth and seventh images, both correspond to Sagittarius, and they each carry a bow, the device of this Graeco-Roman figure. Ox (*Niu*) and Woman (*Nü*), the ninth and tenth images, correspond to Capricorn, and they are each depicted with goats' heads. Finally, the eleventh image, of the Emptiness (*Xu*) mansion, which corresponds to Aquarius, is shown inside of a water jar, an attribution of this zodiac figure. The interpretations of the twelve solar houses seen here are sometimes rather clumsily incorporated, particularly in the figure of the Emptiness mansion; however, the task of incorporating such alien images into the Chinese astrological system must have been very difficult indeed.

The western zodiac seems to have been introduced into China around the end of the sixth century, and can be found in the *Scripture of the Great Assembly of Great Doctrinal Universality* (*Da fangdeng daji jing*).⁶ It became well known in the Tang dynasty, an

age when the Chinese were noted for their interest in exoticism and foreign ideas. Consequently, when taken together, the iconography of the Five Planets and the Twenty-eight Lunar Mansions shown here suggests that this handscroll was inspired by ideas introduced in the Sui–Tang period (531–906), implying a later date for the scroll than would be possible if it had been painted by Zhang Sengyou.

Central Asian-inspired sources in the Buddhist Canon similar to this handscroll⁷ tell us that when the Five Planets entered into the lunar mansion under which a person was born, known as the "destiny mansion," then that person was to recite certain scriptures and *mantra* (sacred syllables that embody the divine energy of a god), wear colors appropriate to the planet, and make offerings to its deity. In addition, one method instructs the practitioner to paint an image of the planet, which was hung around the neck until the planet had left the lunar mansion and then burned;⁸ the images shown in these handscrolls may originally have served as models for paintings used in similar practices. The information provided for worshipping the Five Planets in the Osaka painting does not correspond exactly to these astrological treatises; instead, it goes into details concerning the vessels and types of food used for sacrifices to each planet. However, the intentions of these works are essentially the same. Like Tang dynasty Buddhist astrological works, the text inscribed on the Osaka scroll instructs the practitioner on the proper method for making sacrifices to the deities of the Five Planets, which help counteract the negative influences of these planets when they travel through a person's "destiny mansion." In the same manner, the written descriptions that accompany each of the lunar mansions describe the personalities of people born under their influences, together with the names of the deities who govern these mansions.

ZHANG HUANG (1527–1608)

The Eight Trigrams: The Prior Heaven and Later Heaven Arrangements, from the Compendium of Diagrams

Ming dynasty, Tianqi reign, dated 1623

Woodblock-printed book; ink on paper

26 × 17.3 cm (each page)

C. V. Starr East Asian Library, Columbia University, New York

THE EIGHT TRIGRAMS (*Bagua*) are among the best-known images associated with Taoism, and yet their origin is altogether independent of Taoism. These visual symbols are the basis for the sixty-four hexagrams of the *Changes of the Zhou* (*Zhou yi*), the earliest form of the text now known as the *Book of Changes* (*Yi jing*).¹ The *Changes of the Zhou* is an ancient divination text whose origins can be traced to the Western Zhou dynasty (c. 1050–771 B.C.), even though it probably did not assume its final form until the end of this period.² The Eight Trigrams are made up of combinations of broken and unbroken lines, taken to symbolize *yin*, *yang*, and the intermediary stages in the cycle from *yin* to *yang* and back. The *Changes of the Zhou* and the *Book of Changes* are texts that provide a means of assessing the present state of the world and a basis for decision-making. The most important of the Eight Trigrams are *qian* and *kun*, representing *yang* and *yin*, with three unbroken and three broken lines, respectively.

The earliest surviving visual evidence for the Eight Trigrams dates to the Western Han dynasty (206 B.C.–A.D. 8). One of the most important archaeological discoveries of recent years in China was the discovery in 1973 of the earliest known text of the *Changes of the Zhou* found in Han tomb no. 3 at Mawangdui, Changsha, Hunan province, a burial dated to 168 B.C.³ This complete text includes the sixty-four hexagrams and text with the *Xici* commentary, described by Edward L. Shaughnessy as “a synthetic explanation of the text, its composition, function and meaning.”⁴

The Anterior or Prior Heaven (*Xiantian*) arrangement of the Eight Trigrams is traditionally derived from the sage Fu Xi (third millennium B.C.), one of the Five Emperors of high antiquity, and represents the relationship of the trigrams in the state of primordial chaos (*hundun*), before the emergence of *yin* and *yang* as active agents in the world.⁵ The Later Heaven (*Houtian*) arrangement of the Eight Trigrams is traditionally derived from the early Western Zhou dynasty king Wen (Wenwang), and represents the relationship of the trigrams in phenomenal reality, after the emergence of *yin* and *yang*. The Fu Xi arrangement of the trigrams is further associated with the numerological and talismanic diagram known as the River Diagram (*Hetu*); the Wenwang arrangement is similarly associated with the Luo Writing (*Luoshu*). The *Hetu* and the *Luoshu* are two cosmic diagrams that emerged out of the Yellow and Luo Rivers on the backs of a dragon-horse and tortoise, and were revealed to Fu Xi and Emperor Yu, respectively.⁶ Such spontaneous revelations of cosmic structures through sacred texts and diagrams is characteristic of the Taoist tradition.

Evidence for the early use of the Eight Trigrams in a religious Taoist context can be found in several Six Dynasties period (420–589) literary sources. One of these is the preface to the *Daode jing* attributed to Ge Xuan, probably written during the Liu-Song dynasty (420–479), in which the initiate to whom the scripture was being transmitted visualized a turtle with the Eight Trigrams on its back beneath his or her feet (for a discussion of this preface, see cat. no. 3). The imagery of the sixty-four hexagrams, which are made up of the Eight Trigrams from the *Book of Changes*, also plays a role in the *Declarations of the Perfected* (*Zhen'gao*), a visionary text of Highest Purity (Shangqing) Taoism compiled by Tao Hongjing (456–536) during the Liang dynasty (502–557).⁷

The Eight Trigrams played a vital role in the Taoist alchemical tradition. This was because chemical alchemy entailed manipulating the forces of *yin* and *yang* toward understanding and immortality. The trigrams and their associated hexagrams were subtle visual symbols of cosmic flux, and were easily adopted by Taoists to help explain cosmological principles of transformation.⁸ As Isabelle Robinet has written,

Qian and *kun* are, in cosmological terms, Heaven and Earth, south and north; in alchemical terms, the Furnace and the Cauldron; and in human terms, the Spirit and the Body. *Li* and *kan* are, in cosmological terms, the Sun and the Moon, east and west; in alchemical terms, the “ingredients” Mercury and Lead, Dragon and Tiger. *Qian* and *kun* are the constants in the system (the “completed procedures,” *chengwu*), and *Li* and *kan* are the principles of resonance (*ganying*) and growth and exchanges (*jiaojij*).⁹

The Eight Trigrams and their symbolism are one of several Bronze Age traditions that flowed together in the Han dynasty (206 B.C.–A.D. 220) to form the basis of religious Taoism.

*Mirror with the Five Phases (Elements),
Eight Trigrams, and Twelve Branches*

Tang dynasty (618–906)
Bronze
Diam. 14.5 cm
Palace Museum, Beijing

THE EARLIEST CHINESE BRONZE MIRRORS date to the late Shang dynasty (thirteenth–eleventh century B.C.).¹ As early as the Warring States period (475–221 B.C.), cosmological designs were cast into the backs of mirrors. This was in part linked to the symbolism of mirrors, which were objects used by the living to reflect the real world and by the dead as symbolic sources of light and as maps of the underworld and the cosmos.² The most complex of these designs date to the Sui (581–618) and Tang (618–906) dynasties; three examples are included here. A key aspect of these designs is that they illustrate the correlations between *yin* and *yang* and various directional, seasonal, and chronological systems of ordering natural phenomena. While the mirrors are not Taoist per se, they are significant in a Taoist context because they give visual form to the basic principles underlying the structure of the cosmos in ancient China. These principles of cosmic order and systems of correspondence were codified in the Warring States and Han (206 B.C.–A.D. 220) periods, and were among the intellectual underpinnings of the Taoist religion.

The Sui dynasty mirror from the Museum Rietberg, Zurich (cat. no. 15), depicts the animal symbols of the Four Directions around the central knob.³ These animals, known collectively as the Four Divinities (*Siling* or *Sishen*); are the Azure Dragon

15

(Qinglong or Canglong) of the east; the Vermilion Bird (*Zhuque*) of the south; the White Tiger (*Baihu*) of the west; and the Dark Warrior (*Xuanwu*) of the north, consisting of an entwined turtle and snake. In a wide band around the mirror's perimeter are the twelve animals of the Chinese zodiac, arranged in a clockwise sequence: rat, ox, tiger, hare, dragon, snake, horse, ram, monkey, cock, dog, and boar. In Chinese cosmology, these symbols correspond to the twelve divisions of the celestial equator known as the earthly branches (*dizhi*), each of which also corresponds to a direction (rat = north, ox = north-northeast, and so on). An inscription in standard script is cast into a narrow band between the inner and outer zones. As Helmut Brinker has pointed out, its content is related only loosely to the symbolic designs on the mirror.⁴ The generic name for this type of mirror (*renshou*) comes from a phrase in this inscription meaning "benevolence and longevity."⁵ The *renshou* mirror type appears to have been made in southern China, although similar examples have been excavated from sites as disparate as Xi'an in Shaanxi and Xing'an in Guangxi.⁶

The Tang dynasty (618–906) mirror in the collection of the American Museum of Natural History (cat. no. 16) is one of the largest and finest surviving examples of its type.⁷ The mirror has a dark green surface. Like the Museum Rietberg mirror, the

16

designs cast into the back represent several corresponding levels of order in the structure of the universe. The entire system illustrated here was absorbed into religious Taoism by the end of the Six Dynasties period. The designs are arranged in five concentric bands. Around a central frog-shaped knob are the animal symbols of the four directions, separated by floral designs. In the next band are the twelve animals of the Chinese zodiac, also arranged in a clockwise sequence. The next band depicts the Eight Trigrams, representing the cosmic flux of *yin* and *yang*. These appear in the Later Heaven (*Houtian*) arrangement (see cat. no. 14). The trigrams are interspersed with floral bosses and leaves; among these is a cast design of a boy holding two cartouches with the characters *cao* and *pu*, the latter of which may be a name. The next band of decoration depicts the stylized forms of the Twenty-eight Lunar Mansions in a manner that existed as early as the Han dynasty.⁸ This is one of the earliest surviving examples showing the Lunar Mansions as a coherent group. The next band, just inside the outer band of *ruyi* mushroom-shaped clouds, contains a poetic inscription in standard script, which mentions the correlations of *yin* and *yang*, the Eight Trigrams, and the Five Phases or Elements.⁹

The Tang cosmological mirror in the collection of the Palace Museum, Beijing (cat. no. 17), is unusual in its inclusion of the

17

Five Elements in the decorative scheme. At the center of the mirror, around the raised boss, are the Eight Trigrams, in the Later Heaven arrangement. Then, in a square arranged around the center, are the Chinese characters for the twelve earthly branches that correspond to the twelve celestial stations of Jupiter and to the Chinese zodiac. Finally, around the perimeter, are symbols representing four of the Five Elements: an incense burner (metal), flames (fire), a tree (wood), and a lotus leaf (water). The element earth, which is not represented, is symbolically present at the center. The mirror thus symbolizes the coherent relationship between the Five Elements, the twelve phases of the zodiac, and the Eight Trigrams.

(detail)

Star Maps

From Dunhuang, Gansu province
Tang dynasty (618–906)
Handscroll; ink and colors on paper
24.5 × 34.0 cm
The British Library, London, Oriental and India Office Collections
(Stein 3326)

THE BRITISH LIBRARY SCROLL of star maps is one of two surviving astronomical diagrams from Dunhuang and was one of the many manuscripts acquired by Sir Aurel Stein at the great Buddhist cave-temple site in Central Asia in 1907.¹ The handscroll, painted and inscribed in ink and color on pale beige paper, is truncated at both ends. It begins with a divination chart depicting forms of *qi* (vaporous energy), with notes indicating the significance of the different cloudlike shapes. This is followed by depictions of twelve sections of the sky, corresponding to the twelve stations (*ci*) of the planet Jupiter, in addition to a depiction of the circumpolar area known as the Court of Purple Tenuity (*Ziwei yuan*). The Jupiter stations are twelve equal divisions of the sky, based on the full circuit of the heavens made by Jupiter in its twelve-year rotation around the sun. Because the twelve Jupiter stations are positioned along the celestial equator, they are unrelated to the twelve stations of the Western zodiac, which are situated along the ecliptic (the annual path of the sun through the sky).² The Jupiter stations do, however, correspond to the twelve “earthly branches” (*dizhi*) and the corresponding animal symbols of the Chinese zodiac.³ In addition, the Jupiter stations correspond to the Twenty-eight Lunar Mansions (see cat. no. 12), with two or three mansions occupying each station, depending on the angular extension of the mansions along the celestial equator.⁴ Within each Jupiter station, the key constellations (including the Lunar Mansions) that fill the corresponding section of the sky are depicted.

The star maps begin with the Jupiter station Murky Hollow (*Xuanxiao*), which contains three Lunar Mansions: Woman (*Nü*), Emptiness (*Xu*), and Roof (*Wei*). The fourth map, the Jupiter station Great Plank-Bridge (*Daliang*), includes as one of its asterisms the star cluster known in the West as the Pleiades and known to ancient Chinese astronomers as the Lunar Mansion Mane (*Mao*). The fifth map illustrates the Jupiter station *Shichen* (the name of a deity), containing the Lunar Mansions Beak (*Zui*) and Triaster (*Shen*), corresponding to the Western constellation Orion. The scroll ends with an anthropomorphic figure holding a bow, labeled “God of Lightning” (*Leishen*). In its inclusion of

explanations of different forms of *qi*, this scroll resembles the other Tang dynasty star map that survives from Dunhuang, entitled *Book on the Prognostication of Clouds and Vapors* (*Zhan yunqi shu*).

The significance of the Stein scroll lies primarily in its methodical arrangement of star maps that together comprise the earliest known depiction from any ancient civilization of the entire night sky as seen from the northern hemisphere.⁵ Its importance in a Taoist context lies in its emphasis on the circumpolar region as the most important part of the heavens, with the concentration in this zone of such pivotal asterisms as the Celestial Pole (*Beiji*), the Northern Dipper (*Beidou*), Purple Tenuity (*Ziwei*), and Wenchang (also the name of the later God of Literature), each of which plays a key role in religious Taoism (see, for example, cat. nos. 76, 78, and 89), and in the fact that, from early times, all stars were believed to have an impact on human fate.⁶ In addition, as shown elsewhere (see cat. no. 12), by the Tang dynasty, if not earlier, almost all of the constellations shown here represented gods in the pantheon of religious Taoism (the Lunar Mansions, for example, appear as anthropomorphic gods in the Yuan dynasty [mid-fourteenth century] murals at the Eternal Joy Temple in Shanxi province). Of the circumpolar asterisms, the most important by far was the Northern Dipper, perceived from at least the late Shang dynasty (thirteenth/eleventh century B.C.) as an enormous celestial chronogram. In the *Records of the Historian* (*Shiji*) by Sima Qian (145–87 B.C.), the Dipper is described as follows:

Beidou serves as the chariot of the emperor and effectuates its control over the four cardinal points by revolving around the center; it separates the *yin* and the *yang* and regulates the four seasons; it maintains balance between the Five Elements (*Wuxing*); it regulates the moving of the celestial objects; it determines the epoch of the calendar.⁷

The custom of depicting constellations as series of dots joined by straight lines appears to have begun in the second century B.C.⁸ In the Stein scroll, constellations are not only shown in this manner, but are also distinguished by their different colors (red, black, and white), corresponding to star groups catalogued by the Warring States period astronomers Shi Shen, Gan De, and Wu Xian.⁹ The original star catalogues by these scholars were lost after the Liang dynasty (502–557), but their systems of categorization were passed down by others, having been codified into a single unified system by Qian Lezhi during the Liu-Song dynasty (420–479).¹⁰

—S. L.

19 Star Chart

Ink rubbing of a stele at the Confucian Temple, Suzhou,
Jiangsu province
Southern Song dynasty, Chunyou reign, dated 1247
Hanging scroll; ink on paper
183 x 100 cm
Stone Carving Museum, Suzhou

AT THE TIME THE STONE from which this Southern Song ink rubbing showing a star chart was engraved, in 1247, it was the most advanced celestial map anywhere in the world. It is labeled at the top "Chart of the Celestial Patterns" (*Tianwen tu*).¹ The chart is significant in a Taoist context because it depicts the home of a vast number of gods in the Taoist pantheon, centering on the circumpolar region with the Northern Dipper and the Pole Star, the most important stars in the Taoist heavens. In

addition to a large number of constellations, the celestial equator and the ecliptic (the apparent path of the sun in the sky during the course of the earth's annual rotation) are shown. The chart includes a total of 1,436 stars. The entire northern celestial hemisphere is shown, in addition to part of the southern sky, up to fifty degrees south of the celestial equator. The lines radiating from the northern celestial pole to the celestial equator mark the location in the heavens of the Twenty-eight Lunar Mansions (*Ershiba xiu*).

The star chart was completed in 1193 by Huang Shang (1147–1195), a tutor to Prince Jia, the future Southern Song emperor Ningzong (r. 1195–1224). In 1247, over twenty years after Ningzong's death, it was carved onto a stone stele by Wang Zhiyuan.² The accompanying text has been described by Joseph Needham as "one of the shortest (and most authentic) expositions of the Chinese astronomical system."³ The text states that there are 1,565 named stars (roughly ninety percent of these are shown on the chart), and mentions the ancient theory correlating cities and provinces to specific heavenly bodies. The ancient state of Zhou, for example, was tied to the Jupiter station Quail Fire, comprising the Lunar Mansions Willow (*Liu*), Star (*Xing*), and Spread or Extended Net (*Zhang*).⁴ The Northern Dipper is presented as a celestial clock and seasonal indicator as it rotates through the Lunar Mansions (as it had been perceived since at least the Han dynasty [206 B.C.–A.D. 220]).

The circumpolar region appears at the center of the chart. Here the Northern Dipper (Ursa Major) is clearly visible. It is one of the few constellations in which each component star is named on the chart (see cat. no. 78 for an anthropomorphic depiction of these stars). The ring around the perimeter is marked with the names of the Jupiter stations, the Lunar Mansions, the terrestrial branches (*dizhi*) corresponding to the Chinese zodiac, the names of the ancient states to which the asterisms corresponded, and the widths of the Lunar Mansions along the celestial equator that are accurate up to half a degree.⁵ The boundaries of the Twenty-eight Lunar Mansions are indicated by the lines radiating out from the center to the perimeter. The large circle concentric with the inner boundary of the Central Palace (the circumpolar area) is the Celestial Equator; this runs through the Lunar Mansions (for example, the constellation Orion, the belt of which was the mansion known as Triaster (*Shen*), is clearly visible along the Celestial Equator). The offset circle is the ecliptic, mistakenly shown here as a circle instead of an ellipse. The Milky Way is also clearly shown, meandering from one side of the chart to the other.

NOTES

Cat. no. 8

1. The complete excavation report on the Marquis of Zeng tomb can be found in Hubei Provincial Museum 1989. For a brief English summary of the tomb and its significance, see MacKenzie 1999: cat. nos. 92–109.
2. As F. Richard Stephenson has pointed out, the next complete list of the Lunar Mansions dates from roughly two centuries later, see Stephenson 1994: 519. Prior to this, the earliest known references to Lunar Mansions were found in the Book of Songs (*Shi jing*), and in the inscriptions of certain ritual bronze vessels of the Western Zhou dynasty; see Stephenson 1994: 516–17.
3. Stephenson 1994: 523. For the original report, see Shaanxi Archaeological Institute and Jiaotong University 1990. The precise angular (equatorial) extensions of the lunar mansions are given in the *Master of Huainan* (Huananzi: 139 a.c.); see Major 1993: 127–28.
4. See the anthropomorphic depictions of the Lunar Mansions in the fourteenth-century murals at the Eternal Joy Temple in Shansi, illustrated in Jin 1997: pls. 50–52, 59–61.
5. See Lacquerware from the Warring States to the Han Periods 1994: no. 15.
6. Stephenson 1994: 514.
7. This despite the fact that the actual pole star has changed several times in the past several millennia owing to the precession of the equinoxes; see *ibid.*: 531.

Cat. no. 9

1. Major 1985: 86–65.
2. *Ibid.*: 68.
3. Cheng 1957: 167–68.

Cat. no. 10

1. See Sun and Kistemaker 1997: 116, fig. 6.2.
2. Similar Northern Wei sarcophagi have been excavated in Henan and Shandong provinces. Another example, carved in intaglio, is in the collection of the Temple of Guandi near Luoyang, Henan province.

Cat. no. 11

1. Robinet 1990: 374–76; see also Robinet 1997: 221, 271 n. 2.
2. Major 1993: 108–09, 64–65.
3. Robinet 1990: 382–83.
4. *Ibid.*: 383.
5. *Ibid.*: 384.
6. Goodrich and Fang 1976: 83–85.

Cat. nos. 12–13

1. See XHHP: juan 1, chap. 1: 379–380.
2. There is also a copy of the Osaka scroll by the Qing dynasty court painter Ding Guangpeng (active 1737–68) in the National Palace Museum, Taipei; see Changsheng de shijie 1996: 6–7.
3. Jin 1997: pls. 19, 63–66, 69 (the Five Planets), and pls. 50–52, 59–61 (the Twenty-eight Lunar Mansions).
4. This imitates the names of such Taoist magical diagrams as the *Diagram of the True Forms of the Five Sacred Peaks* (*Wuyue zhenshen tu*; see cat. no. 137).
5. For example, see T 1311, attributed to the Chinese monk Yixing (673–727), and T 1308, attributed to a “brahmin” monk named Jinjuzha from a “western country,” both of which use Sogdian names for the planets and days of the week. These names are identified by Amoghavajra in T 1299 as being Sogdian (*hu*); see Needham and Wang 1959: 258. The iconography of the Five Planets described in these two texts is nearly identical to that of the Osaka handscroll. This opens the interesting possibility that the Central Asian imagery in this painting comes originally from Sogdiana, and that the Greco-Roman elements were introduced through a Sogdian or Persian source. In this case, the astrological treatise by Jinjuzha, which dates to around 806, is probably the most direct source for the Osaka handscroll still preserved.
6. See T 397.
7. See note 5.
8. See T 1308.

Cat. no. 14

1. For an excellent discussion of the textual history of the *Yi jing* or *Zhou yi*, see Shaughnessy 1993. For a translation of the *Yi jing*, see Wilhelm 1967.
2. Shaughnessy 1993: 219.
3. The various silk manuscripts found in this tomb are published in Chen 1996.
4. Shaughnessy 1993: 220.
5. On different meanings and contexts of the term *Xiantian*, see Robinet 1990: 385.
6. Seidel 1983: 302.
7. Kroll 1996b: 183.
8. Robinet 1997: 234 ff.
9. *Ibid.*: 236.

Cat. nos. 15–17

1. Examples were excavated from the tomb of the Shang dynasty queen Fu Hao at Anyang, Henan province, in 1976; see *Yinxu Fu Hao mu* 1980: pl. 68.4–5.
2. See Loewe 1979: 60–85.
3. For a detailed discussion of the Rietberg Museum mirror, see Brinker and Fischer 1980: 91–94, no. 32.
4. *Ibid.* Brinker’s translation is adapted from Wenley 1962: 141, cited in Brinker and Fischer 1980: 92.
5. On this term see Soper 1967: 55–66.
6. Brinker and Fischer 1980: 92 n. 3.
7. The design of this mirror (or a nearly identical example) is reproduced in the catalogue of the imperial Qing dynasty bronze collection, the *Mirror of Antiquity of the Western Qing* (*Xiqing gujian*) of 1751, and also in *On Bronzes and Jades* (*Jinshi suo*) of 1821; see XQJ, juan 40: 45, and JSJ, jin (bronze) section. A slightly smaller mirror with a nearly identical design was published in Beijing in 1935; see Rupert and Todd 1935: no. 352.
8. As F. Richard Stephenson has shown, however, surviving Han examples are only fragmentary. For another Tang depiction of the stylized constellations of the Lunar Mansions, from a tomb near Turfan, Xinjiang province, see Stephenson 1994: 537, fig. 13.12.
9. The inscription is translated in Needham and Wang 1959: fig. 53.

Cat. no. 18

1. The other is kept at Dunhuang; it is published in Ho 1987: 58, and Stephenson 1994: fig. 13.11.
2. The first mention of Jupiter stations is found in the *Spring and Autumn Annals* (*Lushi chunqiu*); see Stephenson 1994: 515. Ritual offerings were made to the planet Jupiter as early as the late Shang dynasty (thirteenth/eleventh century b.c.), and are mentioned in oracle bone inscriptions found at Anyang, the last Shang capital; see Stephenson 1994: 514. Both the celestial equator and the ecliptic are shown on the Southern Song dynasty star chart of A.D. 1247 (cat. no. 19).
3. For a chart of these correspondences, see Schafer 1978c: 76, table 2.
4. *Ibid.* For a chart indicating the location of the Twenty-eight Lunar Mansions, see Needham and Wang 1959: 235–37, table 24.
5. For a list of references to Han dynasty star maps, see Needham and Wang 1959: 276 n. d.
6. See the remarks of the Eastern Han dynasty scholar Zhang Heng to this effect, quoted in *ibid.*: 265.
7. Sun and Kistemaker 1997: 23, quoting from the “Treatise on Celestial Officials” [Constellations] (*Tianguan shu*) in Sima Qian’s *Shiji*.
8. Harper 1978–79: 1, 6 n. 1.
9. Needham and Wang 1959: 263.
10. *Ibid.*: 263–64.

FUNDAMENTAL TO RELIGIOUS TAOISM is the concept of the sacred peak as a numinous pivot connecting heaven and earth. Central to the cosmological beliefs of the Han dynasty (206 B.C.–A.D. 220) was the worship of the Five Sacred Peaks (symbolizing and defining the four cardinal directions and the center) and other holy mountains. The earliest and most visually compelling images of such peaks are the mountain-shaped bronze incense burners (*boshanlu*) of the Han dynasty, the most spectacular of which was excavated in 1968 from the tomb of the Han prince Liu Sheng (second century B.C.; cat. no. 20). The image of a Taoist mountain paradise, populated by transcendent beings, is illustrated in the "Sacred Landscape" section (III.6) of this exhibition and catalogue by Chen Ruyan's fourteenth-century handscroll *Mountains of the Immortals* (cat. no. 144), which ties together the concepts of mountains as sites where the cosmic vital energy (*qi*) is most refined, where the natural ingredients (herbs and minerals) for Taoist elixirs of longevity and immortality are found, and where one can encounter immortal adepts.

The *xian* (adepts or immortals) were conceived of as perfected beings who had transcended *yin* and *yang* and achieved union with the Tao through self-cultivation. Han dynasty images of such figures were known as *yuren*, literally, "winged beings." The bronze example excavated from a Han tomb in Luoyang in 1987 (cat. no. 21) reflects the way in which such figures were conceived. Later images of immortals, including the thirteenth-century painting by Ma Yuan *Immortal Riding a Dragon* (cat. no. 28), are ultimately based on Bronze Age traditions, such as the descriptions of the "divine beings" (*shenren*) found in the *Zhuangzi* (c. 300 B.C.).

The most famous of the ancient immortals, the Queen Mother of the West (Xiwangmu), was one of the most powerful goddesses of early Taoism (see cat. nos. 24–27). Even before the emergence of religious Taoism, she was already worshipped at the imperial Han court. The most illustrious human encounter with the Queen Mother of the West was that of the Zhou dynasty king Mu, a meeting that, according to Chinese mythology, took place in the eighth century B.C. Other immortals whose cults continue to the present day in China, Taiwan, and Hong Kong are Master Red Pine (Chisongzi) and Wang Ziqiao.

20

Mountain-shaped Censer

From the tomb of Liu Sheng at Lingshan, Mancheng, Hebei province
Western Han dynasty, second half 2nd century B.C.
Bronze with gold inlay
H. 26 cm; diam. 15.5 cm
Hebei Provincial Museum, Shijiazhuang

MOUNTAINS HAVE PLAYED a key role in the history of Chinese religions. The image of the sacred peak as an axis joining heaven and earth has been prevalent for centuries in Chinese philosophical and religious thought. Mountains were sites where an adept could encounter perfected beings and gods, or the minerals and herbs that were the ingredients for elixirs of long life. One meditated and purified oneself on mountains and found caverns that were gates to paradise. Mountains were where the *qi*-energy that formed the world was particularly refined. In Taoist ritual the altar is visualized as a mountain that is symbolically (and sometimes actually) climbed by the officiating priest; in Taoist meditation the inner human body is visualized as a mountainous landscape, its forms simultaneously reflecting the structure of the natural landscape and the cosmos.¹

Over time a cult of the Five Sacred Peaks developed, comprising mountains that defined the cardinal directions and the center: Mount Tai (Tai Shan) in the east, Mount Heng (Heng Shan) in the south, Mount Hua (Hua Shan) in the west, Mount Heng (Heng Shan) in the north, and Mount Song (Song Shan) in the middle. This group was codified by the Warring States period (475–221 B.C.), and worship of the Five Peaks was widespread from the Han dynasty (206 B.C.–A.D. 220) onward.²

The perception of mountains as numinous pivots joining heaven and earth was given visual form during the Han dynasty in the remarkable bronze and ceramic incense burners known as *boshanlu* ("universal mountain censer").³ This example was excavated in 1968 from the tomb of the early Han dynasty prince Liu Sheng, at Mancheng, Hebei province. It depicts a sacred peak inhabited by animals and transcendent beings. The flowing lines of gold inlay around the base suggest the clouds that were seen as the mountain's "breath," and the movement of *qi* that pulsates through the earth.

A huge variety of mountain-shaped incense burners have been excavated from Han dynasty tombs in China, reflecting the widespread popularity of this type, which appeared in its mature form during the reign of Han Wudi (r. 140–87 B.C.).⁴ This example was cast in three parts: the conical top, the bowl, and the stemmed, openwork foot. Inlaid with gold wires, the censer depicts a fantastic mountain covered with figures and animals. The flamelike peaks that jut up around the mountain's surface are perforated to allow the release of incense smoke.⁵

—S. L.

Winged Figure

Eastern Han dynasty, 2nd century
Bronze with gold inlay
15.5 × 9.5 cm
Luoyang Museum, Henan

EXCAVATED FROM AN EASTERN HAN dynasty (25–220) tomb on the eastern outskirts of Luoyang, Henan province, in 1987, this winged figure (*yuren*) is one of the earliest three-dimensional sculptures to depict a realized being. Similar figures are often found as part of the decoration on Han dynasty bronze mirrors cast with cosmological diagrams, and on ceramic tomb sculptures. These figures, usually depicted with winglike appendages, were perceived as having transcended the bonds of *yin* and *yang* and as existing beyond time and space. They lived among sacred mountains, in a numinous realm removed from the world of humankind. Such figures are described in early texts of the Taoist tradition, such as the *Zhuangzi* and the *Liezi*. The former book, for example, includes the following passage:

Jian Wu said to Lian Shu, "I was listening to Jie Yu's talk—big and nothing to back it up, going on and on without turning around. I was completely dumbfounded at his words—no more end than the Milky Way, wild and wide of the mark, never coming near human affairs!"

"What were his words like?" asked Lian Shu.

"He said that there is a Holy Man (*shenren*) living on faraway Gushe Mountain, with skin like ice or snow, and gentle and shy like a young girl. He doesn't eat the five grains, but sucks the wind, drinks the dew, climbs up on the clouds and mist, rides a flying dragon, and wanders beyond the four seas. By concentrating his spirit, he can protect creatures from sickness and plague and make the harvest plentiful. I thought this was all insane and refused to believe it."

"You would!" said Lian Shu. "We can't expect a blind man to appreciate beautiful patterns or a deaf man to listen to bells and drums. But blindness and deafness are not confined to the body alone—the understanding has them too, as your words just now have shown. This man, with this virtue of his, is about to embrace the ten thousand things and roll them into one. Though the age calls for reform, why should he wear himself out over the affairs of the world? There is nothing that can harm this man. Though flood waters pile up to the sky, he will not drown. Though a great drought melts metal and stone and scorches the earth and hills, he will not be burned."¹

The *Liezi* includes a similar description, expanding on these miraculous beings:

The Guye mountains stand on a chain of islands where the Yellow River enters the sea. Upon the mountains there lives a Divine Man (*shenren*), who inhales the wind and drinks the dew, and does not eat the five grains. His mind is like a bottomless spring, his body is like a virgin's. He knows neither intimacy nor love, yet immortals (*xian*) and sages serve him as ministers. He inspires no awe, he is never angry, yet the eager and diligent act as his messengers. He is without kindness and bounty, but others have enough by themselves; he does not store and save, but he himself never lacks.²

Both the *Zhuangzi* and the *Liezi* describe such beings as *shenren*, literally, "divine men," using the character *shen* that usually denotes a spirit or god. Their characteristics are similar to early descriptions of *xian*—adepts or immortals—beings that have broken the quotidian bonds of phenomenal reality through their transcendence of *yin* and *yang* and their union with the Tao.

Several similar bronze figures are known; among them are examples in the Osaka Municipal Museum of Arts and a private collection in Paris.³

Stele in Memory of Fei Zhi

Eastern Han dynasty, 2nd century
Limestone
98 × 48 × 9.5 cm
Administrative Committee of Cultural Relics, Yanshi, Henan

THIS STELE IS THE ONLY REMNANT of a Han dynasty cult devoted to the realized being (*zhenren*) Fei Zhi.¹ It was found during the excavation of an Eastern Han dynasty (25–220) tomb to the east of Luoyang, Henan province, a few kilometers away from the boundaries of this city when it was the capital of the Eastern Han. The tomb in which this stele was found is unusual in that several bodies were found buried in it. The stele was placed on a pedestal with three cavities, which may have been used to hold offerings. Kristofer Schipper has described the stele as “not just a monument dedicated to the memory of the Taoist saint Fei Zhi, but also his altar and the seat of his spirit.”²

The stele is as enigmatic as the tomb in which it was found, since neither Fei Zhi nor his disciples named in the stele are recorded in historical sources. According to the inscription, Fei Zhi first became famous for climbing up into a jujube tree and perching there for three years without coming down. Fei's eccentricities eventually brought him to the attention of the imperial court, and the stele indicates that he was summoned to the court twice, in 76 and 89, at the beginnings of the reigns of emperors Zhang (r. 75–88) and He (r. 88–105). Thanks to his aid in making “calculations” that helped the court to avoid inauspicious omens, he was awarded an official title. Fei is further identified with prominent figures from ancient China, including the “Confucian” (*ru*) scholar Yanzi, a contemporary of Confucius, and the magician Master Red Pine (*Chisongzi*).

Eventually, Fei acquired disciples, of whom the official Xu You (also unknown from historical records) is most prominently mentioned. Fei's cult seems to have been established by Xu You's son Xu Jian, who began making offerings to Fei in 169. The stele also attributes divine status to Xu You, who is claimed to have met with the Queen Mother of the West (*Xiwangmu*; see cat. no. 24) on Mount Kunlun. Finally, the stele indicates that five disciples of Xu You, including a certain Master Xu (which

may refer to Xu Jian), consumed an alchemical drug known as “stone marrow,” which allowed them to leave the world as adepts.

Since the date of 169 mentioned on the stele precludes the possibility that it was made as a funerary memorial for Fei Zhi, who lived over half a century earlier, or that the grave mound was his, Schipper has suggested that the remains in the tomb may belong to the five disciples mentioned at the end of the inscription, to Xu Jian and his family, or to other members of the cult dedicated to Fei Zhi.

The inscription on this stele is not the only one of its kind to be preserved. There are similar stele inscriptions from the same period recorded in historical documents, including one devoted to the cult of Wang Ziqiao around Mount Song (also in Henan) dated to 165, and another to the cult of Tang Gongfang in the Hanzhong region, Shaanxi province, the same region where the Celestial Master movement first came to prominence under Zhang Lu at the end of the Han dynasty.³ Unlike Fei Zhi, both of these figures have a long, well-documented history, and have played an important role in Chinese religion right up to the modern era.

This newly discovered stele increases our understanding of the late Han dynasty and serves as an important link between late Warring States politico-philosophical writings such as the *Zhuangzi* and the *Daode jing* and later religious Taoism. It bridges the historical gap between early myths and terms such as “realized being” in Warring States texts and their prominent use in later writings of the Taoist religion. As archaeological research in mainland China advances, new insights continue to be gained into the precedents that formed the foundations of religious Taoism and into the transition from the “classical” age of the Warring States to the flourishing of religion in medieval China.

23

MA YUAN (ACTIVE C. 1190–C. 1225)
The Four Sages of Mount Shang

Southern Song dynasty, c. 1225
 Handscroll; ink and light colors on paper
 33.6 x 307.3 cm
 Cincinnati Art Museum, Anonymous gift (1950.77)

MA YUAN'S HANDSCROLL depicts the Four Sages of Mount Shang, who fled into the mountains during the reign of the early Han dynasty emperor Gaozu (r. 206–195 B.C.).¹ These worthies' retreat into Mount Shang was motivated by their disagreements with the actions of the emperor and their desire to maintain their moral integrity.² The Four Sages' names were Dongyuan, Luli, Qi Liji, and Xiahuang. While often held up as paragons of Confucian virtue, by the fourth century, the Four Sages were also viewed as adepts (*xian*) renowned for their techniques of self-cultivation and alchemy. The *Baopuzi* (*The Master Who Embraces Simplicity*) by Ge Hong (283–343), for example, refers to all four figures as *xian* (adepts or immortals) and mentions that they taught alchemy to the famous strategist Zhang Liang.³ In later tradition, the Four Sages continued to be seen as paragons by both Confucians and Taoists. They appear, for example, in the Song dynasty handscroll in the Freer Gallery of Art entitled *An Assembly of Immortals* (*Qunxian gaohui tu*), traditionally attributed to Li Gonglin (c. 1049–1106), which depicts a Taoist paradise populated with such diverse figures as the Yellow Emperor and Guangchengzi, the Queen Mother of the West, and the female immortal Magu.⁴

The Four Sages of Mount Shang lived solely on mushrooms, and one of the four, Luli, composed the "Song of the Purple Mushroom":

Silent is the lofty mountain;
 Long is the deep valley.
 Bright are [the] purple mushrooms;
 They can still my hunger.
 The ages of [the emperors] Yao and Shun are gone forever;
 Whither shall I go?
 A carriage and four, and lofty roofs,
 All bring great worries [to the inmates].
 If riches and honors entail submission to others,
 I would rather be poor and lowly in order to live happily.⁵

Ma Yuan was a painter active at the imperial Southern Song court in Lin'an, Hangzhou province, during the reigns of Emperors Guangzong (r. 1189–94) and Ningzong (r. 1195–1224), and into the early part of Lizong's reign (r. 1225–64). The *Cincinnati Four Sages of Mount Shang* is one of his surviving works on paper, and has been dated to c. 1225. It is painted primarily in ink with occasional touches of light color, and depicts the Four Sages in a mountainous landscape. A stream flows from left to right through the background of the composition, emptying into a river or lake with crashing waves near the beginning of the scroll. The remote setting is accentuated by the quickly flowing water, the cliffs and grotto-like formations among the rocks, the gnarled pine trees, spiky plum trees, and lush bamboo. Two of

the sages are seated on rocks and playing the board game known as *weiqi*, while a third leans on the trunk of a pine tree and watches. The fourth sage walks with an attendant along a mountain path and searches for mushrooms. The scroll is signed at the end, *Chen Ma Yuan* ("Your servant, Ma Yuan"), indicating that it was painted at the imperial court. The scroll has thirty-seven colophons by scholars of the Yuan and Ming dynasties, including inscriptions by Yang Weizhen (1296–1307) and Ni Zan (1301–1374).⁶ The painting was owned by the great Ming dynasty collector Xiang Yuanbian (1525–1590), and in the Qing dynasty entered the collection of the Qianlong emperor (r. 1736–95), remaining in the Forbidden City until the early twentieth century.⁷ The scroll bears two inscriptions by the Qianlong emperor, and still has its imperial Qing silk wrapper and inscribed jade pin.

Ma Yuan's handscroll emphasizes the close connection between hermits, immortals, and mountains in traditional China. Even before the emergence of religious Taoism in the late Han dynasty (second century), mountains were considered pure and remote places where one could encounter immortals. The rocks, water, pines, and plum trees of Mount Shang are symbols of the values the Four Sages stood for, including strength and moral integrity.

Tomb Tile with the Queen Mother of the West

From Sichuan province
Eastern Han dynasty, 2nd century
Stamped earthenware tile
41 × 47 cm
Sichuan Provincial Museum, Chengdu

25

Money Tree with the Queen Mother of the West and a Seated Buddha

From Sichuan province
Eastern Han dynasty, 2nd century
Lead-glazed earthenware and bronze
H. 177 cm
Asian Art Museum of San Francisco, Gift of the Connoisseurs' Council (1995.79)

ONE OF THE MOST POPULAR DEITIES of the Han dynasty (206 B.C.–A.D. 220) was the Queen Mother of the West (Xiwangmu), depicted in these two archaeological objects from Sichuan province. While the origins of this goddess in the early Bronze Age are murky, Xiwangmu emerged by the third century B.C. as a formidable deity in the Chinese pantheon. The "Inner Chapters" of the *Zhuangzi* list the Queen Mother of the West as

a deity who "obtained the Tao."¹ According to the *Scripture of Great Peace (Taiping jing)*, a text that first appeared in the late Han dynasty, Xiwangmu was an immortal (*xian*). During the Han, the Queen Mother of the West was worshipped by the imperial family, the aristocracy, and the literati, as well as by the common people.²

In legend, ancient kings and emperors sought out the Queen Mother of the West, and asked for her advice on the arts of rulership and self-cultivation (see cat. no. 26). Although originally not a Taoist deity, she was adopted into the pantheon of religious Highest Purity (Shangqing) Taoism in the Six Dynasties period (420–589) and is the principle female deity in the *Supreme Secret Essentials (Wushang biyao)*, a Taoist encyclopedia completed in 577, during the Northern Zhou dynasty.³

Above all, Xiwangmu was associated with the yin force of the yin–yang polarity, and with the phase (or element) metal in the Five Phase (*Wuxing*) system. Yin correlated with the west, the direction most strongly associated with death and rebirth. Nonetheless, in the funerary tile from Sichuan (cat. no. 24), in which the Queen Mother sits on a mat at a feast, she is flanked by a tiger and a dragon (see cat. no. 10), symbolizing her ultimate transcendence of yin and yang.

By the early Eastern Han dynasty (first century), the Queen Mother was associated with Mount Kunlun, a mythical paradise

located to the far west of China.⁴ Kunlun was perceived as an enormous mountain, or mountain range, that functioned as a cosmic pivot connecting Heaven and Earth.

In the earthenware tomb tile, excavated in 1965 from a tomb at Qingbaixiang in Xinfan near Chengdu, Sichuan province, Xiwangmu is entertained at a feast. Regally posed under a canopy, she faces the viewer while a group of figures and animals occupy the foreground. To the left, a hare holds a candelabra; behind the hare is a fox. In front of the hare two figures, either human or celestial courtiers, sit next to a low table. Directly in front of the Queen Mother a frog dances, while a bird and two other human or immortal figures look on at the left.⁵

A much stranger object is the so-called money tree (*qian shu*) from the Asian Art Museum of San Francisco (cat. no. 25). This is one of many examples that have been found in Eastern Han (second century) tombs in Sichuan, one of the areas in which Xiwangmu had the greatest following in this period.⁶ These objects are typically made of a bronze trunk and branches set into a ceramic or stone base. The term "money tree" derives from the fact that the bronze branches are decorated with coin-shaped designs that imitate coins of the Han period.⁷ The function of such money trees in late Han dynasty Sichuan was to provide a symbol of rebirth and eternal life for the occupant of the tomb.

In this example, the base is made of earthenware covered with an amber-colored lead glaze. The surface of the base is covered with molded designs depicting animals, culminating at the top with a figure riding on the back of a deer. From here the bronze tree ascends, with six levels of branches growing off the trunk; these are attached with tenons. Each branch consists of a horizontal stem, with images of coins growing above and below. Near the top is an image of the Queen Mother of the West, seated between two dragons under a canopy; above her, an immortal rides on the back of a dragon. A noteworthy feature of the decoration is the small figure of a meditating Buddha, situated below the figure of Xiwangmu. Buddhism entered China during the late first century, and as Wu Hung has shown, by the second century the Buddha was often seen as an immortal.⁸ Similar images are found in other materials in the Eastern Han period, including stone carvings, ceramics, and bronze mirrors.⁹ Such images would proliferate during the Three Kingdoms period (220–280) and after. The presence of the Buddha under Xiwangmu's image on the San Francisco money tree clearly conveys the superiority of the latter, and yet signals the openness among the Queen Mother's followers toward other systems of belief.

25

TRADITIONALLY ATTRIBUTED TO LIU SONGNIAN

(ACTIVE LATE 12TH–EARLY 13TH CENTURY)

Offerings for Long Life at the Turquoise Pond

Ming dynasty, early 16th century

Hanging scroll; ink and colors on silk

198.7 x 109.1 cm

National Palace Museum, Taipei

THIS PAINTING DEPICTS the Zhou dynasty king Mu's visit to the Queen Mother of the West (Xiawangmu), a story that is ultimately about self-understanding and transcendence. Ancient texts describe King Mu (Muwang; r. 1001–946 B.C.) as the only human ruler to have arrived at the Queen Mother of the West's paradise on Mount Kunlun, located far to the west of China. Their meeting was brief and tinged with melancholy. The king, perhaps aware that he could never rise to the level of the goddess, bemoaned his unworthiness, and then returned home. The story is first found in the *Bamboo Annals*, said to have been excavated from a third-century-B.C. tomb in the third century A.D., and appears as well in the early Taoist text *Liezi*.¹ Its most elaborate version, however, is in the Tang dynasty text *Primordial Ruler, Metal Mother* (*jinnu yuanjun*), by the Taoist Du Guangting (850–933):

King Mu gave the command to harness his eight fine steeds in two teams of four. . . . Riding full speed ahead for a thousand *li*, they reached the nation of the Great Sou Clan. The Great Sou Clan head then offered as tribute the blood of white swans for the king to drink; he set out ox and horse milk to be used for washing the king's feet. After the men . . . drank, they proceeded along the road.

They spent the night in a fold of Kunlun on the sunny side of the Red Water River. On another day, they ascended Kunlun Hill, in order to inspect the palace of the Yellow Thearch [Yellow Emperor]. . . .

Subsequently he was a guest of the Queen Mother of the West. As they toasted each other with drinks at the side of the Turquoise Pond [Yao Chi], the Queen Mother of the West composed poems for the king. The king matched them. Their lyrics were sad. Then he observed where the sun set. In a single day, it had gone ten thousand *li*. The king sighed and said, "I, the Unique Person [as Son of Heaven], am not overabounding with virtue. Later generations will certainly trace back and count up my excesses!" It is also said that the king grasped a white jade tablet and heavy multi-colored damask, offering them in order to acquire the secrets of the Queen

Mother's longevity. She sang the "Poem of the White Clouds."

On top of Cover Mountain, he carved a stone to record his traces, then returned home.²

In the painting, King Mu and the Queen Mother of the West sit facing each other on a terrace, surrounded by jade maidens (*yunni*). The setting is a mountainous landscape, representing the paradise on Mount Kunlun. In the foreground, just outside a roofed enclosure, the king's chariots and attendants await him among boulders and trees. Despite the scroll's traditional attribution to the Southern Song dynasty court painter Liu Songnian, the style is closer to that of the Ming dynasty Wu School master Qiu Ying (c. 1495–1551/2).³ A similar painting in the Walters Art Gallery, Baltimore, bears a spurious Qiu Ying signature, and may be by a close follower.⁴

—S. L.

(detail)

27

Festival of the Peaches of Longevity

Ming dynasty, 15th century

Handscroll; ink, colors, and gold on silk

52 × 476 cm

The Nelson-Atkins Museum of Art, Kansas City, Gift of the Herman R.
and Helen Sutherland Foundation Fund (F72-39)

AMONG THE OUTSTANDING FEATURES of the Queen Mother of the West's paradise on Mount Kunlun were the peach trees that blossomed every three thousand years.¹ The earliest association of these transcendent peaches with the Queen Mother is found in the *Monograph on Broad Phenomena* (*Bowu zhi*) by Zhang Hua (232–300).² The peaches were believed to confer immortality on those who ate them. Zhang Hua's text describes the Queen Mother's visit to Emperor Wu of the Han dynasty (r. 140–87 B.C.) in 110 B.C. as follows:

The Queen Mother asked her attendants for seven peaches. They were as big as crossbow pellets. Giving five to the thearch [Emperor Wu], the Mother ate two. The thearch ate the peaches, then immediately took their pits and put them in front of his knees. The Mother said, "Why are you taking these pits?" The thearch replied, "These peaches are so sweet and lovely. I want to plant them." The Mother laughed and said, "These peaches bear fruit once in three thousand years." . . . Then Dongfang Shuo stealthily spied on the Mother from the southern side room of the basilica [the Nine Floriate Basilica], through the Vermillion Bird window lattice. The Mother saw him. She said to the thearch, "This small boy is spying through the window lattice. Formerly he came three times to steal my peaches." The thearch then greatly marveled at him. On account of this, people of the world say that Dongfang Shuo is a divine transcendent.³

The periodic blossoming of the peaches of longevity in the Kunlun paradise became a fixed part of the Queen Mother's mythology. This long handscroll in the Nelson-Atkins Museum depicts the festival of these peaches (*Pantaohui*). The fantastic landscape is painted in an archaistic blue-and-green style, with gold accents on the rocks. The clouds are painted in white and pink pigments. The first part of the scroll depicts guests who approach an ornate marble gate (*pailou*). Some of these figures walk, while others ride on rams, an elephant, a deer, a horse, and mythical beasts. One figure rides a blue ox and has a red parasol held over his head by an attendant; this may represent the sage Laozi (see cat. no. 1). Toward the center of the scroll, several elaborate palace buildings appear; these represent the palace of the Queen Mother of the West, and are painted with green, blue, and purple pigments and gold. The focus of attention is a grove of enormous peach trees, the ripe fruit of which is

being picked by children and adolescents, as immortals and jade maidens look on from a nearby terrace. In one pavilion, a female orchestra plays on the *pipa* (lute), *sheng* (mouth-organ), *qin* (zither), drum, cymbals, flutes, and chimes. Further on, two cranes dance on a garden terrace, observed by a group of transcendents. At the end of the scroll, male and female figures gather on a high, open-air marble terrace and gaze at a pink cloud.

A longer version of this composition in the Freer Gallery of Art, Washington, D.C., is traditionally attributed to the Southern Song dynasty (thirteenth century) painter Fang Chunlian, but is later in date (seventeenth or eighteenth century) than the Kansas City scroll.⁴ It preserves, however, the entire original composition, which is truncated in the Kansas City version. From the Freer version, it is clear that the Nelson-Atkins Museum scroll originally included a scene at the beginning, depicting guests crossing an ocean on chariots and mythical beasts as they approach the Kunlun paradise. In addition, the end of the scroll would have included a scene of cranes and phoenixes flying in elaborate patterns through the air.

—S. L.

28

MA YUAN (ACTIVE C. 1190–C. 1230)
Immortal Riding a Dragon

Southern Song dynasty, early 13th century
Hanging scroll; ink and light colors on silk
108.1 × 52.6 cm
National Palace Museum, Taipei

IN THIS PAINTING an adept (*xian*) flies through the air on the back of a dragon.¹ At the lower right, a demon thrall holds his master's dragon-headed staff. The scene takes place against a background of clouds, from which the dragon has just emerged. The transcendent gazes out into space with an intense, knowing expression.

Descriptions of such figures can be traced to the Inner Chapters of the *Zhuangzi* (c. 330 B.C.). According to Zhuangzi, this type of being, a "divine person" (*shenren*), "sucks the wind, drinks the dew, climbs up on the clouds and mist, rides a flying dragon, and wanders beyond the four seas."² Dragons were potent symbols of the *yang* force and of the Tao, and from the Warring States period onward (475–221 B.C.) were depicted as the vehicles of gods and transcendents. Images of winged beings (*yuren*) who have transcended the bounds of *yin* and *yang* are often depicted mounted on the backs of dragons in funerary art of the Han dynasty (206 B.C.–A.D. 220) and on bronze mirrors of the third and fourth centuries.³ By the Song dynasty (960–1279), if not earlier, Taoist gods were often shown riding on dragons; an example in this exhibition is the image of the Taoist Official of Water (*Shui guan*) from the Museum of Fine Arts, Boston (cat. no. 71). When human beings attained realization or perfection (*zhen*), they were often described as ascending to heaven in broad daylight on the back of a dragon. The ascension of the Yellow Emperor, for example, is described in this way in Sima Qian's *Records of the Historian* (*Shiji*), compiled in 104 B.C.:

... a dragon with whiskers hanging from its chin came down from the sky to fetch him. The Yellow Emperor mounted on the dragon's back, followed by his ministers and palace ladies, making a company of over seventy persons. When they had all mounted, the dragon rose from the ground and departed.⁴

A similar painting of an adept riding on the back of a dragon is also in the National Palace Museum, Taipei; it is attributed to the Song painter Zhao Boju (d. c. 1162).⁵

—S. L.

NOTES

Cat. no. 20

1. Schipper 1993: 91ff.
2. See Kleeman 1994b.
3. The term *boshanlu* appears to date to the late Six Dynasties period (sixth century); see Erickson 1992: 14. During the Han, such vessels appear to have been called *xunlu* or merely *lu*, both meaning censer.
4. *Ibid.*: 6.
5. Soot on the interior of the top indicates that the censer was actually used during Liu Sheng's lifetime: see Fong 1980: no. 95.

Cat. no. 21

1. Watson 1968: 33. For the Chinese text, see XYZDB: 53.
2. Graham 1960: 35. For the Chinese text, see XYLD8: 74.
3. See *Masterpieces from the Osaka Municipal Museum of Art* 1986: no. 306, and Desroches 1994: 126–27, no. 47.

Cat. no. 22

1. This entry is based on the study of the stele by Kristofer Schipper; see Schipper 1997.
2. *Ibid.*: 239; translated from French.
3. See, respectively, Chen 1988: 2, and Schipper 1991.

Cat. no. 23

1. For a comprehensive study of this scroll, see Avril 1997: 54–59, no. 27.
2. Among other things, the Four Sages disagreed with Gaozu's choice of his heir; see *ibid.*: 54, 58 n. 1.
3. Ware 1981: 104, 273.
4. Selected details of this scroll are published in Lawton 1973: no. 34.
5. Translated by Achilles Fang in Avril 1997: 54.
6. These are discussed at length in *ibid.*
7. The painting is recorded in the imperial Qing catalogue compiled by Zhang Zhao, et al.; see SQBJ: 571–77.

Cat. nos. 24–25

1. See Watson 1968: 82. For the Chinese text, see XYZDB: 107. As Suzanne Cahill has shown, this is one of the earliest references to Xiwangmu, although references to a deity called the "Western Mother" (Xi mu) occur in the oracle bones of the Shang dynasty; see Cahill 1993: 12–14.
2. Cahill 1993: 21–24.
3. *Ibid.*: 34. Xiwangmu is also mentioned as an immortal (*xian*) in the *Declarations of the Perfected* (Zhen'gao; HY 1010), compiled by Tao Hongjing (456–536); for example, see *juan* 2: 10b–11a, where Xiwangmu is identified as the mother of one of the female deities who figures in the Zhen'gao.
4. Textual references that connect Xiwangmu to Mount Kunlun are found in both the *Classic of Mountains and Seas* (Shanhai jing), and in the *Record of the Ten Continents* (Shizhou ji); see Cahill 1993: 19, 36–38, and Smith 1990: 110. The *Classic of Mountains and Seas*, traditionally attributed to Yu the Great and his assistant Yi (late third millennium B.C.), is variously dated to the Warring States (fifth–third century B.C.) or Han periods; see Fracasso 1993: 359–61. According to Suzanne Cahill, the *Record of the Ten Continents* is traditionally attributed to the immortal Dongfang Shuo (154–93 B.C.), active at the court of Han Wudi; see Cahill 1993: 36.
5. Two of these animals, the hare and the frog, were associated with immortality, procreation, and the yin force. Both animals were also associated with the moon, an ancient symbol of yin (just as the sun symbolized yang). As Wu Hung has shown, this funerary tile was originally placed on a wall between tiles depicting symbols of the sun and moon, further emphasizing Xiwangmu's position as a being "beyond opposing or conditional forces, thus representing eternity." See Wu 1987: 26, fig. 6.
6. For another example, see Rawson 1996: cat. no. 87.
7. As Chen Xiandan has shown, the money tree did not produce money, but instead symbolized the riches of a divine paradise, and was thus seen as a "tree of life"; see Chen 1997.
8. Wu 1987: 33. On other Buddhist images of the late Han, see Wu 1986.
9. Wu 1987: figs. 11–12.

Cat. no. 26

1. Cahill 1993: 46.
2. *Ibid.*: 123–24.
3. The fact that the painting is not by Liu Songnian, but resembles works by the early-sixteenth-century painters Zhou Chen, Tang Yin, and Qiu Ying, is pointed out in *Changsheng de shijie* 1996: 80.
4. Walters Art Gallery, acc. no. 35.42.

Cat. no. 27

1. Sources differ on the periodicity of the peach trees' blossoming; they range from one thousand to three thousand years. See Cahill 1993: 178.
2. *Ibid.*: 54–55.
3. *Ibid.*
4. Freer Gallery of Art, acc. no. 08.170.

Cat. no. 28

1. Previously published in *Changsheng de shijie* 1996: pl. 2.
2. Watson 1968: 33; see also cat. no. 21.
3. See Cheng 1957: pl. 3, fig. 6 (depicting a pair of Han ceramic dragons ridden by winged figures, now in the collection of The Art Institute of Chicago, 1978.1029–30), and Nakano 1994: cat. no. 55.
4. Translated in Watson 1961, vol. 2: 52; cited in Dragan 1991: 148. This story also appears in the short biographical account of the Yellow Emperor in the *Biographies of the Assorted Immortals* (Lixian zhuan), attributed to Liu Xiang (77–6 B.C.) of the Han dynasty; see Kaltenmark 1987: 50–53.
5. *Changsheng de shijie* 1996: pl. 1.

萬物將自化王者法道為政吏民庶孽子悉
化為道化如欲作吾將鎮之以无名之樨夫
正變得耶改得正今王者法道民悉從正
齊正而正不可厚廢為耶矣觀其將變道
便鎮制之檢以元名之樨教誡見也王者不
當法道鎮制之而不能制者世俗悉變為耶
矣下古世是也无名之樨其將不欲道性於
信間都无所欲王者不當法之无欲以靜天
地自正道常无欲繫清靜故令天地常正天
地道正也王者法道行誡臣下悉皆自正矣

THIS SECTION OF THE CATALOGUE introduces religious Taoism and focuses on two key moments in its early development: the deification of the sage Laozi and the emergence of the first Taoist church. One of the most complicated aspects of Taoism is its transformation from a philosophy to a religion. One catalyst for this transformation was the political disintegration of the Han dynasty in the second century A.D.; another was the impact on Taoism of Buddhism, a foreign religion that arrived in China from India over the Silk Road in the late Han dynasty. At about the same time, in the second century A.D., the sage Laozi was deified by imperial decree.

The origins of religious Taoism can be traced to Sichuan province in the second century, when the spiritual leader Zhang Daoling had a vision of the deified Laozi. In this vision Laozi commanded Zhang to organize his followers into a movement, which came to be known as the Way of the Celestial Masters (Tianshi Dao). Zhang Daoling became the patriarch of the Celestial Master lineage. Central to this movement was the cultivation of a strict moral code and the belief in gods who, through rituals, could be invoked to aid humanity to achieve both its spiritual and material needs. These gods were perceived as beings composed of the most refined spirit, personifying and giving a recognizable face to the Tao.

The deification of Laozi was given early visual expression in stone sculptures that depict the ancient sage as a god. These works, dating to the Northern and Southern Dynasties period (386–589), illustrate the tremendous impact of Buddhism on Taoism. The two aspects of this influence explored here are the borrowings from Buddhist conventions in the early Taoist depictions of the deified Laozi, and the adaptation from Buddhism of the idea of reincarnation (originally a Hindu concept), reflected in images of the earlier manifestations of Laozi, for

example, his incarnation as Guangchengzi during the reign of the Yellow Emperor (third millennium B.C.).

The remarkable stone sculptures shown here range in date from the Northern Wei to Tang dynasties (sixth to eighth centuries). Among these is a stele dating to 517, from the Forest of Stelae in Xi'an, China, which on one side depicts the deified Laozi (holding his usual attribute, a fan), and on the other the historical Buddha Shakyamuni. Syncretic works such as this, which make room for both religions, demonstrate the pragmatic approach to religion characteristic of traditional Chinese culture. (This phenomenon is explored further in section III.1, "Taoism and Popular Religion.") The sculptures of the deified Laozi from the Tang dynasty (618–906) illustrate the sage as the divine ancestor of the Tang emperors, and are early illustrations of the usefulness of Taoism in establishing political legitimacy.

Stele with the Deified Laozi and Two Attendants

Northern Wei dynasty, Yanchang reign, dated 515
Sandstone

Votive Stele with the Deified Laozi

Sui dynasty, Kaihuang reign dated 587
Limestone
24 × 15 cm
Museum of Fine Arts, Boston, Special Chinese and Japanese Fund
(07.732)

THE SAGE LAOZI is known to have been worshipped as a god by the second century A.D., in the late Han dynasty. Two recorded stele inscriptions of the Eastern Han—the *Stele of the Sage Mother* (*Shengmu bei*), dated 153, and the *Inscription for Laozi* (*Laozi ming*), dated 165—both reveal a new view of Laozi as a god. The former text was the first to describe Laozi as equivalent to the Tao; the second records an imperial sacrifice to the deified sage enacted by Emperor Huan (r. 147–67) at Laozi's birthplace.¹ The *Stele of the Sage Mother* inscription includes the following lines:

Laozi, the Tao:
Born prior to the Shapeless,
Grown before the Great Beginning,
He lives in the prime of the Great Immaculate,
And floats freely through the Six Voids.²

The *Inscription for Laozi* proves that by the middle of the second century Laozi was worshipped as a god by the Han elite. As

Livia Kohn has shown, the sage was now seen as “the central deity of the cosmos, who was born from primordial energy, came down to earth, and eventually ascended back to the heavenly realm as an immortal.”³ This stele inscription reads in part:

Laozi was created from primordial chaos and lived as long as the three luminants [sun, moon, and stars]. He observed the skies and made prophesies, freely came and went to the stars. Following the course of the sun, he transformed nine times; he waxed and waned with the seasons. He regulated the three luminants and had the four numinous animals by his side.⁴ He concentrated his thinking on the cinnabar field [*danian*].⁵ saw Great Unity [*Taiyi*]⁶ in his purple chamber, became one with the Tao, and transformed into an immortal.⁷

In the late Han and Six Dynasties periods, the deified Laozi became the central god in the pantheon of religious Taoism. The earliest images of the deified Laozi date to the fifth century, and are only known in significant numbers from the early sixth century onward (late Northern Wei dynasty). Several references to Taoist image-making survive in fifth-century texts.⁸ As Stephen Bokenkamp has pointed out, Lu Xiuqing (406–477), the compiler of the Taoist Lingbao scriptures, spoke out against the creation of ornate images for Taoist worship, indicating that such works were being made in southern China in the mid-fifth century.⁹ The Northern Wei Celestial Master Kou Qianzhi (365–448) is also recorded in the *History of the Sui Dynasty* (*Sui shu*) as having commissioned Taoist images of Celestial Worthies (*tianzun*) for a temple near the imperial capital.¹⁰ The majority of Taoist sculptures that survive from the Six Dynasties period come from the area around Xi'an in Shaanxi province. The four sixth-century examples included here range in date from 515 to 587 (late Northern Wei to Sui dynasties).

Images of the deified Laozi (now known as Taishang Laojun, or Supreme Lord Lao) are most often found on stone stelae, usually carved from sandstone or limestone.¹¹ The first stele, from the Osaka Municipal Museum of Art, bears an inscription dated to 515, corresponding to the fourth year of the Yanchang reign of the Northern Wei dynasty (cat. no. 29). At this time China was divided between north and south, with the Turkic Toba ruling the Northern Wei (386–534), and Chinese emperors ruling the Liang dynasty (502–557). The Osaka stele is stylistically characteristic of many Taoist and Buddhist sculptures that have been found in the vicinity of Xi'an, an area that was part of the Northern Wei state in the early sixth century. This area played an important role in religious Taoism from the fifth century onward. One of the most sacred Taoist sites is the Observation Platform

(Louguan Tai), located at the base of the Zhongnan Mountains, about sixty kilometers southwest of Xi'an. This is where Yin Xi watched for the purple aura that filled the sky as Laozi approached on his ox as he left for the Western Regions, and where Laozi transmitted the *Daode jing* to Yin Xi.¹²

In its focus on a large central image of the deified sage, the Osaka stele is typical of a format commonly encountered among many Taoist sculptures from the Six Dynasties period. This figure sits in meditation and holds a fan in his right hand; this would become a standard attribute of the deified Laozi in Chinese art. He has a mustache, and on his head is a Taoist priest's cap. Carved in low relief behind Laozi are two intertwined dragons and circular images of the sun and moon. A border of coiled motifs, perhaps clouds, appears at the very top of the stele. The deified Laozi is flanked by smaller standing attendants, one of whom clasps his hands together, while the other holds a vase and a cup. Below the figure of Laozi is a scene depicting two standing worshippers making obeisance before an incense burner; as Kristofer Schipper has pointed out, in Taoism, "the offering of incense in the burner is the essential element of worship."¹³ The stele's inscription is short, beginning on the right side with the date ("On the fifth day of the fourth month of the fourth year of the Yanping reign" [i.e., 515]), and concluding on the lower front with a list of donors; the latter section has suffered from damage.¹⁴ The back and left sides are unadorned.

Scholars have long assumed that the basic format seen here—the large figure of the deified Laozi flanked by two attendants—was borrowed from the prevailing style of Buddhist sculpture, in which a central Buddha was flanked by smaller figures of bodhisattvas; this observation appears entirely correct. In addition, as Jean James has shown, the formula for many of the dedicatory inscriptions on early Taoist stelae were also borrowed from contemporary Buddhist practice.¹⁵ While we know nothing of the precise mechanics of such borrowing, it appears to have been analogous to the well-documented borrowing of textual and ritual elements from Buddhism by early Taoists in the fourth and fifth centuries.¹⁶

Until recently the identity of the figures flanking the deified Laozi on such stelae has been a mystery. An inscription on the back of a Northern Wei stele in the Field Museum, undated but close in style and date to the Osaka stele, identifies the two flanking figures as Yin Xi (Yin xiansheng) and Zhang Ling (Zhang Ling xiansheng).¹⁷ The figures are significant because these were the first human beings to receive revelations from Laozi. It was to Yin Xi that Laozi first transmitted the *Daode jing* (see cat. no. 1), while Zhang Ling (Zhang Daoling) was the first

31

32

human being to experience a vision of the deified Laozi (later known as the Supreme Lord Lao [Taishang Laojun], or Celestial Worthy of the Tao and its Power [Daode tianzun], or merely Celestial Worthy [tianzun]). One result of Zhang Daoling's vision was his reception of the title "Celestial Master" (*tianshi*) from Laozi.¹⁹ It is possible that the figures flanking the deified Laozi on many Six Dynasties and Tang (618–906) period Taoist sculptures also depict Yin Xi and Zhang Daoling. In later Taoist tradition, both Yin and Zhang became immortals.²⁰

The large Northern Wei stele in the Forest of Stelae (Beilin) Museum, Xi'an, bears an inscription dated 517 (cat. no. 30).²⁰ Carved two years after the Osaka stele, it is over six feet tall and is four-sided, with niches carved into each side. The stele is extraordinary in that the primary image on the front is the deified Laozi, while the primary image on the back is the Buddha Shakyamuni.²¹ Laozi is identified by his Taoist cap, the fan he holds in his right hand, and his mustache; the Buddha is identified by his *urna* (the raised bump at the top of his cranium), his *usnisa* (the tuft of hair at the center of his forehead), and the sacred gesture of his right hand, which is raised in *abhaya mudra*, signifying the absence of fear. The two figures are flanked by attending immortals and bodhisattvas, respectively. Laozi sits under a pavilion with *weichi* (owl's tail) finials at the ends of the ridge-beam.

The ecumenical nature of this work is emphasized by the careful attention to detail in the depiction of the Buddha and bodhisattvas and by the presence among the donors of two Buddhist monks (*bhikshu*) with shaved heads, their monastic names inscribed, flanking the bodhisattvas. This part of the stele could easily be mistaken for a Buddhist sculpture. The syncretic appearance, however, may be illusory. The stele lists over sixty donors, more than half of whom are members of the Lü family, and two of these are listed as Taoist priests (*daoshi*). The overwhelmingly Taoist spirit of the stele is suggested by the many Taoist given names among the lay donors: Daoguang (Radiance of the Tao), Daonu (Servant of the Tao), Daoqi (Ascendancy of the Tao), and Daozhen (Prize the Tao). There are different interpretations of the mixed Taoist and Buddhist images on such works.²²

To either side of Laozi's throne are immortals riding on mythical beasts; both the figures and their mounts turn to look at each other. Immediately below the figure of Laozi is a large incense burner entwined by two dragons, with three donors facing the censer on each side. In all there are five registers of donors below the niche containing the deified Laozi. On the back, a canopy with stylized flames appears above the Buddha's niche, above which are many heads of celestial beings. A celestial angel

appears at the left, and what may be a reborn soul emerging from a lotus flower appears at the right. Mythical beasts crouch to either side of the Buddha's throne, one of which has an elfin rider. Below is an incense burner entwined by dragons, just as on the front of the stele. The fact that several of the donors on this side of the stone are unnamed and the existence of blank spaces among the donors suggest that the front side was filled up with names first, with others then added on the back.

The stele's left side has a niche showing a priest or immortal seated with his hands folded in his lap. This figure wears the same cap as Laozi and his attendants, and is clearly Taoist. The three donors named as Taoist priests appear directly below this figure. While this figure is unidentified, he, like Laozi, sits under a pavilion with owl's tail roof finials. Four celestial angels resembling Buddhist *apsaras* soar through the air above. The stele's right side has a niche that appears to have contained a single figure of the bodhisattva Maitreya; the figure's head is missing, however, so its identity is not clear. The stele's dedication appears below this niche and comprises nine vertical columns of standard script, ending with the date, "The second year of the Xiping reign, the cyclical year *dingyou*" (i.e., 517).

The significance of the Beilin stele lies in the way in which it demonstrates the fluid boundary between early Taoism and Buddhism, giving equal place to the deified Laozi and the Buddha. While the precise mechanisms that determined the iconographic structure of such stelae remain unclear, works of this type clearly reflect the openness of the Chinese people to other religions and other gods. This fluid boundary allowed Taoism to accommodate other traditions and beliefs, among which were cults to local gods and immortals (see section III.1, "Taoism and Popular Religion"). In other inscribed examples from the sixth and early seventh centuries, Buddhist and Taoist titles of both deities and donors are often seemingly mixed up, as in the case when the central deity is Taoist, but the donors list themselves as Buddhist disciples, and vice versa.²⁹ The large numbers of Buddhist sculptures from the same area of Shaanxi province suggest that Taoism and Buddhism flourished side-by-side in this area during the late Northern Wei dynasty and were not necessarily seen as mutually exclusive systems of belief. Stephen Bokenkamp has suggested that by this time Taoists in Shaanxi had absorbed certain doctrines from the new Lingbao scriptures from southern China (see cat. nos. 53, 56).³⁴

By the mid-sixth century, the arrangement of figures seen on the Northern Wei sculptures had become even more formalized. The Northern Qi dynasty (550–577) Taoist stele in the Osaka Municipal Museum of Arts (cat. no. 31), dated 554, is a good

example. This stele is carved from limestone and has niches with the deified Laozi on all four sides. The front and back present the seated Laozi with two standing attendants. On the front, the figure of Laozi holds his usual attribute, a fan. These niches appear against a background of low-relief carvings, executed with great vitality; these include flying celestial figures among scudding clouds, an ornate arch above the niche, standing attendants to either side, and a censor, kneeling attendants, and lions below. Following the dedication and the cyclical date *jiaxu* (554) is a long list of donors.³⁵ A similar though undated Taoist stele is in the Arthur M. Sackler Gallery, Washington, D.C.

Many Taoist images survive from the Sui dynasty (581–618), during which China was reunited after over three centuries of disunion. The small stele in the Museum of Fine Arts, Boston, presents a niche with the triad of the deified Laozi with two standing attendants who hold tablets (cat. no. 32). Behind Laozi's head is a lotus-shaped halo. On either side of this central group are two seated lions. The inscription, carved below, reads:

On the twenty-ninth day, [the cyclical day] *renshen* of the sixth month [*jiachen*] of the seventh year of the Kaihuang reign of the Great Sui [dynasty], the Taoist [*daomin*] Su Zun respectfully had commissioned a sculpture of Lord Lao [Laojun], above seven generations of fathers and mothers, for the father and mother who gave him birth, and all his dependents and relatives. May they all achieve the Tao [*cheng Dao*] at one time.

This group of sixth-century Taoist stelae reflect the development and proliferation of images of Laozi during the Six Dynasties and Sui periods. These sculptures set the stage for images of the succeeding Tang dynasty, when the deified sage was appropriated as the divine ancestor of the imperial house.

Stele with the Deified Laozi and the Jade Emperor

Northern Wei dynasty, Longxu reign, dated 527

Sandstone

27.8 × 27.5 cm

National Museum of Chinese History, Beijing

THIS FINELY CARVED STELE appears to depict the deified Laozi with the Jade Emperor or Jade Thearch (Yuhuang).¹ The two primary figures are seated side-by-side in identical postures.² Both figures are bearded and wear the caps of Taoist priests. Their beards extend down over their hands, which are turned outward; their faces radiate expressions of calm detachment, with meditative, half-closed eyes. Behind them stand three smaller figures. Seated lions are carved in low relief on either side of the two primary figures. An inscription at the upper left identifies the larger figure on the left as Yuhuang shi (Master Jade Emperor).³ This may be the earliest surviving depiction of the Jade Emperor in Chinese art.

The back of the stele is divided into two horizontal registers, carved with scenes depicting the stele's donors in low relief. At the top is an ox cart, with a female attendant next to the ox, and a female figure walking behind. Judging from the inscription to the immediate left of this scene, the standing female figure is probably Wang Ashan, the primary donor of the stele. The lower register is divided into two scenes, both of which depict riders on horseback, attended by servants holding parasols.

The left side of the stele is inscribed, "On the twenty-fifth day of the eleventh month of the first year of the Longxu reign [527], the female officer [*nüguan*] Wang Ashan commissioned two sculptures. May my mother and son long have virtuous households." The inscription continues on the back, in three sections: 1) "The Taoist female officer Wang Ashan [who] rides in a cart"; 2) "The niece Feng Wufang [who] rides on a horse"; 3) "The son Feng Faxing [who] rides on a horse." A similar sculpture in the collection of the Museum of Fine Arts, Boston, bears an inscription dated to 515, and may have come from the same workshop.⁴

One of the earliest scriptural sources for the Jade Emperor is the *Supreme Secret Essentials* (*Wushang biyao*), a Taoist compendium dating to the Northern Zhou dynasty (557–581).⁵ By the Tang dynasty (618–906), awareness of the Jade Emperor was widespread among literati.⁶ During the reign of the Northern Song dynasty emperor Zhenzong (r. 997–1022), worship of the Jade Emperor was made part of the imperial cult.

The earliest recorded painting of the Jade Emperor was created in the tenth century by Shike in Shu (modern Sichuan). The painting was significant for its depiction of the Jade Emperor holding court, as the head of a vast pantheon:

Assembled in the sovereign's presence are the celestial immortals [*txianxian*] and numinous officials [*lingguan*], the golden boys [*jintong*] and jade maidens [*yunü*], the Three Officials [*Sanguan*], the gods of Heaven, Earth, and Water; see cat. nos. 69–71], the Supreme Unity [*Taiyi*], the Seven Primes [*Qiyuan*], the gods of the seven stars of the Northern Dipper], the Four Saints [*Sisheng*; see cat. no. 107], the constellations everywhere, the deities of wind, rain, thunder, and lightning, the lords of hills and streams, all rulers of the regions above or below the Earth.⁷

The Jade Emperor, perceived as the head of the popular pantheon, played an increasingly vital role in Chinese religion from the Song dynasty (960–1279) onward. The Jade Emperor occupies a key position that bridges the Taoist and popular pantheons. Several Taoist gods, such as Zhenwu and Yisheng (see cat. no. 107), were called to serve as gods by the Jade Emperor,⁸ and images of the Jade Emperor are often seen in Taoist temples today.

—S. L.

THE *XIANG'ER COMMENTARY* is a highly polemic Taoist work that is universally critical of other traditions, including the Five Classics of Confucianism. The commentary is truncated at the beginning, starting with chapter 3 of the modern edition of the *Daode jing* and continuing only to chapter 37. As in contemporaneous Buddhist texts, there are seventeen characters per column of text. The calligraphy has a balanced, architectonic appearance. Based on similarities with dated Buddhist scrolls from Dunhuang, this work most likely dates to the early sixth century.¹ An unrelated text appears on the back of the scroll, written in a much more informal script.

For a number of reasons, the *Xiang'er Commentary* to the *Daode jing* is one of the most important, most fascinating, and most perplexing of all early Taoist writings. First, its calligraphic style suggests that it was written two centuries before most of the other Taoist manuscripts found at Dunhuang, making it one of the earliest original sources on the Taoist religion.² Second, it is one of the earliest commentaries on the *Daode jing* to be influenced by religious Taoism. Together with the *Stanzas of the Lord on the River* (*Heshang gong zhangjiu*) commentary,³ it is our earliest source for understanding how the *Daode jing* was seen within the religion that revered it above all other scriptures. Moreover, the *Xiang'er* and *Heshang gong* commentaries often stand in direct opposition to each other. When placed together, these two commentaries seem to suggest the earliest controversy on how to interpret the *Daode jing* within religious Taoism.

Finally, the *Xiang'er* is important for the role it has played in modern scholarship. Because of the difficulties involved in dating the composition of the scripture, and the significance that this dating holds for our understanding of the early development of Taoism, this brief, incomplete commentary is one of the most controversial of all early Taoist texts. Some Six Dynasties (420–589) sources attribute this commentary to Zhang Lu, the third patriarch of the Celestial Master tradition, the earliest and most fundamental of all the traditions that formed Taoism. Lu successfully established an independent theocracy when the Han dynasty collapsed, ruling for decades before he finally submitted to the kingdom of Wei in 215; he was enfeoffed by the Wei court, and his teachings gradually spread throughout China. He is believed to have been responsible for much of the early codification of the Celestial Master church. There are, however, virtu-

ally no writings that can be confidently attributed to Lu. Thus, if he did produce the *Xiang'er*, this commentary would be an extremely significant primary source for understanding early Celestial Master doctrines.⁴

At the same time, though, it was common in the Six Dynasties period to attribute writings to Lu or his grandfather Zhang Ling (Zhang Daoling), the first patriarch of the movement, since these two men were the most highly respected figures in the history of the church. The very attribution of a text to one of them makes it immediately suspect. Consequently, some scholars have suggested that the *Xiang'er* was not written until the Six Dynasties period, probably during the Liu-Song dynasty (420–479).⁵ There is substantial evidence on both sides of this controversy, but the argument for a later date finds support in the fact that many of the terms and ideas appearing in this text have no outside precedents until the Six Dynasties period. For example, the *Xiang'er* uses the term "Taoism" (*daojiao*) as a reference to its religious competitors; the first texts other than the *Xiang'er* to use this term as a reference to the religion of Taoism date to the fifth century, two centuries after the supposed creation of the *Xiang'er*.⁶ Consequently, if the *Xiang'er* was written by Zhang Lu, it would substantially change our understanding of many of the key doctrines and terms of Taoism, including even the name of the religion. On the other hand, if this text was written in the Six Dynasties and only attributed to Lu, which would seem to be more in accordance with the ideas it expresses, then the *Xiang'er* could be understood as a reactionary movement against the innovations of the fifth century, when Taoism as we know it today was first codified. This gives the *Xiang'er* a very different context, but does not diminish its importance, since according to this interpretation it would represent one of the earliest, if not the first, internal challenges to the newly formed religion of Taoism in the early Six Dynasties period.

真行子
老君於帝堯時降真行子觀靈寶經教以養物好生之道帝行之則四門明四目禾草繁茂景星顯見

AS THE LEGENDS around Laozi developed, he gradually changed from a figure limited by time and space to a deity with the power to appear in different places at different times, repeatedly taking human form as an imperial instructor to guide the development of Chinese civilization. The deification of Laozi was already under way in the Han dynasty (206 B.C.-A.D. 220).¹ During the medieval period, the names taken by Laozi during these early manifestations were standardized,² and a list of scriptures revealed to each ancient ruler was developed.³ In addition, by this time Laozi was given credit for transmitting to each of these emperors the fundamental developments of Chinese civilization, from fire and farming to the Eight Trigrams (see cat. no. 14).

In this handscroll Wang Liyong depicts ten manifestations of Laozi, and he indicates the names the deified sage took during each appearance, the cultural advances he taught to each ruler, and the scriptures he revealed to them. These can be summarized as follows:

1. In the beginning of the *Chiming* world age (*jie* or *kalpa*), he transmitted the "Numinous Treasure" (*Lingbao*) scriptures;⁴ in the beginning of the following *Kaihuang* world age, he transmitted the "Cavern of Divinity" (*Dongshen*) scriptures.⁵ These revelations were accompanied by his manifestation to the most ancient Chinese rulers, the "Three Emperors" (*Sanhuang*), under the name of Master Gu.
2. In the time of *Suiren*, the legendary ruler credited with the discovery of fire,⁶ Laozi appeared as the Imperial Lord of the Golden Tower (*Jinque dijun*).

3. In the time of Fuxi, the inventor of the Eight Trigrams, Laozi appeared as Yuhuazi and transmitted the *Scripture of Primordial Yang* (*Yuanyang jing*).

4. In the time of Shennong, the inventor of crop cultivation, Laozi appeared as Dachengzi and revealed the *Scripture of Primordial Essence* (*Yuanjing jing*).

5. In the time of Jurong, the inventor of metal casting, Laozi appeared as Guangshouzi and revealed the *Scripture of Massage Which Circulates Essence* (*Anmo tongjing jing*).

6. In the time of the Yellow Emperor (Huangdi; see cat. no. 36), China's first great martial ruler and caster of nine magical tripods, Laozi appeared as Guangchengzi and revealed the *Scripture of the Utmost Way and Great Life* (*Zhidao taisheng jing*).

7. In the time of Emperor Yao, Laozi appeared as Zhenxingzi and revealed the *Scripture of the Luminous Treasure* (*Lingbao jing*).

8. In the time of Emperor Shun, Laozi appeared as Xueyizi and revealed the *Scripture of Great Clarity* (*Taiqing jing*).

9. In the time of Yu, who undertook massive land reclamation projects throughout China, Laozi appeared as Wuchengzi and revealed the *Scripture of Opening the Heavens* (*Kaitian jing*).⁷

10. In the time of Tang of the Yin (Shang) dynasty, Laozi appeared as Chuanyuzi and (again) revealed the *Scripture of the Luminous Treasure*.

For the most part, the first six of these manifestations agree with the Northern Song biography of Laozi entitled *Biography of the One Who Seems like a Dragon* (*Youlong zhuan*; HY 773), compiled by Jia Shanxiang during the reign of Emperor Zhezong (r. 1085–1100), a few decades before this painting was made. Manifestations 7 through 10, however, do not correspond to the standard biographies of Laozi in the Taoist Canon. Wang may have been working with a source corrupted by scribal errors, since the names for manifestations 7 and 9 have been reversed; but other details of these manifestations do not agree with the standard sources.

The idea of Laozi's transformations had a significant impact on the development of the Taoist religion. Laozi came to be understood as instructor and special patron of the imperial family, an idea that gained strength as Taoism began to vie with Buddhism for imperial support. This doctrine culminated in the identification of the members of the Tang ruling house as the descendants of the Elder Lord himself, although it defined the relationship between the Taoist church and imperial court and served as a tool for political legitimation both before and after the Tang dynasty.

The signature by Wang Liyong at the end of this handscroll is preceded by the character *chen* ("servant" or "official"), indicating that this was an imperially commissioned painting. In addition, seals of Emperor Gaozong of the Song dynasty (r. 1127–62) suggest that the painting was commissioned by him and painted between 1134 and 1162.⁸ Wang Liyong was a native of Tongzhou, Sichuan, and obtained the *jinshi* degree in 1120, during the reign of Emperor Huizong. After the Song capital was moved to Lin'an (Hangzhou), he served under Emperor Gaozong as a secretary in the imperial library. He was known for his talent as a calligrapher and figure painter, as well as for his knowledge of the *Book of Changes* (*Yi jing*). The scroll also bears two colophons by the great Ming dynasty collector Xiang Yuanbian (1525–1590).

36

WU WEI (1459–1508)

Discussing the Tao (Guangchengzi and the Yellow Emperor)

Ming dynasty, c. 1500

Handscroll; ink on paper

30 × 97.5 cm

Tianjin Municipal Art Museum

OF THE EARLY MANIFESTATIONS of the deified Laozi, none was as frequently depicted in art as Master of Vast Attainment (Guangchengzi), the spiritual advisor of the Yellow Emperor (Huangdi), traditionally believed to have lived in the third millennium B.C. The Yellow Emperor was seen as an ancestor of the Chinese people and a master of esoteric wisdom.¹ During the Warring States period (475–221 B.C.), a blending of ideas attributed to two different schools of thought, traced to Laozi and the Yellow Emperor, gave rise to the so-called Huang-Lao school.²

The earliest text to describe the meeting between Huangdi and Guangchengzi, said to have occurred on Emptiness and Identity Mountain (Kongtong Shan—traditionally believed to be in Gansu province), is the eleventh chapter of the *Zhuangzi*, thought to have been compiled by the early second century B.C.³ According to this narrative, the Yellow Emperor visited Guangchengzi and asked him about the Tao, saying that he would like to use this knowledge to nourish the people, and to “control *yin* and *yang* in order to insure the growth of all living things.”⁴ Guangchengzi responded by pointing out that instead of concerning himself with the world, the Yellow Emperor should focus on perfecting himself. The Yellow Emperor then gave up his throne and retired to a simple hut, where he lived alone for three months. He later asked Guangchengzi what he should do to master his own being and live a long life. Master Guangcheng

then revealed that in order to pursue the Perfect Way, the Yellow Emperor had to cultivate emptiness and tranquility and distance himself from what was outside of himself.⁵

Wu Wei (1459–1508) was one of the great court painters of the Ming dynasty.⁶ In this handscroll, Guangchengzi appears on the right, under a pine tree, while the Yellow Emperor sits facing him, sitting slightly lower than his teacher on a gently sloping hill. This theme is often encountered in Ming (1368–1644) and Qing (1644–1911) dynasty painting, and owed its popularity in part to the perceived need for any ruler to be in harmony with the Tao in order to lead the people.⁷ The Tianjin Museum scroll has a colophon by the Manchu calligrapher Tiebao (1752–1824), consisting of a transcription in standard script of the *Scripture of the Yellow Court (Huangting jing; see cat. no. 128)*, dated 1817.

37

LIANG KAI (ACTIVE EARLY 13TH CENTURY)
Liberating the Soul from the Netherworld

Southern Song dynasty, early 13th century
 Handscroll; ink on paper
 26 x 73.9 cm
 Mr. and Mrs. Wan-go H. C. Weng Collection

ONE OF THE FINEST surviving examples of Taoist painting from the Southern Song dynasty (1127–1279), this handscroll is also a rare early work by the painter Liang Kai. Painted in the refined *baimiao* (uncolored line drawing) technique, the scroll presents a visionary scene in which a Taoist god and his celestial entourage appear to a Taoist priest. On either side are smaller scenes relating to the primary theme of the scroll: liberation of the soul from the underworld.

Taken as a whole, this painting describes the magical operation whereby the souls of the Taoist faithful were liberated from the netherworld through a combination of religious and secular actions that assured the practitioner a place in the ranks of the celestial offices. The balanced composition of the painting highlights this combination. Each scene within a Taoist temple on the right corresponds to a scene in the secular world on the left: the ritual for the liberation of the patron's ancestors in the lower right, for example, is paired with the liberation of the patron's own soul in the lower left; the vegetarian feast in the middle right is paired with the freeing of captive animals in the middle left; and the commissioning of religious images in the upper right is paired with the giving of alms in the upper left. The central image of the Taoist priest in audience with a celestial deity joins the sacred and secular worlds, and shows the power of the Taoist priest to transform the secular into the sacred through the

medium of Taoist ritual, which infuses the secular world with the sacred energy (*qi*) of the divine.

One particularly effective compositional element of the painting is the fact that the netherworld in the lower left lies just on the borders of the secular world. There is actually a gateway between the two, and the walls of the netherworld extend beyond the borders of the lower left-hand scene into the secular scene in the middle left. This conjunction gives the netherworld a presence not seen in many other paintings with similar themes and demonstrates Liang Kai's mastery of composition.

The theme of this painting received its principal exposition in the Numinous Treasure scriptures, especially the *Scripture of Conveyance* (*Duren jing*), which by Liang Kai's time was becoming the most important of all Taoist scriptures; this scripture is still put in the most honored place in the present Taoist Canon from the Ming dynasty.¹ In particular, the "refinement and conveyance" (*liandu*) funerary rituals that developed around this scripture were especially popular during Liang's lifetime, and may have been a direct influence on the painting.²

The artist's signature, reading "[Your] servant [*chen*], Liang Kai," can be found in the bottom left-hand corner of the painting. The presence of the character *chen* indicates that the painting was imperially commissioned at the Southern Song court in Lin'an (Hangzhou). During the Jiatai reign (1201–04) of Emperor Ningzong, Liang served as a painter-in-attendance (*daizhao*) at the imperial court. He is best known for his monochrome ink paintings of Chan (Zen) themes, many of which are preserved in Japan. This handscroll serves as important evidence that this great Buddhist artist painted Taoist themes as well, and titles of several other paintings by Liang with Taoist themes are also recorded, though none have been preserved.³ Another surviving work that Liang painted for the imperial court is *The Buddha Shakyamuni Descending from the Mountain*, now owned by the Agency for Cultural Affairs, Tokyo.⁴

The painting is followed by a copy of Wang Xizhi's *Scripture of the Yellow Court* (cat. no. 128) attributed to the great Yuan dynasty calligrapher Zhao Mengfu (1254–1322); Zhao's signature, however, is a forgery, and the writing was actually done by a later calligrapher in his style. The contents of the *Scripture of*

the Yellow Court are unrelated to the theme of Liang's painting, and this text was probably added solely because the *Scripture of the Yellow Court* was a popular calligraphic text and contained Taoist themes. Following the transcription are colophons by the scholars Wang Zhideng (1535–1612) and Da Zhongguang (1623–1692). Liang Kai's handscroll is erroneously recorded in Wu Qizhen's *Record of Calligraphy and Painting* (*Shuhua ji*; c. 1677) as *Deities of the Scripture of the Yellow Court*.⁵

貞白先生小象

Portrait of Tao Hongjing

Yuan dynasty, 14th century
Album leaf; ink and light color on paper
36.7 × 30.4 cm
National Palace Museum, Taipei

THIS ALBUM LEAF depicts the Six Dynasties period Taoist master Tao Hongjing (456–536). It is accompanied by a colophon, dated 1344, comprising a short biography of Tao, written by the Yuan dynasty Taoist Zhang Tianyu (1283–1350). Originally from Qiantang (modern Zhejiang), Zhang Tianyu lived on Mount Mao, the site of Tao Hongjing's residence during his retirement, and he was, therefore, an especially appropriate person to comment on this portrait.

Tao Hongjing was one of the most prominent political figures of the Southern Qi (479–502) and Liang (502–557) dynasties.¹ He served as a high-ranking minister during the Southern Qi, and instructed the imperial princes in the Confucian classics. Although he retired from office in 492, he remained influential well into the next dynasty, and was known as the "hermit Grand Councillor" during the reign of Liang Wudi (r. 502–49). Tao had many other accomplishments as well: he was one of the most distinguished literati of the Southern Qi–Liang period, associated with figures such as the great poet Shen Yue (441–513), and he was a gifted painter and calligrapher. His correspondence with Emperor Liang Wudi is preserved in the first major compilation of treatises on calligraphy, the *Essential Record of Calligraphy* (*Fashu yaolu*), compiled in the Tang dynasty. As Lothar Ledderose has shown, it is in Tao Hongjing's writings that the first mention of tracing copies of calligraphy appears.² A stone inscription attributed by many scholars to Tao, the "Inscription on the Burial of a Crane" (*Yihe ming*), influenced the calligraphic styles of Ouyang Xiu (1007–1072) and Huang Tingjian (1045–1105), two of the greatest calligraphers of the Northern Song dynasty (960–1126). Ironically, Huang Tingjian claimed that the inscription was by Wang Xizhi (see cat. no. 128); it was Huang Bosi (1079–1118) who first identified it as the work of Tao Hongjing.³ Tao was also prominent for his scientific endeavors: in addition to alchemical experiments, he was famous for his astronomical charts (see cat. no. 18) and his design of a water-clock.⁴ He experimented with techniques for forging swords and is said to have presented to Liang Wudi swords of exceptional quality,

intended for the practice of "corpse liberation" (see cat. nos. 58–59).⁵

For later generations, however, Tao's greatest achievement was probably the work he did collecting, editing, and annotating the fragmentary manuscripts of the original Highest Purity revelations (cat. no. 55). This work resulted in two major compilations, *Hidden Explanations for Ascending to the Perfected* (*Dengzhen yinjie*; HY 421) and *Declarations of the Perfected* (*Zhen'gao*; HY 1010). The Highest Purity revelations formed the basis for the first of the Three Caverns, the "Cavern of Perfection" section, and yet virtually everything we know about the earliest formulation of this scriptural tradition comes from Tao's writings. In addition, Tao described in some detail the later development of this tradition during the Six Dynasties period, so that his work is the foremost source for understanding the entire first century of development for the Cavern of Perfection scriptures.

Tao's studies of the Highest Purity manuscripts led him to become critical of the mainstream tradition of Taoism. He claimed, for example, that the Numinous Treasure (Lingbao) scriptures—which formed the second of the Three Caverns, the "Cavern of Mystery" section—were nothing more than "fabrications" in imitation of earlier Highest Purity writings. In addition, he criticized many of his predecessors, including Lu Xiuqing (406–477), who he claimed had intentionally suppressed genuine manuscripts in favor of later corrupted editions. As a result, Tao did not support many of the Taoist doctrines that were already becoming standard by the middle of the Six Dynasties period. Before the end of the Six Dynasties period, however, Tao's own work was reincorporated into Taoist orthodoxy and became a part of the mainstream tradition.

42

Stele with the Deified Laozi and Donors

Tang dynasty, Kaiyuan reign, dated 726
Sandstone
H. 45.7 cm
The Field Museum, Chicago, Gift of Duan Fang (32362)

THE WORSHIP of the deified Laozi in religious Taoism reached a new level of significance during the Tang dynasty (618–906). In this period, Laozi was appropriated as the divine ancestor of the Tang imperial family, for both political and spiritual legitimacy. The fact that the ancient sage (now a god) and the Tang emperors shared the same surname (Li) helped make this possible. In 625 Emperor Gaozu announced that Taoism should be ranked ahead of Confucianism and Buddhism (in that order), and in 626 the direct connection between Taoism and the Tang ruling house was clearly articulated.¹ The increasingly important role of Laozi came about in part through the activities at the court of a Taoist priest of the Louguan (Observation Platform) Temple near Xi'an, Yin Wencao (622–688), who claimed to be a descendant of Yin Xi (to whom Laozi had first transmitted the *Daode jing*).² In 666, during the reign of Emperor Gaozong, the deified Laozi was given a new title, Supreme Emperor of Mystery Prime (Taishang xuan yuan huang di).³ In 675 a new edition of the Taoist Canon was compiled, and in 678 the *Daode jing* became a required text in the civil service examination system.⁴ In 730, during the reign of Emperor Xuanzong (Minghuang), imperially sponsored lectures on the *Daode jing* were held at the court in Chang'an (Xi'an), and two years later copies of the text were inscribed onto stone tablets, along with a commentary by the emperor.⁵ An imperial order was promulgated in 733 to the effect that every household in China should own a copy of the *Daode jing*. Subsequently, in 743, during the Tianbao reign, Laozi began to be worshipped in the imperial ancestral temple. As Livia Kohn has written,

These numerous manifestations and visions of the deity [Laozi] recorded in official inscriptions under the Tang were not only placed in various, often newly emerging, places of sacred impact but also show a completely different Lord Lao. No longer the far-distant cosmic creator and abstract symbol of cosmic harmony and state perfection, he has become the concerned ancestor of the ruler of the new dynasty, a deity who is close to humanity both as the third god of the trinity [the Sanqing; see cat. nos. 65–67] (and thus the teaching aspect of the Tao) and because he has active family ties on earth and is a responsible and caring ancestor to his descendants.⁶

Under Emperor Xuanzong (r. 712–55), who was ordained as a Taoist priest, Taoism increasingly became a vehicle for con-

39

solidating political legitimacy.⁷ In 741 Xuanzong decreed that Taoist temples should be established throughout China, in the two imperial capitals (Chang'an and Luoyang) and in every prefectural capital; these were to be called Temples for the Sovereign Emperor of Mystery Prime (Xuanyuan Huangdi Miao).⁸

Four Tang sculptures of the deified Laozi are included in this exhibition. While only one is dated by inscription, all four can be stylistically dated to the seventh or early eighth century. The limestone images from the Museum für Ostasiatische Kunst, Cologne, and the Shanghai Museum are typical of the new, Tang period image of Laozi, who is often presented as a single seated figure without the standing attending figures seen in sixth-century images. Furthermore, both textual and artistic evidence indicates that in the early Tang a new grouping emerged, namely the Three Purities, of which the deified Laozi was one, the Celestial Worthy of the Way and Its Power (Daode

40

tianzun). The others in this new triad of the highest gods of religious Taoism were the Celestial Worthy of Primordial Beginning (Yuanshi tianzun) and the Celestial Worthy of Numinous Treasure (Lingbao tianzun). It is conceivable that the sculptures from Cologne and Shanghai were originally parts of such triads. In addition, while identified as the deified Laozi (Laojun, or Lord Lao), neither image holds a fan, the attribute by which Laozi is usually identified from the Northern Wei dynasty (386–534) onward. Because of damage, the Shanghai image holds no attribute, while the Cologne image holds a ruyi scepter, an emblem of good fortune that was originally a symbol of debate.⁹ Both figures were originally shown resting their arms on a curved support called a *ji*, only traces of which remain. In addition, both figures sit on thrones whose form is derived from the "Sumeru throne," so-called because in a Buddhist context it represented the Indian *axis mundi*, Mount Sumeru. The stylized

41

42

lotus petals (images of purity) at the base of the throne in the Cologne sculpture are another element borrowed from Buddhist usage.

While broken and fragmentary, the large head of the deified Laozi in the Field Museum, Chicago (cat. no. 41), like the Shanghai image, conveys a brooding, mysterious presence seen in many Tang dynasty images of the god. Carved in marble, this image once belonged to a larger-than-life-size sculpture. The remains of a tripartite beard and the Taoist cap identify the figure as the deified Laozi, now a Celestial Worthy (*tianzun*). Very few large-scale sculptural images of Lord Lao survive from the Tang dynasty; one of the largest known is now in the Forest of Stelae (Beilin) Museum, Xi'an (unpublished).

Another image in the Field Museum is a small sandstone stele dated 726. A 1907 gift to the museum from the Manchurian viceroys Duan Fang (1861–1911), who visited Chicago in 1906, this stele is unusual in depicting the deified sage with the donor and his family. The god is seated on a throne at the upper center, against a mandorla of flames. The donor and his wife

kneel to either side, their hands joined in veneration. Below, the donor's four daughters also kneel on either side of a flat, inscribed surface that reveals the date of this stele ("Fourteenth year of the Kaiyuan era" [726]). While rare, similar images are known: a small limestone stele in the Museum of Fine Arts, Boston, depicts Laozi, two attendants, and the kneeling donor with his wife; this sculpture is dated 754, at the end of the Tianbao reign.

The dedication on the Field Museum stele reads:

The son Yang Zhen respectfully made this image of the Celestial Worthy (*tianzun*) for his deceased daughter Ling Kong, seven generations of his fathers and mothers, his living family, and all the beings of the world. Completed on the twenty-first day of the third month of the fourteenth year of the Kaiyuan reign [726].

On the back of the stele are inscriptions in Chinese (inscribed into the stone) and English (written in ink) documenting the gift of the stele to the Field Museum.

43

QIU YING (c. 1495–1551/52)
The Seven Sages of the Bamboo Grove

Ming dynasty, c. 1540–50

Fan painting; ink and colors on gold-flecked paper

18.1 x 54.6 cm

Asian Art Museum of San Francisco, The Asian Art Museum
 Foundation (B79 D51)

THE SEVEN SAGES of the Bamboo Grove (Zhulin qixian) were a group of poets, musicians, and scholar-officials active in the third century, in the vicinity of Jiankang (Nanjing), in south-central China.¹ The group included the musicians Xi Kang (223–262) and Ruan Ji (210–263), famous for their mastery of the *qin* zither and the *ruan* (a banjo-like instrument), respectively.² The other members of the group were Shan Tao (205–283), Wang Rong (234–305), Ruan Xian (234–305), Xiang Xiu, and Liu Ling.

The theme of the Seven Sages is often cited as a Taoist or “Neo-Taoist” subject.³ The group’s connection to the early religious Taoism of the Three Kingdoms period (220–280) was, however, tenuous. Instead, the Seven Sages were exemplars of Mystery Learning or Dark Learning (Xuanxue), a philosophical movement that sought understanding of the supreme reality (Tao) and questioned social conventions. The Xuanxue movement was ultimately derived from such texts as the *Daode jing* and the *Zhuangzi*. As Erik Zürcher has shown, “it is useful to

remember that Dark Learning was both created by and intended for *literati*, i.e., politicians and state officials, and definitely not by Taoist masters, hermits, or cave-dwelling mystics.”⁴ The Seven Sages lived at precisely the same moment that religious Taoism was beginning to spread beyond Sichuan province, the area of its first emergence. They sought the spiritual freedom taught in the *Daode jing* and the *Zhuangzi*. Many anecdotes about the Seven Sages are recorded in *A New Account of Tales of the World* (*Shishuo xinyu*), compiled by Liu Yiqing (403–444).⁵

In Qiu Ying’s fan painting, six of the sages are shown seated in a dense bamboo grove, situated next to a rushing stream. A seventh figure, accompanied by a servant, approaches the grove across a bridge at the lower right. Within the grove the zither player Xi Kang is clearly identifiable. He faces Ruan Ji, who plays the *ruan*.

This fan painting is a late work by Qiu Ying and is one of his finest surviving paintings. It is one of an album of ten Qiu Ying fans put together by the late Qing collector Pan Zhengwei (1791–1850).⁶

—S. L.

NOTES

Cat. nos. 29–32

1. Kohn 1988a: 39–40. The classic study of the *Laozi ming* is Seidel 1969a.
2. Kohn 1988a: 39.
3. *Ibid.*: 40.
4. The spirits of the four cardinal directions; see cat. no. 9.
5. On the cinnabar field (*dantian*), see cat. no. 128.
6. On the god Taiyi (Supreme Unity), see cat. no. 75.
7. Kohn 1988a: 40, citing Seidel 1969a: 123. The entire text of the *Laozi ming* is translated into French in Seidel 1969a: 122–28; the original Chinese text is on 129–30.
8. See Kamitsuka 1998: 64–66.
9. See Bokenkamp 1996–97: 64.
10. *Ibid.*: 64 n. 25, and Ware 1933: 248. On the activities of Kou Qianzhi, see Mather 1979.
11. For recent studies of Six Dynasties period Taoist sculpture, see Bokenkamp 1996–97; Abe 1996–97; Ishimatsu 1998; and Kamitsuka 1998.
12. The Louguan Tai is an active Quanzhen (Complete Realization) sect Taoist temple today; for a discussion of its history, see Chen 1985: 261–64. An alternate site (the Han'gu Pass, located to the east of Mount Hua, and south of the confluence of the Wei and Yellow rivers) was originally said to be the actual location of Laozi's transmission of the *Daode jing*; see Kohn 1988a: 20, 257–58. The shift of the site to the Louguan Temple occurred during the fifth and sixth centuries.
13. Schipper 1993: 22. It should be noted that incense burners are also frequently found in the decoration of sixth-century Buddhist stela.
14. For a transcription of the inscription, see Chûgoku no seki-butsu 1995: 147, no. 89.
15. James 1989: 72.
16. See, for example, Zürcher 1980; and Bokenkamp 1996a: 269. In which Bokenkamp discusses the Taoist Lingbao texts (composed c. 400) as "the first Taoist scriptures to incorporate and redefine Buddhist beliefs, practices, and even portions of Buddhist scripture."
17. See the essay by Stephen Little in this volume, fig. 4.
18. On Zhang Daoling's visions of the deified Laozi in Sichuan in A.D. 142, 144, and 155, see Schipper 1993: 9–10, 57; Robinet 1997: 55; Kohn 1988a: 98, 300–302.
19. See the biographies of Yin Xi and Zhang Daoling in LXQZ.
20. Rubbings of the surface of this stela are published in *Senen hsin* 1966: pls. 29–31 (rubbings), text p. 10, and Zhang 1993: no. 12.
21. The earliest example of a work in which Buddhist and Taoist images are shown together is the Wei Wenlang stela of 424 (Northern Wei) in the Yaowang Shan Museum in Yaoxian, Shaanxi province; see Xiao Gaoshe 1991: pls. 1–8. Two similar examples to the stela of 517 exhibited here are in the Lintong City Museum, Shaanxi, and are dated 518–20 and 523; see Xiao Gaoshe 1991: pls. 63–68, 86–91.
22. Compare the approaches taken in Bokenkamp 1996–97 and Abe 1996–97.
23. See James 1989: 72–73.
24. Bokenkamp 1996–97: 63–66.
25. The inscription is transcribed in Chûgoku no seki-butsu 1995: 152.

Cat. no. 33

1. Previously published in Zhongguo meishu quanji 1988: pl. 73. For an alternative identification of the two primary figures, see Abe 1996–97: 70.
2. The pairing of the two central figures resembles similar pairs in Buddhist art of the late Northern Wei dynasty (late fifth–early sixth century); these almost always depict the historical Buddha, Shakyamuni, and the primordial Buddha, Prabhutaratna, sitting side-by-side in a stupa hovering in mid-air, a scene from the *Lotus Sutra*; see Davidson 1954: 1–6; fig. 1.
3. While Stanley Abe has suggested that the inscription reading Yu Huang shi is a later addition, I have examined the original sculpture carefully, and believe that the calligraphy is technically and stylistically coveal with that of the longer inscription on the back and side of the same stela; see Abe 1996–97: 70, n. 3.
4. Published in Sirén 1925, vol. 2: pl. 126B; and Abe 1996–97: fig. 1.
5. Lagerwey 1981: 126. In this text, the god is entitled Supreme Boundless Great Tao Vast Heavens Jade Emperor (Taishang wuji dadao haoitan yuhuang shangdi).

6. The Jade Emperor is mentioned, for example, in poems by Han Yu (768–824), Liu Zongyuan (773–819), and Yuan Zhen (779–831); see Feng 1936: 245.
7. The painting is recorded in the *Deyuzhai huapin* by the Northern Song dynasty scholar Li Zhi; the translation is adapted from Soper 1949: 26–27.
8. See the account of Zhenwu's audience with the Jade Emperor in Seaman 1987: 112.

Cat. no. 34

1. See Ofuchi 1991: 294–96. The entire text is translated in Bokenkamp 1997.
2. Most of what we know about Taoism comes from Ming dynasty (1368–1644) editions of Taoist scriptures contained in the Taoist Canon.
3. The *Heshang Gong* commentary began during the Han dynasty, but seems to have been modified to include Taoist doctrines in the early Six Dynasties. See Kobayashi 1990: 241–68.
4. See Bokenkamp 1997: 29–77.
5. See Kobayashi 1990: 241–68, 328–56.
6. Prior to this, the term *daojiao* was understood more generally as the "teachings of the Way" and could be used as a reference to everything from Confucian texts to Buddhism. For the importance of formally establishing Taoism as a "teaching" (*jiao*), see Kobayashi 1991: 511–38.

Cat. no. 35

1. See Seidel 1969a for a study and translation of the earliest known writing to describe the many transformations of the Laozi, the Han dynasty *Scripture of the Transformations of Laozi* (*Laozi bianhua jing*).
2. The names given in the *Laozi bianhua jing* often differ from those of later times; the earliest list that accords with the later standard doctrine is found in HY 1196, which dates to the very beginning of the Liu-Song dynasty.
3. See HY 1425. This scripture apparently figured in the imperial debate of 626 which was sparked by the anti-Buddhist memorial by Fu Yi (554–639) presented to the court in 621. In a Buddhist polemic by the monk Minggai that resulted from this debate, the author of this scripture is identified as a certain Zhang Pan (dates unknown). The appearance of HY 1425 in this early-seventh-century debate suggests that it was already in existence by the end of the sixth century; see the *Guang hongming ji* (T 2103), juan 12.
4. These scriptures formed the basis for the second of the Three Caverns around which the present Ming dynasty Taoist Canon is arranged.
5. These scriptures form the third of the Three Caverns.
6. Laozi is here credited with the discoveries of each of these rulers.
7. HY 1425.
8. See *Eight Dynasties of Chinese Painting* 1980: no. 18, for a discussion the various seals on this painting. The seals of Emperor Huizong of the Northern Song dynasty are spurious.

Cat. no. 36

1. The Yellow Emperor is associated with the development of writing, sericulture, the calendar, music, mathematics, the arts of healing, and sexual techniques. See Yates 1997: 17, and Le Blanc 1985: 86.
2. Among the texts attributed to this school are a series of Western Han dynasty (second century B.C.) manuscripts excavated in 1973 from tomb no. 3 at Mawangdui, Changsha, Hunan province; these are translated in Yates 1997: 103–53. There is some evidence that the Huang-Lao school originated in the state of Qi during the mid-Warring States period; see Yates 1997: 17–19.
3. A version of this story also appears in the *Master of Huainan* (*Huainanzi*), dating to the second century B.C.; see Roth 1997: 57–58. Roth's article presents an extensive analysis of the story of the Yellow Emperor's meeting with Guangchengzi as recorded in the *Zhuangzi*. For yet another version of the story, found in the Tang dynasty Taoist text HY 1425, see Kohn 1995: 41. On Emptiness and Identity Mountain, see Min et al. 1994: 871.
4. Watson 1968: 119; for the Chinese text, see XYZDB: 144–45.
5. Watson 1968: 120.
6. Barnhart 1993: 223–41; see also Little 1991–92: 202–03. The Tianjin Municipal Art Museum scroll was previously published in Zhongguo gudai shuhua tuncu 1986–98, vol. 9: no. 7–0078.

7. For another Ming example, see Christie's 1995: lot 35 (now in the Yale University Art Gallery); for a Qing example, see *Zhongguo gudai shuhua turnu* 1986–98, vol. 1: 113, no. 7–025, and *New Interpretations of Ming and Qing Paintings* 1994: no. 35.

4. Barrett 1996: 37–38.
5. *Ibid.*: 56. See also Xiong 1996, which presents an excellent overview of Taoism during the reign of Emperor Xuanzong.
6. Kohn 1998a: 51.
7. *Ibid.*: 59.
8. See Xiong 1996: 263. On even earlier (seventh century) attempts to establish Taoist temples throughout the realm, see Barrett 1996: 31, 35.
9. See Davidson 1950: 242; as he shows, the original name of the *ruyi* was *lanbing*, or "discussion stick." The Cologne sculpture has been in Germany since 1929 and was previously published in Schlombs 1995. The presence of the *ruyi* scepter instead of a fan suggests that the Cologne image may actually represent the Celestial Worthy of Numinous Treasure (Lingbao tianzun), who is often identified by a *ruyi* scepter (see cat. no. 66).

Cat. no. 43

1. The earliest known depiction of this theme dates to the fourth century, and comprises a group of impressed tiles excavated in 1960 from a tomb near Nanjing, Jiangsu province: see Soper 1980: fig. 1.
2. On Xi Kang, see Gulik 1941a.
3. See, for example, Laing 1974.
4. Zürcher 1972: 87. It is noteworthy that Ge Hong (283–343), author of the *Baopuzi* (*Master Who Embraces Simplicity*), criticized followers of the Xuanxue movement as "high-class idlers who disregard the rules of decorum and moral behavior and who waste their time in noisy gatherings [falsely quoting Laozi and Zhuangzi]"; see Zürcher 1972: 348 n. 11.
5. Mather 1976: 371 ff.
6. The album is recorded in TFLSHJ, juan 3: 235. The album bears a colophon by Wu Rongguang (1773–1843), dated 1841.

RITUAL IS THE PRIMARY WAY in which human beings communicate with the gods who personify the Tao. Taoist ritual is a public event, designed to serve the needs of a community. The central figure in any Taoist ritual is the priest (*daoshi*), who petitions the gods on behalf of the community he serves. Incorporating words, music, and dance, Taoist ritual is a performance closely linked to theater and may last from several hours to several days. In the course of a ritual, the priest visualizes his own return to the Tao, the source of all things. Among the sacred dance forms in Taoist ritual is the symbolic pacing of the stars of the Northern Dipper (the Big Dipper), the seat of the celestial bureaucracy of the gods.

The Taoist ritual space, or altar (*daochang* or *daotan*), reflects the structure of the cosmos, and is visualized as a sacred mountain connecting the human and divine realms. The altar may be installed anywhere, and is taken apart when the ritual is complete. At the center of this sacred space is an incense burner, the most important of all ritual implements.

Taoist ritual can be broadly divided into two types: rituals for the living and the dead. In modern Taoism, the *jiao* is a rite of offering designed for the living, while the *zhai* is a rite of fasting for the spiritual well-being of the dead. The ultimate goal of both rituals is to reaffirm humanity's origins in the Tao and to celebrate the human covenant with the divine powers of the world.

JIAO BINGZHEN (ACTIVE C. 1689–1726)
Taoist Ritual at the Imperial Court

Qing dynasty, c. 1723–1726

Hanging scroll; ink and colors on silk

358 x 157 cm

Arthur M. Sackler Gallery, Smithsonian Institution, Washington, D.C.;

Purchase—Smithsonian Collections Acquisitions Program, and
 Partial Gift of Richard G. Pritzlaff (\$1991.99)

THIS HANGING SCROLL shows a Taoist ritual being performed in a courtyard, on a three-tiered altar made of stacked tables. On top of the altar a young man, the patron of the ceremony, kneels in front of a table, while the Taoist priest officiating stands to his right under a parasol. An uninscribed plaque, perhaps a symbol of the principal deity to whom the ritual is directed, stands on the table, and the table is covered by a canopy, a traditional symbol of the heavens. On the ground to either side of the altar, musicians play wind and percussion instruments to accompany the ceremony.

When acquired by the Arthur M. Sackler Gallery, this painting was listed as representing "the Yongzheng emperor's nephew at a Taoist ceremony for the recovery of his father."¹ If this title is correct, then the painting would have been done sometime early in the Yongzheng reign (1723–35). The setting of the painting indicates that the ritual may have taken place in a private imperial residence rather than a Taoist temple, as is suggested by such details as the tiled courtyard and the potted plants and trees in the background. The theme suggests that this ceremony was a "fast" (*zhai*) ritual, one of the most important kinds of Taoist ceremonies. The fast ritual has an ancient history, first identified with the earliest Celestial Master movement at the end of the Han dynasty (second century); many descriptions of fast rituals, including personal accounts of participation in these rituals, survive from the medieval period.² Fast rituals were used for a wide variety of purposes, and well before the Qing dynasty (1644–1911) several types of fast rituals had developed, from ones intended for an individual to others celebrated for the entire country, with certain types of fast only being performed for the benefit of the imperial family or the emperor himself.

While there were many different kinds of fast rituals, they were most commonly commissioned for the benefit of a family member who was either ill, in which case the participants would pray for his or her quick recovery, or deceased, in which case the ritual would be performed to liberate the individual from the

netherworld and enable him or her to ascend to the celestial paradises. The participants would subject themselves to ritualized penitence and self-denial as they confessed their and their families' wrongdoings, hoping thereby to gain merit and have their petitions heard by representatives of the celestial hierarchy. The merit they gained would then be transferred to the person for whom the ritual was being performed, in order to compensate for the accumulation of negative *karma* that had caused the illness or death. In this case, the emperor's nephew (if the subject has been correctly identified) would have performed ritual penitence in the hope that the merit he gained could be used to cure his father's illness, through the intercession of the Taoist priest who stands next to the uppermost altar table.

The most striking feature of this painting is the altar made from stacked tables. Three-tiered altars were already the most common type of Taoist altar by the Tang dynasty,³ but early sources indicate that they were usually made from tamped earth. The use of tables in this ritual was probably a simplification necessitated by the setting, since a tamped-earth altar would have been difficult to build in the middle of a tiled courtyard in a private imperial residence. Although such simplifications are rarely mentioned in standard sources from the Taoist Canon, they are likely to have been common, given the circumstances of a particular ritual. They may often have been dictated by economic or practical concerns not taken into account by the theoretical works included in the Taoist Canon. Paintings such as this one therefore provide an important counterbalance to the image of Taoism gleaned solely from literary sources.

This painting is also of interest because it depicts a ritual commissioned by the Qing imperial family. The Qing dynasty rulers were active supporters of Esoteric Buddhism, but this painting serves as evidence that they patronized Taoism as well, and commissioned Taoist rituals for the benefit of members of the ruling house.⁴

Taoist Ritual from The Plum in the Golden Vase

Qing dynasty, Kangxi reign, c. 1700
Album leaf; ink and colors on silk
39 x 31.2 cm
The Nelson-Atkins Museum of Art, Kansas City, Uhlmann Family Fund, 1983 (F83-4/1)

THIS ALBUM LEAF illustrates chapter 66 of the sixteenth-century novel *The Plum in the Golden Vase* (*Jinping mei*),³ a Ming dynasty work that has been called by one translator "a landmark in the development of narrative art," compared to which "there is no earlier work of prose fiction of equal sophistication in world literature."⁴ The painting depicts a Taoist funerary ritual commissioned by the principal character of the novel, Ximen Qing, for Li Ping'er, with whom he had had an illicit affair, and for whose death he was partly responsible by having forced her to take a dangerous aphrodisiac during her menstrual period.⁵ The ritual was supervised by Huang Yuanbai, a high-ranking Taoist priest from the imperial court, and the caption next to the painting gives the title *Perfected Man Huang Sends Forth an Official Document Recommending the Deceased*. This painting is part of an album of over two hundred leaves, created at the Kangxi court and now dispersed, depicting the different chapters of *The Plum in the Golden Vase*.

The scene shown here was part of a complicated "fast" ritual (*zhai*; cat. no. 44) that went on for many days, and was designed to "refine and convey" (*liandu*) the soul of the deceased,⁶ that is, to purify it of the negative *karma* that had accrued through one's bad actions while alive, and thereby convey (or "liberate") the soul from the tortures of the hells to the celestial paradises of Taoist adepts. The liturgical text of the ritual includes the following lines:

His Benevolent Reverence Taiyi [cat. no. 75] descends on
his mount,
The dark passes of the ravines of endless night open one after
another;
Pairs of youths lead the way,
As the soul of the dead is refined and climbs the cloudy steps.

The series of rites described in the novel include, among other things, making food offerings, burning incense and symbolic goods for the use of the dead in the afterlife (*huacai*), reciting scriptures,⁷ and dancing the "Pace of Yu" (cat. no. 52) over a diagram of the stars of the Northern Dipper (cat. no. 18). Following the caption, the present scene shows Huang Yuanbai

presenting official memorials to the Three Officials (cat. nos. 69–71) and the celestial bureaucracy requesting that the soul of the deceased be liberated from the underworld and given passage to the celestial realms. Huang stands before the altar, holding a "dharma cup of cleansing water" in his left hand and making a benedictional *mudra* gesture with his right hand. Although it is not depicted in the painting, the text indicates that the rite also called for a "seven star precious sword," a sword engraved with the stars of the Northern Dipper. Huang is dressed in a robe decorated with cranes, as described in the novel:

Jade leaves are gathered in his star cap.
Golden clouds are embroidered in his crane robes.

According to the novel, Huang's performance of the rite was so magnificent that he appeared to be "a living god" whose "spiritual purity was like the bright moon over the Long River."

The altar before which Huang stands basically accords with details in the novel, although the literary text describes an even more sumptuous setting for the ritual than is shown here. An incense burner and various ritual implements, some showing Buddhist influence, rest on the altar, together with candles, symbolic of illuminating the darkness of the netherworld, and food offerings, for the "hungry ghosts" who were its captives. On the highest level of the altar stand plaques inscribed with the names of the Three Purities (cat. nos. 65–67). Behind the altar hang paintings that appear to depict the Eight Immortals (cat. nos. 117–18); this detail is missing from the novel. To either side of Huang stand musicians who accompany him during the rite, playing various wind, string, and percussion instruments, including a *sheng* mouth-organ, vertical *xiao* and horizontal *dizi* flutes, lutes, drums, bells, cymbals, and gongs; a similar orchestra can be seen in the nearly contemporary painting by Jiao Bingzhen (cat. no. 44).

The Plum in the Golden Vase has been understood as a criticism of perceived corruptions and excesses of the late Ming dynasty, and the ritual shown here is a prime example of this social critique. The lavish offerings, rich clothes, rugs, and decorations in both the novel and this painting create an image of excess that turns the ritual into "overly elaborate funeral observances that are prime examples of conspicuous consumption."⁸ In addition, the performance of a funerary ritual for the morally questionable Li Ping'er by an imperial representative such as Huang Yuanbai has been interpreted by some scholars as a violation of social mores, and it has been suggested that the use of certain specific Taoist scriptures in the ritual was a usurpation by Ximen Qing of imperial prerogatives.⁹

AMONG THE MOST visually spectacular works of Taoist ritual art are the robes worn by officiating priests. The decoration of these robes presents images of the structures of the cosmos, which are unified in the Tao and in the person of the priest himself. A Taoist text from as early as the Six Dynasties period (420–589) describes regulations concerning Taoist priests' robes.¹ Actual Taoist robes survive from as early as the Jin dynasty (1115–1234),² excavated from the late-twelfth-century tomb of a Taoist named Yan Deyuan, near Datong, Shanxi province. This tomb contained two types of priests' robes: the more commonly encountered *jiangyi*, or Robe of Descent, and the less common *daopao* (Taoist robe).³ The primary image in these robes is the crane, a bird associated with transcendence since at least the Han dynasty (206 B.C.–A.D. 220), and probably much earlier. The Taoist adept Wang Ziqiao, said to have lived during the Zhou dynasty (c. 1050–256 B.C.), ascended to heaven on a crane.⁴ The principal priest depicted in the Taoist ritual from the *Plum in the Golden Vase* (*Jinping mei*) has a robe decorated with flying cranes (cat. no. 45). References to the close connection between cranes and Taoist priests and their vestments are common in early literature. In the "Second Prose-poem on the Red Cliff" by Su Dongpo (1037–1101), for example, the poet encounters a Taoist priest in a dream, dressed in a feathered robe; it is clear from the context that these are crane feathers.⁵

The majority of surviving Taoist priests' robes date to the Ming (1368–1644) and Qing (1644–1911) dynasties and the modern era, and are typically decorated with designs reflecting traditional Taoist cosmology. Characteristic designs on Ming and Qing examples include depictions of the Taoist pantheon, the Eight Immortals, the Eight Trigrams, the Twenty-eight Lunar Mansions, and the twelve animal symbols of the Chinese zodiac. The primary Taoist priest's robe is the Robe of Descent; three of the robes included in this exhibition are of this type, square in shape, with a round hole for the neck.⁶ Such robes are normally yellow or red in color, although green, black, and other colors are known as well.

The portrait in the Royal Ontario Museum, Toronto, is one of the few such images of a Taoist priest known (cat. no. 46). He wears a Robe of Descent decorated with dragons and the Eight Trigrams, and holds a *ruyi* scepter in his hands. The elaborate throne on which he sits is inlaid with "dream-stone" panels. He wears a blue cloth on his head, over which is a Taoist cap in gold, with the Eight Trigrams displayed on its leaves. Judging from the style of painting and the furniture, it appears likely that this work dates to the eighteenth century, possibly to the reign of Qianlong (1736–1795).

47

48

The earliest robe in this group is in the Victoria and Albert Museum, London, and dates to 1650/1700 (cat. no. 47).⁷ It depicts gods of the pantheon, beginning at the top with the Three Purities (Sanqing): the Celestial Worthy of Primordial Beginning (Yuanshi tianzun), the Celestial Worthy of Numinous Treasure (Lingbao tianzun), and the Celestial Worthy of the Way and Its Power (Daode tianzun, the deified Laozi). Below these figures the Jade Emperor appears in a circle, with an entourage. Many of the gods have their names embroidered next to their images. A similar robe, lacking its original border, is in the Metropolitan Museum of Art, New York.⁸

The back of the Robe of Descent in the collection of The Art Institute of Chicago (cat. no. 48) is embroidered on a turquoise-green silk ground with roundels containing auspicious symbols

including dragons, butterflies, and bats, surrounding a central roundel with a tower. Above this central roundel are three palaces representing the Taoist heavens of Jade Purity, Highest Purity, and Supreme Purity, with symbols of the sun and moon to either side and large multicolored dots representing constellations below. Other designs on the back include *lingzhi* mushrooms, phoenixes, and stylized forms of the character *shou* (longevity). The front of the robe is decorated with two towers. The hem is decorated with auspicious emblems, dragons, and other mythical beasts among waves.

The spectacular black-ground Robe of Descent in the Minneapolis Institute of Arts also dates to the nineteenth century (cat. no. 49). It is heavily embroidered with decorative panels containing immortals, auspicious and mythical animals (including

50

the *qilin* and bear), birds, and flowers. The designs center on a large roundel depicting a tower, surrounded by discs representing constellations, and the talismanic "True Forms" (*zhenxing*) of the Five Sacred Peaks (see cat. no. 137).

The next example, also from the Minneapolis Institute of Arts, is unusual in being made of gray silk gauze, with painted decoration (cat. no. 50). This early-nineteenth-century *daopao* is enlivened with dragons among clouds, talismans, and roundels containing the animals of the Chinese zodiac, in pale green, red, lavender, and gold.

The other *daopao* in the Minneapolis Institute of Arts, dating to the mid-nineteenth century, is embroidered on a red ground (cat. no. 51). Its decoration includes the tiger and dragon (symbolizing *yin* and *yang*), the Eight Trigrams, the Twenty-eight Lu-

nar Mansions, the True Forms of the Five Sacred Peaks, discs symbolizing the sun and moon, a tower surrounded by dragons, the *taiji* (*yin-yang*) symbol, and large roundels containing cranes with mushrooms and sprigs of bamboo in their beaks.

52

YUAN MIAOZONG (ACTIVE EARLY TWELFTH CENTURY)
The Pace of Yu from Secret Essentials on Assembling the Perfected of the Most High for the Relief of the State and Deliverance of the People, from the Taoist Canon of the Zhengtong Reign

Ming dynasty, Zhengtong reign, 1444
 Woodblock-printed book; ink on paper
 35.4 × 12.7 cm (each page)
 Bibliothèque Nationale de France, Paris, Chinois 9546 (1210/8)

The Pace of Yu is a Taoist ritual dance, named for the mythic Emperor Yu, founder of the Xia dynasty (traditionally late third-early second millennium B.C.). In this dance, the priest impersonates both Yu, who paced the boundaries of the terrestrial world, and the celestial god Taiyi (Supreme Unity), who paced the heavens.¹ The priest visualizes walking through the Dipper stars, dragging one foot behind him in imitation of the limp of Emperor Yu. The dance serves many functions, including exorcism and purification.

The Pace of Yu is a form of the ancient ritual dance known as "pacing the guideline" (*bugang*), the origins of which can be traced to pre-Taoist rituals of the Warring States period (475–221 B.C.) and the Han dynasty (206 B.C.–A.D. 220).² As Poul Andersen has written, "It was from the Han dynasty milieu of

ritual and divinatory speculation, commonly associated with the *fangshi* (magicians), that the Taoist practice of *bugang* (Pacing the [Celestial] Guideline) derived its theories."³

The earliest mention of pacing the Dipper in a Taoist context occurs in the Highest Purity (Shangqing) teachings, revealed to the fourth-century visionary Yang Xi.⁴ Again, Andersen has explained the sacred dance:

Each step is accompanied by an incantation which is pronounced by the adept standing in the star and which evokes the image of the deity of the star in question. References to the effects of the practice are scattered throughout the incantations, and they center on the notions of entrance into nothingness, obtaining of invisibility, and ascent to the Purple Court, Ziting (i.e., the palace of Taiyi, surrounding the celestial north pole), by way of the Barrier of Heaven, Tianguan, the seventh star of the Dipper.⁵

Yuan Miaozong's *Secret Essentials on Assembling the Perfected of the Most High for the Relief of the State and Deliverance of the People* (*Taishang zhuguo jiumin zongzhen biyao*) of 1116, shown here in a Ming edition, contains several diagrams illustrating the Pace of Yu.⁶ The author was active during the Zhenghe reign of Song Huizong (r. 1100–25), and was a Taoist priest of the Great Law of Heaven's Heart (Tianxin dafa) sect.⁷

Supreme Highest Scripture of the So of Themselves Realized One Talismans of the Five Correspondences of the Limitless Great Way, from the Taoist Canon of the Zhengtong Reign

Ming dynasty, Zhengtong reign, dated 1445
Woodblock-printed book; ink on paper
35 x 11.3 cm (each page)
Bibliothèque Nationale de France, Paris (Chinois 9546 [666/1])

THE TANG DYNASTY MANUSCRIPT from Dunhuang (*Lingbao zhenyi wucheng jing*) is truncated at the beginning, but its ending identifies it with HY 671 from the present Taoist Canon. The fragment consists of nineteen pieces of joined yellowish brown paper. The text is inscribed within a lined grid, with seventeen characters per line. This scripture belongs to the Numinous Treasure (Lingbao) category of scriptures, which form the "Cavern of Mystery," the second of the "Three Caverns" into which all Taoist scriptures are classified. It contains five talismans (*fu*), magical diagrams that correspond to the Five Phase system; these talismans extend well beyond the predrawn borders. Talismans were believed to be sacred images that mirrored the forms of the primordial energies at the inception of the world. Consequently, the scripture describes these talismans as follows:

The "Numinous Treasure So of Themselves Talismans of the Five Correspondences of the Great Highest" came into being in the prior heaven, transforming together with the energy of the Way; they are the realization of the Way. From them came forth heaven and earth; the ten thousand spirits of heaven and earth all find

their source in the Numinous Treasure. . . . If you wish to serve the gate of profundity to the Grand Way of the Numinous Treasure, [then] wear these five talismans and the ten thousand spirits will all find their source in you.

Each talisman corresponds to one of the Five Phases, and the scripture associates them with the various elements that accord with this system: the stars, deities, mountains, parts of the body, seasons, sounds, colors, numbers, animals, days, and so on.¹ Since these talismans were believed to contain the fundamental energies of the Five Phases, they were ingested on special days throughout the year, when the practitioner would perform a meditation to absorb their essences.

In addition, these talismans were written in colored ink on silk and worn on the person of the meditator, or engraved on stones placed around the house in order to subdue the negative forces of the five directions. They were believed to have a number of magical powers, which ranged from curing illnesses and gaining popularity to reversing curses directed toward their wearer.

Because of the magical power believed to be inherent in each of these talismans, they were copied very carefully, so that the same talismans from the Ming dynasty edition of the Taoist Canon (cat. no. 54) are still very close to their Tang dynasty predecessors (cat. no. 53).² On the other hand, the Tang manuscript contains a number of interesting textual variants, the most noticeable of which is the use of the term "Buddha" where the Ming edition of the canon uses "teaching" (*jiao*), and the term "bodhisattva" where the Ming uses "realized being" (*zhenren*). These differences show the considerable influence of Buddhism on the early development of the Lingbao scriptures, while supplying evidence of later attempts to hide such influence.

Parts of this scripture have a distinctly popular character, and many of its practices differ from later orthodox Taoist rituals. These practices probably developed out of local traditions that were in vogue in the Jiangsu region when the scripture was written. For example, while the theoretical basis of the talismans described in the first section of the manuscript accords very well with orthodox Taoist doctrines from the later Six Dynasties period, the second section contains a number of unusual practices that seem to have little place in the orthodox tradition.

These practices are primarily concerned with the use of figurines carved from poke root (*phytolacca acinosa*) which were placed around the household as guardian spirits. These figurines were used in conjunction with images of the Eight Trigrams and the Talismans of the Five Correspondences. Thus, this scripture is a very important document for our understanding of the popular religious practices of southern China during the early fifth century, and of the interaction between locally prominent family traditions and Taoism during its early development.

也
仙公曰西帝
受一篇也

THE BEGINNING AND END of this manuscript are truncated, but it corresponds to the work identified as HY 56 in the present Taoist Canon. Only about one-third of the complete text is preserved in this fragment. It is written on six joined pieces of yellowish brown paper, in relatively informal calligraphy. As in the other texts of this type discovered in Dunhuang, this manuscript is written within a lined grid, seventeen characters per line. It consists primarily of nine talismans (*fu*), magical diagrams that derive from the most fundamental energies forming all existence. These talismans are associated with the "Jade Girdle" (*yuei*) from the title of the scripture (*Shangqing yuei jindang taiji jinshu*), which is defined as the *hun*-soul or *yang*-essence of the Nine Heavens. Since this scripture is primarily concerned with meditation and visualization techniques, it uses a highly symbolic language with many different layers of meaning. Consequently, this essence manifests itself in several different ways, as the recitation that forms the scripture proper, as the deity that protects the scripture, as the nine deities that embody the Nine Heavens, and as the nine talismans possessed by these deities—the nine talismans illustrated in this manuscript.

At midnight on particular days throughout the year, the practitioner would enter into his or her "quiet room," a room reserved for worship and meditation, and recite the scripture. Then he or she would visualize the energy of the Jade Girdle descend from the Nine Heavens and encircle his or her body. After this, the practitioner visualized the nine deities representing the Nine Heavens, wrote the talismans associated with each of these deities, and ingested them, thereby absorbing the energies of these deities and the heavens they embodied. In order to facilitate the visualization of the different deities, a detailed description of each deity is provided, including alternate forms that the deity may take when it manifests in the world. Some of these deities could take rather unusual forms, appearing, for example, with multiple heads, or as animals, or as a human body with a bird's head, or as a bird with a human head. These images are very evocative, suggesting, on the one hand, ancient depictions such as those of nature spirits from the southern kingdom of Chu during the Warring States period, and, on the other, similar images that entered China with Tantric Buddhism; the images here, however, may have developed independently of either of these traditions.

Each of the concepts in this scripture has both a microcosmic and a macrocosmic significance, symbolizing celestial regions and energies as well as the corresponding regions and energies in the human body. For example, the meditations described are based on one of the most fundamental of all Taoist meditations, the "Three Ones." According to this meditation, there were three "palaces" (*gong*) or "cinnabar fields" (*dantian*) located inside the body: in the head, the heart, and the abdomen. Each of these palaces, known here as the "Three Primes," was occupied by a deity, and these three deities were manifestations of a more primordial "one" based on ideas implicit in the *Daode jing*. According to this scripture, after the "one" manifested into the "Three Primes," each of these in turn manifested itself threefold, resulting in the Nine Heavens, the nine deities, and the nine talismans of the Jade Girdle.

The Jade Girdle is paired with the "Golden Crown," which represents the *po*-soul or *yin*-essence of the Nine Heavens. Only the beginning of the section describing the Golden Crown is preserved in this manuscript. The symbolism of the Golden Crown is very similar to that of the Jade Girdle, and there is a single talisman for the Golden Crown in HY 56 that corresponds to the nine talismans for the Jade Girdle. In addition, there are two final sections preserved only in HY 56 that associate the Jade Girdle and the Golden Crown with the sun and moon, respectively.

This scripture belongs to the "Cavern of Perfection" category, the first of the "Three Caverns" into which all Taoist scriptures are arranged. This group of scriptures is commonly known as the Highest Purity (*Shangqing*) scriptures, since they were believed to provide one with access to the heaven of the same name. They grew out of the religious tradition of the Xu family from the Jurong area (modern Jiangsu) in the fourth century. Many of the first sacred writings of this tradition were revealed to Yang Xi (330–386), a medium employed by the Xus, who received his first revelations in 364. The writings of Yang, his patron Xu Mi (305–373/6) and Xu's son Hui (341–370), were collected, edited, and annotated by Tao Hongjing (456–536; cat. no. 38), one of the greatest Taoist scholars of the Six Dynasties period (420–589) and a close confidant to the imperial house during the Southern Qi (479–502) and Liang (502–557) dynasties.

*Great Highest Cavern Mystery Numinous Treasure Subtle
Scripture on Extinguishing and Conveying the Five Refinements
and Reviving the Corpse*

From Dunhuang, Gansu province

Tang dynasty, 7th/8th century

Handscroll; ink on paper

26 x 560 cm

Bibliothèque Nationale de France, Paris (Pelliot Chinois 2865)

THIS SCRIPTURE (*Taishang lingbao dongxuan miedu wulian shengshi miaojing*) is truncated at the beginning and end, but its contents correspond to HY 369 from the Taoist Canon, and also to another manuscript discovered in Dunhuang, known as Stein 298. The text, written on yellow paper, contains five stylized inscriptions written within a ruled grid.¹ These inscriptions are derived from the most famous of all Taoist scriptures, the *Scripture of Conveyance* (HY 1),² and they are based on a magical invocation contained at the end of the *Scripture*, which in turn is an imitation of similar incantations at the ends of Buddhist scriptures, called *dharani*.

This scripture contains one of the earliest descriptions of a Taoist funerary ritual. The celestial script version of the incantation was meant to be recited during this ritual and inscribed on five stones placed in the grave. Each part of the invocation was accompanied by an order directed toward the netherworld bureaucracy to aid the soul of the deceased. The Taoist priest conducting this ceremony would perform the Pace of Yu (see cat. no. 52) a number of times appropriate to each direction, read each part of the invocation and its accompanying order, and then bury the stone with the same inscription in the appropriate part of the grave. This ritual allowed the soul of the deceased to forego the tortures of the hells and ascend to the Southern Palace where new adepts were processed, or else to reenter the wheel of reincarnation.

The invocation upon which the inscriptions in this manuscript are based first appeared spontaneously in the sky during one of the sermons of the Celestial Worthy of Primordial Beginning (see cat. no. 65). The characters that made up the invocation were formed of primordial energy, and consequently the written forms of these characters in the present manuscript are stylized to reflect this first manifestation. In this sense, the magical writing seen in this manuscript is different from the talismans (*fu*) seen elsewhere in this catalogue, since it reflects actual words, rather than an "abstract" diagram. In fact, Chinese characters were believed to derive from celestial equivalents that were harnessed by the Celestial Worthy and other deities from self-formed characters of pure energy, so that the magical writing seen here was actually thought to be a purer form of writing than common script.

Both the present manuscript and Stein 298 contain an additional section that is not preserved in HY 369, but that forms an integral part of the funerary ritual described therein. This section consists of a long memorial summoning the spirits of the five directions to order the netherworld bureaucracy to release the soul of the deceased and guide it back to life. At midnight on the night before the burial, the priest burned incense in the five directions, and then left this memorial exposed overnight beside the corpse.

This additional section, which comes at the end of the manuscript, also contains a number of stories about practitioners who benefited from this scripture. Some of these stories, particularly those about souls that return to re-animate their deceased corpses, are quite colorful. For example, a certain Zheng Renan reanimated his corpse, only to be set on fire by a terrified onlooker; unperturbed, his skeletal form continued to rise quietly, ascending to a post in the celestial bureaucracy. Other stories tell of reanimated corpses bursting out of coffins unearthed during public works projects. The initiates who figure in these stories were guaranteed positions in the celestial bureaucracy, but died before they were able to accumulate the merit necessary to ascend directly to the celestial realms "in broad daylight"; consequently, they had to undergo a period of further refinement in the netherworld before their souls could rejoin with their bodies and rise to the heavens. This idea was probably based on the doctrine of "corpse liberation" (*shijie*), which was very popular at the time this scripture was first composed.

Like cat. no. 53, this scripture belongs to the Lingbao scriptures of the "Cavern of Mystery" category of Taoist scriptures, and probably dates to the early Liu-Song dynasty (420–479), during the formative phase of the Taoist religion. The funerary ritual described in this scripture dates to a period before the full standardization of Taoism, and is a very rare example of the early funerary practices that formed one of the foundations of later Taoist rituals. At the same time, since the present manuscript provides a more complete account of this ritual than is given in HY 369, this important document provides an invaluable resource for understanding the way in which early Taoism helped the living (and the deceased) pass through one of life's principal transitions.

—S. E.

Ordination Scroll of Empress Zhang

Ming dynasty, Hongzhi reign, dated 1493
Handscroll; ink, colors, and gold on paper
54.6 × 2.743.2 cm
San Diego Museum of Art, Gift of Mr. and Mrs. John Jeffers
(1961.094)

EMPRESS ZHANG (1470–1541) was the sole consort of the Hongzhi emperor, Zhu Youtang (r. 1488–1505), who was widely admired as a model Confucian ruler, yet was also known for his belief in religious Taoism.¹ Between the first and seventh lunar months of 1493, the empress was ordained as a Taoist priestess. This handscroll is her ordination certificate. Both painting and document, it depicts fifty-two gods and immortals, and bears a long inscription by Zhang Xuanqing (d. 1509), the Celestial Master of the Zhengyi (Orthodox Unity) sect of Taoism. The inscription outlines a ritual or series of rituals in which an important group of scriptures, talismans, and registers (lists of gods' names) were transmitted to the empress. The acquisition of the registers indicated she was a member of the same spiritual hierarchy as the gods.² In spiritual terms, Empress Zhang was elevated to the status of a realized being (*zhenren*). For the empress, Taoism represented the highest degree of orthodoxy, ideally suited to aiding her husband in ruling the nation.³ The pattern of imperial ordination seen here was established as early as the Northern Wei dynasty, when Emperor Tai Wudi (r. 424–51) was ordained in 442 as a Taoist priest by the northern Celestial Master Kou Qianzhi (d. 448).⁴

In the painting, the empress is depicted floating on a cloud in the heavens, accompanied by an entourage and a large group of deities and adepts. The empress's portrait is painted on a separate piece of paper which has been pasted over a section of the scroll that was intentionally left blank to receive it. It seems clear that the same painter who executed the remainder of the scroll painted this portrait. To the right of the empress is a portrait of Zhang Xuanqing. Among the other figures are the first Celestial Master, Zhang Daoling; the Supreme Lord of Fate; Wenchang, the God of Literature; guardians of the four cardinal directions; celestial generals; the gods of the zodiac; jade maidens (*yunü*); and the immortals Ge Xuan, Xu Xun (see cat. no. 115), and Fuqi.⁵ These figures are identified by small standard script labels inscribed in gold. At the beginning of the scroll is the title, inscribed in large "cloud-seal" (*yunzhuang*) characters: "Tablet of the Transcendent Who Superintends Reality, Red Writ of the Three Caverns" (*Sandong chiwen zong zhen xian jian*). A repaired

tear in the scroll that follows indicates that the first section of painted gods has been truncated. This missing section may have illustrated the highest Taoist gods, the Three Purities (see cat. nos. 65–67), which often appear at the beginning of scriptures in the Taoist Canon. The scroll terminates with its original Ming dynasty *kesi* silk wrapper, woven with dragons in blue, green, red, and gold threads.⁶ The painting's upper, lower, and side borders are decorated with alternating black, white, green, red, and blue dragons.

The main inscription, at the middle of the scroll, is by Zhang Xuanqing, who became the forty-seventh Celestial Master of the Orthodox Unity sect in 1477.⁷ It begins with four large characters, reading "Executive Bureau of Supreme Mystery" (*Taixuan dusheng*). The text that follows is divided into seven sections:

1. The Celestial Master Zhang Xuanqing recounts the lineage of his scriptural tradition, going back to the Taoist god Celestial Worthy of Primordial Beginning (*Yuanshi tianzun*).⁸
2. On the fifth day of the first lunar month of the sixth year of Hongzhi (1493), the Celestial Master requests permission from the celestial hierarchy to transmit certain scriptures to the Ming empress of the Central Palace (*Da Ming zhonggong huanghou*). The time of day (the *chen* hour, corresponding to the period from 7:00 to 9:00 a.m.), the place (the Blessed Plot [*fudi*] of Dragon and Tiger Mountain [Longhu Shan] in Jiangxi), and the name of the altar (the Ancestral Altar of Ten Thousand Methods [*Wanfa zongtan*]) are listed.⁹ Then permission is asked to transmit ten sacred scriptures that are descended from the first Celestial Master, Zhang Daoling. These are listed as follows:
1. Register of the Scripture of the Great Cavern of Supreme Purity (*Shangqing dadong jinglu*)
2. Register of the Five Thunder Scripture of the Three Caverns of Supreme Purity (*Shangqing sandong wulei jinglu*)
3. Register of the Scripture of Cultivating Perfection of the Majestic Oath of Orthodox Unity (*Zhengyi mengwei xiuzhen jinglu*)
4. Register of the Great Yellow Scripture of the Ten Palaces of the Most High (*Taishang shigong dahuang jinglu*)
5. Register of the Scripture on the Highest Accumulated Merit of the Three Fives (*Taishang sanwu dugong jinglu*)
6. Secret Register of the Seven Primes (Stars) of the Highest Northern Dipper (*Taishang beidou qiyan bilu*)
7. Secret Register of the Highest Three Officials Who Assist in Transformation (*Taishang Sanguan fuhua bilu*)
8. Secret Register of the Subtle Precepts of the Highest Nine Perfections (*Taishang jiuzhen miaojie bilu*)

9. Secret Register of the Highest Ascending Mystery Blood Lake Protection of Life (*Taishang shengxuan xuehu baosheng bilu*)

10. Tablet of the Transcendent who Superintends Reality of the Highest Three Heavens Jade Talisman and Contractual Writ of the Unifying Circles (*Taishang santian yufu zongzhen xianjian he tonghuan quanwen*) (referring to this handsroll).

This is followed by a request for a title and rank in the celestial bureaucracy to be conferred on the empress, and a prayer that the empress will enjoy long life and good fortune.

3. A list of accompanying documents, objects, and talismans that will enable the empress to use the scriptures and registers that have been conferred on her.

4. Licenses to perform the rituals and practices of each of the conferred scriptures.

5. The register (list of the deities) under the control of the ordained empress. This includes celestial Mystery Maidens (*suanni*); Celestial Generals (*jiangjun*) Tang, Ge, and Zhou; Marshal (*yuanshuai*) Zhao; Celestial Guards (*tianding*); six *ding* Spirit Maidens (*liu ding shennü*); and six *jia* Generals (*liu jia jiangjun*), the last two groups corresponding to gods of the zodiac. Most of these gods are depicted in the painting.

6. Three large talismans ("Jade Talismans of the Three Heavens" [*Santian yufu*]), written in red ink, to be used by the empress for summoning the gods of her register. The three heavens refer to the Three Purities, and the names of these heavens (*qingwei* for Jade Purity, *yuyun* for Highest Purity, and *dachi* for Great Purity) are included in a stylized form in their respective talismans.

7. A final proclamation, beginning with a verification of the empress's oath, followed by the empress's new Taoist name: Empress of the Great Ming, Sovereign of the Three Heavens Golden-Gate Jade-Assistance High-Immortal Vast-Compassion Universal-Kindness Embodying the Tao (*Da Ming huanghou santian jinque yufu shangxian hongci puhui taidao xuanjun*). Mention is then made of the "Seven-treasures" box and "Twin-phenixes Brilliant Five-flowers" embroidered cloth in which the handsroll will be stored, along with a statement that the empress will serve the emperor ("the lord of the sagely Ming"). At the end is the final date (the seventh lunar month of the sixth year of Hongzhi, the cyclical year *guichou* [1493]), with the day itself left blank.¹⁰

Following this are eight enormous characters, reading "Increasing Prosperity and Ten Thousand Longevities, to Exist as Long as the Heavens" (*Yi long wan shou yu tian chang cun*). Finally, after a length of blank paper, are depictions of nineteen more gods, including the Celestial Generals Tang, Ge, Zhou,

and Zhao; twelve gods of the zodiac, comprising six female *ding* and six male *jia* gods; and three Celestial Guards (*tianding*).¹¹

Empress Zhang was a native of Xingji, located on the Grand Canal, about one hundred miles south of Beijing.¹² Her father attended the Imperial University. The Ming dynastic history (*Ming shi*) states that the future empress was conceived after her mother dreamt that light from the moon (a symbol of *yin*) entered her womb. She married Zhu Youtang in 1487, at the age of seventeen, one year before his accession to the throne. In 1491 she gave birth to Zhu Houzhao, the future Zhengde emperor. In 1495 the empress gave birth to a second son, who died a year later. At the beginning of the Zhengde reign (1506), Empress Zhang became Empress Dowager. She outlived her son and died in 1541, during the Jiajing reign (1522–66). No mention is made in the empress's official biography of her ordination as a Taoist priestess. Nor is any mention made of this event in the *Veritable Records of the Ming Court* (*Ming shilu*) or in the biography of the officiating Celestial Master, Zhang Xuanqing.¹³

Zhang Xuanqing was highly educated and recognized for his talents in poetry and painting. He was first ordained during the Chenghua reign, in the 1470s, and rose to the rank of Celestial Master in 1477. In that year he married a daughter of Zhu Yi (1427–1496), Duke of Chengguo, a member of the imperial family.¹⁴ Zhang's activities at the court in Beijing also began before the Hongzhi reign. In 1486, at the end of the Chenghua reign, he was called to the palace in Beijing, where he performed a *jiao* offering ritual in the Hall of Imperial Peace (Qin'an Dian), the most important Taoist temple in the Forbidden City. In 1488 Zhang Xuanqing had an audience with the Hongzhi emperor, and subsequently became one of the latter's favorites. Zhang performed a *jiao* in 1490, on the occasion of the conception of the emperor's first child. When a son was born, the emperor bestowed on Zhang a jade belt, a gold cap, a silk robe, and silver. In 1498 Zhang was asked to pray for snow in the Temple of Worshipping Heaven (Chaotian Gong), with the result that a heavy snow fell the next day.

In 1501 Zhang Xuanqing introduced his successor to the emperor and requested permission to retire, which he did the following year. In 1504 Zhang presented the emperor with a self-portrait and an ancient sword that the emperor had requested. In return, Zhang was given gold coins and a portrait of Zhang Daoling, the first of the Celestial Masters. Zhang Xuanqing died in 1509.

Highest Purity Illustration of the Sword and Mirrors That Hold Images, from the Taoist Canon of the Zhengtong reign

Ming dynasty, Zhengtong reign, dated 1444
Original text by Sima Chengzhen, Tang dynasty, 8th century
Woodblock-printed book; ink on paper
35 x 11.3 cm (each page)
Bibliothèque Nationale de France, Paris (Chinois 9546 [428])

59

Taoist Ritual Sword

Qing dynasty, 18th century
Steel, brass, ray skin
L. 77 cm
The Art Institute of Chicago, lent by Mrs. E. F. Jeffery (846.30)

THE INSCRIPTION ON cat. no. 59 copies part of the inscription from a sword possessed by Emperor Xuanzong (r. 712–56) of the Tang dynasty (618–906; cat. no. 58), whose reign marked the “golden age” of imperial China.¹ This sword was presented to the emperor by Sima Chengzhen (647–735), an eminent Taoist priest active at his court. The original sword is lost, but an illustration of it is preserved in the Ming dynasty Taoist Canon (HY 431; *Shangqing hanxiang jianjian tu*), shown here as cat. no. 58.

The original sword was known as the *Sword of Phosphorescence and Thunder* (*Jingzhen jian*). It bore a number of symbols that developed upon the ideas of *yin* and *yang*, including the phosphorescence and thunder of its name, which are described as concrete manifestations of the primordial energies of *yin* and *yang*. The respective characters for these two concepts (*jing* and *zhen*) are inscribed on opposite sides of the sword’s pommel. Under the character for “phosphorescence” was the following inscription:

Qian descends essence,
Kun responds to the numinous;
The sun and moon are imaged.
The sacred peaks and rivers are formed.

This forms the first part of the inscription on the Art Institute’s sword. *Qian* and *kun* refer to the first two trigrams and hexagrams of the *Book of Changes* (*Yi jing*), which represent *yang* and *yin* energy, respectively. These two trigrams were shown in two talismans etched on opposite sides of Xuanzong’s sword. Stylized representations of the sun, moon, Northern Dipper (Ursa Major), and the Five Planets of traditional Chinese astronomy were also etched on the “phosphorescence” side of the sword, while the names of the Five Sacred Peaks and Four Rivers of China were etched on the “thunder” side of the sword, followed by the words “wind and clouds, thunder and lightning” (*fengyun leidian*). The second half of the inscription on the Art Institute sword copies that found under the character “thunder” on Xuanzong’s sword:

Spreading thunder and lightning,
Moving the mysterious stars;
Harmful wickedness is destroyed,
Beneficial purity is received.

The “mysterious stars” refers to the stars on the “phosphorescence” side of the sword, just as the previous passage described the peaks and rivers depicted on the “thunder” side; this implies the idea of *yin* within *yang* and *yang* within *yin*.

Taken as a whole, these images delineate the various combinations of *yin* and *yang* that form the world. Beginning with the unbroken lines of *qian* and the broken lines of *kun*, the most primordial representations of *yin* and *yang*, these two principles

are combined to form the elemental manifestations of phosphorescence and thunder, which favor one idea but imply its opposite as well. These combinations continue to form the stellar bodies on the "phosphorescence" side, which represent the heavens, and the sacred peaks and rivers on the "thunder" side, which represent the earth. The sword is therefore seen as a microcosm of the entire cosmos.

Unlike the original sword, there is no inscription on either the pommel or grip of the sword in the Art Institute; the two separate inscriptions from the grip of Xuanzong's sword are combined into a single inscription on the blade of this later sword. In place of the stellar and earthly bodies on Xuanzong's sword, depictions of the Twenty-eight Lunar Mansions are inscribed on the opposite side of the blade, accompanied by the Northern Dipper. As a result, the balance between the heavens and the earth created by the placement of the sun, moon, stars, and geographical features on Xuanzong's sword is not preserved in this example.

The ancient Chinese considered swords to be powerful magical implements with many different uses. Xuanzong's sword supposedly had exorcistic powers, "gathering up ghosts and destroying wickedness." These powers came from the fact that swords were understood as a sacred microcosm that embodied primordial energy. In this sense, swords were closely connected with another sacred microcosm, the human body. This association of the human form with a sword is reflected in the idea of "corpse liberation" (*shijie*), the belief that the body could be refined in the same way that a cicada or snake sheds its old skin as it develops a new one. Following this practice, some adepts (*xian*) would undergo a process similar to physical death in order to refine their bodies. When they "died," they would sometimes use a sword to take the place of their corpse in the coffin; this sword was like the skin left behind by a snake, taking the shape of the deceased but reverting to its original form after burial. In this way, the adept could hide the real significance of his death from the eyes of the profane. Among the prominent Taoist figures who used corpse liberation was Tao Hongjing (456–536; cat. no. 38), who supposedly left behind only a sword and his "empty clothing."²

—S. E.

Taoist Ritual Sword

Sword: Ming dynasty, Yongle reign, dated 1403
 Scabbard: possibly Qing dynasty, Qianlong reign (1736–95)
 Steel, gold, and jade
 L. 73.5 cm
 Staatliches Museum für Völkerkunde, Munich (19-5-2)

Taoist Ritual Sword

Sword: Ming dynasty, Hongzhi reign, 1500
 Scabbard: Qing dynasty, 19th century
 Steel and brass
 L. 64 cm
 Staatliches Museum für Völkerkunde, Munich (19-5-3)

THE FIRST TAOIST RITUAL SWORD shown here (cat. no. 60) is noteworthy for having been given to a leading Taoist master of the Ming dynasty by the Yongle emperor (r. 1403–24). Both sides of the steel blade are inlaid with gold designs depicting stylized constellations, one of which is the Northern Dipper (*Beidou*), the most powerful asterism in the Taoist heavens. A short gold-inlaid inscription on one side of the blade, just below the hilt, reads: "On the first month of the first year of the Yongle reign [1403], imperially bestowed on Gao dao Liu Yuanran." The sword's grip is made of jade; it bears a short inscription in seal script that reproduces part of the inscription on the grip of the sword given to the Tang emperor Xuanzong by the Taoist master Sima Chengzhen in the eighth century (cat. no. 58).

Liu Yuanran (1351–1432), a famous Taoist priest of the early Ming dynasty, was a native of Gongxian in Jiangxi province, and the son of a Yuan dynasty official. His official biography states that in 1393 he attracted the attention of the Hongwu emperor (r. 1368–98) with his abilities at rainmaking.¹ The emperor granted him the title Gao dao (Noble Tao), and Liu subsequently officiated in the Paying Homage to Heaven Palace [Chaotian Gong]. In 1421 the Yongle emperor moved the capital from Nanjing to Beijing, and Liu accompanied him to the north. During the reign of Xuande (r. 1426–35), Liu advanced to the rank of Great Realized Being (*da zhenren*). When he retired in 1433, the Xuande emperor painted a landscape painting with a poem, and

presented it to him.² The Ming history states that as a Taoist master, Liu Yuanran contributed to the ritual correctness of the imperial court through his "pure, calm, and self-controlled" personality.

As one of the leading Taoist priests in the imperial service, Liu Yuanran was a well-established and highly respected figure by the beginning of the Yongle reign in 1403, when this ritual sword was imperially bestowed on him. Liu was a priest of the Pure Illumination (Jingming) sect of Taoism, a school that grew to prominence in the Song and Yuan dynasties and stressed the fusion of Taoist and Confucian ideas (see cat. no. 115).³

The blade of the second sword (cat. no. 61) is inlaid with talismans in fine lines of gold. The handle has fittings of gilded brass, with a wheel (*chakra*)-shaped pommel. According to an inscription of 1849, written in gold on the leather scabbard, the sword was made in 1500, during the reign of Hongzhi (r. 1488–1505). In 1849 the sword was presented to a temple known as the Shrine of Numinous Response (Linggan Ci).

Incense Burner with Li Tieguai

Ming dynasty, 15th/16th century

Bronze

31 x 23 cm

Sichuan Provincial Museum, Chengdu

IN ANY TAOIST RITUAL, the incense burner is the single most important implement. As the Southern Song dynasty Taoist adept Bai Yuchan said, "You have only to set up the incense burner for the divine empyrean to be present."¹ The censer symbolizes the gate between the human world and the realm of the gods (and, by extension, the Tao). The presence of the incense burner sanctifies the space in which any ritual is enacted. The importance of incense in religious Taoism cannot be overstated. As John Lagerwey has shown,

Incense . . . is not just a fragrant offering to the gods, making the altar a pleasant place for them to spend some time. It is what literally draws them to the altar, as to a magnet, and especially to the altar-body of the high priest, for the incense is in the first place a symbol of the Three Energies of his body, billowing up into the bizarre configurations of all primordial energy—"celestial seals"—and thus attracting its divine counterpart, its "other half" into the cave [of the altar].²

The incense burner sits on the altar table, known as the *dong'an* ("cave table"), symbolizing the numinous grotto in the mountain through which the priest communicates with the heavens.³

Very few incense burners that can specifically be said to be Taoist survive from earlier than the Ming dynasty (1368–1644). This bronze example was excavated in Qingsu village near Chengdu, the capital of Sichuan province. The four legs descend from lion masks at the corners of the rectangular bowl. The lid is pierced with holes in the shapes of four of the Eight Trigrams. At the top of the lid is a handle in the shape of the Taoist adept Li Tieguai ("Iron-crutch Li"; see cat. no. 125), suggesting that this incense burner was designed for use in a temple of the Quanzhen (Complete Realization) sect.

—S. L.

Taoist Ritual Tablet

Ming dynasty, 15th/16th century

Ivory

49 × 8.5 cm

Staatliches Museum für Völkerkunde, Munich (11.125)

TABLETS (HU) LIKE THIS ONE, used during ritual audiences with deities from the Taoist pantheon, were modeled after the tablets carried by officials during imperial audiences. Depictions of the actual use of similar tablets during a Taoist ritual can be seen elsewhere in this catalogue (for example, see cat. no. 44).

The tablet is carved with four figures hovering in clouds above sacred mountains, on which grow magical fungi (*lingzhi*; see cat. no. 129). Above the figures is another mountain partially veiled by a coiling cloud, and above this celestial palaces supported by more clouds. Between the figures are four cranes, traditional symbols of longevity. The significance of the figures is not entirely clear, but they may have been inspired by Inner Alchemy (*neidan*). The lowest figure probably represents the meditator, surrounded by a ring of energy (*qi*) directed upward.¹ The upper three figures suggest the microcosmic three cinnabar fields (*dantian*), centers of energy in the head and upper and lower torso of the body, and the macrocosmic Three Purities (see cat. nos. 65–67). The attributes of the figures suggest an inner alchemical numerical progression that reduces the phenomenal world to its primordial energies. The lowest of these three figures is surrounded by the Eight Trigrams in the Later Heaven (*Houtian*; see cat. no. 14) arrangement, symbolizing *yin* and *yang* energy manifested in the world.² The next figure is surrounded by four circles, which may represent the inner alchemical refinement of the Eight Trigrams into the more fundamental trigrams of *qian* and *kun*, pure *yang* and *yin* energy, and *li* and *kan*, the first intermingling of these energies.³ The final figure is surrounded by constellations, in particular the Southern Dipper (a group of stars in Sagittarius) and Northern Dipper (Ursa Major) to the left and right.⁴ The Southern and Northern Dippers were traditionally believed to control (respectively) the records of life and death, and in this context they probably represent the further purification of energy into its most basic manifestation as *yang* and *yin*. As a result, the images on the tablet represent the refinement of energy from its limitless manifestations in the world to its eightfold manifestation in the trigrams, the further refinement of the trigrams into their constituent energies, and the eventual purification of these energies into pure *yin* and *yang*. The final stage of primordial oneness is represented by the heaven that resides even above the Three Purities, the ultimate goal of the inner alchemical process.⁵

—S. E.

TRADITIONALLY ATTRIBUTED TO CHEN ZHITIAN
Fourteen Portraits of Wu Qianjie

Yuan/Ming dynasty, second half 14th century

Handscroll; ink, colors, and gold on silk

51.8 x 834.8 cm

Museum of Fine Arts, Boston, Gift of Mrs. Richard E. Danielson
 (46.252)

THIS SERIES OF PORTRAITS depicts Wu Qianjie (1269–1346), one of the most famous Taoist priests of the Yuan dynasty (1260–1368).¹ Wu was a pupil of Zhang Liusun (1248–1322), himself a pupil of the thirty-sixth Celestial Master, Zhang Zongyan (1244–1292). During his lifetime, Wu Qianjie gained fame as a widely respected priest who was as comfortable in the Mongol court as he was among the literati of south-central China. He became a patriarch of the Mysterious Teaching (Xuanjiao) school of Taoism. The first patriarch of this school was Zhang Liusun, who had been summoned to Beijing in 1276 by the first Mongol emperor, Khubilai Khan (r. 1260–94).² The Xuanjiao school existed only during the Yuan, having been founded in 1287.³

Wu Qianjie began studying Taoism when he was twelve, and became a Taoist priest (*daoshi*) at the age of sixteen.⁴ His teacher summoned him to the capital of Dadu (Beijing) in 1287, and subsequently Wu spent most of his time in the north. When the Yuan emperor Chengzong (r. 1295–1307) came to the throne, Wu Qianjie officiated at the *jiao* ritual of thanksgiving to celebrate the accession. In 1307 Wu was given the title “Heir to the Xuanjiao Patriarchy.”⁵ After his teacher’s death in 1322, Wu Qianjie became head of this sect. He was put in charge of all Taoist affairs in the country, under the aegis of the Academy of

Worthies (Jixian yuan), which also oversaw all Confucian activities, such as the Imperial University.⁶ Wu was respected for his Confucian learning, and often recommended literati to positions at court. As Sun K'o-k'uan has shown, it was through such individuals as Wu Quanjie that the literati elite of the lower Yangzi valley obtained a voice, and thus a measure of influence, at the Mongol court:

Xuanjiao, "the sublime teaching," was in effect a branch of the southern Tianshi Taoism that had been created by the edict of the Mongol rulers. Xuanjiao was purely a Yuan religious phenomenon, for the Xuanjiao patriarchy was obliterated by the founder of the Ming dynasty, Ming Taizu. What is more important, from the standpoint of the history of Yuan literati, is that Xuanjiao, a Taoist religious movement replete with beliefs in magic, divination, and immortality, was the product, not of Taoists acting on their own, but of Taoists working with the active cooperation of prominent Confucian literati and under the endorsement and sponsorship of the ruling Mongols. Xuanjiao was a distinctive form of Daojiao [religious Taoism], and from the standpoint of traditional elite Han Chinese culture it was highly refined and literary. It was also highly political. In effect, Xuanjiao Taoist culture and the culture of the Han Chinese literati were overlapping phenomena, and in some cases they were one.⁷

Among his many accomplishments, Wu Quanjie is credited with the building of the Temple of the Eastern Peak (Dongyue Miao) in Beijing. While the idea to build the temple was Zhang Liusun's, Zhang died before construction could actually begin. In 1322, under the direction of Wu Quanjie, the main hall was completed.⁸ Aside from his skillful managing of Taoist affairs, Wu Quanjie was widely respected by contemporary Chinese literati for his upright character. He is described as follows in the Yuan dynastic history:

[Wu] Quanjie elegantly favored making friends with literati [shidafu], and there were no favors he would not perform [for them]. In his relations with his elders, he was especially considerate and respectful, and in promoting [the careers of] talented persons, he feared only that he did not exert all his strength. As for helping those in poverty or in dire straits, he never let his mind be altered by personal debts or grudges. In his day he was highly regarded for his endowment of chivalric spirit [xia qi].⁹

The handscroll in the Museum of Fine Arts, Boston, is a rare document of Wu Quanjie's life. It includes fourteen portraits, depicting Wu between the ages of forty-three and sixty-three.

According to a record of this composition in the early Ming catalogue *Coral and Munan Gems (Shanhu munan)* by Zhu Cunli (1444–1513), the scroll originally included seventeen portraits.¹⁰ The Boston scroll has traditionally been attributed to Chen Zhitian, but its individual portraits were based on paintings by several artists, including Zhao Mengfu (1254–1322). While the sequence of portraits generally follows a chronological progression, several are out of sequence.¹¹ Each portrait has a note indicating the date and circumstances surrounding the image, and an accompanying poem:

1. The first portrait depicts Wu in 1311. The note reads: "In the fourth year of the Zhida reign [1311], [Wu] returned to court. In Yan [Beijing] he lived in the Hall of Encircling the Pivot [Huan-shu Tang].¹² [Thus was] made [this] *Portrait of Inner Observation [Neiguan xiang]*. Eulogized by Yuan Mingshan of Qinghe." The image is a bust portrait, depicting Wu within a circle. Wu wears a white robe with a blue lapel; a Taoist priest's jade cap is visible under his translucent horse-hair hat. The term *neiguan* (inner observation) refers to a Taoist practice of meditation, "a conscious introspection of one's own body and mind."¹³

2. The second portrait depicts Wu in formal ritual attire, holding an ivory tablet and seated on an elaborate wooden throne. The note reads: "In the second year of the Huangqing reign, the cyclical year *guiyou* [1313], [Wu] celebrated a great *jiao* ritual in the Palace of Eternal Spring [Changchun Gong, a Taoist temple].¹⁴ He was honored and directed to take jade tablets to Mount Song [Henan] and the Ji River [Shandong].¹⁵ [Thus was] made [this] *Portrait of Calming the Mind [Cunsi xiang]*. Eulogized by Zhao Mengfu of Wuxing." The presence here of Zhao Mengfu's inscription and poem is significant because it confirms the close relationships Wu Quanjie maintained with leading literati during his lifetime. Zhao Mengfu wrote many formal inscriptions for Taoist temples in Beijing and elsewhere.¹⁶

3. The third portrait depicts Wu in 1314, performing a Taoist ritual dance (*feibu*, or "flying pace"), most likely the "Pace of Yu" (see cat. no. 52). The accompanying note, by Yu Ji, states that in that year Wu's mother and father were granted official titles, and that the emperor gave Wu gifts of a zun beaker and clothing.

4. The fourth portrait depicts Wu in an informal white robe. Despite the informal pose, his status is indicated by the jade bi disc tied to his belt. The note describes Wu's return to Beijing after a trip to Jiangxi in 1315.

5. The fifth portrait depicts Wu Quanjie holding a *nuyi* (mushroom-shaped) scepter and seated under a pine tree

among rocks and bamboo. A crane dances in the foreground. Yu Ji's note states that Wu was greatly honored by the Yuan emperor Renzong (r. 1312–20), and that the original depiction of this scene was painted by Zhao Mengfu during this emperor's Yuanyou period (1312–20).

6. The sixth image depicts Wu in 1316, standing on a mountainous bluff and watching clouds. The note is by Yuan Jue of Siming (Ningbo, Zhejiang province).

7. The seventh image is a bust portrait from 1317. The note reads: "In the fourth year of Yuanyou, the cyclical year *dingsi* [1317], the Master concluded the cultivation of the Method of the Great Cavern [*Dadong fa*]. [Thus was] made [this] 'Niwan Portrait' (*Niwan xiang*). Eulogized by Zhao Mengfu of Wuxing." *Niwan* refers to the upper of the three Cinnabar Fields of Inner Alchemy (*neidan*). One of the key energy centers of the human body, it is visualized at the center of the head. *Niwan* can refer to a space, a palace, and a god.¹⁷ The term first appears in the *Inner Scripture of the Yellow Court* (*Huangting neijing jing*), a text dating to the fourth or fifth century.

8. The eighth portrait depicts Wu Quanjie during the Dade reign (1297–1307). He is shown near a waterfall on Mount Lu in Jiangxi, playing a *qin* zither under a pine tree while two cranes dance.

9. In the ninth portrait, Wu is shown in 1318, carrying out a *jiao* offering ritual at the court.

10. In the tenth portrait, Wu is shown in 1297, visiting the sacred Taoist mountain of Qingcheng Shan near Chengdu in Sichuan. On this trip from Beijing to Sichuan, Wu was asked to substitute for the emperor in worshipping the god of the Yangzi River.

11. The eleventh portrait shows Wu in 1318, in the Western Hills outside Beijing, listening to the wind in the pines.

12. The twelfth portrait depicts Wu during the Zhiyuan reign (1264–94), standing at the summit of Mount Heng, the great sacred peak in Hunan. The note states that Wu was instructed by Yuan Shizu (Khubilai Khan) to offer sacrifice to Mount Heng.

13. The thirteenth portrait depicts Wu in 1327, as a high-ranking Taoist priest at the Yuan court. He wears a blue robe and holds a tablet, and is shown conducting a *jiao* ritual in the Venerating Perfection Palace (Chongzhen Gong).

14. The final portrait depicts Wu in 1331, at age sixty-three, on the occasion of a *jiao* ritual he conducted at court. Here he leans on a three-footed arm-rest (*ji*) and discusses ritual techniques (*fa*).

ture of Wu Quanjie was once installed in its own hall at the Dongyue Miao in Beijing, where it was worshipped as an icon to the temple's builder.¹⁸ An original example of Wu Quanjie's calligraphy can be seen in his colophon to Chen Rong's famous *Nine Dragons* handscroll of 1244, in the Museum of Fine Arts, Boston.¹⁹

—S. L.

This handscroll is one of the few surviving portraits of a Taoist priest from the Yuan dynasty. A memorial portrait sculp-

NOTES

Cat. no. 44

1. This title does not appear on the painting itself or on its mounting.
2. For example, see the account by Lu Xijiang (406–477) in HY 1268.
3. See Benn 1991 for a detailed study of early Taoist altars.
4. See Rawski 1998: 271.

Cat. no. 45

1. The *Jinping mei* was written during the second half of the sixteenth century and first published around 1618. For the history and importance of this novel, see the introduction in Roy 1993.
2. Roy 1993: xviii.
3. The principal characters of the novel are all described in Roy 1993.
4. For more on *liandu* rites, see Boltz 1983.
5. In particular, the *Jiuzhen shengshen zhongji*: the significance of this particular scripture in the *Jinping mei* has been studied in an unpublished paper; see R. Wang 1999.
6. Roy 1993: lxiv.
7. See R. Wang 1999.

Cat. nos. 46–51

1. The text survives as a Tang dynasty (618–906) Taoist manuscript from Dunhuang in Central Asia, and corresponds to HY 1117 in the Taoist Canon (Dongyuan lingbao sandang jingdao keji yingshi; *juan* 5 includes regulations on robes for Taoist priests; see Ofuchi 1978–79: vol. 1, 223–42). The Dunhuang scroll is now in the Bibliothèque Nationale, Paris (Pelliot 2337).
2. Datong shi bowu guan 1978: pl. 2.
3. See Wilson 1995: fig. 6a–b.
4. The story of Wang Ziqiao was recorded on a late Han dynasty stele dated A.D. 165; see Chen 1988: 2; see also Ebrey 1981: 38–39. I am grateful to Joseph Steuber of the Nelson-Atkins Museum, Kansas City, who kindly sent me a copy of his master's thesis; see Steuber 1996.
5. Watson 1965: 91–93.
6. Lagenwey 1987b: 231.
7. Previously published in Kerr 1991: pl. 28, and Wilson 1995: 44, fig. 3.
8. Acc. no. 46.188; published in Mailey 1978: no. 10.

Cat. no. 52

1. The division of China into nine ancient provinces (*jiuzhou*) was one of the many achievements credited to Emperor Yu; another was the quelling of annual floods and the harnessing of great rivers. Yu's earthworks and feats of hydraulic engineering symbolized the bringing of order to chaos.
2. Andersen 1989–90: 15–16. As Andersen shows, the Pace of Yu is mentioned in both the *Ri Shi* (Day Book), a bamboo-slip manuscript excavated in 1975 from a tomb dated 217 B.C. (Qin dynasty) at Shuihudi, Hubei province, and the *Wushi'er bingfeng* (Fifty-two Healing Methods), a medical treatise written on silk discovered in 1974 in an early Han tomb at Mawangdui, Changsha, Hunan province.
3. *Ibid.*: 21. On early conceptions of the Northern Dipper, see also Harper 1978–79.
4. Andersen 1989–90: 18, 37.
5. *Ibid.*: 38. Proper enactment of the Pace of Yu could result in transformation into a "terrestrial immortal," acquisition of the mushroom of immortality, and realization as a perfected being (*zhennan*). As Andersen has shown, in the original Shangqing teachings of the Six Dynasties period, the Pace of Yu appears to have been an individual practice, unlike its later manifestation at the center of communal ritual. This change appears to have occurred during the Tang dynasty (618–906).
6. Boltz 1987a: 34.
7. *Ibid.*: 33. Boltz notes that "From the *Yijianzhi* stories [compiled by Hong Mai, 1123–1202], it appears that the Tianshi practitioners were recognized above all else for their expertise in the exorcism of possessing spirits that were thought to have caused various forms of mental disturbances" (*ibid.*: 37–38).

1. See the chart in Bokenkamp 1983: 451.
2. The Ming woodblock-printed version of this text has a superb illustrated frontispiece depicting the Three Punties (Sanqing), the highest gods of the Taoist pantheon.

Cat. no. 56

1. The accompanying commentary is not written in a grid.
2. The complete title is *Lingbao wuliang duren shangpin miaojing*.

Cat. no. 57

1. See the biography of Zhu Youtang in Goodrich and Fang 1976, vol. 1: 375–80; see also Twitchett and Fairbank 1988: 353.
2. See Seidel 1983: 333. Seidel has shown that the imperial investiture ceremony was based on an ancient Taoist ritual.
3. Berling 1998: 956, 966. The imperial patronage of religious Taoism reached an apogee during the Jiajing reign (1522–66). Berling has shown that "the pattern of Ming imperial patronage of Taoist temples and rituals was repeated in virtually every reign." This provides a counterpoint to the better-known Ming imperial patronage of Tibetan Buddhism; see Berger 1994: 107–10.
4. Mather 1979: 118.
5. Fuqiu was the teacher of the Zhou dynasty immortal Wang Ziqiao.
6. Despite the fact that the *kesi* wrapper appears at the end of the painting, it is clear that the scroll was meant to be read from right to left (see Sung 1999: 136).
7. Zhang's biography is recorded in *Han Tianshi shijie* (1607), a text in the Wanli period (1573–1620) supplement to the Taoist Canon; see HY 1452, and ZTDZ, vol. 58: 442–43 (*juan* 4: 8–10). The *Han Tianshi shijie* documents the lives of the Ming Celestial Masters up to 1565.
8. Zhang Xuanqing here prefaced his signature with the character *chen* ("servitor"), denoting that he is a servant of the court.
9. Dragon and Tiger Mountain was Zhang Xuanqing's home.
10. This is the case in many imperial inscriptions, such as tomb epitaphs or contractual agreements with the spirit world.
11. The zodiac gods have the heads of their corresponding animal symbols on their headresses.
12. For Empress Zhang's biography, see MS, vol. 12: 3528.
13. For information on events in the life of the Ming Celestial Master, see Seidel 1983 and Huang Ming eming shilu, a text in the Taoist Canon (HY 1450) documenting events in the lives of the Celestial Masters from 1360 to 1605.
14. On Zhu Yi, see CCKZL, *juan* 5: 514–55. Bruyn 2000 points out that during the Ming, many of the Celestial Masters from Longhu Shan married into the imperial family. Through this marriage the Celestial Master obtained a brother-in-law in Li Dongyang (1447–1516), a highly influential Grand Secretary in the reigns of Hongzhi and Zhengde, and one of the finest poets of the Ming dynasty.

Cat. no. 63

1. The ring of energy around this figure is similar to inner alchemical depictions of the union of fire (yang energy) and water (yin energy) in the energy centers of the body; for example, see cat. no. 133.
2. There is apparently a mistake in this arrangement, since the trigram *kun* is shown in the place of *li* as well as in its own position, while *li* is missing altogether.
3. See the introduction to section III.5 and the entries in that section for more detail on the significance of these trigrams in Inner Alchemy.
4. Both dippers are shown with seven stars, although in fact the Southern Dipper has only six stars. The number of stars in the dippers were sometimes altered for aesthetic balance; see cat. no. 78.
5. It was sometimes believed that there was a final highest heaven above the Three Purities called the Daluo heaven, the single peak and the palaces at the top of this tablet may refer to this ultimate celestial realm (see also cat. nos. 65–67).

Cat. no. 64

1. Wu Quanjie's biography is found in *YS*: 1160–61. Valuable information on Wu Quanjie can also be found in Yu Ji's long inscription on the River Chart (*Immortal's Altar* (*Hetu xiantian bei*) in *DYXGL*, juan 25: 5b ff. (see Sun 1981: 238–39).
2. Zhang Liusun was the most powerful Taoist at the Yuan court in the late thirteenth century. A sign of his influence was his success in seeing that the ban on Taoist scriptures that had been promulgated by Khubilai Khan in 1271 was no longer enforced.
3. As Sun K'o-üan has shown, the Xuanjiao school was formed by the Mongol emperors as a means of co-opting the authority of the Celestial Masters of the Orthodox Unity sect at Dragon and Tiger Mountain (Longhu Shan) in Jiangxi province. As part of this program, in 1304 the Celestial Master Zhang Zongyan was summoned to court from Longhu Shan and given the title "Head of the Zhengyi School" (*Zhengyi jiaozhu*); see Sun 1981: 229, and Swann 1964: 17.
4. *YS*: 1160.
5. Sun 1981: 224.
6. *Ibid.*; see also Broeck and Tung 1951: 102.
7. Sun 1981: 212–13.
8. Wu Quanjie also played a role in the choice of the forty-third Celestial Master, Zhang Yuchu (1359–1410), a pivotal Taoist of the early Ming who began a new compilation of the Taoist Canon (eventually published in 1444–45); see Broeck and Tung 1951: 77. For a painting by Wu Boli inscribed by Zhang Yuchu, see cat. no. 141.
9. Translated in Sun 1981: 225. Of all the Yuan literati, Wu Quanjie was probably closest to Wu Cheng, the greatest Neo-Confucian scholar of his day and a court official under the Mongols. Wu Quanjie and Wu Cheng came from the same home town. See Gedalecia 1981: 186–211.
10. *SHMN*: 372–75.
11. The same is true of the sequence of portraits recorded in the *Shanhu munon*.
12. The "pivot" (*shu*) refers to the axis determined by the relative position of the Pole Star and the earth. The Pole Star was called *Beiji* (Northern Extremity) or *Tian shu* (Pivot of Heaven). Both the terrestrial and celestial realms circumscribed this axis.
13. Kohn 1989a: 196.
14. The present White Cloud Monastery (*Bayun Guan*) in Beijing is located just west of its predecessor, the Changchun Guan.
15. The jade tablets were offerings directed to the gods of Mount Song and the Ji River.
16. See, for example, Zhao's stele inscription at the Dongyue Miao, Beijing, entitled *Daoguo lei* (*Stele on the Taoist Religion*), and the handscroll in the Tokyo National Museum entitled *Record of the Restoration of the Three Gates of the Xuanmiao Guan*; see Broeck and Tung 1951, and Shodō zenshū 1970–73, vol. 17: pls. 1–5.
17. In the body, the god Taiyi (Supreme Unity; see cat. no. 75) dwells above the *niwan*; see Robinet 1993: 100. The *niwan* itself consists of nine cavities that correspond to nine celestial palaces; see Despeux 1994: 67.

18. Broeck and Tung, pl. 2. A copy made in 1999 stands in the same hall today.

19. Wu 1997: pl. 92. The *Nine Dragons* scroll also bears colophons by Ouyang Xuan and the thirty-ninth Celestial Master, Zhang Sicheng (dated 1331; see cat. no. 73), among others.

THE TAOIST PANTHEON developed with the growth of the Taoist religion in the late Han and Six Dynasties periods (second–sixth centuries). By the Tang dynasty (618–906), the Three Purities (Sanqing), one of whom was the deified Laozi, were established as the highest gods of the Taoist pantheon. In religious Taoism, the gods are conceived of as pure emanations of the Tao. An important corollary is that the gods are ultimately less important than the Tao itself. Taoism has no supreme being, but teaches that there is only the Tao that spontaneously generates the cosmos.

Taoist gods can further be defined as those deities who are represented by revealed scriptures in the Taoist Canon (*Daozang*). This characterizes the majority of Taoist gods, as opposed to the gods of popular religion, who more often begin their existence as human heroes or even animal or terrestrial spirits and who are eventually transformed into gods of the popular pantheon. Of the Three Purities, only the deified Laozi has his own mythology. Among the high gods of Taoism are the Three Officials (Sanguan): the gods of Heaven, Earth, and Water, who function as judges of human fate.

This section of the exhibition includes an eleventh-century handscroll by Wu Zongyuan in ink on silk, depicting deities of the Taoist pantheon, entitled *Procession of Immortals Paying Homage to the Primordial* (cat. no. 74). Paintings such as this may have served as models for murals in Taoist temples, and are iconographically significant because they allow us to reconstruct the Taoist pantheon at different moments in its historical development. The most spectacular surviving depictions of the Taoist pantheon are the fourteenth-century murals painted on the walls of the Hall of the Three Purities at the Eternal Joy Temple (Yongle Gong), a Yuan dynasty Taoist temple in southern Shanxi province. These murals focus on eight major gods, painted on an enormous scale, each accompanied by a large

entourage of deities. The eight principal gods are the Great Emperor of the South Pole Star, the Earth Goddess (Houtu), the Jade Emperor (Yuhuang), the Purple Tenuity Emperor (Ziwei dadi), Supreme Unity (Taiyi), Metal Mother (Jinmu, the Queen Mother of the West), Wood Sire (Mugong, the ancient Dongwanggong, Lord King of the East), and Gouchen (a celestial emperor representing the constellation surrounding the Pole Star). Among the lesser gods included are the deities of the Sun, Moon, and Five Planets, the gods of the Eight Trigrams, and the gods of the Chinese zodiac.

The images in this and other sections of the exhibition include paintings from several important sets of hanging scrolls made for use in the Water and Land Ritual (*Shuilu zhai*), a Buddhist rite developed in China for the universal salvation of all sentient beings from hell. Like other “fast” rituals common to both Buddhism and Taoism, the ritual was intended to establish merit (*gong*) for both the living and the souls of the dead in the netherworld, so that they might be released from the tortures of these hells and re-enter the wheel of reincarnation, or, better yet, ascend to the celestial realms. Until the Northern Song dynasty (960–1126), sets of Water and Land Ritual paintings included depictions of the highest gods of religious Taoism, the Three Purities (Sanqing), but from the time of Emperor Huizong (r. 1100–25) onward, the inclusion of these images was forbidden in such sets. In many cases the images of Taoist gods that appear in surviving Ming dynasty sets of Water and Land Ritual paintings provide the earliest or finest known images of particular Taoist gods, and it is for this reason that they are included in the exhibition.

67

Celestial Worthy of the Way and Its Power

Early Qing dynasty, 17th/18th century
Hanging scroll; ink and colors on silk
160 x 80 cm
White Cloud Monastery (Baiyun Guan), Beijing

THESE THREE HANGING SCROLLS, from two different triptychs, depict the three highest deities of the later Taoist pantheon, the Three Purities (Sanqing). The Three Purities rule over the highest three celestial realms of Jade Purity (*Yuqing*), Highest Purity (*Shangqing*), and Great Purity (*Taiqing*), also called the Three Purities; these realms are often identified with the Three Heavens (*Santian*).¹ Each of these three fundamental embodiments of the Way in turn transforms itself threefold, resulting in nine heavens, which then manifest in the four directions, for a total of thirty-six heavens. According to the Northern Song dynasty Taoist master Zhang Junfang (active early eleventh century),

Originally, Taoism (*daojiao*) arose from what has no beginning: it left traces and responded to impulses, giving birth to the Wondrous One (*Miaoyi*). The Wondrous One divided into the Three Primes (*Sanyuan*), the Three Primes transformed into the Three Energies (*Sanqi*) and the Three Energies transformed into the Three Materials (*Sancai*).² When the Three Materials grew, then all the ten thousand things were prepared for.³

This vision of the inception of world is derived from chapter 42 of the *Daode jing*:

The Way gave rise to the one,
The one gave rise to the two,
The two gave rise to the three,
The three gave rise to all the ten thousand things.

Although the deities of the Three Purities seen in these hanging scrolls were a fairly late development, the ideas that formed their basis began to appear as early as the fourth or fifth century. The threefold division of the world reflected in the "Three Energies" and the "Three Materials" described by Zhang Junfang was a fundamental part of the first attempts of the Celestial Master movement to organize the Taoist religion on a large scale in the fifth century. For example, an early Liu-Song dynasty (420–479) scripture² from this movement claims that Laozi (see cat. no. 1) first took shape from the Mysterious, Primordial, and Beginning energies (the Three Energies) that manifested from Great Nothingness (*Taiwu*), and that he further spread these energies to form the heavens, the earth, and all things in between (in other words, the Three Materials). In addition, this scripture states that the teachings that Laozi transmitted to Zhang Ling, the founder of the Celestial Master movement in the Eastern Han dynasty (25–220),³ were manifestations of the energies of the Three Heavens, and that part of Zhang's title was "Master of the Three Heavens" (*Santian zhi shi*).

This threefold division of the celestial realms and the energies that formed the world would eventually be associated with another three-part system, the Three Caverns (*Sandong*). This system, first codified by the Liu-Song dynasty Taoist scholar Lu Xiujing (406–477), was a means for the Celestial Master tradition to incorporate scriptural writings from outside the movement, in particular those that included new teachings that had developed out of prominent family traditions in the area near the southern capital.⁴ The Highest Purity scriptures, which centered around the Xu family from the Jurong area (southeast of modern Nanjing), were organized into the Cavern of Perfection (*Dongzhen*) category; the Numinous Treasure (*Lingbao*) scriptures (see cat. no. 53), which centered around the Ge family from the same area, were arranged into the Cavern of Mystery (*Dongxuan*) category; and a group of writings centered around the *Scripture of the Three Emperors* (*Sanhuang jing*), which was connected with both the Xu and Ge family traditions through its supposed author, Bao Jing, were arranged into the Cavern of Divinity (*Dongshen*) category. While Taoist scriptures quickly expanded beyond the limits of these three scriptural traditions, the Three Caverns were maintained as the basis for organizing Taoist scriptures, and the Ming dynasty (1368–1644) Taoist Canon is still nominally arranged according to the Three Caverns.

Gradually, attempts were made to incorporate these different three-part doctrines into a single, coherent system, which was then applied to the Taoist pantheon; the eventual result of these attempts was the Three Purities. Early versions of the Three

Purities appeared in the Tang dynasty (618–906). For example, Wang Xuanhe, a Taoist encyclopedist active during the reigns of Emperor Gaozong of the Tang (r. 649–83) and China's only empress, Wu Zetian (r. 684–705), identified Jade Purity as the realm of the Celestial Worthy of Primordial Beginning (Yuanshi tianzun), Highest Purity as the realm of the Great Highest Lord of the Grand Way (Taishang dadao jun), and Great Purity as the realm of the Great Highest Elder Lord (Taishang laojun, or Laozi).⁷ The Three Purities theory continued to mature through the Tang and Song (960–1279) dynasties, and variants were developed on the basic threefold division of the highest heavens and the deities associated with them. Zhang Junfang, who was the most prominent Taoist figure of his time, stated that Jade Purity is ruled by the Celestial Treasure Lord (Tianbao jun), Highest Purity is ruled by the Numinous Treasure Lord (Lingbao jun), and Great Purity is ruled by the Spirit Treasure Lord (Shenbao jun).⁸ Above these three realms is one more heaven, the highest of the highest, which is the residence of the Celestial Worthy of Primordial Beginning. Zhang's theory is fully matured, and associates these three deities with the Three Heavens, the Three Energies, and the Three Caverns.⁹ At the same time, though, this theory differs from both the Tang dynasty system set forth by Wang Xuanhe and the later system evident in these three paintings. Consequently, it seems that the idea of the Three Purities, while well developed and widely supported, was still not entirely standardized by the Northern Song period.

In addition, there is evidence that the Three Purities were incorporated into Buddhist ritual during the Northern Song, which indicates that the doctrine had already expanded beyond the boundaries of Taoism by this time.¹⁰

These three paintings represent the Three Purities as understood by the Complete Realization (Quanzhen) sect of Taoism (see below). The first deity, who rules over the realm of Jade Purity and is the patriarch of the Cavern of Perfection scriptures, is the Celestial Worthy of Primordial Beginning. The second deity, who rules over the realm of Highest Purity and is the patriarch of the Cavern of Mystery scriptures, is the Celestial Worthy of Numinous Treasure (Lingbao tianzun). The third deity, who rules over the realm of Great Purity and is the patriarch of the Cavern of Divinity scriptures, is the Celestial Worthy of the Way and Its Power (Daode tianzun); the iconography of this last deity indicates to us that he is none other than Laozi (see cat. no. 1). These names and attributes are the end result of the various accretions that developed around the threefold division of both the celestial realms and the Taoist scriptures, beginning in the medieval period. They are at once the highest of all Taoist deities,

the rulers of the most refined celestial realms, and the patrons of the three major sections of the Taoist Canon as it still exists today. As manifestations of the Three Energies, they are the source of all life, and as the patriarchs of the Three Caverns, they are the source of all knowledge.

These paintings differ from many of the other works in this catalogue in that they come from an active Taoist temple, the White Cloud Monastery (Baiyun Guan) in Beijing, rather than from a museum. Thus, they not only are relics of past beliefs, but represent a tradition that is still alive, despite the hostile political climate of the recent past. The Three Purities are still revered in this temple, and their images hold a place of special honor in their own pavilion along the central axis of the temple grounds.¹¹ The White Cloud Monastery is the principal seat of the Complete Realization sect, one of the two major movements of Taoism in modern China.¹² This movement, which is best known for its doctrine of the "unity of the Three Teachings" (*Sanjiao yizhi*), joining together the ideals of Taoism, Buddhism, and Confucianism, grew out of the chaos of the twelfth century after the fall of the Northern Song. It gained considerable political influence through the figure of Qiu Chuji (1148–1227), also known as Qiu Changchun ("Endless Spring"), a disciple of the founder of the movement, Wang Chongyang (1112–1170).¹³ Qiu was first patronized by the Jin dynasty (1115–1234) ruling house, but his support was also sought by the Southern Song (1127–1279) imperial house and the Mongols under Chinggis (Ghengis) Khan (r. 1206–27). Qiu began to court the Mongol rulers, and in 1222, at over seventy years of age, he traveled into Central Asia to meet with Chinggis Khan, thereby linking his movement with the rising Yuan dynasty (1260–1368), which would later gain control over all of China. The White Cloud Monastery was originally named after Qiu,¹⁴ whose remains are said to be buried under the hall devoted to him, which is in front of the Pavilion of the Three Purities. The White Cloud Monastery also originally housed the Ming dynasty woodblock edition of the Taoist Canon, which formed the basis for all modern reprints of this compilation; this Ming edition of the Taoist Canon was kept in the second floor of the Pavilion of the Three Purities.¹⁵ In this sense, the Pavilion of the Three Purities in the White Cloud Monastery can rightly be said to be the source for all contemporary research on the religion of Taoism, and the deities worshipped there remain the patriarchs of the modern scholarly tradition.

Celestial Worthy of Primordial Beginning

Ming dynasty, late 15th/early 16th century
Glazed stoneware
H. 203 cm
Tsui Art Foundation, Hong Kong

THE INTRODUCTION OF MAHAYANA ("Greater Vehicle") Buddhism into China through trade routes in Central Asia had a tremendous impact on Chinese religion, including Taoism. Taoist writers began to reproduce the narrative style of Buddhist writings, and to develop deities in imitation of the many Buddhas and bodhisattvas of the Mahayana pantheon. This trend is clearest in the figure of the Celestial Worthy of Primordial Beginning, an imitation of the supreme Buddhas of the Mahayana tradition.

After his initial appearance in the early fifth century, this deity quickly became the most important of all Taoist gods. By the Tang dynasty, the Celestial Worthy of Primordial Beginning was seen as the source of all Taoist teachings. Supposedly, Taoist scriptures first existed only as patterns that appeared in the pure energies of the unformed world, potent but unintelligible. The Celestial Worthy of Primordial Beginning took these patterns and refined them, casting them into gold and jade tablets with readable characters similar to talismanic script (see cat. no. 56). When the Celestial Worthy of Primordial Beginning first revealed his teachings, the blind regained their sight, the deaf were able to hear, and withered bones even sprang from their graves, filled with new life.¹ Each time a Taoist priest recited the scriptures revealed by the Celestial Worthy of Primordial Beginning, he re-enacted these miracles, freeing the souls of all living things from suffering and transforming his own body through the sacred energies contained in the scripture.

The Celestial Worthy of Primordial Beginning was eventually incorporated into the Three Purities (see cat. no. 65) as the highest of these three deities, and this assured him an unsurpassed position in the later Taoist pantheon. This large sculpture was most likely made as one of a set of three images depicting these Three Purities. The sculpture is made of separately fired and glazed parts that have been put together; this example is unusual in being largely intact.² The green, yellow, aubergine, blue, and transparent enamel glazes found here were widely used during the Ming dynasty for both Buddhist and Taoist ceramic sculpture, and are closely related to the glazes used in Fahua ware.

 Museum of Fine Arts, Boston, Asiatic Curator's Fund and
 Frederick L. Jack Fund (1996.58)

THE TRIAD OF GODS known as the Three Officials (Sanguan) emerged in the religious Taoist pantheon as early as the late Han dynasty (second century). These gods function as judges of human fate. According to a Taoist scripture of the fifth century (the *Taishang santian neijie jing*, or *Supreme Scripture on the Inner Elucidation of the Three Heavens*), the Three Officials played a role in the deified Laozi's initial revelation in A.D. 142 to the first Celestial Master of religious Taoism, Zhang Daoling. As a consequence of this revelation, Zhang Daoling "made a contract with the Three Officials of Heaven, Earth, and Water respectively, as well as with the generals of the star of the Great Year [*Taisui*, or

69

70

Jupiter], so that they then entered the orthodox system of the Three Heavens and no longer opposed the faithful."¹ It is noteworthy that the origin of the Three Officials is older than that of the Three Purities (Sanqing), the highest gods of the religious Taoist pantheon (see cat. nos. 65–67).

The Three Officials also appear in such fifth-century Lingbao scriptures as the *Precepts of the Three Primes* (*Sanyuan pin*), and the *Supreme Secret Essentials* (*Wushang biyao*), a Taoist encyclopedia compiled during the Northern Zhou dynasty in the late sixth century.² Thereafter the Three Officials played a key role as intermediaries between human beings and the bureaucracy of the netherworld of the dead. Certain days of the ritual calendar were reserved for the offering of petitions to the Three Officials, when these gods would review an individual's merits and demerits: the seventh days of the first and seventh months, and the fifth day of the tenth month.³ On these occasions, petitions to the Official of Heaven (*Tian guan*) were burned (and thus carried via smoke to the heavens), petitions to the Official of Earth (*Di guan*) were buried, and those to the Official of Water (*Shui guan*) were submerged.⁴

The theme of the Three Officials is recorded as having been painted as early as the Tang dynasty (618–906).⁵ The earliest surviving depiction of these gods, however, may be that in the well-known Junkunc album, datable to the early Southern Song dynasty (twelfth century).⁶ There the gods are shown with the official titles they were granted in the Northern Song dynasty (960–1126), and are accompanied by Emissaries of the Five Directions. The most elaborate depiction of the Three Officials from the Song dynasty (960–1279), however, is found in the triptych of twelfth-century hanging scrolls in the Museum of Fine Arts, Boston (cat. nos. 69–71).⁷ Painted in ink, colors, and gold on finely woven silk, with great visual coherence and meticulous attention to detail, these are among the finest surviving Taoist paintings of the Song dynasty.⁸ Each painting depicts one of the Three Officials in his realm, surrounded by an entourage of lesser gods and attendants.

The Official of Heaven (cat. no. 69) is shown seated on a platform, surrounded by a large entourage of male and female attendants; the entire group floats on a pale reddish cloud against a void painted in green wash. The Official leans on a low table. Facing him is a kneeling acolyte holding a tablet. An elaborate mandorla appears behind the god, and a canopy is held over his head. This mandorla is decorated in ink and gold with twin dragons against a dense ground of floral scrolls. Fourteen attendants hold a variety of banners, standards, fans, and offerings. In the lower right corner, a single figure holding an axe ascends on a cloud.

In the central painting of the Boston triptych (cat. no. 70), the Official of Earth is shown traveling on horseback through a landscape, accompanied by an entourage of attending gods, immortals, and demons. A parasol surmounted by a phoenix is held over the official's head. The god is dressed in the guise of an emperor of high antiquity (*shanggu*), and holds a switch in his right hand. The figures accompanying the Official of Earth are both male and female. A demonic attendant walking behind the horse holds a falcon in his hand. At the bottom of the painting is Zhong Kui, the Demon Queller, accompanied by three demons and a monkey. The rocks and trees of the landscape are painted in a style derived from that of the Northern Song (eleventh century) master Guo Xi.⁹ Like the earthforms, the foliage is painted primarily in ink, with occasional additions of pale green pigment; here the "crab-claw" brushwork in tree branches is also derived from Guo Xi. The painting of the figures is exceedingly fine, with sensitively rendered facial expressions.

The third painting depicts the Official of Water crossing the roiling waves of an ocean on the back of a dragon (cat. no. 71). The character *wang* (king) appears on the front of his crown. An ornate canopy is held over the official's head. He is accompanied by a host of attendants, including five demons at the bottom of the scroll; two of the attendants ride on the backs of sea turtles. The painting is executed primarily in monochrome ink, with occasional additions of orange-red pigment in the figures' robes. Gold highlights appear throughout the scroll, for example in the attendants' armor, staffs, and hats. The eyes of the dragon are painted red, with gold pupils. The roofs of an underwater palace emerge from the waves at the lower right corner. Above, in the clouds, the god of thunder (Leigong) pounds on a set of drums, while a red-robed scholar and a female figure appear in the upper right corner. The painting of the background waves, rendered in monochrome ink, stands among the finest depictions of water in Chinese painting, despite the fact that the lower edge of the painting is completely repaired.

As Wu Tung has shown, in Chinese paintings of the Ming (1368–1644) and Qing (1644–1911) dynasties, the Three Officials are more often depicted in one scroll.¹⁰ The grouping of all three gods together does occur at least as early as the Song dynasty, however, as can be seen in a leaf in the Junkunc album. The Three Officials are also shown as a group in the fourteenth-century Taoist murals at the Eternal Joy Temple (Yongle Gong) in southern Shanxi province, where they form part of the entourage of the star-god Gouchen.¹¹ A Ming painting in the National Palace Museum, Taipei, entitled *The Three Officials Conducting an Inspection Tour*, has traditionally been attributed to the Southern Song court painter Ma Lin (active early to mid-thirteenth

71

72 (detail)

century).¹² Painted in ink and colors on silk, this work depicts all three officials and their respective entourages in one composition. At the bottom, riding a dragon through waves, is the Official of Water; in the middle ground, riding on a white mythical beast, is the Official of Earth; and at the top, riding in a cart pulled by another mythical beast, is the Official of Heaven. Despite the attribution to Ma Lin, it appears that this work should be attributed to an artist of the Ming dynasty, most likely working in the sixteenth century.¹³ A slightly earlier image of all three gods together is found among the fifteenth-century Water and Land Ritual (*Shuilu zhai*) paintings from the Treasured Tranquility Temple (Baoning Si), now in the Shanxi Provincial Museum, Taiyuan.¹⁴

The early Ming illuminated Taoist scripture in the Museum of Fine Arts, Boston (cat. no. 72), is a transcription of a text in the Taoist Canon that describes the efficacy of the Three Officials. Composed in the Southern Song (1127–1279) or Yuan (1260–1368) dynasties, the full title of the text is *Marvelous Scripture of the Most High Three Principles Who Protect and Prolong Life, Eliminate Disaster, Abolish Danger, Forgive Sins, and Confer Blessings* (*Taishang sanyuan cifu shenzui jie'e xiaozai yansheng baoming miao jing*), also known as the *Scripture of the Three Officials* (*Sanguan jing*).¹⁵ The Boston manuscript is a handwritten, accordion-mounted album. The frontispiece, painted in gold and pale blue pigment on indigo paper, depicts the Three Officials seated in a landscape. Each official is attended by a civil official or attendant. To the left a worshipper holding a tablet kneels on a rock slab, while a guardian and scholar stand in attendance at the right. In the left background are three carriages prepared for an inspection tour by the Three Officials of their respective realms.

On the ground at the center, in front of the three gods, is a tortoise. The landscape includes rocks and pines with scrolling clouds above, all painted in gold. The text is written with seventeen characters per vertical column, a format imitating Buddhist sutros. The full title of the scripture appears following a short preface. A dedication at the end is dated to the second lunar month of the sixth year of Chenghua (1470), but states that the scroll was actually finished in the first lunar month of the preceding year:

Made in the first month of the fifth year of Chenghua (1469).

Within I devote my heart and grant funds (to make this) gold book, the *Marvelous Scripture of the Most High Three Principles Who Protect and Prolong Life, Eliminate Disaster, Abolish Danger, Forgive Sins, and Confer Blessings*, in order, through this action, to (accumulate) merit and (cultivate) virtue. I pray for my household, that it enjoy what is pure and auspicious, and that (the Three Officials) protect my family. This preface (is written) in order to unite and pacify fires and robbers, and to remove all karma; consequently I think of this. Inscribed on an auspicious day of the twelfth month, in the sixth year of Chenghua (1470).

While the majority of surviving images of the Three Officials from traditional China are paintings, sculptural images of these gods were also made. Among the finest of these are the set of enormous Ming dynasty wood sculptures now located in the main hall of the recently renovated Temple of the Eastern Peak (*Dongyue Miao*) in Beijing; these colossal figures also date to the Chenghua reign (1465–87).¹⁶

*Uppermost Highest Spirit Thunder Jade Pivot Thunderous Peal
Precious Scripture with Talismanic Seals*

Yuan dynasty, Zhishun reign, colophon dated 1333
Woodblock-printed book, ink on paper
33.2 x 12.5 cm (each page)
The British Library, London (15103.aa.2)

THIS RICHLY ILLUSTRATED woodblock-printed book is an annotated edition of the Southern Song dynasty *Precious Scripture of the Jade Pivot* (*Yushu baoping*).¹ This scripture developed from the Divine Empyrean (*Shenxiao*) movement, which began as an imperial cult sponsored by the late Northern Song emperor Huizong (r. 1100–25); Huizong believed himself to be an incarnation of the supreme deity of this movement.² There are three commentaries included in this version, attributed to the Taoist master Bai Yuchan (1194–1228); the first patriarch of the Celestial Master movement, Zhang Daoling (second century); and a certain “Celestial Lord Zhang, Emissary of the Five Thunders.” These commentaries are accompanied by a set of eulogistic poems attributed to Lü Dongbin (see cat. no. 120). The name of the scripture is explained by one of these commentaries as follows:

Jade is the essence of the heavens and the earth, the sun and moon; it is the congealed flower of *yin* and *yang*, water and fire. . . . It does not decay, even after ten thousand years. Pivot means trigger, axis. It is the origin of life and death.

This scripture is said to have been revealed to the Thunder Master Luminous Elder (*Haoweng*) by a deity called the Celestial Worthy of the Nine Heavens Who Responds to the Primordial, with a Voice of Thunder, Transforming All. According to the commentary, “Thunder is the command of the heavens. . . . The heavens do not speak—thunder speaks for them.” It was believed that this deity supervised a group of officers who controlled life and death, prosperity and failure, and that he was surrounded by an orchestra of thirty-six spirits (for the manifestations of the highest nine heavens in the four directions) who beat the drums that made the thirty-six different kinds of thunder. In this scripture, he is said to have taken a vow to save all beings who recite his name, probably in imitation of Buddhist deities such as Amitabha or Avalokitesvara (*Guanyin*). Moreover, the scripture claims to aid all those who recite it during times of illness or difficulty and who employ the protective talismans included at the end of the scripture.

(detail)

This edition contains over two dozen illustrations corresponding to the narrative of the scripture, in addition to a magnificent frontispiece, a depiction of a procession of deities, and other supplementary illustrations; these are not preserved in the corresponding text in the Taoist Canon. In addition, this edition is one of the few (if not the only) printed versions of any Taoist scripture that predate the present, Ming dynasty Taoist Canon. As such, it is of unparalleled importance for our understanding of printed Taoist scriptures before the Ming, at the same time that it preserves a more complete edition of the *Precious Scripture of the Jade Pivot* than those found in the Ming Taoist Canon.

The first illustration shown here, which comes toward the end of the scripture, accompanies a *gatha* metrical hymn, a feature adopted from Buddhist scriptures:

The Highest Prince of Jade Purity
Unites the thirty-six heavens;
The Lord of the Nine Heavens Who Transforms All

Changes his form for the worlds of all ten directions.

With loose hair, he rides a magical beast (*qilin*),

With bare feet, he treads over layered ice.

The commentaries read the titles in the first and third lines as both referring to the Celestial Worthy who transmitted the scripture, although the illustration shows the Lord of the Nine Heavens (the central figure) in line three as a manifestation of the Highest Prince of Jade Purity (shown in the upper right, with a beam of energy directed from his upraised hand to the central figure), whose relationship with the Celestial Worthy is unclear owing to a lack of defining attributes. The Lord of the Nine Heavens is accompanied by a fierce figure who carries the records of good and bad actions, and four figures in charge of punishing wrongdoers are shown in the lower left corner. The other figures are all officials under the control of the Lord of the Nine Heavens, including many thunder gods. Of particular interest are the popular gods in the upper left corner: the Earl of Wind (Fengbo), shown with an animal skin that holds the winds; the Duke of

Thunder with his circle of flaming drums; the Mother of Lightning, holding mirrors that emit lightning bolts; and the Rain Master, holding a cup full of rain and a branch with which to scatter it over the earth.

The second illustration shown here is the frontispiece. This frontispiece shows the initial revelation of the scripture in Jade Purity, the highest of the Three Purities (see cat. no. 65). The Celestial Worthy sits in a throne aflame with magical energy, flanked by two celestial guardians and a host of other civil and martial officials. In his hands he holds his principal attribute, a mushroom-shaped scepter (*ruyi*) of golden light. Phoenixes hover above him, while other magical animals sport before his throne. The Luminous Elder kneels before an altar in front of the Celestial Worthy as he receives teachings, followed by a host of other deities in the lower register of the image. Hovering above these deities in the upper register is a second line of deities, at least some of whom appear to be star gods.³ The frontispiece is followed by an illustration of a procession (not shown here)

of Taoist patriarchs (*jiaozhu*), realized beings (*zhenren*), celestial lords (*tianjun*), and marshals (*yuanshuai*), led by the Perfected Warrior (Zhenwu; see cat. no. 103). The procession includes many figures who are illustrated elsewhere in this catalogue, such as Lü Dongbin (see cat. no. 120), Emperor Guan (see cat. no. 83), and Marshal Wen (see cat. no. 87).

After the scripture come a commentary and two colophons. One of the colophons, written by the thirty-ninth Celestial Master, Zhang Sicheng, and dated to 1333, is printed in imitation of the Celestial Master's own script, which suggests that it was originally written to commemorate this edition. These three additions all identify this annotated version of the scripture with the Yuan dynasty figure Xu Daoling.⁴ Little is known of Xu, but another scripture annotated by him in the Taoist Canon includes a commentary dated to 1334, indicating that he was still alive when this edition was published.⁵

—S. E.

WU ZONGYUAN (ACTIVE EARLY 11TH CENTURY)
Procession of Immortals Paying Homage to the Primordial

Northern Song dynasty, early 11th century
 Handscroll: ink on silk
 58 × 777.5 cm
 Private collection

WU ZONGYUAN was one of the greatest painters of Taoist images of the early Northern Song dynasty (960–1126). Working in the style of the Tang dynasty muralist Wu Daozi (active c. 710–c. 760), Wu received many commissions to decorate the walls of Taoist temples in Kaifeng, the Northern Song capital.¹ An official as well, he attained the rank of Vice President of the Bureau of Parks, Lakes, and Mountains.² It is significant that the first half of his career, during which he was most productive, corresponded to the reign of Emperor Zhenzong (r. 998–1022), one of the most devoted of all Northern Song rulers to religious Taoism.³ Wu Zongyuan was recorded as having made handscroll copies of two Wu Daozi murals in Kaifeng.

Painted in ink on two pieces of pale brown silk, this long scroll (over seven meters) depicts a magnificent procession of Taoist gods, moving from right to left over a series of bridges that span a lotus pond. The composition resembles surviving murals depicting gods of the Taoist pantheon from temples of the Yuan dynasty (1260–1368), and Xu Bangda and others have suggested that it is a sketch for such a mural painting.⁴ It is possible that it transmits the composition of either such a Tang mural by Wu Daozi, or one of Wu Zongyuan's own murals in a Northern Song Taoist temple. The scroll is truncated at the beginning. It presents an extraordinary vision of a celestial realm of the type described in the early visions of the Highest Purity (Shangqing) movement—a heaven populated by elegant gods and goddesses. Each of the deities is labeled, with names written in standard-script characters in cartouches adjacent to each figure. The painting is remarkable for the strength and fluidity of its brushwork, and is the earliest surviving Taoist work of its type. Despite its astonishing quality, the painting is clearly an unfinished sketch; this is evident from such details as the partially finished trees and lotus plants and the informal rendering of many of the figures' hair, painted in pale wash only with no further detail.

The Taoist deities in this handscroll are painted in different

sizes, a reflection of their respective rank in the celestial bureaucracy. The primary deities, shown larger than their attendants, are the Great Emperor of Fusang (Fusang dadi), the Celestial Emperor of the Southern Pole [Star] (Nanji tian dijun), and the Eastern Floriate Celestial Emperor (Donghua tian dadi). The first represents the mythical realm from which the sun rises, the second the god who determines the length of human life, and the third Dongwanggong (Lord King of the East), the ancient consort of the Queen Mother of the West (Xiwangmu), in his later manifestation as Mugong (Wood Sire). In the fourteenth-century murals in the Hall of the Three Purities (Sanqing Dian) at the Taoist Eternal Joy Temple (Yongle Gong) in Shanxi, both the Emperor of the Southern Pole Star and the Eastern Floriate Celestial Emperor are depicted in much the same guise, although seated.⁵ In the Yongle Gong murals, which are nearly three hundred years later in date than the Wu Zongyuan handscroll, the gods are also surrounded by many other Taoist gods and realized beings.

Among the many attending gods in this handscroll are male and female figures with such names as Supreme Ultimate Immortal Marquis (Taiji xianhou), Nine Doubts Immortal Marquis (Jiuyi xianhou),⁶ Primordial Yang Youth (Yuanyang tongzi), Supreme Clarity Immortal Earl (Taiqing xianbo), Supreme Cinnabar Jade Maiden (Taidan yunü), Opening Brightness Youth (Kaiming tongzi), Opening Radiance Youth (Kaiguang tongzi), Brahma Ether Maitreya Jade Maiden (Fanqi Mile yunü), and Brahma Treasure Cinnabar Glory Jade Maiden (Fanbao danchang yunü). Aside from the presence of names borrowed from the Buddhist world, it is noteworthy that in this painting, the attendant deities called "youths" (tongzi; literally, "lads") are all female. The precise scriptural source (if one exists) of this pantheon has yet to be identified.

The earliest reliable colophon on the scroll is by the Yuan scholar-artist Zhao Mengfu (1254–1322).⁷ It is dated to 1304, and in it Zhao attributes the scroll to Wu Zongyuan. The scroll's current title was written by the epigrapher Luo Zhenyu (1866–1940), and has been translated as *Procession of Immortals Paying Homage to the Primordial* (*Chaoyuan xianzhangtu*). In this context, the word *yuán* (prime or primordial) refers to the Tao. There is a reduced-scale copy of this scroll in the Xu Beihong Memorial Museum, Beijing.⁸ It is slightly later in date, painted on paper, and lacks the identifying inscriptions of the Wu Zongyuan scroll.

The God Taiyi and Attending Deities

From the Treasured Tranquility Temple (Baoning Si), Youyu county, Shanxi province
Ming dynasty, c. 1460
Hanging scroll; ink and colors on silk
116 x 61 cm
Shanxi Provincial Museum, Taiyuan

TAIYI (SUPREME UNITY) is one of the oldest gods of the Taoist pantheon. His worship can be traced to the Warring States period (475–221 B.C.), well before the emergence of Taoism as an organized religion, and continues to the present day.¹ The early importance of this god has been confirmed by the recent discovery of a text known as *Taiyi Generates Water* (*Taiyi sheng shui*) from a fourth-century-B.C. tomb at Guodian, Hubei province. Based on his research on this text, Donald Harper has shown that Taiyi was a cosmogonic god, a creator of the universe whose actions mirror those of the Tao, who was already worshipped by the social elite in the Warring States period. Taiyi (or Donghuang Taiyi, the Eastern August Supreme Unity) is also the first god described in the “Nine Songs,” a series of shamanistic hymns found in the ancient anthology the *Songs of Chu* (*Chuci*).²

The early Han text *The Master of Huainan* (*Huainanzi*) states that Taiyi resides in the celestial palace known as Taiwei (Supreme Tenuity), later known as Ziwei Gong (Purple Tenuity Palace).³ During the Han dynasty (206 B.C.–A.D. 220), sacrifices to the astral god Taiyi were part of the imperial cult.⁴ The *Inscription for Laozi* (*Laoshi ming*), the late Han stele documenting Laozi’s divination, states that Laozi “concentrated his thinking on the cinnabar field, saw Great Unity (Taiyi) in his purple chamber, became one with the Tao, and transformed into an immortal.”⁵ In the Han dynasty apocryphal texts known as *weishu*, the Northern Dipper was perceived as the instrument of Taiyi: “It is described variously as the ladle by means of which he pours out the primordial breath (*yuanti*) and as the chariot in which he moves through the heavens.”⁶ A celestial god, Taiyi was sometimes known as the “supreme emperor of heaven.”⁷ He was associated with the star Kochab, known in Chinese as Thearch (*Di*), part of the Little Dipper (Ursa Minor). A passage from the *Records of the Historian* (*Shiji*) of Sima Qian (second century B.C.) reads:

The Dipper is the Thearch’s carriage. It revolves around the central point and majestically regulates the four realms. The distribution of Yin and Yang, the fixing of the Four Seasons, the

coordination of the Five Phases, the progression of rotational measurements, and the determining of all celestial markers—all of these are linked to the Dipper.⁸

Schuyler Cammann, citing the *Records of the Historian* and the *History of the Former Han Dynasty* (*Qian Hanshu*), writes,

The Han records state that after Wudi [r. 140–87 B.C.] came to the throne in 140 B.C., he regularly conducted the usual sacrifices to Heaven and to Earth, to the Five Emperors (legendary rulers representing the Five Elements), and to the Sun and the Moon (for Yang and Yin), in order to insure the orderly regularity of the universal process; but in 124 B.C. he was persuaded to adopt, in addition, the cult of Taiyi. At first this was merely an additional form of worship, using a separate shrine, but in 113 B.C., having been told that the Five Emperors were only this god’s aides, Emperor Wu displaced from the central location in the imperial rites the Yellow Emperor (Huangdi), who represented the Center among the Five Directions, in order to give Taiyi the focal position in the state worship.⁹

According to recent research by Li Ling, images of Taiyi can be traced back to as early as the Warring States period.¹⁰ During the Tang dynasty reign of Xuanzong (712–56), sacrifices to Taiyi were fully incorporated into imperial Taoist rituals.¹¹ By the time of the fourteenth-century Taoist murals of the Eternal Joy Temple (Yongle Gong), a Complete Realization (Quanzhen) sect temple in southern Shanxi province, Taiyi is shown in the guise of an emperor, with a mortarboard-type hat with tassels, and holding a tablet.¹²

In the Water and Land Ritual (*Shuilu zhai*) painting from the Treasured Tranquility Temple (Baoning Si), Taiyi is shown at the center, surrounded by five attending gods.¹³ He clenches his hands together in front of his chest, as do the two attending gods in front. Of the remaining attendants, two hold lances, and one holds a pole with a white banner. Here Taiyi takes on the appearance of Zhenwu (Perfected Warrior). Supreme Emperor of the Dark Heaven, reflecting the enormous popularity and influence of Zhenwu during the Ming dynasty (see section III.3, “Zhenwu, the Perfected Warrior”). At the time the Treasured Tranquility Temple Water and Land Ritual paintings were created, Zhenwu was the most important Taoist god in China. The resemblance of Taiyi to Zhenwu is unmistakable: both figures wear robes covering armor, and have long hair combed straight back from their foreheads (see cat. no. 103). Unlike Zhenwu, however, Taiyi wears boots (Zhenwu is usually shown barefoot).

太乙諸神
卷二十一

*The Purple Tenuity Emperor of the North Pole [Star]
and Attendants*

From the Treasured Tranquility Temple (Baoning Si), Youyu county,
Shanxi province

Ming dynasty, c. 1460

Hanging scroll; ink and colors on silk

117 × 60.5 cm

Shanxi Provincial Museum, Taiyuan

THIS SCROLL IS FROM a set of Water and Land Ritual (*Shuilu zhai*) paintings; the surviving set comprises one hundred and thirty-nine hanging scrolls depicting a variety of Buddhist and Taoist gods and other beings.¹ These paintings were designed for use in a Buddhist ritual, but include some of the finest known depictions of Taoist gods. The goal of the Water and Land Ritual was the universal salvation of all beings, generic depictions of which are shown in the scrolls of this and other, similar sets that survive from the Ming (1368–1644) and Qing (1644–1911) dynasties. The paintings include depictions of gods of the animal and plant worlds, human beings, and gods of the Buddhist, Taoist, and popular pantheons.

In the Treasured Tranquility Temple (Baoning Si) painting, the Purple Tenuity Emperor (Ziwei dadì) appears in the central foreground, accompanied by six attendant deities. The background is taken up by swirling clouds. The Ziwei emperor is shown in the guise of a ruler of high antiquity (*shanggu*), holding a tablet in his hands, and wearing a crown in the shape of a long horizontal board with tassels hanging from either end. He wears a blue outer robe decorated with dragons; his inner robes are red and green, with white hem and collar. The gods to either side also carry tablets of rank in their hands, while the other four attending gods respectively hold a canopy, banners, and a basket of flowers.

Like many Taoist gods, the Purple Tenuity Emperor and his attending deities were conceived of as celestial counterparts to the emperor and his court on earth.² One of the most powerful gods in the Taoist pantheon, the Ziwei emperor was viewed since at least the Han dynasty as a god controlling one of the most influential constellations in the northern sky. The emperor of the Ziwei court is still widely worshipped in Taoist temples today, and often depicted in painting and sculpture.

The first known mention of the Ziwei Palace is found in the *History of the Han Dynasty* (*Han shu*), in a description of a comet that appeared in 138 B.C.³ The early Han dynasty Taoist classic

The Master of Huainan (*Huainanzi*), presented to Emperor Wudi by Liu An (d. 122 B.C.), prince of Huainan, mentions the Purple Palace (*Zi Gong*), the asterism ruled by the emperor depicted in the Baoning Si painting: "The Purple Palace is the dwelling place of the Grand Monad (Taiyi)."⁴ The multiplicity of celestial gods that occupy the Purple Palace asterism is attributable to the simultaneous conceptualization of constellations as gods and as homes of gods. This correlative thinking is articulated in Han dynasty (206 B.C.–A.D. 220) texts, but appears to have originated earlier. It is significant that as the dwelling place of the older god Taiyi (conceptualized since the Warring States period as equivalent to the Tao), the Purple Tenuity (Ziwei) Court occupies a position in the heavens in immediate conjunction to the Northern Dipper and the Pole Star (*Beiji*).⁵ The Purple Tenuity court was one of three celestial courts (*yuan*) that enclosed large groups of constellations; the others were known as Supreme Tenuity (*Taiwei*) and Heavenly City (*Tianshi*).⁶ The individual star groups that comprised the Purple Tenuity court were first listed in the second century B.C., in the "Treatise on Celestial Officials [Constellations]" (*Tianguan shu*) chapter of Sima Qian's *Records of the Historian* (*Shiji*).⁷

In the fourteenth century, the Ziwei emperor was still counted as one of the most important Taoist gods of the Complete Realization (Quanzhen) pantheon, as depicted in the Yuan dynasty murals at the Eternal Joy Temple (Yongle Gong) in Shanxi province.⁸

—S. L.

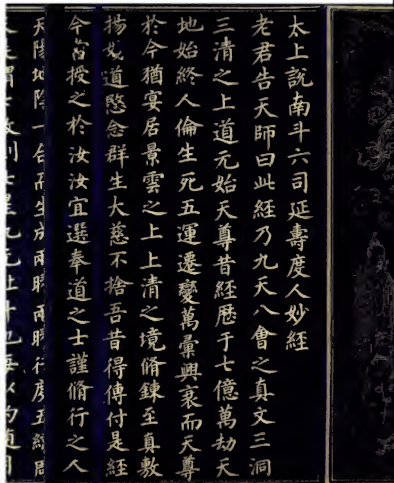

Marvelous Scripture of Salvation that Prolongs Life

Ming dynasty, Longqing reign, dated 1568
 Accordion-mounted album; gold on indigo paper
 25.9 × 11.9 cm (each page)
 Arthur M. Sackler Museum, Harvard University,
 Philip Hofer Bequest (85.1971.518)

ALTHOUGH THE OUTER COVER of this Ming dynasty Taoist manuscript in the Sackler Museum bears the title *Marvelous Scripture of the Mysterious Numinous Northern Dipper That Prolongs Life, Revealed by the Most High [Laozi] (Taishang xuanling beidou yansheng miaojing)*, the text actually consists of several related scriptures. These were traditionally said to have been revealed in A.D. 155 by the deified Laozi to Zhang Daoling, the first Celestial Master, in Sichuan.¹ The texts were most likely composed, however, during the Five Dynasties (907–960) or early Northern Song (late tenth century) periods.² The complete group of texts to which these scriptures belong contains petitions for summoning key stellar gods, including the deities of the Seven Stars of the Northern Dipper and the gods of the Southern, Eastern, Western, and Central Dippers.

The texts included in this manuscript are inscribed in gold ink on indigo paper, in the manner of Buddhist scriptures. According to a note in a cartouche at the end, the scriptures were transcribed with the well-being of the emperor and the nation in mind. The text is bound as an accordion-mounted album. The first text is entitled *Marvelous Scripture of Salvation of the Southern Dipper That Prolongs Life in the Six Bureaus, Spoken by the Most High [Laozi] (Taishang shuo nandou liusi yanshou duren miaojing)*. Following this are scriptures entitled *Marvelous Scripture of the Eastern Dipper That Rules over Destiny and Protects Life, Spoken by the Most High [Laozi] (Taishang shuo dongdou zhusuan huming miaojing)*, *Marvelous Scripture of the Western Dipper That Records Names and Protects the Body, Spoken by the Most High [Laozi] (Taishang shuo xidou jiming hushen miaojing)*, and *Gold Mysterious Feathered [Immortal] Petitions of the Seven Primes [Stars] of the Northern Dipper (Beidou qiyan jinxuan yuzhang)*. These texts are also found in the Taoist Canon (*Daozang*), printed in 1444–45.³ A final text, entitled *Mysterious Petitions*

(detail)

on the Star Lords of the Sun, Moon, Five Phases [Five Planets], and Four Luminants, [Spoken by the] Most High [Laozi] (*Shangqing riye wuxing siyao xingjun xuanzhang*) includes petitions to the gods of the sun (Taiyang), moon (Taiyin), the Five Planets (in the following sequence: Jupiter, Mars, Venus, Mercury, and Saturn), and the invisible (and imaginary) planets Luohou (Rahu) and Jidu (Ketu). This text is not included in the fifteenth-century edition of the Taoist Canon.

A cartouche at the end of the manuscript depicts a celestial guardian holding a sword and a tiger on a chain. An inscription within the cartouche, unsigned, reads:

Respectfully manifesting a sincere heart, [I] have inscribed in gold characters [these] various categories of Dipper Scriptures. [I] look up and pray that the great perfected on high bless [this] august nation, and guard the path of the emperor so that it is enduring

and prosperous, so that [all] households and the nation enjoy prosperity, that the people be at peace, that all things be abundant, and that all dwellings be in order, forever abiding in good fortune and extended years. In the second year of the Longqing reign, the cyclical year *wuchen* [1568], on the first day of the first month of spring.

The scriptures are preceded by a superb illuminated frontispiece, also in gold on indigo paper, depicting the deified Laozi on an enormous throne, holding a fan. Over Laozi's head is a canopy, with beams of light emerging from clouds. He is flanked by celestial guardians, one of whom holds onto a dragon, while the others are armed with swords. A Taoist priest, perhaps representing the first Celestial Master, Zhang Daoling, holds a tablet and kneels on a carpet in front of the deified Laozi. Auspicious emblems are scattered on the ground around this scene of

revelation. To the left are eight gods, and in the upper right corner are six more gods, and four celestial figures with Taoist priests' caps; all of these figures hold tablets. In the upper left corner is a depiction of the goddess Marichi, a Buddhist deity, or possibly the Taoist goddess Doumu, the Dipper Mother, who some scholars believe was derived from Marichi (see cat. no. 98). The goddess has three heads (one a boar's head) and eight arms. She is seated on a throne-chariot pulled by seven pigs. In addition, the scene includes two Taoist marshals (*yuanshuai*).

Lords of the Root Destiny Stars of the Northern and Central Dippers

Ming dynasty, Jingtai reign, dated 1454

Hanging scroll; ink, colors, and gold on silk

141 x 79 cm

The Metropolitan Museum of Art, New York, lent by Oscar L. Tang

THIS HANGING SCROLL belongs to a set of paintings imperially commissioned for the Buddhist Water and Land Ritual (*Shuilu zhaji*). It depicts the deities of the Northern and Central Dippers, with one additional deity in the upper right corner.

Although the Northern Dipper (Ursa Major), and, to a lesser

extent, the Southern Dipper,¹ appear most frequently in Taoist scriptures, there are actually five dipper constellations in Taoist astronomy, in accordance with the Five Phase system (see cat. no. 17):

The Eastern Dipper governs the count of years, the Western Dipper records the names [of those who will ascend to the heavens], the Northern Dipper removes names from the records of death, the Southern Dipper enters them into the records of life, and the Central Dipper, the Great Leader, is the loftiest and most eminent.²

The lower register of the painting depicts the seven star-gods of the Central Dipper.³ These gods are dressed in elaborately embroidered and decorated robes, with outer garments of yellow to indicate their centrality (yellow is the color of the center in the Five Phase system). They wear hats that distinguish their place in the celestial hierarchy, and bear the ivory tablets (see cat. no. 63) of high-ranking officials.

The gods of the Northern Dipper stand in the middle register of the painting, distinguished from the gods of the Central Dipper and partially obscured by the clouds upon which these latter deities float. The primary group of gods of the Northern Dipper consists of seven deities dressed in simple robes with lotus-shaped caps; unlike the gods of the Central Dipper, these figures do not have beards, and almost seem to be androgynous.⁴ The iconography of these figures corresponds to other depictions in the Ming dynasty Water and Land Ritual paintings from Treasured Tranquility Temple (Baoning Si) and from the Yuan dynasty Taoist murals in the Eternal Joy Temple (Yongle Gong) in Shanxi province.⁵ This primary group of seven stars is accompanied by the gods of the two hidden stars of the Northern Dipper,⁶ whose dress and appearance are distinct from the rest of the group. The gods of the Northern Dipper are also followed by an attendant who raises a parasol above them.

The term "root destiny" (*benming*) in the title of the painting alludes to the belief that the life of each person was governed by one of the stars of the Northern Dipper, depending on when they were born according to the traditional cyclical calendar. Six times each year,⁷ on the cyclical day of one's "root destiny," the "Root Destiny Realized Officer" of that cyclical day would descend to the human world, at which time people born under the influence of that officer were to fast and make offerings.⁸ While the identity of the deity in the upper right corner is not indicated in the title of the painting, he may be a variant of these Root Destiny Realized Officers, since his attendants bear offerings of peaches (symbolic of long life) and a sheep's head.

—S. E.

Gods of the Twenty-eight Lunar Mansions

Ming dynasty, Jingtai reign, dated 1454

Hanging scroll; ink, colors, and gold on silk

141 x 79.5 cm

Musée National des Arts Asiatiques Guimet, Paris (EO 668)

Shown in Chicago only

THIS HANGING SCROLL from the Musée Guimet depicts seven of the Twenty-eight Lunar Mansions (*Ershiba xiu*). The history of these gods extends to the Warring States period (475–221 B.C.), and they have been depicted in Chinese art since that time (see cat. no. 8). The Guimet scroll is one of two scrolls from an early Ming imperial Water and Land Ritual (*Shuilu zhai*) set that depict the Twenty-eight Lunar Mansions.¹ The figures include a woman in a small boat, a bearded man in a jar, a ram-headed god, and a tiger-headed god holding a banner. These correspond to the Lunar Mansions *Shi* (House), *Xu* (Emptiness), possibly *Nü* (Woman), and *Zhang* (Spread). The gods emerge from a murky background of clouds and water. An imperial cinnabar seal at the top reads "Treasure of the Guangyun [Palace]." This palace was built in the Forbidden City in the fifteenth century, when the capital was moved from Nanjing to Beijing. An inscription in gold in the top right corner reads "On the third day of the eighth month, in the fifth year of the Jingtai reign of the Great Ming." The painting's title is inscribed along the right border in gold, and reads "Gods of the Twenty-eight Lunar Mansions" (*Ershiba xiu xing jun*). An ink inscription in the lower left corner reads "By imperial order, directed and supervised by the Senior Eunuchs of the Directorate of the Imperial Household Service, Shang Yi and Wang Qin."²

The gods depicted here are significant because they are a vital part of the Taoist pantheon (see cat. no. 12). Appropriated into religious Taoism in the Six Dynasties period (420–589), they are frequently found in the entourage of higher circumpolar gods. In the Yuan dynasty (fourteenth century) murals at the Eternal Joy Temple (Yongle Gong) in Shanxi province, for example, the Twenty-eight Lunar Mansions form part of the entourage of the Purple Tenuity Emperor (Ziwei dadi; see cat. no. 76).³ Several of these figures appear in the Osaka Museum of Art handscroll entitled *The Five Planets and the Twenty-eight Lunar Mansions*, attributed to Zhang Sengyou of the Liang dynasty, including Emptiness (*Xu*), the man emerging from a jar, who corresponds to the Western zodiac figure Aquarius.

—S. L.

*Emperors of the Five Directions and the Opening Heaven
Great Sage Emperor of Mount Changbo*

Ming dynasty, Jingtai period, dated 1454
Hanging scroll; ink, colors, and gold on silk
140.5 × 79 cm
Musée National des Arts Asiatiques Guimet, Paris (EO 686)
Shown in San Francisco only

THIS PAINTING IS ONE of the mid-fifteenth-century Water and Land Ritual (*Shuilu zhai*) set brought to France from China by the great Sinologist Paul Pelliot. Acquired in Beijing, these scrolls were originally created for use by the imperial court in the Forbidden City. Several other examples from this set are included in this exhibition (for example, cat. nos. 78, 79, and 81). In the foreground are the gods of the Five Directions, dressed as emperors of high antiquity, holding tablets of rank in front of them. They wear mortarboard-style crowns with hanging tassels. They are accompanied by three attendants, two of whom are martial guardians (one holds a banner), the other an old scholar holding a scroll. In the upper half of the painting is the Opening Heaven Great Sage Emperor of Mount Changbo, with attendants.

As early as the apocryphal texts (*weishu*) of the Han dynasty (206 B.C.–A.D. 220), the Gods of the Five Directions were believed to inhabit the circumpolar constellation Supreme Tenuity (*Taiwei*), located next to the Northern Dipper (*Beidou*). These gods are also known in Taoist literature from the Six Dynasties period (420–589) onward. That they formed part of the pantheon of later religious Taoism is corroborated by their appearance among the gods in the Eternal Joy Temple (Yongle Gong) murals of the mid-fourteenth century. These gods are significant because they reflect the cosmic structure of the world, in which *yin*, *yang*, and the Five Phases (Elements) are in balance. They predate religious Taoism, and may have originated as chthonic gods of the Neolithic period. Governing all directions (east, south, west, north, and center), they correspond not only to the Five Elements, but to the seasons, the Five Sacred Peaks, the Five Planets, and the zodiac symbols as well.

The Emperors of the Five Directions can be identified by the colors of their robes. Center wears yellow, East wears green, South wears red, West wears blue,¹ and North wears purple (normally black). The Changbo Mountain Emperor at the top of the scroll wears the same regalia as the Emperors of the Five Directions. The identity of this god is still unclear. He has three

attendants, two of them ancient scholar-officials holding tablets, the other a guard holding an axe.

An inscription in gold along the right border bears the title, "Emperors of the Five Directions and the Opening Heaven Great Sage Emperor of Mount Changbo" (*Wufang wudi Changbo Shan kaitian hongsheng di*). The same dated inscription and imperial seal found on the other 1454 Water and Land Ritual paintings in the exhibition are seen here.

81

Divine Immortals of the Five Paths and Transcendents Who Have Obtained the Tao

Ming dynasty, dated 1454

Hanging scroll; ink, colors, and gold on silk

140.5 × 79 cm

Musée National des Arts Asiatiques Guimet, Paris (EO 693)

Shown in San Francisco only

PART OF AN EARLY Ming imperial set of Water and Land Ritual paintings, this hanging scroll depicts a group of Taoist adepts, realized beings, and immortals. The Five Paths represent five realms of existence, comparable to the Six Paths (originally Five Paths) of Mahayana Buddhism. One of the figures is shown as hermit, dressed in a robe made of leaves; others are shown as Taoist priests, wearing the cap that distinguishes members of the clergy; and still others are shown as scholars and adepts. The one recognizable figure is the immortal Liu Haichan, shown at the left with his three-legged toad (see cat. no. 124). One figure holds a basket of *lingzhi* mushrooms, one holds a flowering branch of a plum tree, one holds a book, one holds a scroll, and one holds a staff and a double gourd.

This scroll presents a generic depiction of Taoist worthies, visualized as part of the Taoist pantheon. Unlike the higher gods, these figures are distinguished by having started out as ordinary human beings. After cultivating the Tao and undergoing a spiritual and physical transformation, they achieved realization (*zhen*) and a state of being beyond *yin* and *yang*, and yet exist in the phenomenal world.¹ As models of virtuous human behavior, they also exist outside the normal confines of quotidian society. Such beings play a unique role in Chinese culture, having rejected conformity to Confucian norms, and yet functioning as saints who are capable of healing illness, of transforming themselves into myriad shapes and states of being, and of helping others attain the Tao.

One of the earliest texts to describe such beings is the *Biographies of the Assorted Immortals* (*Lixian zhuan*), attributed to Liu Xiang (77–6 B.C.) of the Han dynasty.² This work includes biographies of such figures as the Yellow Emperor, Wang Ziqiao, Chisongzi (Master Red Pine), and the female adept Magu. During the Six Dynasties (420–589) and Tang (618–906) periods, such biographical accounts proliferated, and today the literature on Taoist adepts and immortals is voluminous.³

—S. L.

NOTES

Cat. nos. 65–67

1. The concept of the Three Heavens actually predates the Three Purities, and the association of the two is a later development (see below).
2. These are the heavens, the earth, and humanity.
3. Yunji qiqian (HY 1026), juan 3.
4. Taishang santian nejie jing, HY 1196.
5. Zhang Ling, otherwise known as Zhang Daoling, is often recognized as the first patriarch of the Taoist religion. For more on this figure, see Ofuchi 1991: 39–46.
6. This theory on the development of the Three Caverns is set forth in Kobayashi 1990: 222–29. For an alternate theory, see Ofuchi 1997, ch. 1.
7. Sandong zhunang, HY 1131, juan 7.
8. Zhang adapted these names from the fifth-century Numinous Treasure scripture *Jiushen shengshen zhang jing* (full title: *Dongxuan lingbao zhen jiu shen shengshen yushang jing*; HY 318), where they are also associated with the terms Jade Purity, Highest Purity, and Great Purity. This scripture in turn developed from the *Scripture of the Three Augusts*, as can be seen from a quotation of the *Scripture of the Three Augusts* contained in juan 6 of the *Wushang biyao* (HY 1130). See Kobayashi 1990: 217–40.
9. Yunji qiqian (HY 1026), juan 3.
10. Fozu tongji (T 2035), juan 46.
11. See the map of the White Cloud Temple in Yoshioka 1979: 250–52.
12. The other movement is the Celestial Master, or Orthodox Unity (Zhengyi) sect.
13. On Qiu Chuji, see Waley 1931.
14. Previously, there was a temple first established in the Tang dynasty on this site, which was given to Qiu and renamed “Palace of Endless Spring” in his honor.
15. This is probably because the Three Purities were considered the patriarchs of all Taoist scriptures, as noted above.

Cat. no. 68

1. HY 1, juan 1. Similar miracles can be found in other Numinous Treasure scriptures from the same time. One might ask how there could have been any corpses to be revived at the beginning of time, but such inconsistencies were clearly irrelevant to the authors of the early Numinous Treasure scriptures.
2. Previously published in Mingze 1930: 555, pl. 1, and Christie’s 1998: lot 108.

15. Schipper 1993: 253. For the original text, see ZTDZ, vol. 58: 274–79 (HY 1430).
16. See *Beijing Dongyue Temple* 1999: 19–20.

Cat. no. 73

1. The cover of the present book bears the title *Gaoshang yushu leixing baojing fuzhu*; the title at the head of the text is *Jintian yingyuan leixing puhua xianzun shuo yushu baojing*, which corresponds to HY 99.

2. See the essay by Patricia Ebrey in this volume and Boltz 1987a: 26–30.
3. For example, the group of seven deities in the front of the line probably comprises the gods of the Northern Dipper, while the next group of six probably represents the Southern Dipper; see cat. no. 78 for a comparative image.
4. The afterword says that the scripture was unannotated before Xu, suggesting that the commentaries may in fact have been written by him. On the other hand, this statement may refer only to a group of notes found after the colophons. In any case, this printed edition seems likely to have been based on an edition of the scripture possessed by, and to an unknown extent annotated by, this Yuan writer.
5. See HY 750.

Cat. no. 74

1. Wu Zongyuan was known during his lifetime as a reincarnation of Wu Daozi; see Yu 1980: 537.
2. Bush and Shih 1985: 346.
3. See S. Cahill 1980: 23–44.
4. Xu 1984a, vol. 1: 95.
5. Jin 1997: pls. 12, 138.
6. Jiuyi (Nine Doubts) is a sacred mountain in Hunan province.

2. Ibid.: 99.
3. HY 624 (Southern Dipper), HY 625 (Eastern Dipper), HY 626 (Western Dipper), HY 973 (Northern Dipper); see also ZTDZ, vol. 19: 12–16, 17–18, and 19–20.

Cat. no. 78

1. This constellation is formed of six stars in Sagittarius resembling Ursa Major.
2. HY 627. This scripture probably dates to the tenth century (see also cat. no. 77).
3. Sources from the Taoist Canon such as HY 627 indicate that there were only three stars in the Central Dipper; the reason for this discrepancy is unclear, but it is possible that the Central Dipper is here depicted as seven gods in order to correlate with the seven gods of the Northern Dipper shown in the middle register.
4. This may result from the Taoist belief already prevalent in the medieval period that the Northern Dipper actually consisted of two sets of stars, one visible group that was manifested by male deities, and another, invisible group manifested by female deities who were the “souls” and the source of illumination for the visible group; for example, see HY 428.
5. See *Booming si mingdai shuilu hua* 1988 and Jin 1997. On the other hand, these gods are depicted with beards in the Ming dynasty Water and Land Ritual murals of the Pilu Temple; see Kang 1998.
6. It was traditionally believed that the Northern Dipper consisted of nine stars, two of which were hidden from the sight of normal people.
7. The traditional Chinese calendar is divided into a cycle of sixty days, so that each cyclical day occurs approximately six times ($6 \times 60 = 360$) each year.
8. HY 622.

Cat. no. 79

1. The pendant, EO 692, is published in Weidner 1994: cat. no. 29, color pl. 15.
2. Translated by Wai-kam Ho in *Eight Dynasties of Chinese Painting* 1980: no. 131.
3. Jin 1997: pl. 19.

Cat. no. 80

1. The ancient symbolic color of West is white, which is also associated with death, and in painting is usually chosen to depict ghosts. It is perhaps because of this that the Emperor of the West wears a blue robe.

Cat. no. 81

1. For introductory studies of Taoist adepts and immortals, see Robinet 1985–86, Kohn 1990c: 1–22, and Penny (forthcoming).
2. Translated in Kaltenmark 1987.
3. One of the most extensive such works is HY 296, *Lishi zhenxian taidao song-jian*, compiled by Zhao Daoyi (fl. 1294–1307) during the Yuan dynasty; see Boltz 1987a: 56–58.

III.1 TAOISM AND POPULAR RELIGION

TAOISM IS A FLEXIBLE SYSTEM of thought, and it allows the worship of many gods who are not, strictly speaking, Taoist. This section of the catalogue explores the fluid boundary between orthodox Taoism and Chinese popular religion, and between Taoist gods and popular gods. Local and popular deities began to be brought into the Taoist pantheon with increasing regularity from the Song dynasty (960–1279) onward. The majority of popular gods can be defined as deities who are associated with specific locales in China (e.g., mountains and cities), nature spirits (e.g., gods of sacred springs and trees), human heroes who through their virtuous deeds have been transformed into gods, or animal spirits who have undergone a similar apotheosis.

The boundary between Taoism and other religious beliefs in China is so fluid that even images of the Buddhist deity Guanyin, the Bodhisattva of Compassion, are often found in Taoist temples. In the Song dynasty this syncretic approach led to the popular belief that the Three Teachings (Taoism, Confucianism, and Buddhism) were merely different paths to the same spiritual goal.

Among the popular gods examined here are City Gods (Chenghuang), gods of sacred mountains, nature deities, Wenchang (the national god of learning and scholarship who began his existence as a local snake god in Sichuan province), Guandi (the God of War, hero of the *Romance of the Three Kingdoms*), and Zhong Kui (the Demon Queller).

Investiture of a Local God

Ming dynasty, Chongzhen reign, colophon dated 1641
 Handscroll; ink, colors, and gold on silk
 48.2 x 90.8 cm
 The Metropolitan Museum of Art, New York, Purchase, Fletcher Fund
 (1938.31.1)

PAINTED ON yellowish brown silk in the final years of the Ming dynasty, this extraordinary painting depicts the investiture of a local god into the Taoist pantheon.¹ The scroll consists of a long painted section depicting gods, followed by several attached pieces of silk with various colophons. The entire scroll is bordered by painted dragons, whose bodies alternate in different colors, interspersed with flaming pearls. The handscroll is significant because it documents a process that was increasingly widespread in China from the Song dynasty (960–1279) onward, namely the petitioning of the throne or (from the Ming dynasty onward) the Taoist establishment of the Orthodox Unity sect for recognition of the spiritual legitimacy of local gods. The result of such imperially sanctioned recognition was that local gods and their human supporters enjoyed increasing prestige in both the spiritual and material worlds.² The entire process was often driven by economic concerns, for the conferring of legitimacy frequently led to increased opportunities for trade.

The painted section of the scroll, consisting of six pieces of joined silk, opens with a depiction of the court of the Jade Emperor, head of the popular pantheon. Among multicolored clouds, painted in red, blue, white, and pale yellow pigments, this god sits on a high throne under a parasol. He is dressed as an ancient emperor and wears a crown in the shape of a mortarboard with hanging tassels; he holds an official tablet in his hands. The god is surrounded on either side by attending gods and celestial guardians. These attending gods are both male and female. One holds a dragon while another holds a tiger—symbols of *yin* and *yang*. The female attendants hold banners with images of the sun and moon, also symbols of *yin* and *yang*. One of the male attendants is clearly recognizable as Zhenwu (the Perfected Warrior). Barefoot, he wears a black robe decorated with gold clouds and holds a tablet in his hands. Behind his head is a red halo. His identity is confirmed by the presence of the tortoise and snake, the ancient symbol of Xuanwu, the Dark Warrior. Significantly, Zhenwu stands in a subservient position to the Jade Emperor, who enfeoffed him at Mount Wudang (Wudang Shan) in Hubei province.

Beyond the court scene stands a red lacquer table, covered with offerings, including two blue vases holding lotus flowers and a tripod incense burner. A long line of seventeen officials follows, emerging from a red gate in the sky. Two guardians, one with a brown face and one with blue, attend this gate. On the other side the procession continues, with an envoy in a green robe and black hat, eight guardians holding halberds, standards, and parasols, a white horse with a groom, and eight bearers carrying a palanquin, with a tiger skin hanging out the door. This entourage is followed by a group of four tall guardians holding swords, with flames above their heads. Beyond this group are two youthful attendants holding lamps, other attendants holding a sword and a wrapped box, officials with green robes and red halos, and another youthful attendant holding another box. Above the head of this last figure, a flying messenger carries the mandate from the Jade Emperor to the local god, officially recognizing the latter as a legitimate deity.³ Finally, the local god himself appears, standing large in a red robe, wearing a high black and gold crown, and holding an official tablet. The god looks straight out at the viewer, and is accompanied by two young attendants holding boxes.

Following the painting are several inscriptions. The first, written by a Taoist priest named Li Daoqing, consists of a record of the petition made to the Celestial Master Zhang at Dragon and Tiger Mountain (Longhu Shan), Jiangxi, asking that the local deity, named Li Zhong, be recognized as a legitimate god. This text mentions the worthiness of the god and cites a ritual first used in the Southern Song dynasty in 1157 (during the Shaoxing reign). The inscription states that three Taoist registers were conferred on the god, namely registers corresponding to the three heavens of Jade Purity, Highest Purity, and Supreme Purity (these correspond to the realms of the Celestial Worthies of Primordial Beginning, Numinous Treasure, and the Way and Its Power [Laozi]). That the inscription was written by a Taoist priest is clear from the presence of an elaborate talisman, written in red ink over the Shaoxing reign date. The second inscription is signed by one Zhu Zhongsu, and is dated 1641, in the Chongzhen reign. It cites the virtue of the local god, and documents the protection he renders his followers. Zhu also specifically mentions the attached painting, describing it as a work that gives visual form to the transmission of Taoist registers to the deity. The final inscription comprises a list of names of patrons of the local god; this too is dated to 1641.

—S. L.

Emperor Guan

Qing dynasty, Kangxi reign (1662–1722)

Ink, colors, and gold on silk

173 x 120 cm.

Plum Blossoms (International) Ltd., Hong Kong

GUANDI (EMPEROR GUAN) or Guan Gong (Duke Guan) is a god of the Chinese popular pantheon, a human hero who was absorbed into the Taoist pantheon in the Song dynasty (960–1279). He is the deified form of Guan Yu, a hero of the early third century. He was famous as a warrior and for his alliance with Liu Bei, founder of the Shu kingdom (221–263) in Sichuan, and Zhang Fei. Guan Yu is also one of the heroes of the Ming dynasty novel *Romance of the Three Kingdoms* (*Sanguo zhi yanyi*), a fictionalized account of events of the Three Kingdoms period (220–280).¹ After he was killed, Guan Yu began to be worshipped as a god. Often called the God of War, Guan Yu became a deity of popular religion by the early Tang dynasty (618–906). Being a martial figure, he was worshipped as a celestial protector against all threats to the individual and the state. A special patron of the military, he was associated with loyalty and bravery, and he was also a killer of demons and queller of ghosts. He is still one of the most widely worshipped gods in China today.

By the twelfth century, if not earlier, Guan Yu was absorbed into the Taoist pantheon with the title Marshal (*yuanshuai*).² In 1615, during the Wanli (1573–1620) reign of the Ming dynasty, Marshal Guan was imperially granted the title Emperor (*di*).³ As Henri Maspero has shown, Guandi was also a god summoned by spirit-mediums in planchette-writing seances.⁴

The menacing figure of Guandi dominates this scroll. Dressed in armor, boots, and swirling robe, he is accompanied by his two assistants, Zhou Cang (holding a banner) and Guan Ping (clasping his hands together).⁵ The figures stand on a green ground, surrounded by swirling green, pink, and gold clouds against a brilliant blue sky. A gold cartouche at the upper right contains the god's name and title: "The Overseer of the Gate, Sage-Emperor Lord Guan." An inscription in ink along the bottom right border reads, "Sincerely Commissioned by the Imperial Prince of Qin, Zhuang" (*Heshi Zhuang Qinwang faxin cheng zao*).⁶

Great Generals of the Deserts and the Spirits of Grasses and Trees Who Dwell in the Void of Water and Land

Ming dynasty, Jingtai reign, dated 1454
 Hanging scroll; ink, colors, and gold on silk
 140.5 × 78.5 cm
 Musée National des Arts Asiatiques Guimet, Paris (EO 684)

Shown in Chicago only

AMONG THE GODS of Chinese popular religion are thousands of deities of the natural world—gods of stones, trees, springs, hills, rivers, and lakes. This hanging scroll, part of the early Ming imperial set of 1454 depicting the Water and Land Ritual in the Musée Guimet, Paris, is devoted to the generic category of these spirits of nature.¹ Their presence in the world of Chinese religion is significant, for they are part of the divine matrix in which humanity is situated.

In the lower right corner of the scroll are a group of military generals; these depict the Great Generals of the Deserts (Kuangye dajiang) mentioned in the painting's title. At the lower left a robed tortoise rides on the back of a dragon; these represent the realm of animals, both real and mythical. Near the left border of the scroll is a young woman wearing a peony blossom in her hair; she is accompanied by a hairy gnome and a toddler with leaves sprouting from his head. The significance of this group is not clear. As Caroline Gyss-Vermande has shown, however, a similarly dressed female figure appears in the fifteenth-century Treasured Tranquility Temple (Baoning Si) set of Water and Land Ritual paintings in the Shanxi Provincial Museum, in the painting depicting the realm of animals and tree-spirits.² Finally, the most fascinating and bizarre deities are those shown at the upper left. These comprise spirits of the vegetable and mineral realms, and include beings in the shapes of trees, rocks, and air (a figure barely visible among the background clouds). This personification of living beings of the natural world clearly reflects the traditional Chinese belief that not only plants, but also rocks and minerals, are animated by the vital force (*qi*) created by the Tao, and, like gods and people, they have their own cycles of life and death.³

—S. L.

City Gods of All Municipalities and Earth Gods of All Districts

Ming dynasty, c. 1600

Hanging scroll; ink, colors, and gold on silk

214 x 103 cm

Musée National des Arts Asiatiques Guimet, Paris (EO 734)

Shown in Chicago only

PART OF A late Ming dynasty set depicting the Water and Land Ritual acquired in China by Paul Pelliot, this painting depicts City Gods (*Chenghuang*) and Earth Gods (*Tudi*). The title of the scroll is inscribed in a cartouche in the upper left corner. Both City Gods and Earth Gods are deities of Chinese popular religion, and they are not, strictly speaking, considered Taoist gods. Of the two types, the oldest are the Earth Gods, shown at the top of this scroll. Their origins can be traced to early gods of the soil (*she*), worshipped in the Han dynasty (206 B.C.–A.D. 220) and earlier. As David Johnson has written,

When the Zhou feudal order was replaced by the Qin–Han bureaucratic system, cities, towns, and villages continued to have *she*. These sacrifices were mandated by statute as part of the official religion. In county and prefectural capitals, the expenses of the cult were evidently borne by the government; in villages and hamlets, the inhabitants had to meet the costs themselves. In Han times formal worship of the god of the soil in the county and prefectural cities thus was in the hands of the officials. The cult was thoroughly rationalized: the earth-god had long since been depersonalized and universalized, and was as featureless and abstract as the deities of the hills, rivers, thunder, rain, and other features of the natural world that received official sacrifice. The open altar was made of earth and was extremely plain, with only a stone pillar, representing the god, and a tree to mark it. Sacrifices there were offered only twice a year, on days in the second and eighth months fixed by statute.¹

The emergence of the cults of both City Gods and Earth Gods out of the traditional worship of the ancient god of the soil appears to have begun during the Six Dynasties period (420–589) and to have accelerated during the Tang dynasty (618–906).

The gods in the foreground of the Guimet painting are City Gods; the existence of this category, literally known as “Wall and Moat Gods” (*chenghuang shen*), can be traced to the early sixth century, in the Six Dynasties period.² The increasing worship of City Gods from the eighth century onward reflects the proliferating urbanization that characterized south and south-central

China during the mid-Tang period.³ Like many gods of the popular pantheon, City Gods often began as human heroes (frequently military generals) who were later deified on the local level. By the end of the Song dynasty, the cult of City Gods was supported by the state at the level of the municipality. When a newly appointed magistrate arrived at his post, he first paid his respects to the City God in the latter’s shrine, and maintained a fixed schedule of sacrifice thereafter.⁴ As Paul Katz has pointed out

The cult of the City God gained increasing popularity during late imperial times because he was seen as the arbiter of a region’s fate, the spiritual equivalent of the district magistrate. As the magistrate could punish evil-doers or intercede with the emperor on behalf of the people, so could the City God inflict calamities or act as a go-between between the people and the Jade Emperor during times of crisis.⁵

These observations have been echoed by Angelo Zito: “Every major locality had a City God temple inhabited by a god who held a heavenly bureaucratic rank equivalent to his earthly counterpart.”⁶ While Johnson has suggested that the rise of the City God cults was linked to the rise of the mercantile class from the Tang dynasty onward, other scholars, in particular Valerie Hansen and Barend ter Haar, have suggested that itinerant figures such as priests, doctors, and migrant workers could also have been responsible for the spread of these cults.⁷

There is evidence from as early as the tenth century that City God temples contained images (either sculptures or paintings) of their gods and attendants, and during the Song dynasty there is clear evidence of imperial recognition of the City God cult.⁸ Occasionally a City God temple would be built in proximity to a Taoist temple. There was, for example, originally a sub-temple to the City God at the Yongle Gong (Eternal Joy Temple), the great Yuan dynasty (1260–1368) Taoist temple of the Complete Realization (Quanzhen) sect at Ruicheng, Shanxi province.⁹ Worship of City Gods continued through the Ming (1368–1644) and Qing (1644–1911) dynasties, and is still found today in Taiwan, Hong Kong, and many overseas Chinese communities.¹⁰ The importance of the City God cults is reflected in stele inscriptions composed by the Qing dynasty Yongzheng (r. 1723–35) and Qianlong (r. 1736–95) emperors, in which these Manchu rulers made public declarations of their respect for the City God of Beijing.¹¹

The Realm of All Mountain Kings and the Six Spirits of the Household

Ming dynasty, c. 1600
 Hanging scroll; ink, colors, and gold on silk
 214 × 103 cm
 Musée National des Arts Asiatiques Guimet, Paris (EO 742)
 Shown in San Francisco only

THIS LATE MING DYNASTY hanging scroll belongs to the same set as cat. no. 85, depicting the Water and Land Ritual. It depicts the generic categories of mountain gods and spirits of households. While the Household Spirits have remained gods of Chinese popular religion, some mountain deities (the gods of the Five Sacred Peaks, for example) were absorbed into the pantheon of Taoism by the late Six Dynasties period (sixth century). The mountain gods shown here represent lesser peaks, and their depictions are generalized. Five of the six Household Spirits (Jiazhi liushen) are shown at the top of the scroll: they are the Stove God (Zao wang), the Door God (Menshen), the God of the Kitchen Door (Hushen), the God of the Well (Jingquan tongzi), and the Earth God (Tudi).¹ The sixth, the Goddess of the Latrine (Sangu furen), is missing. One of the earliest known references to the Stove God is in the third-century text *In Search of the Supernatural* (*Soushen ji*):

During the times of Emperor Xuan of the Han (dynasty), Yin Zifang of Nanyang, who was by nature a filial man, had accumulated many blessings by alms and good acts. He took most pleasure in sacrifices to the Stove God, and one winter solstice morning during the ceremonial lighting of the stove, the god himself appeared. Zifang thanked it for his numerous blessings, and since there was a light-tan ram in the house, he sacrificed it to the Stove God.²

There is a great deal of information regarding the cults of mountains in the Han dynasty (206 B.C.–A.D. 220). Since this period, a standard group of Five Sacred Peaks has been worshipped as gods in China. The origins of the veneration of individual sacred mountains (*yue*) can be traced back to the late Shang dynasty (thirteenth–eleventh century B.C.); such peaks are mentioned in the oracle bone inscriptions excavated at the last Shang capital, Anyang.³ Mountains were seen as powerful forces in the Han and Six Dynasties periods. In Ge Hong's *The Master Who Embraces Simplicity* (*Baopuzi*) of the fourth century, there are famous passages that discuss ways of moving through

mountains, and the herbs and minerals found on sacred peaks that aid self-cultivation and alchemy:

All mountains, whether large or small, have gods and spirits (*shenling*). If the mountain is large, the god is great; if the mountain is small, the god is minor. If someone enters the mountain possessed of no magical arts, he will certainly suffer harm. Some will fall victim to acute diseases or be wounded by weapons. When frightened and uneasy, some will see lights and shadows, others will hear strange sounds. Sometimes a huge tree will topple, though there is no wind, or a cliff will collapse for no reason, striking and killing people. Sometimes the man will flee in confusion, tumbling down a cavern or into a gorge; other times he will encounter tigers, wolves and poisonous insects that attack men. One cannot enter a mountain lightly!⁴

Ge Hong's *Baopuzi* is also the first text to mention the sacred talismans or "true forms" (*zhenxing*) of the Five Sacred Peaks (see cat. no. 137). With the greater institutionalization of Taoism in the Tang dynasty, the gods of the Five Sacred Peaks came increasingly under the control of higher Taoist gods. In the early eighth century, the guidelines for imperial worship of these mountains were determined by the Taoist church.⁵ Mount Tai (Tai Shan), in the east, has been perceived as the most important of the Five Sacred Peaks since the third century B.C., and by the end of the Song dynasty (960–1279) there was a temple to the god of Tai Shan in almost every major city in China.⁶ The close connections between Taoism and mountains cults are illustrated by the fact that in 1349 a temple to the Emperor of the Eastern Peak (Dongyue dadi) was built at the Yongle Gong in Ruicheng, Shanxi province, the birthplace of the immortal Lü Dongbin (see cat. nos. 120–22).⁷

—S. L.

TRADITIONALLY ATTRIBUTED TO JIANG ZICHENG

Marshal Wen

Ming Dynasty, late 14th/early 15th century

Hanging scroll; ink and colors on silk

124 × 66.1 cm

Museum of Fine Arts, Boston, Fenollosa-Weld Collection (11.4008)

THIS PAINTING DEPICTS Marshal Wen, an exorcistic god of the popular pantheon who rose to prominence during the Southern Song (1126–1279) and Yuan (1260–1368) dynasties.¹ Marshal Wen, or Wen Yuanshuai, was best known as a deity who eradicated plague demons. It is significant that his cult arose along the coast of Zhejiang province, where plagues and epidemics were common events.² At the same time, Marshal Wen was also seen as a protector of the Tao who eradicated heterodox (*xie*) and licentious (*yin*) local deities, and a god that worked in the service of the god of the Eastern Peak (Tai Shan) to uphold traditional Confucian values such as filial piety.³ Wen's biography in the *Daozang* makes clear that he served not only the god of Tai Shan, but also the Taoist god Zhenwu, Supreme Emperor of the Dark Heaven.⁴

Like many gods whose worship spans the fluid boundary between Taoism and popular religion, Marshal Wen began as a local god who was absorbed into the Taoist pantheon (another example is the God of Literature, Wenchang; see cat. no. 89). Unlike Wenchang, however, the cult of Marshal Wen did not spread throughout China, but was limited to the south-central coastal provinces of Zhejiang and Jiangsu, and Sichuan in the southwest. He is still worshipped today in Taiwan.

Marshal Wen's cult originated in Pingyang, Wenzhou prefecture, located along the southern coast of Zhejiang province. By the mid-thirteenth century (1264), a temple honoring Marshal Wen had been built in Hangzhou, the Southern Song capital; this was known as the Temple of Boundless Numinosity.⁵ Paul Katz has demonstrated that local merchants played a prominent role in spreading Marshal Wen's cult throughout Zhejiang, and that Taoist priests and scholar-officials also played key roles in supporting worship of this popular god. One of the primary literary sources on Marshal Wen, for example, is the Yuan dynasty stele inscription composed by the scholar-official Song Lian (1310–1381) in 1355 for a temple in Wenzhou prefecture.⁶

The earliest hagiographic source on Marshal Wen is a text in the Taoist Canon (*Daozang*) composed in 1247 by Huang Gongjin, a priest of the Divine Emphyrean (Shenxiao) sect.⁷

According to this text, *Biography of Grand Guardian Wen, Supreme Commander of Earth Spirits* (*Diqi shangjiang Wen taibao zhuan*), the deity originated as a man named Wen Qiong who was born in Pingyang in the Tang dynasty (618–906).⁸ Known for his martial prowess, he was ultimately transformed into a plague-fighting god who worked in the court of the Emperor of the Eastern Peak (Dongyue dadi). Among his responsibilities was the administration of the registers of life and death. Song Lian's stele inscription of 1355, in contrast, depicts Marshal Wen as a traditional scholar of the Tang dynasty who could perform the Pace of Yu (*Yubu*) by the age of seven (see cat. no. 52), and had memorized the Confucian Classics by the age of fourteen.⁹

In the Museum of Fine Arts painting, Marshal Wen is shown as a warrior dressed in red and gold armor and holding a sword with a gray-green blade. He stands against a pale green void, with swirling clouds filling the background; these are outlined in black and orange, with white highlights. The god's face is blue, and his lips and the tip of his nose are red. Marshal Wen's skin is also painted blue, while his hair is red with gold highlights; this is just as he is described in the *Complete Compendium of the Deities of the Three Religions and their Origins* (*Sanjiao yuanliu sushen faquan*), a text that probably dates to the Yuan dynasty.¹⁰ On his head is a black cap, with a flower decorating the front. This flower is most likely the jade flower (*qionghua*) presented by the Jade Emperor to confer immortality. Epaulets with lion masks rest on his shoulders, and a broad sash around his waist is painted with winged mythical beasts in ink and pale blue and red pigments. A long purple ribbon holds this sash in place. Hanging around the god's neck is a red placard inscribed in ink and gold with the characters *Wuju xiaohan* ("The Carefree Man of the Emphyrean"), a name also given to Marshal Wen by the Jade Emperor.¹¹ It is on the basis of this inscribed placard that the Boston painting can be precisely identified as a depiction of Marshal Wen.

—S. L.

88

Marshal Wang

Ming dynasty, Jiajing reign, dated 1542

Hanging scroll; ink and colors on silk

97 × 62 cm

The Metropolitan Museum of Art, New York, Purchase, Bequest of Dorothy Graham Bennett (1989.155)

DEPICTING A DEIFIED HERO of the early Tang dynasty (seventh century), this hanging scroll is a rare product of an imperial painting atelier in the Forbidden City during the Jiajing reign (1522–66). The Jiajing emperor was devoted to Taoism, and he had all the Buddhist temples in the palace shut down shortly after he took the throne.¹ This painting depicts the god Marshal Wang (Wang yuanshuai), a god of the popular pantheon known for his ability to crush human villains and malevolent river spirits.²

Among billowing clouds, the wrathful god is shown hovering over roiling, white-topped, dark green waves. Among the waves are many writhing snakes. Patches of blue sky, streaked with gold, appear at the top of the scroll. The god is depicted with reddish orange skin. He has wild red hair and fangs, and glowers down at the snakes below. He wears an orange placard over his shoulder, held in place by a rope and inscribed in gold ink: “Red heart, loyalty, and virtue” (*Chixin zhongliang*); this placard was given to him by the Jade Emperor. He stands on a flaming wheel. In one hand he holds a ball on a chain, and in the other a bucket.

At the top of the scroll, a Taoist adept holding a fan stands on a pink cloud. To the right are three gods, two with bird-beaks; these hold a trident, a ball on a chain, and a hammer and spike. To the left are three more gods; these hold swords, and one is shown with a bird’s beak and a mustache. Below, near the left margin, a birdlike demon with lavender wings flies behind the central god.

The painting is inscribed at the upper right, “Painted by order of the Imperial concubine [*huang guifei*] Shen, in the beginning of summer of the *renyin* year of Jiajing [1542].” Over this is impressed a large red seal, now illegible and partially trimmed.

—S. L.

89

DING YUNPENG (ACTIVE C. 1584–1638)
Wenchang, the God of Literature

Ming dynasty, Wanli reign, dated 1596
 Hanging scroll; ink on paper
 117.5 × 46.4 cm

The British Museum, London (1936.10–9.0129 Add. 170)

ONE OF THE most popular gods in late imperial China was Wenchang, the God of Literature. First worshipped as a snake god known as “the Viper” in Sichuan during the Six Dynasties period (420–589), he rose in prominence until by the Tang dynasty (618–906) he was worshipped as part of the imperial cult.¹ In the Song dynasty (twelfth century) the god revealed himself in anthropomorphic form as a Taoist god, the Divine Lord of Zitong.² From the Song onward, Wenchang was widely worshipped by the literati, particularly by candidates in the civil service examinations; he was also venerated for his powers of healing and exorcism.³ His cult ultimately achieved a national following.

In the *Book of Transformations*, a text revealed to a twelfth-century medium named Liu Ansheng in Chengdu, Sichuan, the god Zitong demonstrates his cosmological origins:

When Hundun [Primordial Chaos] first divided into opaque
 and clear,
 In the astral quarter of the Southeast the phosphors shone sharp
 and bright.
 In its midst was contained the billowing energies of the Great
 Monad [Taiyi, Supreme Unity].
 I was already in secret correspondence with the quintessence
 of Creation.
 Alone I occupied the stellar palace above the Twin Maidens
 [a constellation].
 Governing the Five Virtues, the quintessence of the Five activities.
 Abruptly tired of dwelling in this desolate region,
 I shed my slough and end my term, the fruit of the Tao achieved.⁴

The British Museum scroll by the late Ming painter Ding Yunpeng depicts Wenchang descending on clouds above an ocean. The god rides on a mule. He is dressed as a scholar-official, wears a peony in his hat, and holds a scroll in his left hand. He has an entourage, consisting of an old man with a book (his attendant Zhuyi, or “Red Robe”) and two boys.⁵ Below, in the foreground, Wenchang’s acolyte Kuixing, a demonic figure holding a writing brush in his right hand and a weight (for measuring the worth of scholars) in his left, rides across the waves on the head of a dragon.⁶

The painting is finely executed in the *baimiao*, or uncolored line drawing technique. It is inscribed, “At the beginning of the middle ten-day [cycle] of the first month of summer in the cyclical year *bingshen* [1596], on the Day that Demons are Born, respectfully copied by Nanyu Ding Yunpeng.”

—S. L.

LÜ JI (c. 1440–c. 1505)

The Old Man of the Southern [Celestial] Pole

Ming dynasty, late 15th century

Hanging scroll; ink and colors on silk

217 × 114.2 cm

Palace Museum, Beijing

LÜ JI'S LARGE HANGING SCROLL depicts Shoulao (or Shouxing), the God of Longevity (also known as the Old Man of the Southern [Celestial] Pole), accompanied by a white deer. The god appears to be bowing to the red sun that hangs in the sky above. On either side are blossoming trees and bamboo. The god is shown with a tall, domed cranium and white whiskers.

According to Sima Qian's *Records of the Historian* (*Shiji*), a temple for the worship of the Longevity Star (Shouxing) was first erected by Emperor Qin Shihuangdi.¹ In antiquity, Shouxing corresponded to both an area of the sky bounded by the Lunar Mansions Horn (*Jiao*) and Neck (*Kang*), and a star corresponding to Canopus, found in a constellation known as *Hu*:

The Old Man Star (*Laoren xing*) located south of the *Hu* constellation (in the southeastern horizon), also known as *Nan ji* (Southern Pole), appears regularly in late autumn and disappears in early spring. When it is seen, peace prevails (in the nation) and the sovereign is blessed with a long life.²

In 736, during the Tang dynasty (618–906), Emperor Xuanzong (r. 712–56) revived imperial worship of Shouxing, and an altar devoted to this god was established in Chang'an (Xi'an).³ The imperial decree read as follows:

No virtue is greater than creation, and no happiness is greater than longevity. If there is an object [of longevity worship], why should it not receive ritual sacrifices? Now a memorialist says that in mid-autumn, the sun and moon meet in the Shouxing (Longevity Star) Mansion, which happens to fall within the month of my [Xuanzong's] birth. [He] would like to have it serve as an ancillary god in the sacrifices to She [the God of the Soil]. However, it is inappropriate ritual classification. The Shouxing Mansion governs the lodges of *Jiao* and *Kang*, which are the elders of the 28 *xu* (lodges). In addition it (Shouxing) is known for [bringing] happiness and longevity. Will this emperor be the only one to enjoy its benefits? Are not the people under heaven desirous of the same? It seems Shouxing worship dates back to the Qin dynasty, which can be said to be old. Henceforth, it is decreed that the government

agency in charge should set up a special altar of the Shouxing Mansion to conduct ritual ceremonies on the day of One Thousand Autumns (*qianqiu jie*). It is also decreed that sacrifices should be made to the Old Man Star (*Laoren xing*, or Canopus) and the seven lodges [of the east], including *Jiao* and *Kang*. This should be recorded as the standard practice.⁴

One of the earliest known depictions of Shouxing is in a painting in the Musée Guimet, Paris, entitled *The Star-lords of Good Fortune, Emolument, and Longevity*, dated 1454, and a product of the imperial Ming court (cat. no. 91).⁵ From the Ming dynasty onward, Shouxing or Shoulao (Old Longevity) is often seen in the company of the Eight Immortals (Baxian; see cat. no. 118).

This painting is signed in the lower left corner, "The respectful hand of Lü Ji" (*Lü Ji bai shou*), followed by a seal reading "Seal of Lü Tingzhen of Siming" (*Siming Lü Tingzhen zhi yin*). A single collector's seal appears in the lower right corner. Lü Ji was one of the leading court painters of the late fifteenth and early sixteenth centuries. A native of Ningbo in Zhejiang province, he was one of the leading masters of bird-and-flower painting at the court of the Hongzhi emperor (r. 1488–1505).⁶ Figure paintings by Lü Ji are extremely rare, and this is one of the few known examples.⁷

—S. L.

The Star-lords of Good Fortune, Emolument, and Longevity

Ming dynasty, Jingtai reign, dated 1454

Hanging scroll; ink, colors, and gold on silk

140 × 78 cm

Musée National des Arts Asiatiques Guimet, Paris (EO 689)

Shown in San Francisco only

WITH THE EXCEPTION of a painting in the Nezu Museum, Tokyo, entitled *The Three Stars Playing Weiqi* and attributed to the Yuan dynasty, the painting of the Three Stars in the Musée Guimet is the earliest known image of this group of gods in Chinese art.¹ Dated to 1454 and created for use in a Water and Land Ritual at the imperial Ming court in the Forbidden City (see cat. nos. 78–81), the scroll depicts a triad that has enjoyed great popularity from the fifteenth century onward: the gods known as Fuxing (Good Fortune Star), Luxing (Emolument Star), and Shouxing (Longevity Star). Of the three gods, the most ancient is (appropriately) Shouxing (or God of Longevity), shown at the upper left as an old man with white hair (see cat. no. 90). In the Musée Guimet scroll, all three gods wear the official caps and hold the tablets of Taoist priests. Accompanying them is a smaller attendant, who holds a small parasol with banners aloft. This group is shown against a background of clouds. A similar depiction of these gods appears in the painting entitled *The Three Stars, Nine Sources of Brightness, Twenty-eight Lunar Mansions, and Twelve Palaces [of the Zodiac]* in the Nelson-Atkins Museum, Kansas City, which may come from the same imperial Ming workshop (see the essay by Stephen Little in this volume, fig. 11). The title of the Musée Guimet painting is inscribed in gold in standard script characters along the right border. At the top right, also in gold, is the date, and an ink inscription at the lower left records the names of the officials who commissioned the painting.

As Mary Fong has shown, the earliest literary evidence for the Three Stars comes from a play entitled *The Festival of the Immortal Officials Fu, Lu, and Shou* (*Fu Lu Shou xian'guan qinghui*), written by Zhu Youdun (1379–1439), a grandson of the first Ming emperor, Zhu Yuanzhang (r. 1368–98).² In this drama, published in 1443, the Three Stars descend to the mortal world for the lunar New Year's festival. In another play by the same author, *The Eight Immortals Convey Wishes for Longevity at the Turquoise Pond*, the duties of the Three Stars are enumerated as multiplying happiness (Fuxing), conferring emolument or high salary (Luxing), and increasing longevity (Shouxing). Based on the literary and visual evidence, therefore, it would appear that

this group first appeared in the early fifteenth century. As Fong has shown, the gods Fuxing and Luxing have no mythology of their own and no prior history before the early Ming dynasty.³

Although these gods are shown in the Musée Guimet painting as Taoist priests, Fong is also correct in pointing out that the Three Stars are not Taoist gods *per se*.⁴ There are, for example, no texts in the Ming Taoist Canon (*Daozang*) devoted to this triad. This is significant because the Taoist Canon was compiled only a decade before the painting of this hanging scroll. The Three Stars appear instead to be gods of popular religion, quite possibly instituted at the imperial level in the early Ming. They do not appear, for example, among the more than three hundred Taoist gods depicted in the early-fourteenth-century murals at the Yongle Gong in southern Shanxi province. The Three Stars have remained gods of popular religion, and their images are among the most commonly encountered today of any Chinese gods.

DAI JIN (1388–1462)
Zhong Kui Traveling at Night

Ming dynasty, 15th century
Hanging scroll; ink and colors on silk
189.7 × 120.2 cm
Palace Museum, Beijing

ZHONG KUI is one of the most popular gods in traditional China.¹ Although he emerged in the Tang dynasty as a god of popular religion at the highest level of society, by the Song dynasty he had been adopted into the religious Taoist pantheon. The story of Zhong Kui is about a scholar who becomes a demon-killing ghost, ridding the world of pestilence and evil:

One afternoon in the Kaiyuan era (713–742), Minghuang (Emperor Xuanzong), feeling ill after he had returned from a round of bow-and-arrow practice on Li Shan, fell asleep. He soon saw in a dream a small-size demon, wearing only knee-length trousers and one shoe—the other being tied at his waist—and holding a bamboo fan, in the act of stealing the favorite consort's embroidered perfume-bag and his own jade flute. Then, instead of escaping, the strange being began frolicking around the palace grounds with the loot. Minghuang therefore approached him and demanded an explanation. The demon respectfully replied that his name was Xu Hao and explained that "Xu" stood for "stealing indiscriminately for the sake of fun" and "Hao" for "replacing man's joys with sorrows."

Hearing this, the emperor became angry and wanted to call for his bodyguards. But at that very moment, a large-size demon, wearing a tattered hat, blue robe, horn waist-belt, and black boots appeared and nabbed the thief. Immediately afterwards, he proceeded first to gouge out the victim's eyes, then tore him to pieces and finally ate him.

When the emperor asked him who he was, the Demon Queller introduced himself as Zhong Kui, a *jinsh*² from Zhongnan, who ashamed at having failed the next higher degree of examinations during the Wude era (618–627), had committed suicide by dashing his head against the palace steps. He further mentioned that because the emperor Gaozu awarded him an honorable burial of a court official of the green-robe rank, he had vowed to rid the world of mischievous demons like Xu Hao. At these words, Minghuang awoke and found himself fully recovered. Without delay he summoned [the court painter] Wu Daozi and requested him to paint a portrait of the Demon Queller as he had seen him in his dream. When it was finished, the emperor examined it carefully and said, "You and I must have had a similar vision!" And he awarded Wu one hundred taels of gold.³

The long tradition of Zhong Kui paintings is traditionally said to have begun with this depiction by Wu Daozi in the early eighth century. By the mid-tenth century, we read that in Sichuan, "Each year, at winter's end, those in the Hanlin Academy who were skilled in painting ghosts and spirits customarily presented paintings of Zhong Kui to the court."⁴

Dai Jin (1388–1462), a professional painter from Hangzhou, Zhejiang province, was one of the earliest masters of the Zhe School of Ming painting. The painting is signed along the left border, "Painted by Dai Jin of West Lake" (*Xihu Dai Jin xie*); this is followed by a single seal, *Jing'an* (the artist's *hao*, or nickname).

III.2 DIVINE MANIFESTATIONS I: GODDESS AND FEMALE

AMONG THE RELIGIONS OF CHINA, Taoism is distinguished by its emphasis on the vital role of the *yin* force—the feminine aspect of the world. In the *Daode jing*, attributed to Laozi, the Tao itself is described in this light:

The Valley Spirit [i.e., the Tao] never dies.
It is named the Mysterious Female.
And the Doorway of the Mysterious Female
Is the base from which Heaven and Earth sprang.
It is there within us all the while;
Draw upon it as you will, it never runs dry.¹

From a cosmological viewpoint, the *yin* force, which as a complement to the *yang* (male) force symbolizes the feminine aspect of reality, has always been a fundamental element in Taoist belief. *Yin* and *yang* are seen as mutually complementary opposites whose interaction creates all the mechanisms of the universe; one cannot exist without the other.

This section of the exhibition introduces several of the most important goddesses of the Taoist pantheon. These deities personify the essence of the *yin* force, and have a long history in China as protectors of life and dispensers of longevity. As patron deities of women, goddesses such as the Queen Mother of the West (Xiawangmu) or Metal Mother (Jinmu), the Sovereign of the Clouds of Dawn (Bixia yuanjun, the Goddess of Mount Tai, the Sacred Peak of the East), Doumu (the Dipper Mother), Houtu (the Earth Goddess), and Tianhou (the Empress of Heaven, or Mazu) continue to be worshipped in China today. During the course of Chinese history, many of the Taoist deities who transmitted secret teachings to human visionaries have been female. The fourth-century Shangqing (Highest Purity) adept Yang Xi, for example, frequently obtained sacred texts from the divine realm through the intercession of the female realized being (*zhenren*) Wei Huacun.

Throughout the history of religious Taoism, female saints have also played a vital role in both popular and elite worship. Such influential figures as Master Geng, active as an alchemist at the Tang court in the ninth century, and Tanyangzi, a late-sixteenth-century teacher who had a wide following among many of the leading male literati scholar-officials of the late Ming dynasty in south-central China, are exemplary models of the powerful role of the *yin* aspect of being in daily life and belief. From the time of the first Celestial Master sect (second century) onward, both men and women could be ordained into the Taoist clergy. The longevity of this tradition is reflected at the imperial level, where empresses and princesses were regularly ordained as Taoist priestesses from the Tang dynasty (618–906) onward.

94

WU WEI (1459–1508)

Female Goddess or Immortal

Ming dynasty, 15th century
Hanging scroll; ink on paper
162.7 × 63.8 cm
Shanghai Museum

WHILE UNTITLED, the Taoist goddesses depicted in these two paintings almost certainly are Xiwangmu, the Queen Mother of the West, also known as Jinmu, or Metal Mother.¹ This is suggested by the presence of single phoenixes in the headdresses of both figures; the phoenix has been a key iconographic feature of Xiwangmu since at least the Yuan dynasty (1260–1368), as seen in the murals of the Hall of the Three Purities (Sanqing Dian) at the Eternal Joy Temple (Yongle Gong) in Shanxi.² In the National Palace Museum scroll (cat. no. 93), the identification is corroborated by the presence of the peaches held by the jade maiden (*yunü*) at the left; these are the peaches that grow every three thousand years in the Queen Mother's paradise on Mount Kunlun (see cat. no. 27).

One of the oldest female deities of China, Xiwangmu is mentioned in the "Inner Chapters" of the *Zhuangzi* (c. 300 B.C.) as a goddess who "obtained the Tao." She was associated with metal (one of the Five Phases or Elements), autumn, and the west, all aspects of the *yin* force. As a divine personification of *yin*, Xiwangmu was widely worshipped from the Han dynasty (206 B.C.–A.D. 220) onward. She emerged as a full-fledged Taoist goddess in the scriptures of the Shangqing (Highest Purity) school of religious Taoism in the Eastern Jin dynasty (fourth century). In addition to being a patron deity of women, she was a divine teacher who could control the length of people's lives, and was closely associated with the cultivation of virtue and immortality.³ Significantly, she is still worshipped today in China, Taiwan, and Hong Kong, and among many overseas Chinese communities.⁴

In the National Palace Museum scroll, the goddess is shown standing in a dignified posture, her hands clasped together in a

gesture of worship. This, and the fact that she and her attendant face to the right, suggest that the painting originally belonged to a larger set, with the figures facing images of higher Taoist gods such as the Three Purities (Sanqing; see cat. no. 65–67). The goddess is dressed in elaborate robes, painted with superbly harmonized blue, green, red, pink, and lavender pigments. Her ornate metal crown has a single phoenix at the center. Her attendant holds a tray heavily laden with ripe peaches, ancient symbols of longevity and good fortune. The scroll bears seals of the Qing dynasty Qianlong (r. 1736–95), Jiaqing (r. 1796–1820), and Xuantong (r. 1909–11) emperors.

The painting by the scholar and professional painter Wu Wei (1459–1508) in the Shanghai Museum (see cat. no. 94) presents the goddess as a young woman of extraordinarily refined appearance.³ This striking characterization of the goddess recalls the exalted description of the Queen Mother in the Six Dynasties period (420–589) text *Esoteric Transmissions Concerning the Martial Thearch of Han* (*Han Wudi neizhuan*), quoted in the Tang Taoist Du Guangting's *The Primordial Ruler, Metal Mother* (*Jinmu yuanjun*):

The Queen Mother rides an imperial carriage of purple clouds, harnessing nine-colored dappled qilin [mythical beasts]. Tied around her waist, she wears the whip of the Celestial Realized Ones; as a belt pendant, she has a diamond numinous seal. In her clothing of multi-colored damask with a yellow background, the patterns and variegated colors are bright and fresh. The radiance of metal makes a shimmering gleam. At her waist is a double-bladed sword for dividing phosphors. Knotted flying clouds make a great cord. On top of her head is a great floriate topknot. She wears the crown of the Grand Realized Ones with hanging beaded strings of daybreak. She steps forth on shoes with squared, phoenix-patterned soles of rose-gem. Her age might be about twenty. Her celestial appearance eclipses and puts in the shade all others. She is a realized numinous being.*

Wu Wei's scroll is painted in ink alone with sharp tonal contrasts, and wet washes over energetic dry ink outlines. The painting depicts the goddess as detached and mysterious. Wearing voluminous robes, she wears a headdress with a single stylized phoenix in front, and holds a tablet of rank in her hands. Her face is summarily painted with sharp lines of very dry ink. The painting is signed "Xiaoxian" ("Little Immortal"), and bears two of the artist's seals: "Seal of Wu Wei" and "Battalion Commander of the Embroidered Uniform Guard" (a title in the imperial Ming painting academy).

Saintly Mother Heavenly Immortal of the Eastern Peak

Ming dynasty, c. 1600
Hanging scroll; ink, colors, and gold on silk
216 x 100 cm
Musée National des Arts Asiatiques Guimet, Paris (EO 760)
Shown in Chicago only

ONE OF THE MOST POPULAR Taoist deities from the Ming dynasty onward was Bixia yuanjun, the Sovereign of the Clouds of Dawn.¹ This goddess was the daughter of the male god of Mount Tai (Tai Shan), the easternmost of the Five Sacred Peaks, located in Shandong province. Mount Tai had been a focal point of imperial and popular worship since at least the Qin (221–207 B.C.) and Han (206 B.C.–A.D. 220) dynasties.² Not only was the peak closely tied to rites related to the political legitimacy of the emperor, but it was also seen in the medieval period as the gateway to the realm of the dead.³

The Palace of the Clouds of Dawn (Bixia Gong), a shrine to the goddess, was built at the top of Mount Tai during the Ming dynasty, and is still a focus of pilgrimage worship.⁴ Bixia yuanjun became the most popular female Taoist deity in China during the Ming and Qing dynasties, and unlike her father, was seen as a compassionate deity.⁵ Her popularity is widespread today. Many cities in China have temples dedicated to Bixia yuanjun. In Beijing, the Temple of the Eastern Peak (Dongyue Miao) contains a hall dedicated to the goddess, as does the White Cloud Monastery (Baiyun Guan). In Taoist painting and sculpture, she is often accompanied by nine other attendant goddesses, including the Goddess of Children (Zisun niangniang) and the Goddess of Eyesight (Yanguang niangniang).⁶

The official Taoist hagiography of Bixia yuanjun is contained in a text entitled *History of Mount Tai (Tai shi)*, compiled by Zha Zhilong (fl. 1554–86) and included in the Wanli reign (1573–1620) supplement to the Taoist Canon, printed in 1607.⁷

The Art Institute's bronze sculpture of the Sovereign of the Clouds of Dawn (cat. no. 95) can be dated to the early Ming

dynasty (fifteenth century), and was undoubtedly made for use on a Taoist altar. Dignified and imposing, the goddess can be identified by the three phoenixes in her headdress (her standard iconography). With her hands, the goddess forms a sacred gesture, not unlike the Buddhist *mudra* of "turning the Wheel of the Law" (although the position of the hands is reversed). Two small boys stand on her lap.

The brilliant hanging scroll in the Musée Guimet, Paris (cat. no. 96), depicts the Sovereign of the Clouds of Dawn regally seated in her celestial court, accompanied by six female attendants. Bixia yuanjun wears a robe edged with feathers and holds a tablet in both hands. Her headdress contains seven phoenixes. An inscription on the outer mounting records the title: *Saintly Mother Heavenly Immortal of the Eastern Peak (Dongyue tianxian shengmu)*. As Susan Naquin has shown, by 1600 the goddess was widely known by this title.

Many images of Bixia yuanjun survive from the Ming and Qing dynasties. They can almost all be identified by the presence of three, or sometimes more, phoenixes in the deity's headdress (as opposed to images of the Queen Mother of the West, in which the headdress usually has a single phoenix).

—S. L.

The Lady of the Highest Primordial and the Empress of Earth

Ming dynasty, c. 1600
 Hanging scroll; ink, colors, and gold on silk
 216.5 x 103 cm
 Musée National des Arts Asiatiques Guimet, Paris (EO 717)
 Shown in San Francisco only

THIS PAINTING was originally made for the Buddhist Water and Land Ritual (see section II.3, "The Taoist Pantheon"). It depicts two female deities, the Lady of the Highest Primordial (Shangyuan furen; above) and the Empress of Earth (Houtu; below), each accompanied by female attendants¹ holding auspicious items such as coral, a mushroom-shaped *ruyi* scepter, and a parasol. They float on multi-colored clouds that descend from above the top border of the painting.

The Lady of the Highest Primordial first came to prominence in the medieval period, and holds a special place in the legends surrounding the Highest Purity scriptures (see cat. no. 55). She is most famous for a medieval tale in which she appears to the Han dynasty emperor Wudi (r. 140–87 B.C.), together with the Queen Mother of the West (Xiwangmu; see cat. no. 26).² In addition, she was a teacher of the three Mao brothers, fabled Han dynasty figures who gave their names to Mount Mao, an important Taoist site, and who were seen as patriarchs of the Highest Purity scriptures. Later hagiographies of this goddess³ still emphasize these medieval legends, but it is clear that she continued to play an active role in the Taoist pantheon in late imperial times.⁴

The Empress of Earth seems to have been worshipped as an earth spirit as early as the sixth century B.C., and is connected by such early texts as the *Zuozhuan* with ancient community altars to the soil (*she*). Imperial rites to this deity were formalized by Emperor Wu of the Han dynasty in 113 B.C.⁵ Although the literal translation of this deity's name suggests that the deity is female, early sources indicate that the name was initially understood as the proper name or title of a male deity who eventually came to be seen as female by the medieval period. This probably resulted from the use of the character for "empress" (*hou*) in the deity's name, and from the popular associations between the earth and

female or *yin* energy (as opposed to the male or *yang* energy associated with the heavens). In addition to her primary role as a divine manifestation of the earth, the Empress of Earth has secondary connotations as a protector spirit of graves and the deceased. Although the Empress of Earth appears here in the context of a Buddhist ritual, she figures prominently in the Taoist pantheon, and is one of the primary deities in the Yuan dynasty murals of the Hall of Three Purities in the Eternal Joy Temple (Yongle Gong) in Shanxi province.⁶ It is intriguing to note that in the murals of the Hall of Three Purities, the Empress of Earth is depicted opposite the Metal Mother (a title for the Queen Mother of the West), ancient companion to the Lady of the Highest Primordial, with whom she is shown in the present painting.

The depiction of the Lady of the Highest Primordial with the Empress of Earth in this painting suggests that the former goddess is used to represent the heavens, while the latter represents the earth. Moreover, the Lady of the Highest Primordial serves as a divine matriarchal figure, being called in later times Realized Mother of the Three Heavens,⁷ while the Empress of Earth serves as patron protectress of the dead; so, taken together, these two goddesses seem to personify the entirety of human (and cosmic) existence from birth to death. As such, this painting is a particularly evocative expression of the goal of the Water and Land Ritual to address all the spirits of the natural and supernatural worlds—literally, all the spirits of the "water and land."

—S. E.

The Dipper Mother

Qing dynasty, 18th century

Dehua porcelain

H. 24.8 cm

Asian Art Museum of San Francisco, The Avery Brundage Collection
(B60 P1362)

IT IS UNCLEAR when worship of the Dipper Mother (Dǒumu) began, but she did not come to prominence until the late imperial period (beginning in the fifteenth century). There are several short texts concerning this deity in the Taoist Canon, including at least two biographies¹ and a ritual devoted to her² from the Ming dynasty (1368–1644). As her name implies, she is the mother of the seven stars of the Northern Dipper (Ursa Major). One of her biographies tells us that in countless ages past, she made a vow to “give birth to sacred children who would assist *qian* and *kun*” and aid Great Transformation (*zaohua*).³ Later, when she was incarnated as a woman named Lady of Violet Light, consort to a certain King Zhou Yu, she was able to fulfill this vow. On a fine spring day, when all the flowers were in bloom, she was amusing herself in the royal gardens, and decided to bathe in the Pool of Warm Jade and Golden Lotus. After she disrobed and entered the pool, she suddenly felt “moved,” and nine lotus buds in the pool blossomed to reveal nine children.⁴ A more elaborate account tells us that when she entered the pool, a “white jade tortoise platform with a precious throne shaped like a sacred *xie* beast”⁵ rose out of the waters of the pool. The lady mounted the throne and began to meditate, and the Way (Tao) responded by casting a light that penetrated into the pool, transforming into nine golden lotus buds. After seven days, these lotuses suddenly rose to the heavens, transforming into nine precious towers with nine magical syllables formed from the energies that created them. These nine syllables in turn gave rise to nine stars. The elder of these stars were Violet Tenuity and Celestial August, two important stars in the central northern sky; their younger siblings were the seven stars of Ursa Major.⁶

The Dipper Mother is also identified with the moon, and in particular with the magical elixir concocted by the hare in the moon, associating her with an ancient Chinese myth and another female deity, Chang E (see cat. no. 101). The Dipper Mother dispensed this medicine to the world, curing illnesses and ensuring safe births.⁷

In order to commemorate the birth of the seven stars of the Northern Dipper and their elder siblings, worshippers held a

festival called the “Offering of the Nine Luminescences” (*Jiuguang jiao*) annually on their birthday. The power of this festival to undo the effects of negative *karma* has been likened to “nine suns shining on a mountain of ice.”⁸ The festival was apparently based on the *Realized Scripture of the Nine Luminescences* (*Jiuguang zhenjing*), a scripture that still exists in the Taoist Canon.⁹ This scripture reflects the idea of the “unity of the Three Teachings” of Confucianism, Taoism, and Buddhism that was popular in late imperial China, being devoted to both the supreme Taoist deity, the Celestial Worthy of Primordial Beginning (Yuanshi tianzun), and to the highest deity of Esoteric Buddhism, the Buddha Vairocana. Similarly, the ritual devoted to the Dipper Mother found in the Taoist Canon also invokes both Taoist and Buddhist deities, including Vairocana, who is once again paired with the Celestial Worthy of Primordial Beginning.¹⁰

This blending of Buddhist and Taoist elements can also be seen in the figure of the Dipper Mother herself. It is thought that the Dipper Mother was derived from one of the twenty *devas* of Buddhism, Marichi, whose name means, literally, “ray of light.” As her name implies, this goddess is intimately connected with stellar phenomena, and she is sometimes depicted holding the sun and moon aloft in two of her hands; the Dipper Mother seen here is also holding the sun and the moon. The vehicle of Marichi is drawn by seven pigs, which suggests the seven stars of Ursa Major, and the Dipper Mother is often similarly depicted with pigs for mounts. In addition, the Chinese transliteration for Marichi, “Molizhi tian,” is given as one of the titles for the Dipper Mother in the ritual devoted to her.

This porcelain sculpture of Dǒumu from the Asian Art Museum of San Francisco sits on a lotus throne. On her head is a crown; she has eighteen arms and a third eye in her forehead. Her hands hold numerous attributes, including sacred weapons and vessels.¹¹

The Dipper Mother is still actively worshipped in China today, most notably at the White Cloud Monastery (Baiyun Guan) in Beijing, where there is a chamber dedicated to her.

The Alchemy of Master Geng

Ming dynasty, 16th century (traditionally attributed to the Song dynasty, 960–1279)

Hanging scroll; ink on silk

105.3 x 57.7 cm

National Palace Museum, Taipei

THIS PAINTING of a Taoist female alchemist depicts a scene at the Tang dynasty court in the mid-ninth century. The female adept known as Master Geng was one of a long tradition of *fangshi* ("magicians," or "technicians"—literally "method-masters") stretching back into the Bronze Age. Although records of female *fangshi* are rare, several antecedents are known from the Six Dynasties period (420–589) and earlier. The presence of such adepts, male or female, at the imperial courts of China was significant because they reflected the virtue of the rulers they served. Thus, beyond their abilities to create elixirs that would extend the lives of their patrons, their very presence added to the prestige of the ruler. Throughout Chinese history emperors and imperial families have been major sources of patronage for Taoist adepts. This tradition can be traced to as early as the emperor Qin Shihuangdi in the third century B.C., long before the advent of religious Taoism. During the Liang dynasty (502–557), Emperor Wudi was a great patron of the Taoist alchemist Tao Hongjing (456–536), despite the fact that Wudi was a devout Buddhist. The emperor funded a Taoist monastery on Mount Mao (Mao Shan) for Tao and supported his alchemical experiments.¹

The story of Master Geng is related in Wu Shu's *Records of Strange Magician-Technicians Between the Yangzi and Huai Rivers* (*Jiang Huai yiren lu*), dated to c. 975:

Teacher Geng was the daughter of Geng Qian. When she was young she was intelligent and beautiful and liked reading books. Fond of writing, she sometimes composed praiseworthy poetry, but she was also acquainted with Taoist techniques, and could control the spirits. She mastered the "art of the yellow and the white" (alchemy), with many other strange transformations, mysterious and incomprehensible. No one knew how she acquired all this knowledge.

In the Dazhong reign-period (847–859) the emperor, being fond of the elegant and fascinated by the strange, summoned her to the palace to observe her techniques. She was not added to the pool of palace ladies but was given special lodgings and called "Teacher" (*jiansheng*). When having an audience she always wore green robes and held a tablet and when she spoke it was with brilliant elo-

quence and confident bearing. . . . The Teacher did not often demonstrate her (divination) techniques, but when she did so the results always came out as she predicted. For this the emperor valued her all the more.²

After once turning mercury into silver for the emperor, Master Geng was asked to turn snow into silver (this is the scene depicted in the National Palace Museum painting):

On another occasion during heavy snow the emperor asked her if she could turn that into silver also. Saying that she could, she cut up some hard snow in the form of an ingot and threw it into a blazing charcoal fire. The ashes rose up and all was covered over with charcoal; then after about the time required to take a meal she said it was done, and taking out the red-hot substance, put it on the ground to cool, whereupon it brightened and took the form of a silver ingot, with the same knife-marks still on it. The under-surface, which the fire had reached first, looked like stalactites. Later the Teacher made a lot of "snow-silver," so much that she presented vessels made of it to the emperor on his birthday. . . .

Later on the Teacher appeared to be pregnant, and told the emperor that she would give birth that night to a baby who would be a great sage. The emperor caused everything to be prepared, but towards midnight there came a violent thunderstorm, and the next morning she had regained her normal size, but no baby was to be seen. She said that the gods had taken it away and that it could not be got back.

The Teacher was fond of wine, and just like other people in love affairs and sexual relations. Moreover in the course of time she fell ill and died. Formerly the holy immortals often mixed with human beings—perhaps she was one of them.³

It is worth noting that Master Geng's patron, Emperor Xuanzong, died from an overdose of cinnabar.⁴ The National Palace Museum scroll depicts Master Geng seated before a charcoal brazier with the emperor facing her. Several vessels rest in the charcoal; these appear to be the silver vessels she made from snow. The painting is executed in ink on silk, and closely resembles in style the work of the Wu School painter Tang Yin (1470–1523).⁵

YOU QIU (ACTIVE 16TH CENTURY)
The Immortal Master Tanyangzi

Ming dynasty, Wanli reign, dated 1580
 Hanging scroll; ink and colors on silk
 118.5 × 57.3 cm
 Shanghai Museum

YOU QIU'S MEMORIAL PORTRAIT of Tanyangzi (1557–1580) presents an image of one of the most famous female Taoist adepts of the sixteenth century. The scroll was painted only three months after Tanyangzi's ascent to immortality, at the age of twenty-three in the ninth lunar month of 1580. This event was recorded by the scholar Wang Shizhen (1526–1590). As told by Ann Waltner,

On the ninth day of the ninth lunar month in 1580 a large crowd gathered in Zhitang, a small town in the hinterland of the splendid city of Suzhou, to witness an event they had long anticipated. A young woman, at twenty-three barely more than a girl, the daughter of one of the most prominent families of the region, was deep in a shrine at the grave of her dead fiancé. For years, people had been hearing stories about this young woman, about how she had not eaten grain for five years, about how she had visions of the Buddhist bodhisattva Guanyin and how she had visited the court of the Taoist deity the Queen Mother of the West. Even more surprising were the stories that her father and a circle of his distinguished colleagues had declared themselves to be her disciples. The crowd gathered and she did what she had promised them she would do. According to numerous contemporary accounts, she ascended heavenward in broad daylight and attained immortality.¹

By the time she attained immortality the young woman had already had an enlightenment experience, after mastering the techniques of Inner Alchemy and creating an internal elixir.² Among the sacred texts revered by Tanyangzi were the Buddhist scriptures the *Heart Sutra*, the *Diamond Sutra*, the *Surangama Sutra*, and the *Vimalakirti Sutra*. The Taoist texts she studied included the *Daode jing*, the *Scripture of the Yellow Court (Huangting jing*; see cat. no. 128), the *Scripture of the Hidden Contract (Yinfu jing*; also known as the *Huangdi yinfu jing*; early seventh century), and the *Realized Scripture of the Numinous Treasure (Lingbao zhen jing)*.³ In the sixth lunar month of 1580, shortly before her death, Tanyangzi experienced a vision in which she visited the Queen Mother of the West.⁴ This experience, during which esoteric teachings were transmitted to her, lasted several days.

One of the extraordinary aspects of Tanyangzi's brief earthly career is that her followers included numerous elite scholar-officials, beginning with her father, Wang Xijue (1534–1611), who after her death became Grand Secretary at the court of the Wanli emperor (r. 1583–1620). Tanyangzi's biography was written by Wang Shizhen, one of the most cultivated figures in the literary and artistic world of late sixteenth century. What is known about Tanyangzi derives largely from Wang Shizhen's text, which, along with a woodblock illustration of the moment immediately prior to Tanyangzi's ascent to immortality, is found in the *Stories of Exquisite Immortals, New Edition (Xinjian xianyuan jishi)* of 1602, a collection of illustrated biographies of holy women.⁵ Tanyangzi's story is also characteristic of later Chinese religion, revealing the syncretic mixing of Taoist, Buddhist, and Confucian teachings.⁶

In the painting Tanyangzi appears as she must have appeared in 1580. She is shown wearing an ochre robe with a pale blue hem, and with a black hat on her head. She holds a ritual sword in her left hand. Her skin is painted with pale white pigment, and her lips are red. The portrait is signed, "Painted by You Qiu of Changzhou, on an auspicious day of the twelfth lunar month of the year *gengchen* [1580] of the Wanli reign." You Qiu was a son-in-law of the Wu School painter Qiu Ying (c. 1495–1552).

According to a poem by Wang Chang (1725–1807), a mural depicting Tanyangzi was also painted by You Qiu on the wall of the saint's shrine at Taicang, near Suzhou.⁷ It is likely that the hanging scroll in the Shanghai Museum depicts a similar scene, since the presence of a sword coincides with descriptions of Tanyangzi's final moments.

The inscription by Zhang Tao at the top of the scroll consists of a transcription of Tanyangzi's final Eight Admonitions, and other texts that were said to be by Tanyangzi herself.⁸ Among these admonitions was "Do not believe that your teacher [Tanyangzi] was a sorcerer outside the Tao who was a specialist in alchemy or sexual techniques."⁹ Zhang's inscription is signed, "Respectfully recorded by the disciple Zhang Tao, in the twelfth month of the year *gengchen* [1580]."

Chang E, the Moon Goddess

Late Yuan or early Ming dynasty, 1350/1400

Fan painting; ink and colors on silk

25 × 25 cm

The Art Institute of Chicago, Samuel M. Nickerson Endowment Fund
(1947.534)

THIS PAINTING DEPICTS Chang E, the Moon Goddess, also known as Taiyin xingjun (Star-lord of Supreme Yin). Chang E was believed to live in the Guanghan Gong (Broad Cold Palace) in the moon. The moon itself was an ancient symbol of the *yin* force, and it is appropriate that its deity was a woman, also a pure manifestation of *yin*. Chang E was said to have stolen the elixir of immortality from her husband, the mythical archer Yi, and taken it to the moon; as a result, she was closely associated with longevity and immortality.¹ She was well established as a popular deity by the Tang dynasty (618–906).²

At the time of the Autumn Moon festival, on the night of the full moon in the eighth lunar month, an altar would be set up for

worship of the moon and of Chang E. This festival was closely associated with women, since the advent of the full moon in the eighth month signalled the rising *yin* element in the annual cosmological cycle.³ The following is a description of a sacrifice to the moon as practiced in the early twentieth century:

Just at the hour when the moon is clear of the treetops and sails like a full-rigged ship into the high heavens, the service begins. . . . One after another the women [of the household] go forward and make their bows. Two candles are lighted. . . . Bundles of incense-sticks are stuck flaming into the family urn, but their light glimmers faintly in the floods of moonshine. The whole service lasts but a few moments. . . .⁴

The Art Institute fan depicts Chang E standing on a rocky plateau.⁵ The goddess rests her left hand on the trunk of a pine tree (a symbol of longevity) that grows at the edge of a chasm. Behind the figure, a full moon rises among white clouds in a deep blue sky.

—S. L.

NOTES

Introduction

1. Waley 1958: 149.

Cat. nos. 93–94

1. The central figure of cat. no. 93 is identified as the Queen Mother of the West in *Changsheng de shijie* 1996: 79, pl. 24. The definitive study of Xiwangmu is Cahill 1993. The appellation "Metal Mother" appears to have first occurred in the Tang dynasty (618–906); see Cahill 1993: 68.
2. Jin 1997: pls. 140, 150.
3. See Cahill 1986a.
4. See, for example, Stevens 1997: 53.
5. Previously published in *Zhongguo gudai shuhua suruo* 1986–98, vol. 2: 256, no. 1-0445.
6. Translated in Cahill 1993: 81.

Cat. nos. 95–96

1. The title *yuansun* (literally, "primordial lord") was commonly used in the names of Taoist female gods. For a brief history of the cult of *Bixia yuansun*, see Naquin 1992: 334–38.
2. See Bokenkamp 1996b: 251–60 and Chavannes 1910.
3. Bokenkamp 1996b: 252.
4. Boltz 1987a: 297 n. 277.
5. Naquin 1992: 334.
6. *Ibid.*: 335; see also Goodrich 1964: 62–63, 257–58.
7. Boltz 1987a: 105.

Cat. no. 97

1. Three attendants accompany the Lady of the Highest Primordial, while four accompany the Empress of Earth; this may derive from the association of yang (heaven) energy with odd numbers and yin (earth) energy with even numbers.
2. See Schipper 1965.
3. For example, see the Yuan hagiography in HY 296, *juan* 3.
4. For example, she is included in a list of goddesses for a ritual petition found in the Song dynasty text HY 1214, *juan* 3. I am grateful to Kristofer Schipper for this citation.
5. Relevant passages from the *Zuozhuan* and the *Manshu* can be conveniently found in Lu and Luan 1991: 218–25. See also Chavannes 1910: 521–22.
6. Jin 1997.
7. HY 1214, *juan* 3.

Cat. no. 98

1. HY 45 and HY 621; these texts are undated, but they were completed sometime before the compilation of the Taoist Canon in 1444–45.
2. HY 1440; this text is included in the supplement to the Taoist Canon that was added in 1607.
3. These are the first two trigrams (and hexagrams) of the *Book of Changes* (*Yi jing*). They represent the yang and yin energies of the universe.
4. HY 45.
5. This was a mythical animal resembling a cow that is said to have been able to distinguish the proper from the improper; it was one of the animals used to decorate official robes.
6. HY 621.
7. HY 621.
8. HY 45. The ritual centering on the Mother of the Dipper in HY 1440 also uses this metaphor, which suggests that it shares a common source with HY 45, and may have been inspired by this biography.
9. HY 42 (full title: *Yueqing yuanshi xianhuang jiuwang zhenjing*).
10. HY 1440. In this instance the Celestial Worthy of Primordial Beginning is called the Highest Imperial of Primordial Beginning.
11. Several other Dehua porcelain sculptures of Doumu are published in Donnelly 1969: pl. 99.

Cat. no. 99

1. Strickmann 1979a: 155–59.
2. Translated in Needham et al. 1976: 169.
3. *Ibid.*: 170.
4. This emperor is not to be confused with the more famous Emperor Xuanzong (Minghuang) of the early eighth century. Other Tang emperors who died of sinister poisoning were Xianzong (r. 805–20), Muzong (r. 820–24), and Wuzong (r. 840–46). Wuzong was responsible for the great anti-Buddhist persecution of 845; see Ch'en 1964: 226–33.
5. See *Changsheng de shijie* 1996: pl. 19.

Cat. no. 100

1. Waltnr. (forthcoming), chap. 1: "The World of Late Ming China." I am deeply grateful to the author for making this book available to me prior to its publication. Because this event was sacred, and because direct knowledge of it was secret, the details of Tanyangzi's ascent are not recorded by Wang Shizhen, her biographer; see Waltnr. 1987: 117.
2. Waltnr. 1987: 113. To her disciple Tu Long, a famous writer and connoisseur, Tanyangzi wrote in the manner of the *Daode jing*:

Great beauty is no beauty. Ultimate words are no words. You have heard much of the Tao. The quality of the Tao which prevents it from being abandoned also prevents it from being recorded. Those who are wise do not spontaneously know it. Those who know it don't speak of it. Those who speak of it don't write of it: this is the mystery of the Tao.

3. *Ibid.*: 115; Waltnr. (forthcoming), chap. 6: "The Cult of T'an-yang-tzu."
4. Waltnr. 1987: 115–16.
5. A depiction of Tanyangzi, seated with a snake in the shrine to her dead fiancé, appears in the woodblock-printed version of her story, *Stories of Exquisite Immortals: New Edition* (*Xixian xianyuan jishi*), published in 1602 (reprinted in Wang 1989, vol. 1); see Waltnr. (forthcoming). The cult of Tanyangzi continued long after her death, well into the Qing dynasty.
6. The Confucian elements in her teachings are clear from her final admonitions, which include the directives: "Love and respect your ruler and relatives," "Pity and empathize with widows and orphans," and "Cheish frugality; be moderate in your happiness" (Waltnr. [forthcoming]).
7. The mural was entitled *Ascending Heavenward in Broad Daylight*; by the mid-Qing dynasty this mural no longer survived.
8. Ann Waltnr., private communication, May 14, 1999.
9. Waltnr. (forthcoming).

Cat. no. 101

1. Xiwangmu, the Queen Mother of the West, was also associated with longevity and immortality. For the traditional story of Chang E, see Soymie 1962.
2. Schafer 1978c: 201–07; see also Goodrich 1991: 213–22. In her guise as the Star-lord of Supreme Yin, the goddess appears with the god of the sun (Taiyang or Supreme Yang) and the deities of the Five Planets in the entourage of the Purple Tenuity Emperor (Ziwei dadì) in the fourteenth-century Taoist murals of the Eternal Joy Temple (Yongle Gong) in Shanxi; see Jin 1997: pls. 19, 48, 62.
3. Burckhardt 198a: 52–54.
4. Bredon and Mitrophanow 1927: 399; for a photograph of a modern "moon altar," see p. 401.
5. Previously published in Little 1996: fig. 13. This fan is similar to several other fans and album leaves that depict Chang E; see Songren huace 1979: pl. 2. *Yixuan duoying* 1989: pl. 13, and Cahill 1961a: pl. 23. The Art Institute's fan bears a seal of the late Qing collector and epigrapher Wu Dacheng (1835–1902).

III.3 ZHENWU, THE PERFECTED WARRIOR

THE ORIGINS OF the Taoist god Zhenwu (Perfected Warrior) can be traced to the late Warring States period (third century B.C.) and Han dynasty (206 B.C.–A.D. 220). In that time, the god was known simply as Xuanwu, or Dark Warrior. Represented by a tortoise entwined by a snake, Xuanwu was the ancient symbol of the north, and as such was visualized as the deity of one of the cardinal directions. In Han dynasty ceramic roof tiles, for example, Xuanwu appears along with the other animal symbols of the directions: the dragon of the east, the tiger of the west, and the bird of the south. In stone sarcophagi of the Northern Wei dynasty (386–534), Xuanwu again appears, often carved onto the foot slab (see cat. no. 102), accompanying the dragon and tiger that appear on the two long sides of the sarcophagus. Textual evidence suggests that a cult devoted solely to Xuanwu developed only in the seventh century, during the early Tang dynasty (618–906).¹

The transformation of the Dark Warrior (Xuanwu) into the anthropomorphic god known as the Perfected Warrior (Zhenwu) occurred in the early Northern Song dynasty (960–1126).² Imperial recognition of this transformation happened during the reign of Song Zhenzong (r. 998–1022), who was deeply devoted to religious Taoism.³ Zhenzong was the first to build a temple to Zhenwu in the capital of Bianliang (Kaifeng, Henan province), after the miraculous appearance of a tortoise and snake in 1017.⁴ Xuanwu's name was changed to Zhenwu at this time, to avoid a taboo on the name of the Song imperial ancestor Zhao Xuanlang. Zhenwu was particularly associated with healing, and is said to have cured Emperor Renzong (r. 1023–64) from illness in 1056. Zhenwu's efficacious power even led the Tangut rulers of the Xia dynasty (982–1227) to begin worshipping him in the early eleventh century. Two of the earliest surviving images of Zhenwu as an anthropomorphic warrior come from Xia archaeological contexts. One, in the collection of the State Hermit-

age Museum, Saint Petersburg, Russia, is a twelfth-century banner depicting Zhenwu with a tortoise and snake, recovered from the ancient site of Kharakhoto by P. K. Kozlov (1863–1935) in 1909; the other is a twelfth-century silk banner, excavated in 1990 from a ruined Buddhist pagoda in Helan county, Ningxia Autonomous Region.⁵

In 1018, under the Song emperor Zhenzong, Zhenwu obtained the title Perfected Warrior Numinous Response Perfected Lord (Zhenwu lingying zhenjun).⁶ Under Song Huizong (r. 1100–25), in 1108, Zhenwu was given the title Marshal Yousheng (Yousheng yuanshuai).⁷ The god's title was changed to Emperor (*di*) during the Yuan dynasty (1260–1368): after 1304 he was known as Supreme Emperor of the Dark Heaven, Primal Sage, and Benevolent Majesty (Xuantian yuansheng renwei shangdi).⁸

It was during the Northern Song dynasty that Zhenwu began to be associated with a powerful group of Taoist celestial marshals known as the Four Saints (Sisheng). Paintings of Zhenwu as Marshal Yousheng are known from the early twelfth century, and a fifteenth-century Ming painting in this exhibition also depicts him as one of the Four Saints (cat. no. 107).⁹ These gods were perceived as spirit-guardians of the Taoist faith and of the nation. In contemporary Taoist rituals in southern Taiwan, a separate altar is still often constructed for the Four Saints, and the altar table is called "Wudang Mountain" after Zhenwu's sacred peak Wudang Shan (Mount Wudang) in northwestern Hubei province, an association that began in the Yuan dynasty (1260–1368).¹⁰

The period of Zhenwu's greatest influence and popularity, however, was the Ming dynasty (1368–1644). The first Ming emperor, Zhu Yuanzhang (Taizu, r. 1368–98), ordered sacrifices to Zhenwu on the god's birthday (the third day of the third lunar month) and the day of his ascension to heaven (the ninth day of the ninth lunar month). It was the third Ming emperor, Zhu Di

(Yongle, r. 1403–24), however, whose personal devotion to Zhenwu led to the greatest rise in the god's national prestige. By this time, the god was seen as the eighty-second transformation (*bianhua*) of Laozi, and he was enfeoffed at Wudang Shan by the Jade Emperor (Yuhuang).¹¹ The celestial referents to the god included one of Zhenwu's weapons, the Seven Star Sword of the Three Terraces (*Santai qixingjian*), which refers to the seven stars of the Northern Dipper and to the powerful constellation called the Three Terraces (*Santai*), located in immediate proximity to the Dipper.¹² The Yongle emperor was himself famous as a warrior, and in 1403 he usurped the throne from his nephew, the Jianwen emperor. The emperor credited Zhenwu with aiding him in this successful campaign.¹³ In 1412 the emperor ordered a massive building campaign on Wudang Shan, Zhenwu's sacred peak, culminating in the construction of the Zixiao Gong (Purple Empyrean Palace; see cat. no. 109). At the top of Wudang Shan a cluster of sacred buildings was built, known as the Purple Forbidden City (*Zijincheng*)—the same name as the Forbidden City in Beijing. During the Yongle reign, Wudang Shan was renamed Taihe Shan (Mountain of Supreme Harmony), and took precedence over the Five Sacred Peaks, formerly the most important sacred Taoist mountains in China. At several times during the Yongle reign, miraculous manifestations of Zhenwu were seen at the mountain; these are recorded in both the Taoist Canon (see cat. no. 110) and in a large handscroll now owned by the Baiyun Guan (White Cloud Monastery) in Beijing (cat. no. 111).

When Zhu Di moved the imperial capital from Nanjing to Beijing in 1421 and rebuilt the Forbidden City, he constructed a temple to Zhenwu, prominently positioned along the north-south axis of the palace. This temple, the Qin'an Dian (Hall of Imperial Peace), is significantly the northernmost building in the Forbidden City, appropriate given the fact that Zhenwu is god of the northern celestial quadrant. The original temple burned down in the late fifteenth century, and it was subsequently rebuilt during the Jiajing reign (1522–66), a time of devoted patronage of religious Taoism. This temple still stands, situated on its own marble terrace and enclosed by its own wall, at the center of the Imperial Flower Garden (Yuhua Yuan) just inside the Martial Gate (*Wu Men*) of the Forbidden City. Despite Qing dynasty renovations carried out by the Yongzheng emperor (r. 1723–35), the temple is still dedicated to Zhenwu, and contains three large statues of the god as its primary icons.

It is clear that by the mid-fifteenth century, Zhenwu had become the most important god in the Taoist pantheon, to some extent even supplanting the deified Laozi.¹⁴ No longer just a powerful god of healing and exorcism, Zhenwu was also a cele-

tial protector of the emperor and the state. In the Ming, a popular novel entitled *Journey to the North* (*Beiyou ji*) appeared, recounting the story of Zhenwu's apotheosis. Gary Seaman has shown that this novel was possibly created in the context of spirit-writing cults of the period.¹⁵ Imperial patronage of the Zhenwu cult continued through the remainder of the Ming dynasty. As John Lagerwey has written, "All Ming emperors after Chengzu [Yongle] announced their accession to the throne by sending a sacrifice to Zhenwu."¹⁶

Both painted and sculpted images of Zhenwu proliferated during the Ming dynasty. It is clear from those that survive that the god was worshipped by all levels of society. The dedicatory inscriptions on two fifteenth-century bronze sculptures of Zhenwu (one of which is included in the exhibition; see cat. no. 103) are indicative of the widespread devotion to this god. A small bronze image of Zhenwu in the Museum für Kunst und Gewerbe, Hamburg, bears the following inscription:

Offered by the Taoist believers (*dao xinshi*) Wu She, his younger brothers Wu Chan and Wu Si, and their families, who dwell in Hengshan Village at Clear Lake, in Lanxi County, Jinhua Fu [in Zhejiang province, one hundred thirty kilometers southwest of Hangzhou], who manifest their hearts, and have had cast [this] image of the Saint [*sheng*, i.e., Zhenwu], [for the] Hall of the Jade Maiden and Numinous Official [*yunü lingguan tang*], in order to nourish those who pray for auspicious fate and the granting of wishes. Made by Shen Zhongyi of Bianliang [Kaifeng], on an auspicious day in the first month of the *jiachen* year [1424] of the Yongle reign.¹⁷

One of the rarest Ming images related to Zhenwu is an unpublished bronze sculpture depicting Wudang Shan, now in the British Museum, London.¹⁸ This work, over one meter in height, depicts the sacred mountain, with the image of Zhenwu riding on the back of an entwined tortoise and snake flying through the air near the top. Included too are images of shrines and devotees, and the five Dragons Kings, ancient gods associated with the mountain, standing at the bottom.¹⁹ It is entirely conceivable that this bronze replica of Wudang Shan functioned as a substitute for the actual mountain in rituals directed toward Zhenwu far from the mountain itself.²⁰

Significantly, Zhenwu continued to be worshipped by the Manchu emperors of the Qing dynasty (1644–1911), and he is still worshipped in China today. In the Yangqing Guan, the primary Taoist temple in Kaifeng, for example, an over-life-sized bronze sculpture of the god, dated 1486, is still the central icon of worship.

Section of a Sarcophagus with Xuanwu

Northern Wei dynasty, early 6th century
Limestone
55 × 52 cm
Private collection

THIS ELEGANT SCULPTURE was originally the foot slab of the sarcophagus of an aristocrat.¹ On the basis of its style and comparison with excavated examples, the carving can be dated to the late Northern Wei dynasty (386–534), after the capital had moved to Luoyang in Henan province (c. 500–534). The panel depicts Xuanwu, the ancient symbol of the north, in its traditional guise of a tortoise entwined by a snake. In addition, the paired animal symbol is accompanied by a male figure, dressed as a scholar or court official. A similar depiction of the tortoise and snake accompanied by a male figure holding a sword or club, carved in intaglio, is found on the foot slab of the famous Northern Wei sarcophagus in the Nelson-Atkins Museum, Kansas City, dated c. 525.² While the significance of this figure is not yet clear, it may represent an early personification of this powerful deity of the north. The background of the sarcophagus panel

is carved with low-relief designs of swirling clouds. There are slight traces of red pigment in the eye of the snake. At the top of the slab is a low tang, for insertion into the top of the sarcophagus.

The symbolism of Xuanwu as the intertwined tortoise and snake emerged by at least the third century B.C. Xuanwu was already worshipped as a deity in the Han dynasty (206 B.C.–A.D. 220), as one of the four gods of the cardinal directions (the others are the dragon of the east, the tiger of the west, and the bird of the south). In early Taoist rituals, these gods were invoked by the priest to protect the sacred space of the altar.³ Even after the emergence of Zhenwu (Xuanwu) as an anthropomorphic deity in the Northern Song dynasty (960–1126), the tortoise and snake continued to symbolize the god.

CHEN YANQING (ACTIVE EARLY 15TH CENTURY)
Zhenwu, Supreme Emperor of the Dark Heaven

Ming dynasty, Zhengtong reign, dated 1439

Gilt bronze

H. 36.4 cm

The Art Institute of Chicago, Gift of Robert Sonnenschein II
 (1950.1054)

THIS SCULPTURE OF ZHENWU is an excellent example of a small-scale image made for personal devotion. The figure conforms to the god's classic iconography, with bare feet and long hair. Zhenwu rests his hands in his lap; the left hand forms a sacred gesture. A dedicatory inscription incised onto the interior surface reads:

The Great Ming dynasty. The devout Buddhist believer, Meng Zhen of the Shaanxi Regional Military Commission, of the Central Guard of Ganzhou [in modern Gansu], who resides in the city, [with his] family and others, now at Nanjing, vows to cast one statue of the Lofty Zhen[wu], so that above [we may attain] the reward of the Four Kindnesses, and below the aid of the Three Forgivenesses, [also] good fortune and all that we wish for. In the year *jiwei* of the Zhengtong reign [1439], cast by Master Chen Yanqing of Qiantang [Hangzhou], and gilded by Han Ye.

The fact that the donor of this work describes himself as a devout Buddhist, and yet commissions a work depicting a Taoist god, is fully characteristic of Chinese religious belief, in which devotion to different religions presents no apparent conflict.

Two other fifteenth-century gilt-bronze sculptures in North American collections were also made by Chen Yanqing in Hangzhou, Zhejiang province. Both works depict the Celestial Worthy of Primordial Beginning (*Yuanshi tianzun*), the central of the Three Purities (*Sanqing*, the highest gods of religious Taoism; see cat. no. 65). The first, bearing an inscription dated 1438, was recently acquired by the Metropolitan Museum of Art, New York; it was made for a temple in Gansu province. The second, in the Royal Ontario Museum, Toronto, is inscribed but undated.¹

Small-scale devotional sculptures of Zhenwu were widespread during the Ming dynasty, when worship of this god reached its peak. The promotion of Zhenwu by the Yongle emperor (r. 1403–24) led to increasing devotion to the god, both at the imperial level and throughout Chinese society. Zhenwu's popularity is indicated by the enormous number of such images, the majority of which are made of either glazed stoneware or porcelain.

—S. L.

*Zhenwu, Supreme Emperor of the
Dark Heaven*

Ming dynasty, 15th/16th century

Bronze with traces of pigments

H. 133 cm

The British Museum, London, Given by

Messrs. Yamanaka (1908.7-25.2)

ONE OF THE largest known Ming bronze sculptures of Zhenwu outside of China, this work presents the orthodox image of the Perfected Warrior. Zhenwu sits in a dignified posture befitting his status as a celestial emperor, reflecting the title he received in 1304: Supreme Emperor of the Dark Heaven, Primal Sage, and Benevolent Majesty (Xuantian yuansheng renwei shangdi). The god's long hair is combed straight back and falls to his waist. He wears armor under his robe, with a dragon emblazoned on his breastplate. His feet are bare. He forms a sacred gesture with the two front fingers of his left hand, while his right hand rests in his lap. His eyes were originally inlaid. The armor and robe reveal traces of lacquer and gilding; elsewhere there

are traces of pigment on the surface. Zhenwu's robe is decorated in front with a five-clawed dragon; the hem is decorated with clouds in low relief.

A similar but larger bronze sculpture, dated to the twenty-second year of the Chinghua reign (1486), is the central icon of worship in the Yanqing Guan, the primary Taoist temple in Kaifeng, Henan province. In its overall appearance, the British Museum sculpture also resembles smaller-scale images from the fifteenth century in the Museum für Kunst und Gewerbe, Hamburg (dated 1424), and The Art Institute of Chicago (dated 1439; cat. no. 103).

—S. L.

Shrine with Zhenwu and Other Taoist Gods

Ming dynasty, Yongle reign, dated 1406

Longquan celadon ware with gilding

H. 49.5 cm

The British Museum, London, Given by Sir Percival David (OA 1929.1–14.1)

THIS SHRINE, which incorporates images of the Three Purities (Sanqing; the highest gods of Taoism) with images of Zhenwu, is like hundreds of other shrines made at the Longquan kilns in Zhejiang province.¹ Unlike the majority of such shrines, however, this example has a dated inscription incised into the back, under the glaze: "In the fourth year of the Yongle [reign], in the first month, an auspicious day."

The shrine forms a kind of miniature mountain with three grottos, and a disk, possibly representing the sun, at the top, where the god Zhenwu rides on a mythical beast. He can be identified by his long hair and bare feet. The middle grotto contains the Three Purities (cat. nos. 65–67), comprising the Celestial

Worthy of Primordial Beginning (Yuanshi tianzun; center), the Celestial Worthy of Numinous Treasure (Lingbao tianzun, holding a *nuyi* scepter; right), and the Celestial Worthy of the Way and Its Power (Daode tianzun, the deified Laozi, holding a fan; left). A jade maiden (*yunü*) and golden lad (*jintong*) stand in attendance on the Three Purities. The lower grotto depicts the Jade Emperor, seated at the center, with Zhenwu seated to the right, and another female Taoist god seated to the left. Here Zhenwu's identity is confirmed by the turtle and snake intertwined at his feet.

—S. L.

*Zhenwu, Supreme Emperor of the
Dark Heaven*

Ming dynasty, mark of Wanli reign
(1573–1620)

Blue and white porcelain
46 x 20 x 15 cm

Museum of Fine Arts, Boston, Gift of Mr. and
Mrs. F. Gordon Morrill (1979.785)

THIS BLUE-AND-WHITE PORCELAIN sculpture of the god Zhenwu, like the gilt-bronze example in the collection of The Art Institute of Chicago (cat. no. 103), was made for personal devotion. The identification of the sculpture as Zhenwu is clear from the presence of an entwined tortoise and snake on the platform in front of the god. The god's long hair and bare feet also conform to his standard iconography. An unusual (but not unknown) feature of this work is the third eye in the god's forehead. The figure's robe is painted with leafy branches and a dragon. A screen behind him is decorated along its border with bats, traditional symbols of good fortune. A six-character reign

mark is inscribed in underglaze blue on the front of the stepped base: "Made in the Wanli reign of the Great Ming dynasty" (*Da Ming Wanli nian zhi*).

The production of ceramic images of Zhenwu was very popular during the Ming dynasty. The majority of surviving examples are made of the same lead-glazed porcelainous stoneware used for imperial and aristocratic roof tiles. Examples in Longquan celadon ware, white Dehua porcelain (*blanc de chine*), and enameled Cizhou stoneware are also known.¹

—S. L.

The Four Saints: The Perfected Lords Tianpeng, Tianyou, Yisheng, and Xuanwu

From the Treasured Tranquility Temple (Baoning Si), Youyu county,
Shanxi province
Ming dynasty, c. 1460
Hanging scroll; ink, colors, and gold on silk
119.2 x 62 cm
Shanxi Provincial Museum, Taiyuan

SINCE THE NORTHERN SONG DYNASTY (960–1126), Zhenwu has been included as one of a group of Taoist spirit guardians known as the Four Saints (Sisheng). This painting, from the Treasured Tranquility Temple (Baoning Si) set of paintings on the Water and Land Ritual (*Shuilu zhai*; see cat. nos. 78–81), depicts these exorcistic guardians standing in a group among loosely defined clouds.¹ The two at the top, who resemble the wrathful Wisdom Kings (*mingwang*) of Tantric Buddhism, are Tianpeng and Tianyou. They are divine marshals (*yuanshuai*) who protect Taoism and the state.² Tianpeng, at the upper left, has four arms; the upper two arms hold a sword and an axe, the lower two arms hold a *vajra* (stylized thunderbolt) and *ghanta* (bell). Tianyou, at the upper right, has two arms, and holds a box in his hands. At the bottom of the scroll are Zhenwu (Perfected Warrior), on the right, and Yisheng (Respectful Sage), on the left. A similar grouping of the Four Saints appears in the twelfth-century album of Taoist gods in the Stephen Junkunc IV collection.³

The group known as the Four Saints first appeared in the Northern Song dynasty (960–1126).⁴ According to John Lagerwey, the Four Saints figure in texts of the Orthodox Method Heaven's Heart (*Tianxin zhengfa*) movement, which originated in the tenth century.⁵ The Four Saints were also worshipped as demon-suppressing deities in the Great Rites of Youthful Incipience (*Tongchu dafa*) movement, founded at the end of the Northern Song dynasty by Yang Xizhan (r. 1101–24).⁶ This movement was a revival of the Highest Purity (*Shangqing*) sect at Mount Mao (Mao Shan) near Nanjing. The *Record of the Listener* (*Yijian zhi*) by Hong Mai (1123–1202) describes late-twelfth-century (early Southern Song dynasty) shrines to and images of the Four Saints, but in insufficient detail to determine their visual aspect.⁷

Although worship of the Four Saints can be traced to the Northern Song dynasty, the history of several of these gods extends back to the Six Dynasties period, and, in the case of

Zhenwu (Xuanwu), to at least the Han dynasty. It was only in the Northern Song dynasty, however, that Xuanwu manifested himself as an anthropomorphic god whose name was changed to Zhenwu (Perfected Warrior).⁸ The exorcistic god Tianpeng was invoked with an incantation that is already found in the Shang-qing scriptures of the Six Dynasties period.⁹ An example of such an incantation has been translated by Michel Strickmann.¹⁰ As Judith Boltz has shown, "the efficacy of reciting the Tianpeng incantation is the subject of three accounts in Du Guanting's *Daojiao lingyan ji*."¹¹ Talismans of Tianpeng are illustrated in Yuan Miaozong's *Secret Essentials of the Supreme All-encompassing Reality* (*Taishang zongzhen biyao*; see cat. no. 52). As Paul Katz has shown, Taoist texts of the Song dynasty depict Tianpeng as an assistant to Zhenwu, Supreme Emperor of the Dark Heaven.¹²

Yisheng, known after 1014 as Yisheng baode zhenjun (Perfected Lord, Respectful Sage of Precious Virtue), was a powerful spirit guardian of the Song state.¹³ Yisheng's apotheosis is described in Wang Qiruo's *Biography of [the God] Respectful Sage of Precious Virtue* (*Yisheng baode zhuan*), a text commissioned by Emperor Zhenzong during the Dazhong xiangfu reign (1008–16).¹⁴ As in the case of Zhenwu, Yisheng was commanded by the Jade Emperor (*Yuhuang*) to manifest himself in the phenomenal world. According to Boltz, Yisheng was also "perceived as a cosmic agent who enforced the traditional values of the literati class, especially those preparing to serve in public office."¹⁵ In the painting, the feet of both Yisheng and Zhenwu are bare, and both hold swords in their right hands; the image of Yisheng is completely derived from that of Zhenwu. Comparison with the depiction of the Four Saints in the album of Taoist gods in the Junkunc collection further suggests that the figure at the lower left in the Baoning Si painting is Yisheng, also shown with his left hand resting on his right wrist. That variations existed in the depiction of these gods is also clear, however, from the Junkunc album, in which Marshal Tianpeng is shown with three faces and six arms, holding the sun, moon, a bell (*ghanta*), disk, sword, and halberd. Similarly, Marshal Tianyou is shown with two faces and four arms, holding a sword, a flaming wheel (*chakra*), and a bow and arrow.

Zhenwu and His Court

Yuan dynasty (1260–1368)
Hanging scroll; ink and colors on silk
122.7 × 63.3 cm
Reiun-ji, Tokyo

● Important Cultural Property

IN 1304 THE Yuan dynasty emperor Chengzong (r. 1295–1307) granted the Taoist god Zhenwu (Perfected Warrior) the title Supreme Emperor of the Dark Heaven, Primal Sage, and Benevolent Majesty (Xuantian yuansheng renwei shangdi). This was the first time that Zhenwu obtained the title Supreme Emperor (*shangdi*).¹

The Reiun-ji hanging scroll, painted during the late Yuan dynasty (fourteenth century), presents an image of the god with his celestial court.² That the deity is presented as a crowned and enthroned emperor suggests that the painting was created after Chengzong had elevated Zhenwu. The identification of the main figure as Zhenwu is clear from the presence of the intertwined tortoise and snake on the ground in front of the throne. The god and his attendants are shown among swirling reddish clouds, against a blue sky. A transparent halo appears behind Zhenwu's head, and he wears a rectangular locket around his neck. Two martial guardians stand behind the throne. One holds Zhenwu's sword, and the other a banner decorated in gold with the seven stars of the Northern Dipper. Standing on either side of the throne are two female attendants, holding a box and a tablet, and two civil officials, holding a tablet and a bound book.

In the foreground stand four celestial marshals (*yuanshuai*).³ At the lower left is Marshal Guan (Guan Yu), the Three Kingdoms period (220–280) hero, who was adopted into the Taoist pantheon during the Northern Song dynasty (960–1126; see cat. no. 83).⁴ Marshal Guan appears in this guise as early as the twelfth century. He holds his customary attribute, a halberd with a long, curving blade. Next to him stands Marshal Zhao, holding a sword with multiple rings around the blade and a black-and-white tiger on a chain.⁵ At the lower right stands Marshal Wen, the eradicator of plagues whose cult emerged in Zhejiang province during the Song dynasty (see cat. no. 87). Behind Marshal Wen stands Marshal Ma, holding a lance with a snake wrapped around the shaft.⁶

The high quality of the Reiun-ji hanging scroll suggests that it was the product of an imperial atelier. The scroll's astonishing state of preservation may be due to its having been kept for at least two centuries by a Buddhist temple in Japan.⁷ A similar painting, dating to the fifteenth century (early Ming dynasty), is owned by the Herbert F. Johnson Museum of Art, Cornell University.⁸

XIE SHICHEN (1487–AFTER 1567)
Clearing Sky after Snow on the Purple Empyrean Palace at Mount Wudang

Ming dynasty, Jiajing reign, dated 1541
 Hanging scroll; ink and colors on silk
 198.9 × 98.8 cm
 Shanghai Museum

XIE SHICHEN'S PAINTING depicts the Purple Empyrean Palace (Zixiao Gong) on Mount Wudang (Wudang Shan) in Hubei province. The temple was built in 1413 on the orders of the Yongle emperor (r. 1403–24).¹ It is the best-preserved of all the Yongle period buildings at Wudang Shan. The Purple Empyrean Palace is located immediately under the Prince's Cliff (Taizi yan), where Zhenwu gained supremacy over the dark forces of the north.² Painted from memory, Xie Shichen's scene of the temple closely resembles the actual site as it appears today. This hall contains statues of the Jade Emperor (Yuhuang), Zhenwu, and other gods.³

According to tradition, the immortal Yin Xi, to whom Laozi transmitted the *Daode jing*, had lived at Wudang Shan, and Taoist adepts were associated with the mountain since at least the second century B.C. In the Tang dynasty (618–906), Wudang Shan was listed as one of "Seventy-two Blessed Plots" (*fudi*) by the Taoist Du Guangting (850–933).⁴

John Lagerwey has shown that firmly documented Taoist activity at Wudang Shan can be traced to the twelfth century.⁵ During the Yuan dynasty, the temples at Wudang Shan were rebuilt through the influence of the priest Wu Quanjie (1269–1346) (see cat. no. 64).⁶ After the construction of the Purple Empyrean Palace in the Yongle period, all subsequent Ming emperors continued to venerate the mountain. At the beginning of every reign, an imperial emissary was sent to Wudang Shan to announce the new emperor's investiture. Among other imperial gifts, an important group of bronze sculptures was given to the Purple Empyrean Palace by the Chenghua emperor in 1479.⁷

Painted on dark silk, Xie Shichen's depiction presents a rare topographical view of the temple. The artist's inscription reads:

This is [one of] four fantastic scenes within the Four Seas. When I was young I passed through this country [of Wudang Shan]. Now I do not have the strength to do it again. On impulse, inspired by longing to return to the scene, I gave it form in order not to forget it. The scene gradually emerged from within my eyes. In the ninth month of the twentieth year of Jiajing [1541], recorded by Xie Shichen.

At the bottom of the scroll, several travelers with their servants arrive at the cliff below the temple. From a path along a rushing stream, cliffs rise dramatically to the buildings above, perched among boulders and trees.

*Illustrated Record of the Auspicious Responses of the Supreme
Emperor of the Dark Heaven to the Great Ming Dynasty*

Ming dynasty, Zhengtong reign, 1444–45
Woodblock-illustrated book; ink on paper
35 × 11.3 cm (each page)
Bibliothèque Nationale de France, Paris (Chinois 9546 [952])

Miraculous Manifestations of Zhenwu at Wudang Shan

Ming dynasty, 15th century
Handscroll; ink and colors on silk
56 × 85 cm (each section)
White Cloud Monastery (Baiyun Guan), Beijing

MOUNT WUDANG (Wudang Shan) in Hubei province was the traditional center of worship for Zhenwu, the Perfected Warrior, and legend says that he retired from the world on this mountain to cultivate the Way. During the upheaval in the struggle for power at the end of the Yuan dynasty (1260–1368), several of the Taoist temples (literally, *guan*, “observatories,” and *gong*, “palaces”) dedicated to Zhenwu on Mount Wudang were damaged, and in 1412 the third emperor of the Ming dynasty, Chengzu (the Yongle emperor, r. 1403–24), sponsored a series of restorations and rebuildings.¹ Chengzu sent Marquis Zhang Xin and Commandant-escort Mu Xin to supervise the restorations, giving them a labor force of over two hundred thousand troops. When the restorations were completed, the emperor entrusted the head of the Orthodox Unity (Zhengyi) sect, the forty-fourth Celestial Master, Zhang Yuqing, to appoint his grandson Zhang Biyun and several other prominent Taoist masters to supervise a community of fifty Taoist priests in each of four major temples. Imperial edicts indicate that these restorations were undertaken as a sign of the emperor’s devotion to Taoism, as thanks for the aid of the Perfected Warrior in securing the rule of his family, and also in memory of the first Ming emperor, Taizu (r. 1368–98), and his empress, Xiaoci. At the same time, Zhenwu was perceived as a special patron and protector of the Ming ruling house, so these projects carried an additional significance as a renewal of the relationship between the Ming dynasty and its closest ally in the celestial hierarchy.

This woodblock text (cat. no. 110) from the Taoist Canon (*Daozang*) contains illustrations of the miracles that occurred during the restoration projects.² These miracles were understood to be portents of the Perfected Warrior’s approval for the projects, but they also functioned as political propaganda for

the Ming ruling house, as can be seen immediately in the first illustration to the text. This plate shows people gathering in reverence at the pavilion in which the imperial edict to rebuild the temples on Mount Wudang—inscribed on a “yellow tablet” (yellow being the color for the center in the Five Phase system)—was kept during the restorations. According to the text, the nearby population was so impressed with Emperor Chengzu’s devotion and the magnificence of his edict that they came from all the outlying lands to view his illustrious command, “filling the streets and blocking the roads.” The pavilion itself was often luminous with spiritual light, and cranes and other magical animals gathered around it.

The second illustration in the scripture shows the appearance of Zhenwu during the reading of an imperial proclamation in honor of the god before the restoration projects were undertaken. On the night this proclamation was read, a black cloud appeared in the clear sky and approached the main temple from the northwest, stopping no more than a meter away from the imperial delegation. Writhing with thunder and lightning, it remained stationary over the temple for some time, and faint images of martial flags could be seen within it. Zhenwu himself appeared above the cloud to accept the emperor’s proclamation; then the vision suddenly disappeared, and the sky was once again clear.

The following two illustrations show the appearance of magical plants on the mountain in the spring of 1413 after the restoration projects had begun. The first shows a group of people in the mountains gathering the leaves of *qianlin* or “soaring grove” trees, which are flourishing all over the mountain; these leaves were believed to cure all manner of illnesses. The following illustration shows a group of three people standing outside one of

111 (detail; scene 1)

111 (detail; scene 15)

the temples, staring up in wonder at the fruits of a "betel-plum" tree. According to legend, when the Perfected Warrior was living on Mount Wudang, he took a branch from a plum tree and grafted it onto a betel tree, taking an oath that if he accomplished the Way (Tao) then the branch would flower and produce fruit. The fruit of these trees, which was rare and considered to be an auspicious omen, had already begun to appear in unusual numbers early in the Yongle era (1403–24), in the years 1405–06, but in the spring of 1413 the entire mountain was adorned with the blossoms of this tree, and in the fifth month there was a crop of fruit such as had not been produced since antiquity.

The following two illustrations (shown here) depict Zhenwu's miraculous aid in the construction of the temples. The first (1) shows a giant tree trunk that was found floating upright in the river near the Yellow Crane Tower, a site in Wuchang county, Hubei province, where legend says that a magical being riding a yellow crane once stopped to rest. This four-meter-long trunk, which rose one meter out of the water, was floating suspended in the river, neither embedded in the bottom of the river, which was over five meters deep, nor moving with the current. The trunk was found by men in boats hauling timber to Mount Wudang for the restoration projects, and it was attached to a boat without difficulty and taken to the mountain, where it was used as the central beam in the principal hall of the main temple. The following illustration in the scripture (2) shows the discovery of an ancient temple bell in the river. A group of people traveling along the river was hindered by a violent wind and rainstorm, when suddenly the wind stopped and a giant bell floated to the surface. This bell was taken to Mount Wudang, where it was installed in the main temple.

The next eleven illustrations, two of which are reproduced here (3 and 4), all show appearances of Zhenwu himself in 1413, during the restorations. From the fifth to the eighth lunar months, Zhenwu appeared several times as the temple reconstructions proceeded, sometimes alone, sometimes accompanied by celestial civil and martial attendants bearing his banner, sword, or seal of office. The majority of these manifestations took place over the main temple compound on the highest peak of Mount Wudang, which is shown rising above the clouds, with a long stairway descending from the main entrance in the wall surrounding the temple. In addition, the fourth of these manifestations is depicted over one of the three subsidiary temples, shown farther down the mountain.

The date and authorship of this text are unknown, but it includes the text of an imperial stele commemorating the restoration of the temples at Mount Wudang dated to 1418, and its

tone and contents, as well as its inclusion of several imperial edicts, suggest that it was written largely as a piece of propaganda for the emperor—thus, most likely an imperial commission. This account of miracles is of particular interest since it was written less than three decades before the compilation of the Taoist Canon: the events it recounts were still within living memory when the edition shown here was made.

The remarkable handscroll painting (cat. no. 111) from the Baiyun Guan, Beijing, also depicts manifestations of Zhenwu at Wudang Shan (here called Taihe Shan, or Mountain of Supreme Harmony).³ A title inscribed on the outer mounting reads, *Wuliang fushou tu* ("Painting of Limitless Good Fortune and Longevity"). The scroll comprises fifteen scenes, each accompanied by an inscription describing the nature and location of various miraculous celestial displays; these inscriptions list the months (but not the year) in which the displays took place.

The first scene has lost its inscription, but the second scene, which depicts concentric rings of multicolored light over Heaven's Column Peak at Wudang Shan, is dated to the first day of the seventh lunar month. The final scene, dated to the thirteenth day of the twelfth lunar month, depicts a manifestation of the black image of Zhenwu over the same peak, accompanied by multicolored clouds and beams of light. The only scenes in the Baiyun Guan handscroll that may correspond to the illustrated text in the Taoist Canon occur in the eighth month: in the handscroll's sixth and seventh scenes, displays of five-colored concentric bands of light appear over Heaven's Column Peak; this is described as occurring thirty-one times on the seventeenth day of the eighth month, and fifteen times between the second day of the eighth month and the twenty-sixth day of the fifth month. The *Illustrated Record* in the Taoist Canon describes actual appearances of Zhenwu at Wudang Shan on the same days. In addition to depicting the varied topography of Wudang Shan, the Baiyun Guan handscroll is extraordinary for its bird's-eye-view depictions of such temple structures as the Jade Empress's Palace of the Dark Heaven (scenes 3 and 4), the Flying Ascent Terrace (scene 5), and the Palace of the Five Dragons (scene 11). According to tradition, the painting was a gift to the Baiyun Guan from the Yongle emperor.⁴ It is conceivable that the scroll was originally longer and consisted of even more scenes than those depicted here.

—S. E./S. L.

Register of the Supreme General, the Great Highest Dark Heaven Perfected Warrior, from the Taoist Canon of the Zhengtong Reign

Ming dynasty, Zhengtong reign, 1444–45

Woodblock-illustrated book; ink on paper

35 × 11.3 cm (each page)

Bibliothèque Nationale de France, Paris (Chinois 9546 [1196])

REGISTERS (LU) WERE AMONG the first documents given to a new initiate into a Taoist community by the early Way of the Celestial Masters (Tianshi Dao).¹ They consisted primarily of lists of names of celestial generals who could be called upon for aid, and as a result, early registers were known by such names as "Register of One General," "Register of Ten Generals," and so on. The first of these registers were given to children beginning at the age of seven or eight, and were known as "child" (*tongzi*) registers.² Registers were also given to adult initiates, and because their reception was the initial act that distinguished members of the Taoist community from the outside world, the first title given to a Taoist novice was "register student" (*lusheng*).³ Registers were intimately connected with talismans (*fu*), and served a similarly protective function.

The present text is an early Ming dynasty variation on these registers. Although the corpus of Taoist literature had expanded considerably beyond the scope of the early Celestial Masters tradition by the Ming dynasty, this text shows that registers continued to play an important role. This register (cat. no. 112) is dedicated entirely to the martial god Zhenwu, the Perfected Warrior, who is here called Supreme General, drawing a parallel between this deity and the generals of earlier registers. The register begins with an image of Zhenwu, showing standard

elements of his iconography, such as loose hair, bare feet, and the totem animals of the northern region he rules, an entwined tortoise and snake. This image is followed by three magical invocations designed to "suppress," "dispel," and "halt" malignant spirits. These spells describe the most terrifying manifestation of the Perfected Warrior:

My nose is like a mountain,
My forceful eyes radiate light,
My teeth are like a forest of swords,
In my hands I hold the Seven Stars [of the Northern Dipper,
or Ursa Major].
Celestial demons and heterodox ways,
All manner of malignant spirits,
When they see me they turn to blood,
Changing into powdered dust!

After these spells comes the magical talisman of the Perfected Warrior, bordered by the Northern Dipper on the top and surrounded by the Twenty-eight Lunar Mansions. The significance of this talisman is not described in the text, but like the talismans illustrated elsewhere in this catalogue, it would have been used to protect against ghosts and demons. The talisman is followed by a list of spirits under the command of the Perfected Warrior, ranging from generals and warriors to envoys and jade maidens, and including well-known groups such as the six *jia* and *ding* spirits (see cat. no. 57). These latter spirits, who could be called upon in times of need, are a representative sample of the Perfected Warrior's full army, which consisted of some three hundred thousand troops.

The entire register was to be worn on the person of the recipient: "Serve and honor it, and ten thousand spirits will aid and protect you, while all malignant spirits will be dispersed. It will lengthen your years, and you will receive blessings beyond measure!" Taken as a whole, the register was a coordinated program of defense against both natural and supernatural forces, with talisman, spells, and celestial protectors who accompanied the recipient of the register wherever he went and guarded him against the dangers of an uncertain world.

The register itself is followed by a sample ritual for its transmission, which provides considerable information about the provenance of the text. This ritual indicates that the register was

to be received from a representative of the hereditary Celestial Master of Mount Longhu (Longhu Shan, in Jiangxi province), which in the Ming dynasty was the headquarters of the Celestial Masters sect, by this time often called the Orthodox Unity (Zhengyi) sect. The ritual further mentions the forty-second, forty-third, and forty-fourth Celestial Masters by name, and consequently in its present state it was probably composed sometime during the period of the forty-fourth Celestial Master, Zhang Yuqing, who headed the Orthodox Unity sect from 1410 to 1427.⁴ As such, it is nearly contemporary with the record of miraculous appearances of the Perfected Warrior on Mount Wudang described elsewhere in this catalogue (see cat. nos. 110–11), and was composed only about three decades before the printing of the edition from the Taoist Canon (*Daozang*) shown here.

—S. E.

Zhenwu with the Eight Trigrams, the Northern Dipper, and Talismans

Qing dynasty, 17th or early 18th century
Hanging scroll; ink, colors and gold on silk
59.9 × 42.6 cm

The Art Institute of Chicago, Russell Tyson Endowment (1999.566)

ONE OF THE most important roles of Zhenwu, the Perfected Warrior, was to protect against malevolent spirits. When he was first summoned to take up a post in the celestial hierarchy, the Highest Imperial (Shangdi) ordered him to "subdue the north [the direction of the demon capital of Fengdu] . . . and put a stop to all the wicked demons under the heavens."¹ His first assignment was to battle the demon kings who had risen up as the world became corrupt. During a great battle, these demon kings caused the energies of the trigrams *kan* and *li* (yin-water and yang-fire energy as manifested in the world; see cat. nos. 58–59) to manifest as a giant tortoise and snake, but the Perfected Warrior used his spiritual might to subjugate them under his feet.² After he had subdued the armies of the demon kings, he went to the Old Master (Laozi) so that his military feats could be recognized and his accomplishment of the "proper realized Way [Tao]" would be foretold.³ The Old Master, however, pointed to the heavens and the earth, saying that there were still many malevolent spirits in the world, and the Perfected Warrior's accomplishment of the Way could not be foretold until the Lord of the Netherworld himself (Yenluowang or Yama) came with the Perfected Warrior before the Old Master to report that there were no longer any souls in the hells. Thereupon, the Perfected Warrior made a vow to take all the wickedness of the world upon himself, until there were no longer any demons or ghosts, or any souls left suffering.⁴ As a result, he became the special protector of all those beset by harmful spirits.

The Perfected Warrior is shown here in this role. He is flanked by martial officers, one of whom holds a war-club, while the other bears his standard. Above these officers are the sun and moon, depicted as red and white disks; the officer under the sun is shown with a white face, while the one under the moon is red, balancing the composition of the painting at the same time that they express the idea of *yin* within *yang* and *yang* within *yin*. Below the Perfected Warrior are the tortoise and snake, both totem animals of the north in the Five Phase system (see cat. no. 9) and the manifestations of *yin* and *yang* from the battle story recounted above. Above this scene, the Eight Trigrams are shown

in their "Later Heaven" (*Houtian*) arrangement (see cat. no. 14), that is, as manifestations of the energies of *yin* and *yang* in the phenomenal world. The Eight Trigrams surround an image of the Northern Dipper (Ursa Major; see cat. no. 18); above the trigrams is the constellation known as *Santai* (Three Terraces).

The rest of the painting is made up of seventy-two talismans, which are arranged around the Perfected Warrior in a manner reminiscent of Buddhist mandalas. These talismans are composed of stylized star-diagrams and talismanic script, and each talisman is accompanied by an inscription indicating its function. The large majority of these talismans protect against demons; the second talisman, for example, protects against "abnormalities in the shape of pigs, cats, dogs, or all those that eat their own young," while the forty-fifth talisman protects against "old trees that turn into sprites." Other talismans protect against all manner of social, natural, and supernatural disasters, from imprisonment and burglary to plagues and bad dreams. A smaller number of talismans bring good fortune rather than protecting against bad; these help oneself and one's family to live long, prosperous lives, and aid in such pursuits as attaining political office. The wide range of the talismans in the painting reflects the all-encompassing vow of the Perfected Warrior, and his special powers against all kinds of malevolent spirits.

Stylistic features of this hanging scroll suggest that it may have been done outside China, perhaps in Korea. The present mounting is Japanese. At the same time, the content and iconography of the painting are consistent with Chinese images of the Perfected Warrior.

Zhenwu, Supreme Emperor of the Dark Heaven

Ink rubbing of a stele from the Six Harmonies Pagoda, Hangzhou, Zhejiang province

Ming dynasty, Wanli reign, dated 1586

Hanging scroll; ink on paper

148.6 × 67.6 cm

The Nelson-Atkins Museum of Art, Kansas City, Bequest of Laurence Sickman (F88-45/345)

THIS INK RUBBING is taken from a late Ming stone stele, itself based on an earlier stele, now destroyed. The image on the stele depicts Zhenwu, the Perfected Warrior, descending on a black cloud over swirling waves. The god stands on the back of an intertwined tortoise and snake. Zhenwu is shown wearing wind-blown robes over armor, and he brandishes a sword in his right hand. His long hair flies out behind his head, as he stares at the crackling flame that envelops the blade of his sword. Behind him an attendant stands and holds a fluttering banner on which appear stars of the Northern Dipper. Below, in the lower right corner, two martial figures genuflect to the god.

An inscription carved along the right border of the composition reads:

On the fifteenth day of the first month of spring in the year *bingxu* of the Wanli reign [1586], Zhong Yin of Qiantang [Hangzhou] saw the image of the Saint [*shengxiang*] at the Six Harmonies Pagoda [Liuhe ta], which people had rubbed to ruin. Manifesting his intent, he again restored [the stele], and washed . . . and made [this] offering.

Next to one of the bowing figures below are the characters *Yu jikan*, apparently a personal name. A damaged inscription along the left border reads in part, "Engraved by Chen Yinglong."

—S. L.

INHERITING AN ANCIENT TRADITION of adepts who, through their own self-cultivation, transcended the bounds of the natural world, religious Taoism developed its own tradition of immortal practitioners of the Tao. This section of the exhibition catalogue explores visual depictions from the Song (960–1279) through Qing (1644–1911) dynasties of the individual's cultivation of moral virtue and perfection, which for those with sufficient faith and discipline led to longevity, immortality, and spiritual union with the Tao.

Included here are paintings of a variety of famous immortal adepts. Among these are Zhongli Quan, Lü Dongbin, Zhang Guolao, and Li Tieguai, all members of the well-known group known as the Eight Immortals, particularly worshipped by the Quanzhen (Complete Realization) sect from the fourteenth century onward. These figures, revered for their spiritual powers and worshipped as divine saints, are among the most popular figures in Taoism. The images shown in this section explore the immortals' exotic mythologies and unconventional behavior. Significantly, the cult of immortals and transcendents is regaining strength today among Taoist believers in China, and some Taoist temples are dedicated to the worship of these figures.¹

The Taoist concept of immortality is typically fluid. As Kristofer Schipper has written,

Who are these Immortals? There is no precise way to define them, no method is error-free, no ecclesiastical institution or tradition has ever confirmed their quality, no official canonization has ever distinguished the true Immortals from the false ones. Their stories do not allow a distillation of an exact doctrine, for there is no dogma defining how a body can become one with Tao. Every human being, whether big or small, humble or great, young woman or old man, musician, herbalist, clown, or scholar, may—on the sole condition of finding his or her own mountain—quit the

treadmill of progress towards death and discover the return towards life. It is not even necessary to act intentionally; luck and a certain predisposition may sometimes be the only needed conditions, but nothing is guaranteed. It is necessary, however, to at all times be open and prepared to recognize, at a given moment of one's life, the mountain or the initiating Immortal, which some day is to be found on everyone's life path.²

Almost all Taoist immortals began their lives as human beings. Subsequently they underwent a spiritual and physical transformation, resulting in an existence beyond the bounds of yin and yang. Such beings are traditionally known as *xian*, translated as adept or immortal.³ Cults of specific immortals are documented from early as the Han dynasty (206 B.C.–A.D. 220), and include both male and female figures. The immortal Wang Ziqiao, for example, was said to have lived in the sixth century B.C. His attainment of immortality was commemorated in a late Han dynasty stele inscription of A.D. 165, and his biography appears in the fourth-century compendium entitled *Biographies of the Divine Immortals* (*Shenxian zhuan*), traditionally attributed to the alchemist Ge Hong.⁴ A similar late Han stele commemorating the cult of the immortal Fei Zhi, excavated in 1991 near Luoyang, Henan, is included in this exhibition (cat. no. 22).

The immortals have a remarkable function within Taoism. As free spirits who can move with ease between Heaven and Earth, they serve as role models for humanity in their cultivation of moral, spiritual, and bodily perfection, and can intercede on behalf of mortals with the gods and the Tao. Their often unconventional appearance symbolizes their rejection of quotidian norms, and belies their transcendent state of being.

*Illustrated Biography of the Realized Lord Grand Astrologer Xu,
from the Taoist Canon of the Zhengtong Reign*

Ming dynasty, Zhengtong reign, 1444–45

Woodblock-printed book

35 × 11.3 cm (each page)

Bibliothèque Nationale de France, Paris (Chinois 9546, 437/1-2)

XU XUN (239–336)¹ is an important Taoist figure known for his ability to protect against plagues and “flood dragons” (*jiao*), magical creatures believed to cause natural disasters. His legend brings together three different strands of China’s religious and intellectual culture: popular religion, Taoism, and Confucianism.

The first of these forms the earliest, most fundamental stratum of the movement surrounding Xu Xun, who supposedly served as an official during the Jin dynasty (265–420), and is believed to have lived in the area surrounding Western Mountain (Xi Shan, in modern Jiangxi). His cult first developed in this area, and the Jade Prosperity Palace (Yulong Gong) on Western Mountain remained the focal point for worship of Xu throughout the imperial period. The biographies of Xu preserved in the Taoist Canon are primarily made up of local legends from the area around Western Mountain, and are closely linked to both the natural and human geography of the region. Popular worship of Xu continued in this area long after he was incorporated into the Taoist pantheon, co-existing with and often supporting the official Taoist rites performed in the Jade Prosperity Palace. In his *Collected Writings on the Jade Prosperity Palace* (*Yulong ji*),² the eminent Taoist master Bai Yuchan (1194–1228) described several popular regional traditions around Western Mountain that were still flourishing in the early thirteenth century. For example, there were annual processions in which an image of

1b

1a

Xu would be paraded through the communities in the region; during these processions, the deity was believed to pay visits to other deities in the area connected with his legend.³ An image of Xu's son-in-law, Lord Huang, was brought to the Jade Prosperity Palace every autumn to pay his respects, and once every three years an image of Xu was taken to visit his son-in-law and daughter in their temple. Merchants profited from these events, and every year they fought with each other to direct the procession of Lord Huang to their own shops as this deity left the Jade Prosperity Palace, believing that this would bring them good fortune over the next year.

When Xu was taken to visit his son-in-law and daughter, all the villages and towns would prepare offerings of incense to greet the deity as he passed by. During these processions, people singing ancient melodies carried the image of the deity in a palanquin decorated with carvings of a white horse and golden phoenixes, which were thought to be his mounts. People wearing headdresses constructed from bamboo frames with narrow bases and wide tops, and decorated with strips of colored cloth that hung down and covered their foreheads, accompanied the palanquin. Bai Yuchan described these practices as "ancient and strange," and suggested that they may have been remnants of customs dating back to the late fourth or early fifth century.

By the Tang dynasty (618–906), the cult surrounding Xu Xun

was intimately connected with Taoism. Bai indicated that the temple devoted to Xu on Western Mountain was restored by the Taoist master Hu Huichao in the Yongchun reign (682–683). In addition, a biography of Xu Xun from the Tang dynasty tells us that the Taoist rite Great Fast of the Yellow Register (*Huanglu dazhai*) was practiced at this temple.⁴ Xu Xun was patronized by both the Tang and Song (960–1279) emperors, and the Song emperors in particular strengthened the ties between Xu's cult and Taoism as he became a national deity. The name of the temple on Western Mountain was changed from Flying Carpet Observatory (*Youwei Guan*)⁵ to Jade Prosperity Observatory (*Yulong Guan*) by Emperor Zhenzong of the Song (r. 997–1022). Zhenzong based this name on a passage from the Taoist *Scripture of Conveyance* (*Duren jing*), which by the Song dynasty was already becoming the most important Taoist scripture. This name was further changed to Jade Prosperity Palace of Ten Thousand Longevities (*Yulong Wanshou Gong*) by Emperor Huizong (r. 1100–25) in 1116, thereby elevating its status. These examples indicate both the close relationship between Taoism and the imperial family during this dynasty and the ability of the Taoist church to mediate between local traditions and the imperially sponsored national religion.

Finally, the cult devoted to Xu Xun also upheld Confucian ideals, in that many of the figures connected with the legend of

4b

4a

Xu Xun were famous for their filial piety (*xiao*). In particular, Xu's teacher, Wu Meng, is known as one of the twenty-four paragons of filial piety (*ershi si xiao*). In the Tang dynasty, the movement surrounding Xu was known as the Way of Filial Piety (*Xiaodao*), and, in addition to Taoist scriptures, this movement revered the *Classic of Filial Piety* (*Xiao jing*), a work attributed to Confucius himself. In the chaos of the twelfth and thirteenth centuries that ensued after Jurchen and then Mongol troops captured north China, the Way of Filial Piety was reborn as the Clear and Bright Way of Loyalty and Filial Piety (*Jingming zhongxiao dao*), one of the most important Taoist movements of its time. Under the influence of the doctrine of "unity of the Three Teachings" (*Sanjiao yizhi*) of Confucianism, Taoism, and Buddhism, the connections between Taoism and Confucianism were emphasized even more. Consequently, the example of Xu Xun shows the illusory nature of the opposition sometimes imposed upon Taoism and Confucianism, since these two intellectual traditions often shared the same beliefs.

Narrative illustrations of Xu Xun's life existed as early as the Northern Song (960–1126). Bai Yuchan tells us that three of the walls in the front hall of the Jade Prosperity Palace in Jiangxi were painted with scenes from Xu's life, while depictions of the annual processions described above were also painted elsewhere in the temple. These scenes may have provided inspiration for the woodblock illustrations in the present text, which was first completed sometime after 1295.⁸ The version shown here, entitled *Illustrated Biography of the Realized Lord Grand Astrologer Xu* (*Xu taishi zhenjun tuzhuan*), is contained in the Taoist Canon (*Daozang*) published in 1444–45.

In the first set of illustrations shown here, Xu is preparing an alchemical elixir. This magical operation is said to have been disturbed by flood dragons who tried to flood Xu's chamber, forcing him to incapacitate the flood dragons by nailing them to the side of a cliff. The first illustration (1a) shows Xu standing outside the chamber with an alchemical crucible while his soldiers torture two flood dragons nailed to the cliff. In the second illustration (1b), Xu first stops to pay his respects at the stone chamber where the famous patriarch of alchemy, Ge Xuan (164–244), completed an elixir. He then travels to a stream where he stops to sharpen his stone on a rock. Finally, he climbs a peak, and after making offerings to the Highest Imperial (Shangdi), he consumes the elixir.

In the second set of illustrations, Xu is commanding a group of spirits to prepare an iron pillar that will protect a dragon-infested area.⁹ The first illustration (2a) shows a spirit climbing up to the mouth of a giant furnace where the pillar is being made. In the second illustration (2b), the pillar is placed in a well that had provided the flood dragons with access to the village. Xu informs the villagers that as long as the pillar remains upright, they will be safe from flood dragons, but if it ever leans he will return to protect them once again.

In the third set of illustrations, Xu and Wu Meng have employed two dragons to carry the boat in which they are riding. Partway through their journey, they decide to travel through a "cavern-heaven" (*dongtian*), a paradisiacal dwelling for Taoist adepts that lay under a mountain. The owner of the boat, a common man, has been instructed to keep his eyes shut for the entire journey, but as the boat approaches the cavern-heaven,

3b

3a

the bottom begins to scrape on the tops of trees, and the owner of the boat, overcome by concern and curiosity, opens his eyes to look. The dragons drop the boat and flee from his gaze. The first illustration (3a) shows the flying boat, and the second illustration (3b) shows the boat stranded on top of the mountain, while the owner, who has realized Xu and Wu are no ordinary people, begs these masters to teach him methods for attaining longevity.

The final set of illustrations shows Xu's ascent to the celestial realms. In the first illustration (4a), Xu ascends to the celestial realms in a magical carriage surrounded by clouds, accompanied by forty-two members of his family, including six disciples. Supposedly, even the dogs and chickens of the household rose up with him (see cat. no. 116). Two celestial warriors stand to either side of Xu's entourage, while villagers bid them farewell. In the second illustration (4b), two servants, a husband and wife, who were transporting rice and hence not present when Xu began his ascent, rush to see him one last time. In their hurry, they have overturned their rice cart, which can be seen in the left of the illustration.

—S. E.

CUI ZIZHONG (D. 1644)
Chickens and Dogs Amid the Clouds

Ming dynasty, early 17th century
 Hanging scroll; ink and colors on silk
 191.4 x 84 cm
 National Palace Museum, Taipei

THIS PAINTING SHOWS the magician-scholar Xu Xun (239–336; see cat. no. 115) traveling with his family on a mountain far from civilization.¹ Xu wears the square cap of a Taoist priest and carries a scroll in his hand. The “chickens and dogs” of the title refer to a dog in front of Xu, humorously imitating the proud step and satisfied look of the ox as he leads the way, and a chicken in a cage on the servant’s pole. While these images derive from Xu’s biographies, they also allude to chapter 80 of the *Daode jing*, which says that in a well-governed kingdom, people might be so close to another town as to hear its dogs and chickens, but would never venture away from their homes to see it. This allusion emphasizes the reclusive theme of the painting.

Legend says that when Xu Xun ascended to the celestial realms, he was allowed to bring his household—even the chickens and dogs rose to the heavens along with him. The small group shown here accompanying Xu on his departure from earthly life stands in stark contrast to the large celestial entourage that greets Xu and takes him to the heavens in the *Illustrated Biography of the Realized Lord Grand Astrologer Xu* (cat. no. 115), from the Taoist Canon. While the illustrations in that book idealize Xu as a celestial official who triumphantly “rose to the heavens in broad daylight,” Cui Zizhong shows him here rather as a hermit scholar who has turned his back on the corrupt world to seek a life of quietude in the mountains. This suggests parallels with famous paragons of virtue such as Bo Yi and Shu Qi, who protested the usurpation of the Shang dynasty by going into seclusion in the mountains, eventually starving to death.

Cui lived in Beijing, where he was famous as a figure painter, using a stylized archaism in his paintings modeled on the works of great masters of the past such as Gu Kaizhi (c. 344–406) and Wu Daozi (eighth century), both of whom were known for their connections with Taoism. Cui’s life ended in tragedy; he died of starvation the same year the Manchu rulers of the Qing dynasty took control of China, in 1644.

117

Vase with the Eight Immortals

Yuan dynasty, c. 1350
Longquan celadon ware
H. 25.4 cm
Private collection

118

The Eight Immortals, the Three Stars, and the Queen Mother of the West at the Turquoise Pond

Qing dynasty, Qianlong reign (1736–95)
Hanging scroll; ink and colors on kesi silk tapestry
182.8 x 104.1 cm
Asian Art Museum of San Francisco, The Avery Brundage Collection
(B62 D28)

FROM THE YUAN DYNASTY onward, the Eight Immortals (Baxian) have been the most famous group of Taoist adepts in China.¹ They appear to have emerged as a discrete group during the Jin dynasty (1115–1234) in northern China, and are depicted in the ceramic tomb sculptures decorating the walls of Jin dynasty tombs near Pingyang, Shanxi province, dating to the late twelfth and early thirteenth centuries.² The emergence of the Eight Immortals as a group occurred within the context of the Complete Realization (Quanzhen) sect of Taoism, which spread rapidly throughout China during the Jin and Yuan (1260–1368) dynasties. The most famous early depiction of this group is in a mural at the Hall of Purified Yang (Chunyang Dian) at the Eternal Joy Temple (Yongle Gong), the great Quanzhen sect temple at Ruicheng, southern Shanxi province, dating to the

mid-fourteenth century.³ By the Ming and Qing dynasties, entire temples were dedicated to the Eight Immortals.

The members of the Eight Immortals are Zhongli Quan, Lü Dongbin, Li Tieguai, Zhang Guolao, Han Xiangzi, Cao Guoqu, Lan Caihe, and He Xian'gu. The majority of these figures were said to have lived during the Tang dynasty (618–906). While the hagiographies of some of the Eight Immortals are straightforward, some appear to conflate different individuals. A thoroughly researched and coherent history of the cult of the Eight Immortals has yet to be written.⁴

Zhongli Quan, said in some sources to have lived in the Han dynasty (206 B.C.–A.D. 220), is considered the leader of the group, and is usually shown as a casually dressed scholar with a large stomach protruding through his partially open robe (see cat. no. 119). His most famous pupil, Lü Dongbin (see cat. nos. 120–22), was a promising scholar who gave up pursuit of an official career after experiencing an entire lifetime of success and failure in a dream induced by meeting Zhongli Quan. Lü Dongbin may be the most popular of the Eight Immortals, and is the subject of many Yuan and Ming dynasty dramas. He is often depicted with a sword, and is sometimes accompanied by his familiar, the spirit of a willow tree. Both Zhongli Quan and Lü Dongbin are among the patron saints of Taoist Inner Alchemy (*neidan*).

Li Tieguai (cat. no. 125), another very popular member of this group, was a promising Taoist adept whose body was cremated by a disciple while Li's ethereal self visited the deified Laozi. When Li returned after a week-long absence to find his body burned, he appropriated the corpse of a hideous, crippled beggar. Zhang Guolao (cat. no. 123), usually depicted as an old man, was a gifted magician, conforming to the ancient image of the *fāngshī*, or "technique master." He was supposedly already hundreds of years old when summoned to the imperial court of Tang Xuanzong in the early eighth century. In the visual arts, Zhang is often depicted accompanied by his magic mule, which could be folded up like a piece of paper and stuffed into a small bag when not being ridden by his master.

Han Xiangzi was the nephew of the Tang poet Han Yu, and is usually shown as a young boy holding a flute or a "fish-drum." Cao Guoqu, a tenth-century aristocrat and the patron saint of actors, is often depicted holding a fly-whisk or a pair of castanets; sometimes he is shown asleep, or staring at a *taiji* diagram. Lan Caihe is depicted as a young man holding the percussion instrument known as *jieban* (clappers). He Xian'gu, the only female member of the group, is often depicted holding a basket of *lingzhi* magic mushrooms, peaches, or a lotus flower.

The Eight Immortals are frequently depicted on celadon vases; the Longquan celadon vase shown here (cat. no. 117), dating to the early fourteenth century, is one of the finest known examples of its type. Each of the eight figures is molded in relief in its own panel around the surface of the octagonal vase. When the vase was glazed, the molded panels were covered in a wax resist, resulting in a striking contrast between the reddish-brown color of the ceramic body and the cool green tonality of the iron-oxide celadon glaze. Such vases point to the widespread popularity of the theme of the Eight Immortals by the Yuan dynasty (1260–1368).

From the early Ming dynasty (fifteenth century) on, the Eight Immortals were frequently depicted with Shoulao, the God of Longevity. One of the Three Stars (the gods of longevity, emolument, and good fortune), Shoulao ("Old longevity"), appears to have emerged in his manifestation as an old man with a huge, domed cranium in the late fourteenth or early fifteenth century (see cat. nos. 90–91). Such scenes are commonly encountered on Ming ceramics and other decorative arts from the Jiajing reign (1522–66) onward, and continued to enjoy great popularity during the Qing dynasty.

The superb eighteenth-century *kesi* silk tapestry from the Asian Art Museum of San Francisco (cat. no. 118) probably dates to the Qing dynasty Qianlong reign (1736–95).⁵ Here the Eight Immortals are shown in a fantastic landscape, almost certainly depicting the Turquoise Pond (Yao chi) in the paradise on Mount Kunlun. The waves of the pond are shown below a precarious rock bridge that the immortals ascend on their way to a terrace above, where the Three Stars are already standing. The Queen Mother of the West approaches at the upper left, flying on a phoenix and accompanied by two jade maidens. Such refined *kesi* weavings may have been made as imperial birthday gifts during the Qianlong reign.

ATTRIBUTED TO ZHAO QI (ACTIVE LATE 15TH CENTURY)
The Immortal Zhongli Quan

Ming dynasty, late 15th century

Hanging scroll; ink and colors on silk

134.5 × 57.2 cm

The Cleveland Museum of Art, Purchase from the J. H. Wade Fund
 (76.13)

THE TAOIST IMMORTAL Zhongli Quan is generally considered to be the leader of the Eight Immortals (Baxian) and the teacher of Lü Dongbin (see cat. nos. 120–22). While some sources state that he was born during the Han dynasty, others state that “his dates are unknown.”¹ His story in the *Complete Biographies of the Assorted Immortals* (*Lixian quanzhuan*) of 1598 reads in part:

He [Zhongli Quan] was very strong. During the Han dynasty he served as a great general. Once, when attacking Turfan [in Central Asia], his side lost the advantage. He alone escaped on horseback and rode into a mountain valley. He lost the road, and at night entered a dense forest. There he came upon a barbarian monk, with disheveled hair brushing his forehead. On the monk's body hung a robe of knotted grass. The monk led him for several li² until they saw a village, and said, “This is where Master Donghua attained the Tao.”³ Here you can rest.” He then bowed and disappeared.

Zhongli was not inclined to rush into the village. After some time he heard someone say, “This must be the one the blue-eyed barbarian spoke of.” He saw an old man wearing a white deerskin and holding a green bramble staff. The old man raised his voice and said, “Is this not the great general Zhongli Quan? Why didn't you spend the night where the monk lives?” Zhongli heard him and was much alarmed for he knew this was no ordinary person.

At that point the place was transformed into a rude lair, and he found himself thinking of Luan birds and cranes [the attributes of immortals]. He then turned his mind to the Tao and begged the old man for the method of transcending the world. Thereupon the old man transmitted to him the Secrets of Extended Life (*changsheng*), the Fiery Transformations of Gold and Cinnabar, and the Green Dragon Sword Technique. Zhongli then took his leave and emerged from his gate. When he turned around and looked back toward the village there was nothing to see.

Later on he encountered the Perfected Being (*zhenren*) Huayang who transmitted to him the Interior Elixir of the Spatula and the Fire Talismans of Taiyi [Supreme Unity]. He also met the immortal Wang Xuanfu, from whom he obtained the secrets of

longevity. Traveling through the clouds he arrived in Lu [in Shandong province] and lived in Zoucheng. Once he entered Emptiness and Identity (Kongtong) Mountain, and dwelt at the Peak of the Four Graybeards of Purple-Cinnabar. Again he obtained the Secrets of the Jade Casket, whereupon he became an immortal and left the world.⁴

This painting may originally have been one of a set depicting the Eight Immortals. Zhongli Quan is shown crossing the ocean waves and holding a double gourd in his hand. He has an intense expression and his stomach is bared. Around his waist is a belt of leaves. The waves over which he walks send forth white beads of spray as they break.

Although unsigned, the painting can be confidently attributed to the late-fifteenth-century Zhe School painter Zhao Qi, who worked as a court painter in the Forbidden City during the reign of the Hongzhi emperor (r. 1488–1505).⁵

Southern Song dynasty, mid-13th century

Fan painting; ink and colors on silk

23.8 × 25.1 cm

The Metropolitan Museum of Art, New York, Rogers Fund (17.170.2)

THE TAOIST IMMORTAL LÜ Dongbin ("Lü the Cavern-guest") is a patriarch of the Quanzhen (Complete Realization) sect, and is included as one of the famed Eight Immortals (Baxian; see cat. nos. 117–18). Lü is believed to have lived in the late Tang dynasty (618–906), and his following became widespread during the Song Dynasty (960–1279). He is usually depicted in art as a handsome scholar, dressed in a white robe and equipped with a sword. According to mythology, he was widely celebrated as a swordsman, and for his skills in poetry, calligraphy, and the connoisseurship of wine.¹ In addition, he was revered as a specialist in the meditative techniques of *neidan* (Inner Alchemy), and as a healer, exorcist, diviner, and artisan.² A well-known example of Lü Dongbin's alchemical poetry reads:

The water-drinking sea tortoise passes unnoticed,
The mountain talisman burner is disliked by the demons.
One grain of millet contains the whole world,
In a one-quart alchemical vessel boil rivers and mountains.³

By the end of the Song dynasty, Lü was worshipped as the patron saint of merchants, pharmacists, ink-makers, and scholars. There are several different accounts of his life, a number of which stress his meeting with the immortal Zhongli Quan (see cat. no. 119). One of the best-known of these stories is "The

121

Yellow-Millet Dream" (*Huangliang meng*), in which Lū falls asleep at an inn while Zhongli prepares some millet for a meal. While asleep, Lū has a dream in which he experiences his entire official career, which ends in failure and disgrace. As Paul Katz has shown, this story became widely known after the publication and performance of the *The Yellow-Millet Dream*, a drama by the Yuan dynasty playwright Ma Zhiyuan (1260–1325).⁴ As told in the Yuan compendium the *Illustrated Biographies of the Immortals* (*Zengxian liexian zhuan*), the story reads:

Once he [Lū Dongbin] entered into a tavern in Chang'an [Xi'an] to see a Taoist priest, dressed in a gray cap and white gown, spontaneously scribble a poem on a wall. It ran,

Sit or lie—I always grasp a pot of wine,
No need to tell my eyes to see the starry zone.
Vast like heaven and like earth, I never have a name,
Among so many mortals, I'm scattered and alone.

Impressed and attracted by the Taoist's strange appearance and unusual old age, as well as by the grace and naturalness of his verse, Dongbin bowed to him and inquired his name.

"I am Master Cloudchamber [Zhongli Quan]," he answered. "My home is the Crane Ridge in the Zhongnan Mountains. Would you like to join me in my wanderings?"

Dongbin hesitated to agree to this proposal, so Master Cloudchamber took him to an inn. While he attended to the preparation of a simple meal, Dongbin reclined on a pillow. Soon he became oblivious of his surroundings and fell asleep.

He had a dream. He dreamt that he went up to the capital as a candidate of the imperial examination and passed it at the top of the list. Starting his career as a junior secretary to one of the Boards, he rapidly rose in rank to positions at the Censorate and the Hanlin Academy. Eventually he became a Privy Councillor after he had occupied, in the course of his unbroken success, all the most sought-after and important official posts.

122

Twice he was married, he further dreamt, and both wives belonged to families of wealth and position. Children were born to him. His sons soon took themselves wives, and his daughters left the paternal roof for their husbands' homes. All these events happened before he even reached the age of forty.

Next he found himself Prime Minister for a period of ten years, wielding immense power. This corrupted him. Then suddenly, without warning, he was accused of a grave crime. His home and all his possessions were confiscated, his wife and children separated. He himself, a solitary outcast, was wandering toward his place of banishment beyond the mountains. He found his horse brought to a standstill in a snowstorm and was no longer able to continue the journey.

At this juncture in his dream Dongbin woke with a heavy sigh. Lo and behold! The meal was still being prepared. Laughing at his surprise, Master Cloudchamber intoned a verse.

The yellow millet simmers yet uncooked,
A single dream and you have reached the world beyond!

Dongbin gaped in astonishment. "Sir," he stammered, "how is it you know about my dream?"

"In the dream that just came to you," Master Cloudchamber replied matter-of-factly, "you not only scaled the dizzy heights of splendor but also plumbed the uttermost depths of misery. Fifty years were past and gone in the twinkling of an eye. What you gained was not worth rejoicing over, what you lost was not worth grieving about. Only when people have a great awakening, they know that the world is but one big dream."

Impressed by this incident, Dongbin received spiritual enlightenment. He fell to his knees before the master and entreated him for instruction in the arts of transcending the limitations of this earthly sphere.⁵

One of the earliest known depictions of Lü Dongbin with Zhongli Qian appears in the Hall of Purified Yang (Chunyang Dian) at the Eternal Joy Temple (Yongle Gong), the great Quanzhen sect Taoist temple in southern Shanxi province, built during the thirteenth century and painted during the mid-fourteenth century.⁶ Significantly, the Eternal Joy Temple was built at Lü Dongbin's birthplace.⁷ The walls of the Hall of Purified Yang are devoted to murals depicting fifty-two scenes from Lü's life.⁸ The majority of these scenes are accompanied by cartouches with texts describing the adjacent stories; thirty-seven of these are direct quotes from the *Record of Divine Transformations and Miraculous Powers of the Lord Emperor of Purified Yang* (Chunyang dijun shenhua miaotong ji), by the Quanzhen Taoist master Miao Shanshi (fl. 1288–1324).⁹ The Yuan dynasty portrait of Lü Dongbin from the Nelson-Atkins Museum (cat. no. 120) is slightly older than the Yongle Gong murals, and depicts the immortal as an elegant scholar standing in a pale brown robe tied with a black belt. On his head is a blue hat; a double gourd hangs from his belt. The tip of his magic sword emerges from under his robe.

The Southern Song dynasty fan painting from the Museum of Fine Arts, Boston (cat. no. 121), depicts Lü Dongbin crossing the waves of Lake Dongting in southern China. Painted in ink and light colors on finely woven silk, the brushwork here is fluid and elegant. Placed asymmetrically to one side, the dignified figure projects an impassive expression as he crosses the gentle waves. Lü wears a white robe and a pale blue cap; the sash that ties his robe is also painted pale blue. In their expressive movements and variations in width, the lines that describe the immortal's robe convey the fluid movement of the figure as he crosses the lake. As Wu Tung has suggested, this figure resembles Southern Song paintings of Bodhidharma crossing the Yangzi River on a reed.¹⁰ The fan has no inscription, and has no seals that might help identify the artist. A crease down the middle indicates that the fan was originally mounted with a central wooden or bamboo spine.

While Lü Dongbin was associated with many sites in China, one of the most famous in the popular imagination was the Yueyang Tower (Yueyang Lou) overlooking Lake Dongting in Hunan province. This tower, originally built during the Kaiyuan reign (713–41) of the Tang dynasty, became famous throughout China through the essay written by Fan Zhongyan (989–1052) entitled "The Pavilion of Yueyang" (1046).¹¹ Lü was often said to have visited the tower to drink wine. An early-twelfth-century account states that there was a portrait of Lü Dongbin in the Yueyang Tower, and according to Hong Mai's *Record of the Listener* (Yijianzhi), another portrait sculpture of the immortal

existed in the White Crane Temple in the city of Yueyang by 1172.¹² It was in Yueyang that Lü Dongbin encountered spirits of a pine tree and willow tree; these nature deities are depicted on either side of the north door of the Hall of Purified Yang at the Eternal Joy Temple.¹³ The association of Lü Dongbin with the Yueyang Tower was even more widespread from the Yuan dynasty onward, with the publication of Ma Zhiyuan's play *Lü Dongbin Thrice Intoxicated at the Yueyang Tower*.¹⁴

A famous poem attributed to Lü specifically mentions the city of Yueyang:

In the morning I travel to the North Sea, in the evening to Cangwu,
In my sleeve is a blue-green snake [the name of Lü's magic sword],
courageous and rough [is my appearance].
Thrice I entered Yueyang, but no-one recognized me.
Singing a song as I flew by Lake Dongting.¹⁵

The Southern Song fan painting from the Metropolitan Museum of Art entitled *The Immortal Lü Dongbin Appearing at the Yueyang Pavilion* (cat. no. 122) gives visual expression to Lü's association with this site. The anonymous painter has depicted the tower in great detail. A large banner hangs from the second story; on it the characters *Yueyang* are visible. Guests on the second floor, interrupted from their banquet, rush to the balcony, while those on the first floor run outside and point to the upper right, where the figure of Lü Dongbin appears flying through the air. A whitewashed wall at the lower right is covered with graffiti, which includes a depiction of a man riding a mule; next to this is written the cyclical date *dingsi*, which may correspond to 1257. The many scholar-officials gazing up at the flying figure in this painting reflect the enormous appeal of Lü Dongbin among both the common people and the literati. This appeal, which cut across social and economic boundaries, made Lü one of the most famous and popular of all later Taoist immortals.¹⁶

—S. L.

The Immortal Zhang Guolao

Ming dynasty, 15th century (traditionally attributed to the

Song dynasty, 960–1279)

Hanging scroll; ink and colors on silk

183.8 × 104.1 cm

National Palace Museum, Taipei

ZHANG GUOLAO, also known as Zhang Guo, was a historical figure active during the reigns of Empress Wu of the Zhou dynasty (r. 684–705) and Emperor Xuanzong of the Tang (r. 712–56). According to the official *History of the Tang Dynasty*,¹ he was an old man who frequented the mountains in the area of modern Hebei and Shanxi, living as a recluse. He was believed to know secret arts for longevity, and claimed to have lived for several hundred years. Once he was summoned by Empress Wu, but feigned death in order to avoid meeting with her. Later, he was once again seen wandering in the mountains in Hebei, and in 733 Emperor Xuanzong sent an emissary to greet him. Zhang refused this emissary by stopping his breath, appearing dead for some time before he finally revived. However, Xuanzong persisted, and eventually persuaded Zhang to come to the capital, where he was welcomed with great reverence. A handscroll by the Yuan dynasty court painter Ren Renfa (1255–1328) in the Palace Museum, Beijing, depicts this meeting.²

While at the capital, Zhang had a number of encounters with the emperor, who continually tested his magical abilities. On two occasions Xuanzong introduced Zhang to men with a special expertise in predicting the ages of others; the first man became confused when he saw Zhang, and the second failed to see him at all, even though they were facing each other. Another time, the emperor had Zhang's rotted teeth knocked out while he was asleep from too much wine; Zhang applied special medicine from a pouch kept near his breast to his gums, and, after another nap, he woke up with shiny white new teeth.

The emperor was so impressed with these events that he decided to marry an imperial princess to Zhang, but Zhang laughed at this proposal, and eventually left the capital for the northern sacred peak, Mount Heng. He nevertheless remained on good terms with the emperor, who gave him several depart-

ing gifts and bestowed upon him the honorary title "Master Who Penetrates Mystery." Xuanzong also established a Taoist temple called the Observatory of Perching on Rose-colored Clouds (Qixia Guan) in Zhang's honor.

Zhang is depicted here as an old man, which corresponds to his description in the *Old Dynastic Records of the Tang*. He is shown as a hermit in the mountains, attended by two jade maidens (*yunü*), common figures in the entourages of high-ranking realized beings (*zhenren*). One maiden places an offering of incense into a censer (*ding*) in front of Zhang, while the other stands behind him, holding a mushroom-shaped *ruyi* scepter. Zhang and his attendants in the lower right are balanced in the upper left by a peach tree, a crane, and other traditional symbols of longevity. The painting bears the seals of the Qing dynasty emperors Qianlong, Jiaqing, and Xuantong.³

Zhang is best known as one of the Eight Immortals (see cat. nos. 117–18). This group appears to have first developed out of the Complete Realization (Quanzhen) movement during the Jin dynasty (1115–1234), and includes some of that movement's patriarchs, such as Lü Dongbin, in addition to historical figures such as Zhang from the Tang and Song dynasties. The Eight Immortals were a favorite subject for dramas, novels, and artistic works in the Yuan and Ming dynasties, and are still popular as gods of good fortune and long life today.

—S. E.

YAN HUI (ACTIVE LATE 13TH–EARLY 14TH CENTURY)
The Immortal Liu Haichan

Yuan dynasty, 13th/14th century
 Hanging scroll; ink and colors on silk
 161 x 79.8 cm
 Chion-ji, Kyoto

✦ Important Cultural Property

YAN HUI'S PAINTING of Liu Haichan is one of the earliest known images of this adept. Liu lived during the turmoil of the Five Dynasties period.¹ He served as Grand Councillor for Liu Shouguang, who established himself as emperor in 911, only to be captured and executed shortly thereafter. While serving Liu Shouguang, he was visited by a Taoist using the pseudonym Zhengyangzi (Master Upright Yang), who initiated him into the secrets of Inner Alchemy. At the end of their meeting, Zhengyangzi requested ten eggs and ten coins from Liu; he placed one of the coins on a table and stacked the remaining coins and eggs on top of it, in the shape of a pagoda. Liu marveled at the feat and said, "This is precarious indeed!" Zhengyangzi responded that it was not nearly as precarious as Liu's present life, and then cast aside the coins and departed. Liu realized the danger he was in, and the next day left behind his riches and his post to become a hermit. He became known as Haichanzi (Master Sea Toad), from which the name of Liu Hai or Liu Haichan derives. Legend has it that he also received teachings on Inner Alchemy from Lǚ Dongbin (see cat. nos. 120–22), and consequently he came to be seen as the fourth patriarch of the Complete Realization (Quanzhen) sect. He is particularly famous as a master of Inner Alchemy, and is sometimes included in the Eight Immortals.

In this painting, Liu sits on a rock next to a bamboo grove and a stream. A three-legged toad, one of Liu's standard iconographical elements, sits on his shoulder. The adept grasps the toad's leg with his right hand, and holds a flowering and fruiting sprig from a peach tree in his left hand (the peach is an ancient symbol of fertility, longevity, and purity).² Liu has a quixotic, resigned expression on his face.

—S. L./S. E.

YAN HUI (ACTIVE LATE 13TH–EARLY 14TH CENTURY)

The Immortal Li Tieguai

Yuan dynasty, late 13th/early 14th century

Hanging scroll; ink and colors on silk

161 x 79.8 cm

Chion-ji, Kyoto

* Important Cultural Property

PERHAPS THE MOST FAMOUS surviving image of Li Tieguai ("Iron-crutch Li"), this painting by Yan Hui depicts the Sui dynasty (581–618) Taoist adept in a mountainous landscape.¹ It is also one of the earliest known images of Li, predating the murals of the Eternal Joy Temple (Yongle Gong) in southern Shanxi province by at least two decades.² Sitting on a rocky outcropping by a stream, with a crag and waterfall in the distance, Li glowers up at a miniature, ethereal form of himself that flies heavenward on a cloud. Barefoot and disheveled, he wears a double gourd at his waist—a symbol of the joining of Heaven and Earth in the adept's own body. His crutch leans against the rock on which he sits. Li's bizarre physiognomy and contorted right hand, which appears to have just released the flying figure above, convey his otherworldly persona with arresting clarity.

The Ming dynasty compendium the *Complete Biographies of the Assorted Immortals* (*Liexian quanzhuan*; 1598), compiled by Wang Shizhen, contains the following account of Li Tieguai:

Li Tieguai had an eminent disposition. He attained the Tao at an early age. While cultivating realization in a mountain cave, Li Laojun [the deified Laozi] and Master Wenqu [an adept of the Shang dynasty] often descended [from heaven] to his mountain retreat, where they instructed him in Taoist teachings.

One day he was about to attend a meeting with Laojun on Mount Hua [the sacred peak in Shaanxi province]. Li said to his disciple, "My physical body will remain here—if my ethereal soul [hun] does not return in seven days, you may cremate my body." On the sixth day the disciple's mother fell ill and he had to rush home, so he cremated the body. On the seventh day Li's spirit returned, but his body was gone and he was not pleased. He thereupon possessed the corpse of a man who had starved to death, and rose up. Because of this, his form is that of a crippled man—but he was not like this originally.³

Li Tieguai became one of the most popular of all Taoist adepts, and was one of the Eight Immortals (see cat. nos. 117–18). He is still worshipped in China today (his image appears on the altar of the Eight Immortals Temple in Xi'an).

—S. L.

HUANG JI (ACTIVE 15TH CENTURY)

Sharpening a Sword

Ming dynasty, 15th century

Hanging scroll; ink, colors, and gold on silk

170.7 x 111 cm

Palace Museum, Beijing

THIS PAINTING DEPICTS the Taoist immortal Li Tieguai sharpening a sword against a stone.¹ Li is identified by his crutch, which leans against a nearby rock. A stream rushes by in the background, and branches of a pine tree loom overhead. The immortal wears a tattered, pale blue-green robe around his waist; his skin is painted with brown pigment. A bright red double gourd hangs from his waist, tied with a blue sash. Around his head is a white headband; his lips are painted with pale red pigment. The astral emanation rising from his torso suggests his ability to transport himself anywhere in time and space (see cat. no. 125).

The significance of this scene is not entirely clear. Howard Rogers has pointed out that the sword is usually associated with Lü Dongbin (see cat. nos. 120, 121) rather than Li Tieguai.² Since Huang Ji created this image of Li Tieguai for the imperial Ming court, Rogers's theory that the immortal is shown here as a spirit-guardian of the state may be correct. In religious Taoism, swords were both a standard part of the ritual paraphernalia of Taoist priests (see cat. nos. 58–61), who used them for purification and exorcism, and the powerful attributes of such martial gods as Zhenwu (see cat. no. 114) and Marshal Wen (see cat. no. 87).

The painting is signed in the upper left corner: "Painted by Sanshan Huang Ji, Judge [*zhenhu*] in the Embroidered Uniform Guard, on duty in the Palace of Humane Knowledge" (*Zhi Renzhi Dian Jinyi zhenhu Sanshan Huang Ji xie*). This is followed by two seals, reading *Kemei* (the artist's *hao*, or nickname) and "Daily approaching the pure and radiant" (*Rijin qingguang*). The latter seal was used by several court painters in the fifteenth century, and indicates that the artist worked in the immediate presence of the emperor. Very little is known about Huang Ji, and this is his only known surviving work. He was a native of Houguan (now Fuzhou) in Fujian province, and worked at the imperial court in the late fifteenth century.³ There is a short colophon on the mounting by the Qing dynasty prince Yongxing (1752–1823).⁴

127

SUN JUE

Female Immortals

Ming dynasty, dated 1410(?)

Fan painting; ink and colors on silk

25 × 23.3 cm

Philadelphia Museum of Art: Purchased, Museum funds (29-40-48)

THIS FAN PAINTING depicts three female Taoist adepts, dressed in skirts made of leaves and jackets made of grass. All three figures are shown as young women, their hair neatly arranged and held in place with combs; each is also barefoot. The right figure holds a staff, and has a backpack containing bananas, twigs, and cloth-wrapped bundles. The middle figure holds a strange root figurine with sprigs of leaves in its hands. The left figure has the most elaborate backpack, containing a bamboo-painted fan, a woven parasol with mushrooms, a skull, a double gourd, herbs, and tassels. The adepts walk along a mountain path, next to rocks and a pine tree. These figures resemble early depictions of the female Taoist adept Magu (Hemp Lady). A Yuan dynasty (1260–1368) painting of Magu in the

Museum of Fine Arts, Boston, depicts this female adept in much the same guise as the figures in the Philadelphia Museum fan—in a mountainous landscape, barefoot, her hair arranged in a topknot, and dressed in a jacket of leaves.¹ A similar group of figures also appears in the Song dynasty handscroll in the Freer Gallery entitled *An Assembly of Immortals*, traditionally attributed to Li Gonglin (1049–1106).²

Magu's biography appears in the Jin dynasty text entitled *Biographies of the Divine Immortals* (*Shenxian zhuan*) by Ge Hong (283–343). Believed to have lived during the reign of Emperor Huan (r. 147–67) of the Han dynasty, Magu was the sister of an adept named Wang Fangping.³ Her appearance was that of a young woman of eighteen, yet since becoming an adept she was said to have thrice seen the Eastern Ocean turn to mulberry fields, an indication of her transcendence of time.

The fan painting bears a short inscription, partially illegible, along the right border. This includes a cyclical date that may be *gengyin*; given the painting's style, this may correspond to the year 1410. This is followed by an unknown artist's signature, which appears to read *Sun Jue*.

—S. L.

NOTES

Introduction

1. For example, the Eight Immortals Temple (Baxian An), the largest Taoist temple in Xi'an, Shaanxi province.
2. Schipper 1993: 164.
3. For discussions of the Taoist concept of immortality, see Robinet 1985: 86; 87–105; Kohn 1990b: 627–40; Kristofer Schipper, "The Immortals," in Schipper 1993: 160–82; and Penny (forthcoming).
4. On Wang Zhaohu, see Holzman 1986; Steuber 1996; and Ebrey 1981: 38–39. Another important source of early stories of immortals is the *Biographies of the Assorted Immortals* (*Lixian zhuan*), attributed to the Han dynasty author Liu Xiang; translated in Kaltenmark 1987.

Cat. no. 115

1. These are the dates suggested in Schipper 1985: 822–23. Xu Xun's dates vary in different sources; later biographies claim that he died in 374, at 136 years of age.
2. This work can be found in the *Xiuzhen shishu*, HY 263, juan 31–36.
3. The popular practices described here can be found in *ibid.*, juan 34.
4. *Xiaodao Wu Xu er zhenjun zhuan*, HY 449. Schipper 1985: 819 dated this text to the ninth century. It is likely to date from the Tang since it uses a name for the temple on Western Mountain that fell out of use when the temple was renamed by Emperor Zhenzong of the Song (see below).
5. The legend surrounding this name is discussed in Schipper 1985. The term "observatory" for Taoist temples supposedly derives from the Tower Observatory (*fouguan*), which Yin Xi ascended to see the ether rising from Laozi as he approached the pass to leave the lands ruled by the Zhou. The continued use of this term suggests the importance of observing stellar phenomena in Taoist practices.
6. Boltz 1987a: 75 points out that this text refers to Xu by a title bestowed upon him in 1295.
7. In the Tang version of the story contained in *Xiaodao Wu Xu er zhenjun zhuan*, HY 449, this pillar forms spontaneously from the blood of a dragon that has just been killed.

THE MEDITATIVE PRACTICE known as Inner Alchemy (*neidan*) was designed as a means to achieve individual spiritual perfection. Its focus was on visualization and the use of symbols drawn from chemical alchemy (*waidan*) and the *Book of Changes* (*Yi jing*) to aid the adept in the process of purification, spiritual renewal, and achieving union with the Tao. The techniques of Inner Alchemy were based on two traditions: ancient disciplines of meditation and self-cultivation, and laboratory experiments in the preparation of elixirs that could both physically and spiritually transform the adept. These disciplines required the cultivation of one's moral integrity and spiritual purity; without these, other efforts would fail.

Although elixirs were believed to confer health, longevity, and even immortality, the creation of these elixirs could be expensive and dangerous. Chemical alchemy involved the collection, refinement, and transformation of ingredients such as cinnabar, lead, gold, malachite, sulphur, mica, saltpeter, and orpiment, some of which are extremely toxic. Death often accompanied their ingestion, but with faith in one's spiritual worthiness, it was believed that the adept would immediately rise to heaven. In its fundamental aspect, chemical alchemy concerned the manipulation of time and space. By refining the rare ingredients for elixirs, the adept gained control over *yin* and *yang*, in the end achieving a state of transcendence over phenomenal reality. The astonishing properties of the elixirs mentioned by the alchemist Tao Hongjing (456–536) are suggested by their equally astonishing names: Efflorescence of Langgan, Powder of Liquefied Gold, Dragon Foetus, Jade Essence, Gold Elixir, and the Nine-times Cycled.¹

Inner Alchemy, in contrast, refers to a technique combining meditation and breath control to visualize the creation of the elixir in the inner landscape of the adept's own body. In this mode, the internal energies (*qi*) of the human body were used

to create the elixir. When successfully achieved, this visualized elixir transformed the practitioner, who was reborn as a divine, embryonic immortal. As alchemy began to be reinterpreted as an internal process, theorists found an important conceptual model to bridge the outer and inner alchemical traditions in the trigram symbolism developed by Wei Boyang (see cat. no. 130). According to Inner Alchemy, *qian* (three unbroken *yang* lines) and *kun* (three broken *yin* lines) represent the first move away from the undifferentiated oneness at the beginning of the world. After *qian* and *kun* became distinct, they intermingled to form the Eight Trigrams and the Sixty-four Hexagrams of the *Book of Changes* (*Yi jing*). Within the body, the *yang* energy of *qian* is manifested by the trigram *li* (a *yin* line enclosed by two *yang* lines), which is represented by the alchemical element mercury and the dragon, while the *yin* energy of *kun* is manifested by the trigram *kan* (a single *yang* line enclosed by two *yin* lines), represented by the alchemical element lead and the tiger.² *Kan* and *li* are secondary manifestations of *yin* and *yang*, containing both of these energies within them.

The goal of the inner alchemical process is to join these energies in a symbolic crucible and purify them in the fires of a symbolic furnace in the body. As a result, the inner *yang* line of *kan* is joined with the outer *yang* lines of *li* to reconstitute the trigram *qian*, thereby purifying the energies of the body into a pure *yang* "elixir."³ This theoretical framework underlies the artworks shown in the following entries, many of which show the specific phases in which the *yin* and *yang* energies of the body are reintegrated into an undifferentiated oneness. Central to these works is the idea that the goal of a Taoist transcendent was not immortality per se, but spiritual perfection and union with the Tao.

WANG XIZHI (307–365)
Scripture of the Yellow Court

Eastern Jin dynasty, dated 356
 Ink rubbing of a stone engraving of the Song dynasty (960–1279)
 Album; ink on paper
 25.2 x 11.2 cm (each page)
 Palace Museum, Beijing

THE *SCRIPTURE OF THE YELLOW COURT* (*Huangting jing*) is one of the most difficult of all Taoist scriptures to understand. It describes the different regions inside the body, the deities that inhabit these regions, and the energies (*qi*) and essences (*jing*) that vitalize the body as they circulate through it. These components are all incorporated into an act of meditation, an inner visualization, the primary goal of which is to nourish an embryonic form that enables the meditator to refine the body and gain endless life.¹ The language of this scripture, however, is terse and imagistic, and does not provide keys to understanding the significance of many of the terms that appear within it. This ambiguity has led many scholars to propose that the text may have been more of a memory aid recited during meditation than a meditation manual as such.² In addition, there was probably a commentarial tradition, either oral or written, that accompanied this scripture when it was first written—an early tradition now lost.³

The version of the *Scripture of the Yellow Court* attributed to Wang Xizhi differs from other editions of the scripture in many important ways. For example, all other editions begin with the statement “Laozi made these heptasyllabic [seven-character] lines while dwelling in reclusion, in order to explain the form of the body and all its spirits,” thereby attributing the scripture to Laozi. But this opening is absent from Wang Xizhi’s text, and its absence suggests that the identification of Laozi as the author of this scripture may not have been standardized until after the middle of the fourth century. Even if this were the case, however, the scripture was still intimately connected with Laozi and the *Daode jing* by Wang Xizhi’s time. Wang’s text also contains stylistic variations not found in other editions. In particular, he opens the scripture with four lines of four characters each before changing to heptasyllabic verse, while all other editions are heptasyllabic throughout. This four-character structure shows similarities with passages resembling the *Scripture of the Yellow Court* in the *Master Who Embraces Simplicity* (*Baopuzi*) written by Ge Hong (283–343).⁴

There are in fact two scriptures that bear the name *Scripture of the Yellow Court*, an “inner” (*nei*) scripture⁵ and an “outer” (*wai*) one.⁶ Wang Xizhi’s text corresponds to the outer scripture. The provenance of the inner scripture is fairly clear, since it contains ideas that developed in the Highest Purity scriptures (see cat. no. 55). It was supposedly revealed to the matriarch of the Highest Purity movement, Wei Huacun, in 288, but it may not actually have been composed until revelations were given to Yang Xi (330–386) in 364 by the deified Wei Huacun and a number of other realized beings (*zhenren*).⁷ The provenance of the outer scripture, on the other hand, is a matter of some controversy. It is much shorter than the inner scripture, which includes most of the outer scripture, although in altered form. This redundancy has led some scholars to propose that the inner scripture was developed from the earlier, outer scripture,⁸ while others have suggested that the outer scripture could just as well be a summarized, “exoteric” version of the older, “esoteric” inner scripture. In any case, the version attributed to Wang Xizhi, which is dated to 356, is the earliest extant text of either version.⁹ Consequently, this edition is the oldest primary source for the *Scripture of the Yellow Court*.

Like many aristocrats of the Eastern Jin dynasty, Wang Xizhi, who is commonly regarded as the greatest early Chinese calligrapher, belonged to a family that adhered to the Celestial Master sect of religious Taoism (*Tianshi dao*).¹¹ It is widely recognized, for example, that the presence of the character *zhi* in Wang Xizhi’s name was an indication of his affiliation with this sect (the same is true of the fourth-century painter Gu Kaizhi).¹² According to the *Jinshu* (*Dynastic history of the Jin*), Wang Xizhi followed Taoist self-cultivation practices, such as the gathering of herbs and minerals for enhancing health and longevity.¹³ These activities were carried out in conjunction with his close friend, the adept Xu Mai, whose brother Xu Mi was the principal patron of the early Highest Purity revelations from which the inner version of the *Scripture of the Yellow Court* developed. As Lothar Ledderose has shown, Wang Xizhi was “more than merely superficially involved in Taoist beliefs.”¹⁴ In the last years of his life (after 361), Wang is described as “following the arts of the Yellow Emperor (Huangdi) and Laozi.”¹⁵

*Classification of Supreme Numinous Treasure Mushrooms,
from the Taoist Canon of the Zhengtong Reign*

Ming dynasty, Zhengtong reign, dated 1445
Woodblock-printed book; ink on paper
35 x 11.3 cm (each page)
Bibliothèque Nationale de France, Paris (Chinois 9546/1387)

MUSHROOMS PLAYED A vital role in early Taoism. Even before the emergence of religious Taoism, mushrooms were sought for their magical powers. Qin Shihuangdi (r. 221–210 B.C.) and Han Wudi (r. 140–87 B.C.) both sent magicians (*fāngshī*) in search of such fungi. Many adepts were said to live on mushrooms; for example, Pengzu, who lived to be over seven hundred years old, ate only mushrooms. According to the *Soushenji* (*In Search of the Supernatural*) of the early third century,

Pengzu was a Yin (Shang) dynasty minister whose surname was Qian and who given name was Jian. He was the grandson of Emperor Zhuangxi and the middle child of Luzhong [Ends of the Earth] family. He lived during the Xia and survived until the end of the Shang dynasty—he is said to have been 700 years old. His regular food was the cinnamon fungus (the *lingzhi*).¹

As Michel Strickmann has shown, the cult of magic mushrooms in China is ancient.² Sima Qian's *Records of the Historian* (*Shiji*; first century B.C.) states that mushrooms were believed to be among the sacred plants that grew on Penglai, one of the isles of the immortals in the Eastern Ocean.³ Since at least the Han dynasty, the appearance of strange and auspicious mushrooms has portended virtuous emperors:

During the reign of the emperor Wu, in the year 109 B.C., according to the *History of the Former Han Dynasty*, a mushroom with nine stalks from a single root grew in a room of the summer palace. A general amnesty was proclaimed throughout the empire, and the Song of the Mushroom Chamber was composed. The text of this song has been preserved.⁴

The use of mushrooms that enable the adept to see the numinous world is common in many cultures.⁵ In the Six Dynasties period (420–589), as well, mushrooms (specifically “mushrooms that nourish the divine” or *yangshen zhi*) are mentioned as among the numinous plants growing on the isles of the immortals.⁶

One of the earliest discussions of the importance of mushrooms in a Taoist context is in Ge Hong's *Baopuzi* (*The Master*

Who Embraces Simplicity). In this text, Ge describes several types of mushrooms, including rock, wood, herb, and flesh mushrooms:

The rock ones are semblances of mushrooms in stone. They grow on famous mountains by the sea. Along island streams there are formations of piled rocks resembling flesh. Those seeming to have head, tail, and four feet are the best. They look like something alive. They are attached to boulders, and prefer high, steep spots, which sometimes render them inaccessible. The red ones resemble coral; the white ones, a slice of fat; the black, wet varnish; the blue, kingfisher feathers; and the yellow, purplish gold. All of them glow in the darkness like ice, being easily visible at night from a distance of three hundred paces.⁷

It is noteworthy that many varieties of mushrooms are in fact luminescent at night, just as described by Ge Hong.

The *Classification of Supreme Numinous Treasure Mushrooms* is believed to have been written during the Song dynasty (960–1279), and is included in the Taoist Canon printed in the mid-fifteenth century. The edition in the Bibliothèque Nationale has a printed frontispiece depicting the Three Purities (Sanqing). A cartouche at the end of the text contains the date: “Zhengtong 10th year [1445], 11th month, 11th day.” The text illustrates 126 varieties of mushrooms, some commonplace and others fantastic in form. All are said to confer longevity, to varying degrees. For example:

The Yellow Jade Mushroom grows on Mount Penglai. Its color is yellow, and its taste bitter. Dongwanggong ate it and became immortal, and lived for 90,000 years. The yellow tiger and yellow fish guard it. It consists of three levels; the lower level has three branches.

Many of the mushrooms in this text are described as being surrounded by multicolored clouds; others have astounding shapes. The text is part of a long tradition of mushroom handbooks, of the type referred to by Ge Hong.⁸

WANG SHIZHEN (1526–1590)

The Alchemist Wei Boyang, from the Complete Biographies of the Assorted Immortals

Ming dynasty, 1600/30

Woodblock-illustrated book; ink on paper

20.7 × 12.6 cm (each page)

Harvard-Yenching Library, Harvard University,
Cambridge, Massachusetts

WEI BOYANG is a semimythical figure from the Kuaiji area of modern Zhejiang believed to have been active in the middle of the second century. The biography contained in the *Complete Biographies of the Assorted Immortals* is based on the *Biographies of the Divine Immortals (Shenxian zhuan)* by the great Jin dynasty alchemist and scholar Ge Hong (283–343).¹

According to legend, Wei entered into the mountains with three of his disciples, where he successfully concocted an alchemical elixir. Already doubting the worthiness of two of his disciples, however, Wei devised a trial to test their devotion. He brought along with him a white dog, and when the elixir was completed, he suggested to his disciples that they first test it on the dog. Yet, unbeknownst to his disciples, Wei had set aside some unfinished elixir, knowing that this incomplete elixir was poisonous and would cause whoever consumed it to die. Wei then fed this unfinished, poisonous elixir to the dog, who promptly fell over dead. Nonetheless, apparently unaffected by what had happened, Wei expressed to his disciples his resolve to consume the failed concoction:

I have turned my back on the paths of the world, and left behind my family. If I do not become an adept from this [elixir], I would still be ashamed to return home. Life and death are one; I will consume it.

Naturally, Wei too died when he took the poisonous elixir. At this point, one of his disciples stated that his master must have had his reasons for taking the elixir, and, putting his faith in his teacher, he also consumed the poisonous elixir and died. The other two disciples refused, however, thinking that it was better to live a few more decades than to risk death for a dubious chance at immortality. After these two faithless students descended from the mountains to make funerary arrangements for their apparently foolhardy companions, Wei, who had actually taken the completed elixir to counteract the effects of the poison, revived, and he proceeded to administer the real elixir to the faithful disciple and to the dog, who were both restored to life.²

The present woodblock print illustrates this story, showing Wei and his faithful disciple together with the dog that accompanied them to the magical realms of adepts and realized beings.

As we can see from the above story, Wei practiced chemical alchemy (*waidan*). However, he was best known in the later imperial period for his influence on the tradition of Inner Alchemy (*neidan*), which reinterpreted the alchemical process and its terminology as representing an internal physiological and spiritual meditation.³ Much of Wei's later fame derives from the alchemical treatise attributed to him, the *Contract of the Three Unities of the Zhou Dynasty (Classic of) Changes (Zhouyi cantong qi)*, a work that seems to have begun as a treatise on chemical alchemy in the late Han dynasty.⁴ The principal innovation of this text is the use of trigrams from the *Book of Changes (Zhouyi or Yi jing)* to explain the alchemical process, as seen in the opening passage:

Qian and *kun* are the gateway to change (*yi*), the father and mother of the various hexagrams. *Kan* and *li* are the walls, the straight axle in the moving hub.

The prominence of imagery from the *Book of Changes* in this work led one of its later commentators, the Five Dynasties writer Peng Xiao, to state: "Master Wei is saying that the cultivation of golden elixir and reverted cinnabar is analogous to [literally, "follows the same road"] the building and transformation [of the world]. Consequently, he relies on the symbols of the *Book of Changes* to discuss it." The symbolic language of the *Zhouyi cantong qi* eventually became one of the primary foundations for later Inner Alchemy, and consequently it is seen as one of China's great spiritual classics.

—S. E.

Illustrations of the Sealed Verification of the Golden Elixir of the Reverted Cinnabar

Qing dynasty, 17th/18th centuries
Handscroll; ink and colors on silk
20 x 1,200 cm
White Cloud Monastery (Baiyun Guan), Beijing

THIS HANDSCROLL (*Jinye huandan yinzheng tu*) contains twenty illustrations that depict the “work” of Inner Alchemy from beginning to end. The illustrations are accompanied by poems that sometimes help to explain them, but that are often just as suggestive and cryptic as the images themselves.¹ The author’s preface tells us that the images were originally divided into two main groups, “Images of Outer Methods” (*wajia xiang*), comprising illustrations 1 and 3–10, and “Images of Inner Methods” (*neifa xiang*), sections 11–19. These groups were supplemented by two separate images (2 and 20), which represent, respectively, the first awareness of differentiated existence, and the final return to undifferentiated oneness. Taken as a whole, the illustrations show the entire alchemical process from the movement out of undifferentiated oneness into the multiplicity of the world, and the return from this multiplicity to oneness through the reintegration of complementary opposites. This process is analogous to the western alchemical principles of coagulation and dissolution.² The illustrations in the text (not all shown) are as follows:

1. The Original Root

An empty circle represents the state of undifferentiated oneness (equivalent to the Tao).

2. Startled Awakening

The six paths of reincarnation: in the hells, as a hungry ghost, as an animal, as an *asura* (a kind of lesser spirit), as a human, or as a *deva* (deity). This indicates the development of differentiated existence from the “original root.”

3. [The Trigrams] *Qian* and *Kun*

Thirty-six palaces flanked by the sun and moon are on a magical mountain that rises from a square island in the ocean. The square shape of the island indicates that it represents earth (as opposed to the heavens), while the palaces probably represent the thirty-six heavens of Taoist and Buddhist cosmology. This indicates the arising of the entire cosmos from the initial differentiation of *yin* (trigram *kun*) and *yang* (trigram *qian*).

4. Alchemical Vessels

A man, who represents the alchemical furnace and the trigram *qian* (three unbroken *yang* lines), and a woman, who represents the tripod or crucible and the trigram *kun* (three broken *yin* lines), are shown. This indicates the goal of Inner Alchemy to harmonize *yin* and *yang*.

5. Lead and Mercury

A male child in a circle, who represents the alchemical element mercury and the trigram *kan* (one unbroken line between two broken lines), and a female child in a circle, who represents the alchemical element lead and the trigram *li* (one broken line between two unbroken lines), are shown.³ This suggests the gradual intermingling of *yin* and *yang*.

6. Harmonization

This is a diagram of the twelve earthly branches (*dizhi*) that represent the twelve spatial directions and times of day, connected by lines. This indicates the full development of differentiated space and time, but also the interconnectedness of these differentiations.

7. Realized Land

A palace is shown rising from a lotus encircled by a wall with a single gate; the accompanying poem discusses the difference between “true” or alchemical lead and “ordinary” lead. This and the following illustrations show the beginning of the process of reunification.

8. Selection

An alchemical crucible covered by a sword on a three-tiered altar is depicted. In front of the altar is a toad with three legs, with a ray of light coming from its mouth that envelopes a crane; these are further symbols of *yin* and *yang*.⁴ This illustration reintroduces the crucible of illustration 4 as the central theme of the alchemical process.

9. Systematization

This illustration depicts a temple compound with stairs leading to a gateway on the left, a temple building, and a three-tiered altar in the courtyard. The three tiers of the altar represent the heavens, earth, and humanity. Exorcistic swords are placed at the four corners of the altar, and are decorated with hanging mirrors that also serve an exorcistic function. This illustration begins the actual ritual process of refining an alchemical elixir.

10. Support

A central figure that may represent the Northern Dipper (*Ursa Major*) sits on a three-tiered altar, with a dragon and a tiger descending on the right and left sides. The figure is flanked by two

beings who the poem suggests represent civil and military officials. The meditator assumes the central role of the Northern Dipper, and draws the essences of *yin* (tiger) and *yang* (dragon) into himself.

11. Consuming Cinnabar

A dragon and a tiger sport with a magical pearl over the ocean. The images of reunification are gradually refined.

12. Nine Tripods

These are the nine tripods cast by the Yellow Emperor as signs of his mandate to rule over the nine traditional regions of China, punctuated by five orbs resting on clouds, which may represent the Five Planets or the Five Phases. Symbolically, the meditator assumes the role of the Yellow Emperor uniting the entire (interior) world, and his crucible is transformed into the nine tripods of this mythical figure.

13. Bringing Forth the Fire

The meditator is shown in two conjoined circles, with his back to the viewer. He is surrounded by the eight trigrams. Beneath him is a flaming crucible. The entire image is encircled by depictions of different phases of the moon and several inscriptions. This is the inner mystery of the alchemical process, where the meditator absorbs the Eight Trigrams and refines them (and himself) over time in his inner crucible.

14. Taking Away the Fire

The same two conjoined circles of section 13 are again depicted, but they are now empty. They are surrounded by the "embodiment" (*ti*) trigrams *qian* and *kun* above and below, and the "use" trigrams *kan* and *li* to the right and left. The entire image is encircled by phases of the moon and more inscriptions. The meditator has been reduced to his principal elements, *yin* and *yang*, shown as two conjoined circles and as the "embodiments" (primary manifestations) and "uses" (secondary manifestations) of these two principles in the four most essential trigrams.

15. Adding and Taking Away

A ray of light comes forth from a crucible surrounded by a dragon and tiger and placed on a three-tiered altar. Within the ray of light the three *hun* or *yang* souls of the body rise to the left, while the seven *po* or *yin* souls of the body rise to the right. The accompanying poem says:

The *yin* *po*-souls harmonize with lead, daily decreasing.

The *yang* *hun*-souls combine with mercury, growing ever-more vigorous . . .

Adding mercury and taking away lead, entirely by means of fire.

The meditator's being is purified of its *yin* elements and becomes pure *yang* energy.

16. Bathing or Purification

An infant hovers on clouds that rise from a crucible on a three-tiered altar. The meditator, now shown as an infant symbolizing pure *yang* energy, undergoes a final purification. Interestingly, this purification is through water (*yin*), in contrast to the previous purification by fire (*yang*).

17. Golden Elixir

A dragon hovers in a fiery atmosphere over a pearl, beneath which is a flaming crucible on a three-tiered altar. The meditator's body has been completely purified into a magical elixir, shown as the dragon and pearl, more symbols of *yang* energy.

18. Embracing the Primordial

A man meditates under a pine tree. Now that the body is purified, consciousness is transformed into pure light through meditation on primordial oneness.

19. Audience with the Primordial

The man rides on clouds that rise from a fire. With body and consciousness both pure, the meditator ascends to meet with primordial oneness.

20. Returning to the Primordial

The empty circle suggests that the meditator has reunited with undifferentiated oneness, completing the cycle.

The handscroll is a Qing dynasty (seventeenth/eighteenth century) copy of a series of illustrations attributed to a Southern Song dynasty (1127–1279) writer using the pseudonym "Master Dragon Eyebrows" (Longmeizi); this author's preface is dated to 1218. The same text can be found in the Ming dynasty Taoist Canon.⁶ Little is known of the author, but he claims to have studied under the disciples of a certain realized being named Liu, who in turn appears to have been a student of the famous Zhang Boduan (984–1082). Zhang's *Writing on Awakening to Realization* (*Wuzhen pian*) is considered to be one of the standard works on the principles of Inner Alchemy.⁷ A prefatory note by a later editor named Wang Qidao dated to 1234 further identifies this text with the great Southern Song Taoist scholar Bai Yuchan (1194–1229). There is also an epilogue by a certain Lin Jing dated to 1249, which affirms the lineage of the text as belonging to the school of alchemy known as "Violet Light" (*zhiyang*) after Zhang Boduan's pseudonym.

13

12

18

17

16

The history of this handscroll and its contents is inextricably linked with the Complete Realization (Quanzhen) sect, even though its alchemical teachings developed independently of this movement. As the Complete Realization sect rose to power in the Yuan dynasty (1260–1368), the lineage from Zhang Boduan to Bai Yuchan was traced back to the Liao dynasty (916–1125) master Liu Haichan (see cat. no. 124), the fourth patriarch of the Complete Realization movement. Although the present text probably predates the formal establishment of this lineage, the image of a three-legged toad in section 8 may already suggest a connection with Liu, since such a toad was often depicted as part of his iconography. The secrets of Inner Alchemy were revealed to Liu by Lü Dongbin (see cat. nos. 120–22), the third patriarch of the Complete Realization sect. By the middle of the Yuan dynasty this lineage came to be known as the “southern” lineage of the Complete Realization sect, in opposition to the “northern” lineage founded by Wang Chongyang (1112–1170), historical founder of the Complete Realization movement.⁴

Since the Yuan dynasty, the headquarters of the northern lineage has been the White Cloud Monastery, where this handscroll is now kept.

Directions for Endowment and Vitality

Ming dynasty, Wanli reign, dated 1615
Woodblock-illustrated book; ink on paper
30.8 x 26.3 cm (each page)
The British Library, London (15113.e.6)

THE DIRECTIONS FOR ENDOWMENT AND VITALITY (*Xingming guizhi*) is a Ming dynasty treatise on Inner Alchemy, richly illustrated with over fifty diagrams and images.¹ The breadth of its text and illustrations led Joseph Needham to call it "the Summa of physiological alchemy [*neidan*]."² As its title suggests, the work is principally concerned with the "endowment" (*xing*, often translated as "nature") and "vitality" (*ming*, often translated as "life" or "life-span") of human life. Essentially, *xing* and *ming* together compose the most fundamental energy that animates the human body, and the purpose of this treatise is to return the secondary energies of the body to the primordial purity of this primary energy.

The first and second illustrations shown here (1a and 1b), called the *Illustration of Broad Illumination* and the *Illustration of Reverse Illumination*, show the inner landscape of the body from the front and back. The first depicts a meditator sitting cross-legged. In his left hand he holds a crow enclosed in a circle, an ancient symbol of the sun, and in his right hand a hare enclosed in a circle, the corresponding symbol of the moon. On his forehead a composite character formed from the three-character phrase "to join endowment and vitality" (*he xingming*) is enclosed in another circle. These three circles represent the *yang* and *yin* energies of the body to the left and the right, and their union in the center. The symbolic crucible of Inner Alchemy is shown in the meditator's abdomen, the place of the lowest of the three "cinnabar fields" (*dantian*), which Needham defined in this context as centers of "vital internal warmth."³ The second illustration shows the spinal cord, which is flanked by the kidneys in the lower body; the kidneys are defined as "dragon fire" on the right, a symbol of *yang* energy within the *yin* side of the body, and "tiger water" on the left, a symbol of *yin* energy within

2b

2a

the yang side of the body. The top circle in the second illustration, which corresponds to the composite character "to join endowment and vitality" in the first, encloses the character's "primordial spirit" (*yuanshen*).

The third image (2a) is called the *Illustration of Bringing Together the Four Symbols*. The animals of the five phases (see cat. no. 9) are shown: the Dark Warrior (an entwined tortoise and snake), representing water and the kidneys on the bottom (north); a red bird, representing fire and the heart on the top (south); a blue-green dragon, representing wood and liver on the left, reading the diagram as if facing the viewer [east];⁴ and a white tiger representing metal and the lungs on the right (west). These animals are directed towards the alchemical crucible, here labeled "realized will" (*zhenyi*). The realized will is explained in the text as "the prime of the trigram *qian* [three unbroken yang lines], the mother of the heavens and the earth, the root of *yin* and *yang*, the source of water and fire, the ancestor of the sun and moon, the font of the three materials [the heavens, the earth, and humanity], and the progenitor of the Five Phases."

Finally, the fourth illustration (2b) is called *Illustration of the Marriage of the Dragon and the Tiger*; Needham has already pointed out the sexual connotations of this title.⁵ A blue-green dragon, symbol of *yang*, and a white tiger, symbol of *yin*, are shown infusing their energies into the alchemical crucible. A girl dressed in blue-green robes rides the dragon, symbol of *yin* within *yang*, while a white-faced boy rides the tiger, symbol of *yang* within *yin*. These images suggest the trigrams *li* (two unbroken yang lines enclosing a broken *yin* line) and *kan* (two broken *yin* lines enclosing an unbroken yang line), which represent mercury and lead, the two fundamental elements transformed in the inner alchemical operation.

The origins of this book are obscure, but it quotes several Ming dynasty writers, such as Luo Nian'an (1504–1564), so it can be dated to the late sixteenth century. The copy shown here was made during the first printing of the work in 1615. It is attributed to a disciple of a certain Master Yin, about whom very little is known.

133

Illustration of Inner Circulation

Qing dynasty, 19th century

Ink rubbing; ink on paper

133 x 56 cm

Richard Rosenblum Family Collection,

Newton Center, Massachusetts

THIS RUBBING, entitled *Illustration of Inner Circulation (Neijing tu)*, shows the circulation of bodily energies that create an internal physiological elixir that will give long life, culminating in an ascent to the heavens. It is largely an illustration of two poems, attributed to Lǚ Dongbin, that are found in their entirety on the left side of the rubbing, and in parts with the specific images they describe.¹

The rubbing consists of a diagram of the head and torso, seen from the side. The entire diagram is framed on the right by the spinal cord, which connects the lower torso with the cranial cavity. Within the three major sections of the body—the head, the upper torso, and the lower torso, the areas of the three “cinnabar fields” (*dantian*)—complementary images of yin and yang energy are shown intermingling. Several other images based on inner alchemical principles and visualization techniques can also be seen; of these, the “three passes” of the spinal cord through which energy moves up and down the body—here shown as three gate-towers—are particularly notable.

Beginning in the cranial cavity, there are nine peaks that suggest the “nine palaces” (*jiugong*) of traditional Taoist meditation; these peaks represent the yang energy of the upper body. Within these peaks lies a “numinous platform” (*lingtai*) that implies the ultimate goal of alchemy, an audience with representatives of the celestial hierarchy. A stream of “spirit water” (*shenshui*) flows down from these mountains—down the spinal cord—illustrating the idea that “Water flows down from the head and is called ‘spirit water,’ while realized energy rises from the [lower] cinnabar field and is called ‘proper fire.’”²

Below the peaks are two dots representing at once the eyes and the sun and moon, symbols of yang and yin energy. Above the eyes there is a “white-haired old man with eyebrows hanging to the ground”; his robe is covered with stylized versions of the character for long life (*shou*). This man represents the yin alchemical element lead, and may have a secondary association with Laozi.³ Below this man is a “blue-eyed foreign monk with arms raised to the heavens.” This monk represents the yang

alchemical element mercury, and may have a secondary association with either Bodhidharma or Maitreya.³ The placement of the *yin* image of the old man over the *yang* image of the young monk implies the idea of *yin* within *yang* and *yang* within *yin*, and the reversal of these energies that is part of the inner alchemical process.

The cranial cavity is framed on the left by the *ren* and *du* energy conduits (*muo*), two of the paths in which energy (*qi*) travels during its circuit through the body. The *du* conduit is the sole conduit that traverses the center of the body from top to bottom, while the *ren* conduit is associated with the womb, giving these conduits a special significance for the inner process.⁴

The middle of the body is dominated by images of the "Weaving Girl" and "Herd Boy" stars, two stars traditionally seen as lovers who meet in the sky once a year. The Weaving Girl represents the kidneys, seat of the element water (*yin*) in the Five Phase system. She sits at a spinning wheel, and a current of energy rises from her to the trachea, shown as a twelve-storied tower that "holds secret explanations." Completing the circuit, a double-current of energy descends from this tower to the Herd Boy, who sits in the middle cinnabar field of the heart, seat of the element fire (*yang*) in the Five Phase system. As Joseph Needham has pointed out, these two images together represent a lesser circulation intermingling the *yin* and *yang* energies of the kidneys and the heart, which corresponds to the greater circulation of the entire body.⁵

The other major internal organs are also indicated in this section by inscriptions, and there are several more symbolic images. Of particular interest is the grove of trees to the side of Weaving Girl. Trees represent the element wood in the Five Phase system, which is associated with the new growth of spring and the rise of *yang* energy from the pinnacle of *yin* in the winter months. Here, however, the proximity of the trees to the Weaving Girl suggests a *yin* correspondence, which brings to mind passages such as "The liver is wood, which flourishes in the west; the lungs are metal, which comes forth from the east—these are the patterns (*li*) of the Five Phases turned upside down."⁶ The normal place of wood in the Five Phase system is in the east, while metal is placed in the west; in Inner Alchemy, however, the placement of these elements is reversed in order to refine *yin* and *yang* energies. Moreover, this grove also illustrates a line from one of the poems attributed to Lǚ Dongbin that talks of "planting golden coins," and in another version of this illustration, the trees are "money trees" that bear coins for fruit.⁷ The golden coins of the poem suggest the *yin* element metal, and

consequently the grove of trees represents a secondary union of *yang* wood and *yin* metal that corresponds to the primary union of water and fire described above.

Finally, the Herd Boy holds in his hands the Northern Dipper (Ursa Major), a traditional image of the circumpolar zone of the sky; this image strengthens both the connections between the torso and the stellar regions, already implied by the Weaving Girl and Herd Boy, and the centrality of the middle cinnabar field in the heart.

In the very bottom of the rubbing, we see *yin* water representing the trigram *kan*. The inscription to the right reads, "The waters of *kan* flow in reverse." This reversal is accomplished by a boy and girl (*yang* and *yin*, or *yin* lead and *yang* mercury) operating treadmills that drive the water upward. This water rises to become *yang* fire, which joins with the "spirit water" of the cranial cavity, representing the extraction of the unbroken line of the trigram *kan* to replace the broken line of the trigram *li*. These two trigrams are thereby refined into the pure *yang* energy of the trigram *qian* (three unbroken lines), the elixir of Inner Alchemy.

The alchemical operation itself culminates in the alchemical crucible of the lower cinnabar field, which unites water and fire. The elixir is shown as four interlinked *taiji* symbols, which hover over the crucible, emitting rays of *yang* energy.

The "iron ox" (*tieniu*) to the left of the alchemical crucible is an image drawn from the first line of the poem quoted to the left: "The iron ox ploughs the field, planting golden coins." Needham interprets the ox as follows: "The ox [represents] the beast of evil desire which has to be ridden and controlled by Everyman. . . . the ox is the motive power for the circulation of *chhi* [*qi*, energy] and *i* [*yi*, will] in the body."⁸ Accordingly, the ox represents the body itself, and the physical and mental inertia of slothfulness which must be overcome to accomplish the alchemical "work."

The rubbing was taken from a carved wooden tablet (now lost) in the White Cloud Monastery (Baiyun Guan) that was commissioned by Liu Chengyin and completed in 1886. According to the inscription in the lower left corner, the carving was based on a painting Liu saw in a library on a certain Tall Pine Mountain (Gaosong Shan). Other examples of the same theme exist, including a Qing dynasty color painting done in the painting academy of the imperial palace.¹⁰

134

WEN BOREN (1502–1575)
Spring Dawn at the Elixir Terrace

Ming dynasty, 16th century
Handscroll; ink and light colors on paper
30.1 × 124.8 cm
National Palace Museum, Taipei

WEN BOREN WAS A nephew of the famous Ming dynasty painter Wen Zhengming (1470–1559), and one of the leading artists of the Wu School of literati painting.¹ His short handscroll entitled *Spring Dawn at the Elixir Terrace* depicts a mountainous landscape, colored in muted ochre and pale blue pigments.² The landscape of cliffs and rounded boulders opens at the left with a balustrade-lined path bordering a stream. Beyond a footbridge, the path disappears behind a cliff, only to reappear in the middle of the scroll, where a boy carries a hoe and a basket of purple mushrooms. Among densely foliated deciduous trees, the path, again bounded by a balustrade, disappears once more into the entrance of a cavern. Beyond this, at the top of a narrow ridge, a thatched roof appears. The painting ends with a depiction of a Taoist adept, standing alone on a promontory surrounded by an ocean of clouds, with a pale mountain range visible in the far distance. The object of the

adept's attention is a crucible that stands on a rock; in this reaction vessel the elixir is being refined. A jet of vapor shoots upward from the crucible's mouth. The painting is signed, "Sketched by Wufeng Wen Boren."

Actual experiments in laboratory alchemy were in fact rare after the Tang dynasty (618–906), owing in part to the great expense of obtaining and preparing the proper ingredients, and in part to the proliferation of the practices of Inner Alchemy.³ The greatest phase of true laboratory alchemy appears to have taken place during the Eastern Jin (317–420) and Six Dynasties (420–589) periods. In one of his visions of the Perfected Being Lady Wei Huacun, Yang Xi (330–c. 386) was told of the numinous elixirs that dedicated adepts could hope to create:

Some will cyclically transform in their furnaces the darksome semen (*yao jing*) of cinnabar, or refine by the powder method the purple ichor of gold and jade. The Langan elixir will flow and flower in thick billows; the Eight Gems (*ba qiong*) will soar in cloudlike radiance. The Crimson Fluid will eddy and ripple as the Dragon Foetus (*long tai*) cries out from its secret place. Tiger-Spittle and Phoenix-Brain, Cloud Langan and Jade Frost, Lunar Liquor of the Supreme Pole (*Taiji yueli*) and Divine Steel of the Three Rings (*sanhuan linggang*)—if a spatulaful of (one of these) is presented to them, their spiritual feathers will spread forth like

pinions. Then will they (be able to) peruse the pattern figured on the Vault of Space, and glow forth in the Chamber of Primal Commencement.⁴

Depictions of the alchemical process in Chinese painting are surprisingly rare. The earliest known examples date to the Yuan dynasty (1260–1368). A painting in the British Museum attributed to Yan Hui (active late thirteenth–early fourteenth century), for example, depicts three of the Eight Immortals (Zhongli Quan, Lü Dongbin, and Li Tieguai) seated around a crucible in which the elixir is being prepared; cast onto the exterior of the reaction vessel are the Eight Trigrams of the *Book of Changes*, symbolizing the cyclical transformations of *yin* and *yang*.⁵ Such images are better known from the Ming dynasty, and survive from the hands of such artists as Qian Gu (1508–1578) and Chen Hongshou (1598–1652), in addition to Wen Boren.⁶

Although it would appear that Wen Boren's painting depicts the alchemical preparation of an elixir, it is more likely that it is a visual metaphor for Inner Alchemy (*neidan*): the creation of the elixir within the adept's own body through meditation and visualization. The techniques of Inner Alchemy were widely practiced from the Song dynasty (960–1126) onward, largely supplanting experiments in laboratory alchemy. Nonetheless, as Nathan Sivin has pointed out, the language of both Outer (chemical)

and Inner (visualized) Alchemy was often interchangeable, and it is frequently difficult to tell from Taoist alchemical texts which technique, or body of techniques, is being referred to.⁷ That Wen Boren's handscroll is an allegory of Inner Alchemy is corroborated by the presence of an attached colophon in cursive script, written by the late Ming artist and dramatist Xu Wei (1521–1593).⁸ This text is written in the classical language of Inner Alchemy, in which the component aspects of the vital energies (*qi*) within the human body are directed toward the creation of the inner elixir, following the symbolism of *yin* and *yang*, the Five Elements (Phases), and the Eight Trigrams.⁹

Mirror with Taoist Adept under a Pine Tree

Song dynasty (960–1279)
Bronze
D. 14.6 cm
Palace Museum, Beijing

136

Mirror with Taoist Adept in Front of a Cavern-Heaven

Yuan dynasty, Zhishun reign, dated 1331
Bronze
D. 19.9 cm
Palace Museum, Beijing

THE BACKS OF THESE bronze mirrors are cast with designs depicting Taoist adepts obtaining the alchemical elixir. Similar mirrors have been excavated from sites in both northern and southern China, and include examples dating to the Song (960–1279), Jin (1115–1234), and Yuan (1260–1368) dynasties.¹ The decoration of these mirrors tends to follow a fixed format: an adept sits in contemplation under a pine tree, while an attendant approaches, carrying either a vessel containing an elixir or a tray with peaches or other gifts. The adepts are usually accompanied by such animals as a crane, turtle, or deer. Sometimes an attendant or messenger is shown descending from the sky on a cloud, bearing a vessel or tray; sometimes the attendant emerges from the door of a cavern-heaven (*dongtian*; see cat. no. 148). Like the scene depicted in Wen Boren's *Spring Dawn at the Elixir Terrace* (cat. no. 134), these images appear to be allegories of Inner Alchemy.

The Song dynasty mirror (cat. no. 135) depicts a Taoist adept seated under a pine tree. He wears flowing robes, and has a halo behind his head.² In the foreground are a tortoise and crane, both symbols of longevity. On the left side, a figure descends on a cloud and offers the adept a vial, presumably containing an elixir.

The second mirror (cat. no. 136) bears a Yuan dynasty date: "Recorded in the *xinwei* year of the Zhishun reign" (i.e., 1331).³ A bearded adept is shown at the right, seated on a rock under a pine tree. He is accompanied by a female attendant holding a tray; on the tray is what appears to be a tortoise. To the right, a deer, a male attendant holding a jar emitting beams of light, and a crane emerge from the open door of a cavern-heaven. The deer and the figure carrying the vessel cross a short bridge over a stream and approach the adept. An inscription in a cartouche next to the deer reads "Made by He Dezhen of Zhang Commandery in Hongdu [an old name for Nanchang in Jiangxi province]." A third inscription appears inside the door to the cavern-heaven, and reads *Yujun Changsha*, which may be translated, "Lodging with a lord in Changsha." There are similar mirrors in the Baoji Museum, Shaanxi province; the Museum of East Asian Antiquities in Stockholm; and the Museum for Applied Arts, Frankfurt; these, however, have no inscriptions.

—S. L.

NOTES

Introduction

1. Strickmann 1979a: 132–33.
2. These associations are complicated by the fact that *kan* and *li* include both yin and yang, so that they can sometimes be represented by symbols of either principle.
3. Although the emphasis on the reconstruction of *qian* which is sometimes apparent in alchemical texts seems to create a bias towards yang energy rather than a balance (or integration) of yang and yin, the complementary reconstruction of *kun* could also be implied. See, in particular, Needham et al. 1983: 47–67.

Cat. no. 128

1. See Kroll 1956a: 149.
2. See, for example, Schipper 1975, and Robinet 1993: 55–96.
3. There are still later commentaries from the Tang dynasty preserved in the Taoist Canon; see Robinet 1993.
4. Schipper 1975.
5. Full title: *Huangting neijing jing*. The first four stanzas of this version of the *Huangting jing* are translated in Kroll 1956a: 152–55.
6. Full title: *Huangting waojing jing*.
7. For an ink rubbing that transmits Yang Xi's version of the text (preserved in Dong Qichang's *Xihong tang fatie*), see Ledderose 1984: fig. 10.
8. For example, see Schipper 1975.
9. The term "outer" can have the connotation of "exoteric," while the term "inner" can signify "esoteric," although these meanings are not necessarily applicable here.
10. Wang Xizhi's original manuscript of the *Huangting jing* was destroyed during the An Lushan rebellion of 755; see Ledderose 1984: 261.

8. Strickmann 1966: 15.

Cat. no. 130

1. This biography is contained in the *Yunji qiqian*, HY 1026, juan 109. On the *Complete Biographies of the Asorted Immortals*, see Hu 2000: no. 7.
2. There are similar stories about other alchemy masters from the medieval period; for example, see the *Zhen'gao*, HY 1010, juan 5: 8.
3. On the physiological character of Inner Alchemy, see Needham et al. 1983.
4. Pregadio 1995: 155–73, suggests that the *Zhouyi cantong qi* may have had a somewhat more complicated history, beginning as an "apocryphal" (wei) commentary to the *Book of Changes*, being reinterpreted as a treatise on outer alchemy in the Six Dynasties, and finally being adopted by theorists of Inner Alchemy in the Tang–Song period.

Cat. no. 131

1. The first seven poems are translated in Kohn 1993: 230–35.
2. See Needham et al. 1983 for a preliminary comparison of Western and Chinese alchemical techniques.
3. Note that this is a reversal of the usual attributions of *kan* and *li*: *kan* is normally associated with yin, female, and lead, while *li* is normally associated with yang, male, and mercury (see cat. nos. 58–59). This reversal is

explained by the yang line within the yin trigram *kan*, and the yin line within the yang trigram *li*, which are being represented here to indicate the presence of yang within yin and yin within yang.

4. The three-legged toad is a symbol of the Taoist adept Liu Haichan; see below and cat. no. 124.
5. These are ancient symbols of yin and yang.
6. HY 151.
7. For a study and translation of this work, see Robinet 1995.
8. The first four patriarchs of both lineages, through Liu Haichan, are the same. Supposedly, Wang took the teachings of these patriarchs and established the northern lineage, while Zhang Boduan used their teachings to develop the southern lineage of Inner Alchemy. In actuality, the teachings of Zhang Boduan developed prior to the Complete Realization sect, and the concept of a "southern lineage" was developed by the Complete Realization sect primarily to incorporate the independent alchemical traditions that had developed out of Zhang's teachings during the Song dynasty.

Cat. no. 132

1. Many of these illustrations, including the ones discussed here, are reproduced in Needham et al. 1983.
2. Ibid.: 229.
3. Ibid.: 38.
4. Alternately, the dragon and tiger could be read as reversed symbols indicating yin in yang and yang in yin; see ibid.: 58.
5. Ibid.: 104.

3. Ibid.: 157.

ONE OF THE EARLIEST TEXTS of religious Taoism, the *Scripture of Great Peace* (*Taiping jing*), teaches a profound respect for the Earth as a living body. This section of the exhibition catalogue explores the traditional Taoist concept of the natural landscape as sacred and reflecting the inherently divine structure of both the cosmos and the inner human body (i.e., macrocosm and microcosm). The divine correspondence between the outer terrestrial and inner landscape of the human body is a fundamental aspect of Taoist techniques of visualization and Inner Alchemy, and can be seen in such works as the *Illustration of Inner Circulation* (*Neijing tu*; cat. no. 133), a diagram that originated in the Six Dynasties period (420–589).

This concept of the Earth as a sacred body is often given visual expression in Chinese paintings. The earliest Chinese texts that discuss the theory and practice of landscape painting, for example, emphasize the importance of the artist capturing and conveying the dynamic movement of vital energy (*qi*) that defines and animates the dynamic forms of the earth. The concept of the Earth as sacred is explored here on several levels. First is the concept of the sacred mountain. Mountains are revered throughout Taoist history as places where adepts meditate, pursue alchemy, and encounter immortals and gods. In mountains can be found numinous cavern-heavens (*dongtian*), mysterious grottoes that are actually gateways to the spirit world. A direct extension of this concept of sacred space is the frequent siting of Taoist temples on or near mountains.

Examples of these concepts of sacred space as illustrated in Chinese painting include Juran's *Seeking the Tao in the Autumn Mountains* (cat. no. 138), Ni Zan's *The Crane Grove* (depicting an outdoor Taoist stone altar; cat. no. 139), Dai Jin's *Seeking the Tao in a Cavern-Heaven* (cat. no. 148), Wen Zhengming's *The Seven*

Junipers (a painting of seven trees that are living symbols of the seven stars of the Northern Dipper; cat. no. 147), and a large topographical painting by Guan Huai, a Qing court artist, depicting the Zhengyi (Orthodox Unity) sect temple complex at Dragon and Tiger Mountain (Longhu Shan) in Jiangxi province (cat. no. 151).

Illustration of the True Forms of the Five Sacred Peaks

Rubbing from a stone stele at the Taoist Temple of the Central Peak,
Mount Song
Ming dynasty, Wanli reign, dated 1604
Hanging scroll; ink on paper
270 x 118 cm
Dengfeng Bureau of Cultural Relics, Henan

TAOIST PRACTITIONERS, and the religious ascetics in China before them, have always had a passion for mountains, rivaled only by that of great nature poets such as Xie Lingyun (385–433). The great patriarch of chemical alchemy Ge Hong (283–343) says the following in his *The Master Who Embraces Simplicity* (*Baopuzi*):

Those who mix medicines, who are avoiding political turmoil or who seek quietude in order to practice the Way, have always gone into the mountains.¹

However, the very remoteness from civilization that gave mountains their value also made them dangerous places, and Ge Hong continues, “Most of those who do not know the methods for entering mountains encounter troubles and harm.” In order to protect themselves from tigers, wolves, and mountain spirits, who would cause tree branches and boulders to fall on unwary travelers and misguide them over precipitous cliffs, Taoists would wear (and sometimes ingest) talismans, believed to imitate the “true forms” (*zhenxing*) of, and thus embody the energy of, the mountains they climbed. These talismans would cause the gods of the mountain to protect their wearer, and lesser spirits to submit to his (or her) commands.

This rubbing was taken from a stone stele kept at the Zhongyue Miao, or Temple of the Central Peak, on Mount Song in Henan province. The temple has a number of stelae illustrating this theme, of which this is the oldest. It shows the “true forms” of the Five Sacred Peaks (*wuyue*) of China. They are as follows: the Eastern Peak of Mount Tai (Shandong province), shown in the upper right, the Southern Peak of Mount Heng (Hunan province), shown in the lower right, the Western Peak of Mount Hua (Shaanxi province), shown in the lower left, the Northern Peak of Mount Heng (Hebei province), shown in the upper left, and the Central Peak of Mount Song (Henan province), shown in the middle. Each “true form” is accompanied by an inscription that tells where the peak is located, which of the Five Planets it corresponds to in the Five Phase system (see cat. no. 17), and what god rules over it. Additional information, such as the

most famous classical reference to the peak, the titles given to its god in the Kaiyuan era (713–41) of the Tang dynasty, and the changes made to the titles in the Song dynasty (960–1279), is also included.

Above the talismans there is an inscription dated to 1604, during the Wanli reign (1573–1620) of the Ming dynasty, by the government official Fang Damei,² who served as a Regional Inspector of Henan for the Censorate when this was written. Fang states that the “true forms” of the Five Sacred Peaks were first given to Emperor Wudi of the Han dynasty (r. 140–87 B.C.) by the Queen Mother of the West (Xi Wangmu). This statement is based on a medieval legend of Emperor Wudi, wherein he was given sacred scriptures by the Queen Mother of the West and the Lady of the Highest Primordial (see cat. nos. 26, 97). He mounted these scriptures on violet brocade with a coral roller, placed them in a gold case and sealed them in a box of white jade. However, Wudi’s nature was too violent and lustful to be suited to the Way, and after becoming disappointed with his progress, the Queen Mother caused all the scriptures, and the building in which they were kept, to be burned. Fortunately, the emperor transmitted a copy of the “true forms” of the Five Peaks to his minister Dong Zhongshu, and all later copies derived from this one.³ While this story resides in the realm of legend rather than historical fact, the “true forms” existed in some shape by the Jin dynasty (265–420), and are mentioned prominently by Ge Hong, who says, “I have heard Master Zheng [Ge’s teacher] say that there are no more significant works on the Way than the *Writ of the Three August* and the *Illustration of the True Forms of the Five Peaks*.⁴”

The “true forms” of the Five Peaks seen here were common in both China and Japan, and can also be found on later stelae such as one dated to 1682 in Xi’an, of which the Field Museum in Chicago has a rubbing.⁵ At the same time, the Ming dynasty Taoist Canon, which was printed over a century before the present stele, preserves an alternate version of the “true forms” of the Five Peaks;⁶ the former are more abstract and talismanic, while the latter resemble maps that highlight areas of sacred significance within each peak.

—S. E.

138

JURAN (ACTIVE C. 960–80)

Seeking the Tao in the Autumn Mountains

Northern Song dynasty, 10th century

Hanging scroll; ink on silk

156.2 × 77.2 cm

National Palace Museum, Taipei

JURAN WAS A BUDDHIST MONK active in the tenth century. He worked at the courts of the Southern Tang (923–36) and Northern Song (960–1126) dynasties, in Nanjing and Kaifeng. A pupil of the great landscapist Dong Yuan, Juran became one of the most famous painters in Chinese history. He and his teacher were described as follows by the Northern Song critic Shen Gua (1031–1095) in his *Casual Writings from the Stream of Dreams* (*Mengqi bitan*) of c. 1090:

In the Jiangnan area [south of the Yangzi] during the time of the Southern Tang's second ruler [r. 926–34], there was a Director of the Northern Park, Dong Yuan, who excelled in painting and was especially skilled in distant views with autumnal mists. He mainly depicted the real mountains of Jiangnan and did not make brush-drawings of extraordinary heights. After him, the monk Juran of Jianye [Nanjing] followed Yuan's method and fathomed marvelous principles. Generally the brushwork of Yuan and Juran should be viewed at a distance. Their use of the brush is very cursory and if [their paintings are] seen from nearby, they may not seem to resemble the appearance of things; but, if viewed from afar, scenes and objects are clear, and deep feelings and distant thoughts [arise], as if one were gazing on another world.¹

The title of Juran's *Seeking the Tao in the Autumn Mountains* fully expresses the meaning of this remote and dynamic landscape. Situated in a ravine, sitting under the eave of a thatched dwelling and entertaining a guest, a recluse contemplates the vital energy (*qi*) of the mountains that visibly swirls around his retreat. The landscape in this painting is a symbol of cosmic process, and simultaneously a symbol of the inner spirit-landscape of the human body. "Seeking the Tao" here suggests that the adept is aware of the numinous life-force that creates and gives form to the terrestrial landscape, and of the fact that what seems solid is actually in flux—a flux generated by the flow of *qi* through the earth. These ideas lay at the heart of the Chinese discipline known as *fengshui* (geomancy).

—S. L.

139

NI ZAN (1306–1374)

The Crane Grove

Yuan or early Ming dynasty, c. 1360/74

Handscroll; ink on paper

30.5 × 54 cm

China National Museum of Fine Arts (Zhongguo Meishu Guan),

Beijing

A NATIVE OF WUXI in Jiangsu province in south-central China, Ni Zan was one of the most famous painters in Chinese history.¹ Ni's family was devoted to the Orthodox Unity (Zhengyi) sect of religious Taoism. Shortly after his birth, Ni's father died. He was subsequently brought up by his half-brother, Ni Zhaoxun (1279–1328), who was closely acquainted with the Taoist adept Zhang Yu (see cat. no. 38) of Mount Mao (Mao Shan) and with the priest Wu Quanjie (see cat. no. 64).² Ni Zan spent most of his life during the Mongol-ruled Yuan dynasty (1260–1368). As a young man he was widely admired for his poetry, calligraphy, and painting. As the hold of the Mongols weakened in the 1350s, affluent families like Ni Zan's suffered from exorbitant taxation. To escape this burden, Ni gave his estates and most of his possessions to relatives and friends, and lived for nearly twenty years on a houseboat.

The Crane Grove is dedicated to a Taoist priest of the Divine Empyrean (Shenxiao) sect named Zhou Xuanzhen (b. 1328), whose sobriquet was Helin (Crane Grove).³ This painting is the only surviving work by Ni Zan depicting a Taoist ritual space.⁴ At the center of the scroll is a grove of trees with a stone altar (*shitan*) next to a riverbank. The painting is followed by twenty colophons, including inscriptions by several Yuan scholars and the

Ming artists Wen Zhengming (1470–1559) and Dong Qichang (1555–1636).⁵ These colophons are deeply informed by religious Taoism. The Yuan scholar Zheng Cai, for example, writes:

Among the sounds of jade chimes, [you] worship Purple Tenuity,⁶
Wending through the void, the white crane has flown [here] with
his flock.
We know [from this] that the consort of Heng Shan has arrived,⁷
Is this not the Prince of Mount Gou who has returned?⁸
Close to Heaven, the Jasper Altar has beckoned him to descend,
The moon-born pearl trees are scattered with his coming and
going.
One admires you, sir, who have attained the Tao and penetrated
boundless space,
As the five-colored spring clouds cover your robes.⁹

Further evidence that Ni Zan was closely acquainted with Zhou Xuanzhen is provided by a poem in Ni's collected writings, inscribed on a now-lost portrait of the Taoist priest:¹⁰

Settling in Perfection in the high halls of Purple Emptiness,¹¹
He rests his phosphor [chariot] in the mysterious palaces of the
Utmost Tao.¹²
His sword reflects the bright moon through jade and pearl trees,
His belt ornaments make tinkling sounds in the numinous wind
of the Seven Star Junipers.
Led by the Purple Luan [bird] and [sounds of] pan-pipes,
He is followed by White Jade Lads.
He is a transformed hermit, manifested like Zuo Yuanfang.¹³
In summoning demons and spirits, he resembles Qi Shaoweng.¹⁴
Exhaling yang and inhaling yin, he supports primordial creation,
Enfeoffing mountains and summoning clouds, he employs the
God of the Soil.
Three plucks of his zither and the hundred gods delight,
The womb-immortal dances in the vastness of the red clouds
of dawn.¹⁵

—S. L./S. E.

140

NI ZAN (1306–1374)

The Purple Mushroom Mountain Dwelling

Ming dynasty, c. 1370

Hanging scroll; ink on paper

80.5 × 34.8 cm

National Palace Museum, Taipei

WHILE UNDATED, this landscape by Ni Zan can be attributed to the final decade of his life.¹ The phrase “purple mushroom” in the painting’s title refers to the Four Sages of Mount Shang (see cat. no. 23). These four hermits of the early Han dynasty lived on mushrooms, and one of them, the alchemist Luli, composed a song known as the “Song of the Purple Mushroom.” In the Six Dynasties period (420–589), the Four Sages were perceived as Taoist hermits, and are called *xian* (immortals) in Ge Hong’s *The Master Who Embraces Simplicity* (*Baopuzi*).²

In his inscription on this painting, Ni Zan alludes to the purple mushrooms of Luli’s song:

The mountain dwelling faces the Jade Sea,
... the Purple Mushrooms are lustrous.³
Over the clouds, one flies with “duck shoes,”
In the moon, one hears phoenixes and pipes.
Wood smoke rises from the stone stove,
Bamboo and snow are scattered before the columns.
Who sees noble scholar Chen?
Serene, he is skilled at nourishing life (*yang sheng*).⁴

The image of the purple mushroom was common in Yuan poetry written by Taoist scholars. A poem by the adept Yu Ji (1272–1348) that refers to the breathing techniques of Inner Alchemy alludes to the purple mushroom as a symbol of self-realization:

A thousand years, embracing the subtle respiration,
Moving together with the sun and the moon;
Looking forward to the time when I will become a yellow-haired one,
Daily awaiting the growth of the purple mushroom.⁵

In their apparent simplicity, Ni Zan’s landscapes present a world detached from the social turmoil that shook China in the fourteenth century. Ni’s cultivation of his moral integrity at a time when intellectuals were faced with difficult political choices made him a cultural hero during his lifetime. His Taoist orientation is apparent from both his collected writings and the friendships he cultivated with Taoist priests and adepts. He was, for example, a good friend of the great landscape painter Huang Gongwang (1269–1354), a Complete Realization (*Quanzhen*) adept who was an expert in divination and *fengshui* (geomancy).⁶

—S. L.

WU BOLI (ACTIVE LATE 14TH–EARLY 15TH CENTURY)
Dragon Pine

Ming dynasty, late 14th century

Hanging scroll; ink on paper

120.9 × 33.5 cm

The Metropolitan Museum of Art, New York, Edward Elliott Family Collection, Gift of Douglas Dillon (1984.475.3)

WU BOLI WAS A Taoist priest who lived in the late Yuan and early Ming dynasties.¹ Active at the headquarters of the Orthodox Unity (Zhengyi) sect, Wu was closely associated with another Taoist priest of this sect, Fang Congyi (c. 1301–after 1378), whose work is also represented in this exhibition (cat. no. 143). Both Wu and Fang lived in the Highest Purity Palace (Shangqing Gong); this temple is depicted as it appeared in the eighteenth century in Guan Huai's topographical painting of Dragon and Tiger Mountain (Longhu Shan; cat. no. 151). In 1406 Wu Boli was ordered by the Yongle emperor (r. 1403–24) to accompany the Forty-third Celestial Master (*tianshi*), Zhang Yuchu (1361–1410), to search for the immortal Zhang Sanfeng at Mount Wudang (Wudang Shan) in Hubei province.

As a painter Wu Boli specialized in scenes of withered trees, bamboo, and stones. While unsigned, Wu's *Dragon Pine* bears one of the artist's seals. As Chiang I-han has shown in his study of this scroll, Wu's painting reflects the clear influence of the tenth-century masters Dong Yuan and Juran (see cat. no. 138).

This scroll bears an inscription at the top by the Celestial Master Zhang Yuchu. In addition to being the leading Taoist cleric in China during the early Ming dynasty, Zhang was a prolific artist, famous for his paintings by the age of fifteen.² Among the collectors' seals on the scroll is the "half-seal" used as an inventory mark during the early Ming reign of Hongwu (1368–98).

The ancient pine tree of Wu Boli's painting is a symbol of longevity, and of the Tao itself. Like the dragon, and similarly symbolizing the *yang* element, it exists in proximity to water, symbolizing *yin*. As Wen Fong has shown, the powerful animation of the tree brings to mind the description of a pine tree by the tenth-century landscapist Jing Hao:

Among the trees, one had grown to occupy a huge area by itself. Its aged bark was covered with green lichen. It looked as if it were a flying dragon riding the sky, or as if it were a coiling dragon aiming at reaching the Milky Way.³

—S. L.

LU GUANG (C. 1300–AFTER 1371)
Spring Dawn at the Cinnabar Terrace

Ming dynasty, c. 1369

Hanging scroll; ink on paper

61.3 x 26 cm

The Metropolitan Museum of Art, New York, Edward Elliott Family Collection, Purchase, The Dillon Fund Gift (1982.2.2)

LU GUANG'S SMALL hanging scroll depicts a Taoist temple in a mountainous landscape. Recent research suggests that the painting depicts Mount Mao (Mao Shan), an ancient Taoist center near Nanjing in Jiangsu province.¹ Painted in dry monochrome ink, the scroll depicts a towering mountain peak with lesser peaks to either side, at the base of which is a Taoist temple. The "cinnabar terrace" of the painting's title probably refers to the slanted terrace just below the tall central peak. On this terrace, enclosed by a low fence or balustrade, is an outdoor Taoist altar. This type of altar appears in several other paintings of the Yuan and Ming dynasties, including works by Ni Zan and Shao Mi.² The character *dan* in the title can mean both cinnabar and elixir. Furthermore, it is likely that the title refers not to the chemical refining of the elixir of immortality, but to Inner Alchemy (*neidan*), in which the internal energies of the adept's own body are channeled through visualization to create the "inner" elixir.

The artist's inscription, written at the upper right, reads:

Picture of "Spring Dawn at the Cinnabar Terrace," painted by
 Tianyu [Lu Guang] for Boyong.

Ten years I stayed in guest houses, cut off from the dust and disorder [of the world].

On the river, returning home, I think of solitude.

Jade vapors [*yu qi*] float in the Void, in the Spring there is no rain,
 The elixir's glow emerges from the well, becoming clouds at dawn.³

In the wind, from time to time I lean on a dragon staff,

Under the moon, [I hear] the Luan [bird] and *sheng* [pipes], sounds
 I haven't heard for a long time.

Rejoicing, I face the old immortal, far away from family.

Seated in their midst, we examine paintings and discuss literature.

While little is known about Lu Guang's own beliefs with regard to religious Taoism, he is known to have painted this subject more than once, suggesting that, like his contemporaries Huang Gongwang (1269–1354) and Ni Zan (1306–1374), he was aware of and may have practiced the Taoist techniques of Inner Alchemy.⁴

—S. L.

143

FANG CONGYI (C. 1301—AFTER 1378)
Cloudy Mountains

Yuan dynasty, c. 1360

Handscroll; ink and light colors on paper
26.1 x 144.5 cm

The Metropolitan Museum of Art, New York, Purchase, Gift of
J. Pierpont Morgan, by exchange (1973.121.4)

FANG CONGYI was a Taoist priest of the Highest Purity Palace (Shangqing Gong) at Dragon and Tiger Mountain (Longhu Shan; see cat. no. 151), the headquarters of the Orthodox Unity (Zhengyi) sect in Jiangxi province.¹ Although he spent most of his life at Dragon and Tiger Mountain, he worked briefly in Dadu (Beijing) in the 1330s. His nickname was Fanghu (Square Jar), the name of one of the isles of the immortals in the eastern sea (see cat. no. 149). He was known to and admired by many of the leading literati of the Yuan dynasty (1260–1368), including such figures as Song Lian (1310–1381), who wrote several colophons on his paintings.² Fang was one of several Yuan Taoist priests who were also painters; among these were the Celestial Master Zhang Yucai (r. 1295–1316) and Deng You (c. 1300–after 1378), a monk who trained at Dragon and Tiger Mountain and later served as abbot of a Taoist temple in Wenzhou, Zhejiang.³

Contemporary accounts of Fang Congyi hint at his deeply religious and cultivated persona. The scholar Wei Su (1303–1372), who knew Fang, wrote in a colophon on one of his works:

Fanghu studied the Tao at Dragon and Tiger Mountain. Undefined by worldly dust, the workings of his mind are superior. Often he paints landscapes which have an extraordinary flavor. Wuyi, Kuanglu, Heng, Tai, Huabuzhu, these are all mountains which he frequently depicted for me. As for the Immortal Cliffs, it is the place where he habitually sits and passes his leisure time. Moreover, this man voyages beyond the world and is unfathomable. When inspired, he gives spontaneously without even asking your name; otherwise, he will not produce one stroke.⁴

Another Yuan scholar, Li Cun (1281–1354), wrote:

Fanghu's brush pursues the state of immortality. Accordingly, it gives shape to the shapeless, and returns that which has shape to shapelessness. That this can be done in painting must indeed be the ultimate achievement of art. If Fanghu were not himself an immortal, could he have done this?⁵

Fang Congyi's *Cloudy Mountains*, from the Metropolitan Museum of Art, New York, has been described as "among the most spectacular of Fang's extant works."⁶ Beginning with a densely textured spit of land with lush trees and rounded masses of earth, with the elegant roofs of a temple visible at the right, the painting proceeds to depict a long mountain range that turns and twists like a dragon flying through space, only to dissolve completely into empty mist at the end of the scroll. As several scholars have observed, this work strikingly conveys the subtle transformations of solid matter into vital energy (*qi*) and vital energy into solid matter that characterize the workings of the natural world. As Richard Barnhart has written, speaking of another work by Fang, "This kind of almost tangible sense of ongoing process intertwining the natural world, man, and artistic creation might be thought of as the unspoken, underlying meaning of all Yuan scholar-painting, but few succeeded better than Fang Congyi in giving it vivid, direct visual expression."⁷

—S. L.

144

CHEN RUYAN (c. 1331–1371)
Mountains of the Immortals

Yuan dynasty, late 14th century
 Handscroll; ink and colors on silk
 33 × 102.9 cm

The Cleveland Museum of Art, Gift of Mr. and Mrs. A. Dean Perry
 (1997.95)

CHEN RUYAN'S handscroll presents a classic illustration of an immortals' paradise, as conceived by Taoists from at least the Six Dynasties period onward. Comprising a range of mountains painted in the blue-and-green (*qinglü*) style, the painting depicts a realm far from the dusty world. At the upper right a red-walled Taoist temple nestles in a steeply ascending valley. In a clearing, a realized being (*zhenren*) sits on a carpet next to a *qin* zither and *lingzhi* mushrooms, while watching a young attendant who dances with two cranes. Toward the end of the scroll, two immortal figures walk in another clearing, among auspicious animals and numinous plants. In the air above, another immortal flies on the back of a crane. Waterfalls and clouds are evidence of the mountains' breath, or *qi*.

The presence of azurite (blue) and malachite (green) pigments in the painting alludes both to antique styles of painting and to Taoist elixirs, for both minerals were used in elixirs from at least the Six Dynasties period onward.¹

Chen Ruyan lived for most of his life in Suzhou, Jiangsu province.² He was a close friend of Ni Zan (1306–1374) and Wang Meng (1308–1385), both of whom were known for their Taoist images (Ni Zan and his family were also supporters of religious Taoism).³ When the rebel Zhang Shicheng took control of Suzhou toward the end of the Yuan dynasty (1260–1368), Chen Ruyan served as a military advisor to Pan Yuanming, Zhang's brother-in-law. After Zhu Yuanzhang established the Ming dynasty in 1368, Chen traveled to the new capital, Nanjing, and accepted an official post as registrar (*jinglu*) of Jinan, Shandong province. Due to an unknown offense, Chen Ruyan was executed in the autumn of 1371.

The Cleveland handscroll is unsigned, but bears an inscription by Ni Zan at the upper right:

Mountains of the Immortals was painted by Master Chen Weiyun [Chen Ruyan]. In its rich elegance and pure detachment, he has profoundly captured the brush-spirit of Zhao Ronglu [Zhao Mengfu, 1254–1322]. Who else could have done this? Now one can no longer obtain [his works]. On the second day of the twelfth month of the year *xinhai* [1371], inscribed by Ni Zan.

Ni's allusion to the works of Zhao Mengfu as the model for Chen Ruyan's painting is born out by such blue-and-green style landscapes by Zhao as *The Mind-Landscape of Xie Youyu* in the Princeton University Art Museum.⁴

Mountains of the Immortals was Chen Ruyan's best-known painting from the early Ming dynasty onward.⁵ The scroll bears seals of Xiang Yuanbian (1525–1590), Zhu Zhichi (late Ming dynasty), Liang Qingbiao (1620–1691), Gao Shiqi (1645–1704), and Lu Xinyuan (1834–1894).⁶

—S. L.

145

PUGUANG (ACTIVE C. 1286–1309)
Isles of the Blessed

Yuan dynasty, late 13th/early 14th century

Handscroll; ink and colors on silk

31.5 × 970 cm

Kaikodo, New York

PUGUANG'S *ISLES OF THE BLESSED* depicts an ocean, the mysterious waves of which are alternately tempestuous and calm. Scattered over the surface of the ocean is a chain of islands. The first seven float like rafts on the water, while three at the end, with sheer, unapproachable cliffs, are firmly anchored in the depths. The latter almost certainly represent the immortals' islands known as Fanghu, Yingzhou, and Penglai.¹ Temples and palaces inhabited by Taoist adepts appear on each island. The first seven islands may represent the human realm, while the last three comprise the realm of the perfected beings (*zhenren*) who approach the islands flying on cranes and clouds.

The ocean in this painting is a symbol of transformation. In Taoist thought, change is the fundamental nature of reality. This belief provides the intellectual underpinnings of the ancient *Book of Changes* (*Yi jing*), the visual symbolism of which was adopted by Taoism as a way of illustrating the transformations of *yin* and *yang*, symbolized here by the constantly shifting patterns of the waves.²

Puguang was a Buddhist monk from Datong, Shanxi province. He was born during the Jin dynasty (1115–1234) and died in the early Yuan dynasty (1260–1368). He knew both Wanyan Shou (1172–1232), a Jin prince and painter, and the painter and calligrapher Zhao Mengfu (1254–1322).³ Like Zhao, he served as a scholar-official in the early Yuan government. He was particularly famous as a calligrapher.

This handscroll is signed, "Puguang, Chief Academician in the Zhaowen Academy, made in the Moon Pool Meditation Hall." The scroll is characteristic of early Yuan paintings in the lineage of the Southern Song court painter Ma Yuan (active early thirteenth century). Comparison with Ma's *Views of Water* album in the Palace Museum, Beijing, and the *Sketches of Water* attributed to Ma in the National Palace Museum, Taipei, confirms an early Yuan date for the scroll, as Howard Rogers has shown.⁴

—S. L.

LENG QIAN (ACTIVE 14TH CENTURY)
Mount Boyue

Yuan dynasty, Zhizheng reign, dated 1343
 Hanging scroll; ink on paper
 84.4 x 41.4 cm
 National Palace Museum, Taipei

LENG QIAN WAS A Taoist master and musician of the Yuan dynasty (1260–1368), and was closely acquainted with the Moslem poet Sadula and the statesman Liu Ji.¹ During the reign of the first Ming emperor, Zhu Yuanzhang (r. 1368–98), Leng was appointed to the post of Chief Musician in the Court of Imperial Sacrifices.²

Leng Qian's *Mount Boyue* is one of the earliest surviving travel paintings known in the history of Chinese painting.³ Painted in dry and heavily textured ink on paper, the work depicts the convoluted landscape of the Yellow Mountains (Huang Shan) in Anhui province (despite its title, which refers to a nearby mountain, also in Anhui). The painting records a trip Leng Qian and Liu Ji took to this geologically fantastic region of Anhui in 1343. Leng's own inscription on the scroll reads in part:

Onward we went in successive stages for several tens of li, and we began to catch sight of Tianmen [the Gate of Heaven, a notch between two slopes of the peak known as Tiandu, the Peak of the Heavenly Citadel, in the Yellow Mountains]. We paid homage to the sacred images and gazed with enjoyment at mountains and rivers. . . . Far-off peaks rose, one above the other, piercing the clouds and joining the heavens. Forest groves spread out before them. I asked one of the locals (what it was) and he answered, Huang Shan. It could be reached in a day's journey, so we set out upon the trek. Along the way we encountered strange pines and wondrous rocks; lofty, majestic peaks and cliffs; flying waterfalls and bubbling streams; . . . emaciated monks and strange beasts; monkey chattering and bird calls. (All of these) lay in my heart and took hold of my imagination. Creeping vines led us to the summit of the mountain. (There was) the Yangzi River all in a ribbon with Jinling [Nanjing] clearly evident. There were great expanses to the north and south, in all directions it was remote and untamed, entirely screened off from my vision. Liu said, "Up ahead we would stray into the mountains of the immortals" (*xian shan*).⁴

In Leng's painting, the actual voyage through the landscape is translated into a single fixed view, yet one that is simultaneously full of dynamic movement. The transition between the human world and the realm of the realized adepts implied in Liu Ji's remark quoted in Leng's inscription recalls the similar transformations of the world described in such ancient texts as Sun Chuo's (320–377) account of ascending the Tiantai Mountains. As Richard Mather has written:

The "Poetic Essay on Roaming in the Tiantai Mountains" is, at one level, a record of the poet's mystical experience of identity with the non-actual reality embodied in mountains and streams. Much of it is, of course, vivid physical description of the ascent of one of China's most scenic mountains. . . . But the metaphysical level is unmistakably present. After a brief preface, the essay proper begins with a general statement of the Great Void (Taixu) and its manifold activity within the natural world. It proceeds to a specific location of the Tiantai Range in space—in "magic Yue," then clearly implies that its ascent leads beyond space and time.⁵

At the top of the ascent, the poet is "within the realm of Taoist immortals" and "in perfect accord with the Tao."⁶ The significance of both Sun Chuo's prose-poem and Leng Qian's painting rests on the ancient Chinese view of certain mountains as sacred pivots that connect Heaven and Earth. This perception certainly characterized the Yellow Mountains of Anhui depicted in Leng's painting, said to be the site where the Yellow Emperor ascended to immortality.

WEN ZHENGMING (1470–1559)
The Seven Junipers (The Seven Stars)

Ming dynasty, Jiajing reign, dated 1532

Handscroll; ink on paper

22.8 x 362 cm

The Honolulu Academy of Arts, Gift of Mrs. Carter Galt, 1952 (1666.1)

WEN ZHENGMING's topographical handscroll depicts seven juniper trees planted in the year 500 (Liang dynasty) on the grounds of the Zhidao Guan, a Taoist temple in Changshu (Yushan), Jiangsu province.¹ It is clear from the poem written at the end of the scroll that the seven ancient trees were perceived as Taoist immortals, and as representations of the seven stars of the Northern Dipper, the most powerful constellation in Taoist cosmology. Like his teacher Shen Zhou (1427–1509), Wen chose to depict only the upper portions of the trees.² In the painting, the junipers writhe across the surface of the paper, the trunks and branches interlocked. The brushwork is dry and scumbled, with occasional passages of wet ink wash and dense dotting. In its contorted, twisting movements, this work is one of Wen Zhengming's boldest compositions.

The long poem inscribed by Wen Zhengming after the painting does not appear among Wen's collected literary works, but is recorded in the *Gujin tushu jicheng* (1725) as being by Huang Yun, a native of Kunshan and contemporary of Wen Zhengming.³ In this poem, the seven junipers are described as being planted by realized beings (*zhenren*), taking "the form of the Dipper," and being "arranged like an immortal's altar." The relationship between the trees and the Northern Dipper is clearly stated; on one level, the trees are representatives on earth of the stars of the Northern Dipper, also known as the "seven primes" (*qi yuan*; see cat. no. 78). With their strange, ancient shapes, the trees are compared to "leviathans (*kun*) transformed, soaring through the sea, or the *Peng* bird quickly striking" (an allusion to the *Zhuangzi*), and to "the jade trees of Penglai (one of the three islands of the immortals in the eastern sea)." The scroll has a colophon by Chen Daofu (1483–1544), also written in 1532.

Wen Zhengming's painting is remarkable for its realistic depiction of the Seven Junipers of Changshu, which still stand today in the temple precincts of the Zhidao Guan. In a Taoist context, the trees are powerful symbols of the divine realm of the heavens, and of such human virtues as moral integrity.

—S. L.

148

DAI JIN (1388–1462)

Seeking the Tao in a Cavern-Heaven

Ming dynasty, 15th century

Hanging scroll; ink and colors on silk

210.5 x 83 cm

Palace Museum, Beijing

DAI JIN WAS ONE of the great professional Zhe School masters of early Ming painting. His painting gives visual form to the ancient Taoist belief in numinous caverns that penetrate within sacred mountains, and that function as gateways to paradise and the realm of the Tao.¹ In the painting, an adept ascends a path among tall pines and towering cliffs toward the entrance of a cavern-heaven (*dongtian*).² The figure has a Taoist cap on his head, visible under his translucent cowl. Within the grotto's opening, a balustrade-lined pathway disappears into the mist. Such scenes are commonly encountered in traditional Chinese painting. In addition to representing a real or idealized space, the cavern-heaven can also represent the sacred interior space of the adept's own body, as visualized through the techniques of Inner Alchemy (*neidan*).³

Although the system of Ten Great Cavern-Heavens and Thirty-six Lesser Cavern-Heavens was codified by the Taoist master Du Guangting (850–933) in the late Tang dynasty, a system of such numinous caverns already existed in the earliest revelations of the Highest Purity (*Shangqing*) school in the fourth century.⁴ Du wrote in the preface to his *Record of Cavern-Heavens, Blessed Places, Ducts, Peaks, and Great Mountains* (*Dongtian fudi yuedu mingshan ji*; A.D. 901):

When Heaven and Earth divided and the clear [ethers (*qi*)] separated from the turbid, they fashioned the great rivers by melting and the lofty mountains by congealing. Above they laid out the stellar mansions, below they stored the grotto-heavens. The affairs of each of these being administered by great sages and superior Perfected, they contain divine palaces and spirit residences, jade halls and gold terraces: soaring structures of congealed clouds, formed from solidified ether.⁵

Dai Jin's *Seeking the Tao in a Cavern-Heaven* symbolizes both the veneration of cavern-heavens in the terrestrial landscape and the adept's inner spiritual journey toward achieving the Tao (*cheng dao*).

—S. L.

WANG YUN WAS a professional painter active in Yangzhou, Jiangsu province, during the Kangxi (1662–1722) and Yongzheng (1723–35) reigns. His depiction of the island known as Fanghu (Square Jar) is one of the finest known depictions of this mythical Taoist paradise.¹ Also known as Fangzhang, Fanghu was one of the sacred islands sought by the first emperor of the Qin dynasty (r. 247–209 B.C.), who longed to become one of the perfected (*zhenren*). The *Records of the Historian* (*Shiji*) by Sima Qian (c. 145–c. 86 B.C.) records that a *fongshi* (magician) named Xu Fu, from the state of Qi (in modern Shandong province), convinced the emperor to fund an expedition to find the three “divine islands” (*shen shan*) in the eastern sea.² These islands were called Penglai, Fangzhang (Fanghu), and Yingzhou, and were inhabited by immortals (*xian*).

Fanghu is also mentioned in the *Liezi*, a text attributed to the philosopher of the same name (who lived c. 400 B.C.) that was designated a Taoist classic in the eighth century.³

Within it [the eastern ocean] there are five mountains, called Daiyu, Yuanjiao, Fanghu, Yingzhou, and Penglai.⁴ These mountains are thirty thousand miles high, and as many miles round; the tablelands on their summits extend for nine thousand miles. It is seventy thousand miles from one mountain to the next, but they are considered close neighbors. The towers and terraces upon them are all gold and jade, the beasts and birds are all unsullied white; trees of pearl and garnet always grow densely, flowering and bearing fruit which is always luscious, and those who eat of it never grow old and die. The men who dwell there are all of the race of immortal sages (*xian sheng*), who fly, too many to be counted, to and from one mountain to another in a day and a night.⁵

Wang Yun's painting depicts Fanghu rising from an ocean roiling with waves. Surrounded by mysterious vapors, the island is dotted with numinous trees and vegetation, immortals' palaces, and caverns from which waterfalls descend. The mountain is painted with pale blue and green pigments, with pale pink blossoms among the trees. The palace buildings are painted green and red, with gold roofs.⁶ At the upper left is a short inscription by the painter, which includes the title *Painting of Fanghu* and the date: “Painted for Helao the Taoist, in a summer month of the year *jimao* [1699], copying a Song [dynasty] artist's original.”

—S. L.

WANG YUN (1652–1735 OR LATER)
The Fanghu Isle of the Immortals

Qing dynasty, Kangxi reign, dated 1699
Hanging scroll; ink and colors on silk
142 × 60.3 cm

The Nelson-Atkins Museum of Art, Kansas City, Fortieth Anniversary Memorial Acquisition Fund (F75-43)

YUAN YAO (ACTIVE 1739–80)

Autumn Moon over the Dew Terrace

Qing dynasty, Kangxi reign, dated 1721

Hanging scroll; ink and colors on silk

215 × 137 cm

Museum für Ostasiatische Kunst, Cologne (A89.1)

YUAN YAO'S ELEGANT PAINTING depicts the imperial Jianzhang palace of the Han dynasty (206 B.C.–A.D. 220), built in the year 104 B.C. by Emperor Wu (r. 140–87 B.C.).¹ Seen bathed in moonlight, a prominent feature is the tall marble terrace at the upper right, topped by a bowl designed to catch dew. Known as the Dew Terrace (Lutai), this structure reflected the belief that an emperor's virtuous reign would be acknowledged by Heaven, which would send down "sweet dew" as a sign of its approval. One of the earliest mentions of this concept is in chapter thirty-two of the *Daode jing*, attributed to Laozi:

The Tao is constant, but has no name (= fame);

Although the Uncarved Block is subtle (= small, minute),

In Heaven and Earth, all submit to it.

If barons and kings would but possess themselves of it,

The ten thousand creatures would flock to do them homage;

Heaven and Earth would conspire to send Sweet Dew.²

Mindful of such models, and as a public mark of his virtue, Emperor Wu of the Han built the Dew Terrace within his palace grounds, to demonstrate Heaven's acknowledgment of his right to rule. Similarly, the appearance of mysterious vapors, spontaneously generated by the sky, was recorded during the reign of Han Guangwu, when the emperor carried out the Feng ritual of legitimation on Mount Tai, in Shandong province, in A.D. 56.³ In mirror inscriptions of the Six Dynasties period, Taoist feathered beings were said to live on dew, and the image of auspicious dew descending from heaven was associated with Taoist sacred sites as late as the Ming dynasty. In the poem attached to Wen Zhengming's *The Seven Junipers* (*The Seven Stars*) handscroll (cat. no. 147), for example, sweet dew was said to descend to the temple site because of the presence of the sacred juniper trees, which functioned as a natural altar.

—S. L.

GUAN HUI (ACTIVE LATE 18TH CENTURY)
Taoist Temples at Dragon and Tiger Mountain

Qing dynasty, late 18th century
 Hanging scroll; ink and colors on silk
 86.9 x 285.7 cm
 Los Angeles County Museum of Art, Gift of Shane and Marilyn Wells
 (M.87.269)

THIS LARGE HANGING SCROLL depicts the headquarters of the Orthodox Unity (Zhengyi) sect at Dragon and Tiger Mountain (Longhu Shan), Jiangxi province. Painted in the late eighteenth century by the court painter Guan Huai, this idealized view may have been commissioned on the occasion of an imperially funded renovation of the temples. Legend states that in the late Han dynasty (second century), the first Celestial Master, Zhang Daoling, refined the elixir of immortality at this site. In the late Tang dynasty, the mountain was listed as one of the "Seventy-two Blessed Plots" (*fudi*) or sacred Taoist sites in China by Du Guangting (850–933).¹ The association of the mountain with the Orthodox Unity sect and the hereditary Celestial Masters can be securely traced to no earlier than the late Southern Song dynasty (thirteenth century).² The site was continually occupied as the headquarters of the Zhengyi sect from the Song dynasty until the mid-nineteenth century, when it was destroyed during the Taiping Rebellion.³ Even after its renovation in the late nineteenth century, the site was again destroyed after 1949, with the coming to power of the Communists under Mao Zedong. It has only recently been renovated again, and today flourishes as one of the most important Taoist sites in China.

Guan Huai's painting depicts Dragon and Tiger Mountain from a bird's-eye-view perspective. Its meticulous technique reveals the influence of both the early Qing dynasty Orthodox School of painting and Giuseppe Castiglione (Lang Shining; 1688–1766), the Italian Jesuit priest who was one of the most popular painters at the courts of the Yongzheng (r. 1723–35) and Qianlong (r. 1736–95) emperors. The temple buildings, with their red columns and orange walls, provide a vibrant contrast to the surrounding landscape, which is painted in ink and pale washes of ochre and green pigment. Blue, green, lavender,

white, and yellow foliage appears throughout the scroll. The painting is signed at the lower left: "Respectfully painted by [your] servant (*chen*), Guan Huai." Numerous topographical features and buildings within the painting are labeled in carefully inscribed standard script characters. The name Longhu Shan (Dragon and Tiger Mountain), for example, is written on the tall peak at the upper left.

Two temple complexes appear in a mountainous landscape, with a river meandering in the foreground. The buildings of each complex rest on marble platforms or foundations. The first complex, at the right, labeled on the detached gate bordering the river as the Supreme Highest Purity Palace, comprises three main halls within a walled enclosure. This temple is said to have first been built in the late Tang dynasty (ninth century), when it was called the Perfected Immortal Monastery.⁴ It underwent renovations in the Northern Song (960–1126), Yuan (1260–1368), Ming (1368–1644), and Qing (1644–1911) dynasties, and was given the name Supreme Highest Purity Palace (Tai Shang-qing Gong) in 1687, during the reign of Kangxi (1662–1722). The temple's inner gate is labeled "Dragon and Tiger Gate." In sequence, the three main buildings are labeled "Treasure Hall of the Three Purities," "Perfected Wind Hall," and "Pavilion of Jade Perfection." The second temple complex, at the far left, is

labeled "Monastery of Orthodox Unity" (Zhengyi Guan) on the outer gate. The three main halls of this complex are labeled "Hall of the Numinous Official," "Column Base of the Immortal Lineage," and "Pavilion of the Jade Emperor."

As is typical of sacred Taoist sites, many topographical features around the two temple complexes are also labeled. Along the top of the scroll, a slowly rising hill at the upper right is labeled "Heavenly Response Mountain," near the top of which is an enclosure with a gate, two pavilions, and a cave entrance. The gate is labeled "Hut of Quiet Understanding," the second pavilion "Crane Returning Pavilion," and the domed cave entrance "Cavern Where the Perfected Being Empty Quietude [*Xi-jing zhenren*] Refined the Elixir." A peak to the upper right of the second temple complex is labeled "Guanyin Summit," a reference to the Buddhist bodhisattva of compassion, while a nearby waterfall is labeled "Horse-tail Water[fall]." Other topographical features in the lower half of the painting include (from right to left) "Dragon Well Mountain," "Prior Heaven Mountain," "Pond of the Seven Stars" (a reference to the seven stars of the Northern Dipper), "Pond of Heavenly Unity," and "Cloud-embroidered Stone." Finally, just near the summit of Longhu Shan, is a cavern entrance labeled "Cavern Where the Perfected Being [Zhang] Daoling Refined the Elixir."

Little is known about Guan Huai, the painter of this scroll. He was a native of Hangzhou, Zhejiang province, who in 1780 passed the *jinsi* civil service examination.⁵ Guan eventually rose to the rank of Vice-Minister of the Board of Rites (*libu shilang*). He excelled at literary composition and landscape painting, in which he worked closely with Dong Gao (1740–1818), another court painter of the late Qianlong period.

—S. L.

NOTES

Cat. no. 137

1. HY 1177, juan 17.
2. Fang's dates are unknown, but he obtained the *jinshi* degree in 1586. He was a native of Zhili (modern Hebei province).
3. This legend is recounted in HY 292, which may date to as early as the fifth century; see also Schipper 1965.
4. HY 1177, juan 19.
5. Published in Munakata 1991: 113.
6. For example, see HY 441.

Cat. no. 138

1. Translated by Roderick Whitfield in Bush and Shih 1985: 119.

Cat. no. 139

1. On Ni Zan, see Wang 1967: 15–46.
2. *Yuan si diaji* 1975: 25–26. As Wai-kam Ho has shown, Ni Zan's elder brother "was officially head of the prefectural diocese [of the Zhengyi sect] carrying the imperially consecrated title, *Xuanzhong zhenren* [Perfect Being within Mystery]." See Ho 1968: 111 n. 136.
3. Zhou Xuanzhen was a native of Jiahe, Zhejiang province. He studied to be a Taoist priest at the Purple Empiness Monastery (Zixu Guan) in Jiaxing, Zhejiang province. In his later years, he moved to the Utmost Tao Monastery (Zhidao Guan) in Changshu, Jiangsu province. In the early Ming dynasty, he was summoned by Ming Taizu to the imperial court in Nanjing; see Min 1994: 672.
4. Previously published in *Zhongguo gudai shuhua zumu* 1986–98, vol. 1: 36, no. 3-003.
5. Other colophons are by Wen Peng (1498–1573), Wen Jia (1501–1583), Mo Shilong (active c. 1552–87), and Cheng Zhengkui (active c. 1630–74).
6. Purple Tenacity (Ziwei) is the name of both the circumpolar zone of the sky (the Purple Tenacity Palace, or Ziwei Gong) and a Taoist god; see cat. no. 76.
7. Heng Shan (Mount Heng), in Hunan province, is the southernmost of the Five Sacred Peaks.
8. The Prince of Mount Guojishan was Wang Ziqiao, a famous immortal said to have lived during the reign of King Ling (r. 571–545 B.C.) of the Zhou dynasty. Wang ascended to immortality on the back of a crane from Mount Goushi, near Mount Song (Song Shan) in Henan province. See Kaltenmark 1987: 109–14.
9. Numinous "five-colored clouds" are often signs in Taoist contexts of auspicious and divine portents; see cat. nos. 110–11. This poem is transcribed in Zhao 1998: 77.
10. QBQJ: 415.
11. This is a reference to the Purple Empiness Monastery (Zixu Guan) in Jiaxing, Zhejiang province.
12. This is the Utmost Tao Monastery (Zhidao Guan) in Changshu, Jiangsu, home of the famous Seven Junipers (Seven Stars) painted by Wen Zhengming in 1532 (cat. no. 147).
13. This refers to Zuo Ci, a *fangshi* (magician) at the court of Cao Cao in the Three Kingdoms period; see DeWoskin 1983: 83–86. Zuo Ci was famous for his ability to transform himself into different creatures and to vanish through walls.
14. A reference to Li Shaojun of the state of Qi (in Shandong), a *fangshi* at the court of the Han emperor Wu (r. 140–87 B.C.).
15. The last two lines are an allusion to lines 6–7 of the *Inner Scripture of the Yellow Court* (*Huangting neijing jing*), a text often recited by Zhou Xuanzhen in his last years:

Three plucks of the zither heart causes the worm-immortal to dance,
The Nine Energies are translucently clear, emerging from between the mists.

CONTRIBUTORS

PATRICIA EBREY is Professor of History and Chinese Studies at the University of Washington, Seattle. A specialist in the social and cultural history of the Song Dynasty (960–1279), she is the author of many publications, including *Chu Hsi's Family Rituals: A Twelfth-Century Chinese Manual for the Performance of Cappings, Weddings, Funerals, and Ancestral Rites* (1991). Among the many books she has contributed to and edited are *Chinese Civilization and Society: A Sourcebook* (1981) and *Religion and Society in T'ang and Sung China* (1996). In 1998–99 she was a visiting professor at the Institute for Advanced Study, Princeton University, researching the career of Emperor Huizong (r. 1100–25) of the Northern Song dynasty.

SHAWN EICHMAN is Exhibition Coordinator for "Taoism and the Arts of China" at The Art Institute of Chicago. He holds M.A. degrees from the University of Hawaii and Waseda University in Tokyo, and received his Ph.D. from the University of Hawaii in 1999. The subject of his doctoral dissertation was Six Dynasties period Taoism, with an emphasis on the Highest Purity scriptures. Before joining the staff of the Art Institute, he spent four years in Japan researching Taoism, supported by a Japanese Ministry of Education (Monbusho) Research Grant.

STEPHEN LITTLE is Pritzker Curator of Asian Art at The Art Institute of Chicago. A specialist in Chinese and Japanese art, he received his Ph.D. from Yale University in the history of art in 1987. He has worked at the Asian Art Museum of San Francisco, the Cleveland Museum of Art, and the Honolulu Academy of Arts. His research interests include Chinese and Japanese painting, Chinese calligraphy, and Chinese and Japanese ceramics. His publications include *Chinese Ceramics of the Transitional Period, 1620–1683* (1983) and *Visions of the Dharma: Japanese Buddhist Paintings and Prints in the Honolulu Academy of Arts* (1991).

KRISTOFER SCHIPPER is Directeur d'Etudes at the Ecole pratique des Hautes Etudes, Sorbonne, Paris, and Professor Emeritus of Chinese History at Leiden University, The Netherlands. An ordained Taoist priest and one of the world's leading authorities on this religion, Schipper has published extensively on Taoism in French, English, Chinese, and Japanese. His writings include *L'empereur Wou des Han dans la légende taoïste* (1965), *Concordance du Houang-t'ing King: Nei-king et Wai-king* (1975), and *Le corps taoïste* (1982; translated in 1993 as *The Taoist Body*).

NANCY SHATZMAN STEINHARDT is professor in the Department of Asian and Middle Eastern Studies at the University of Pennsylvania, and Curator of Chinese Art at the University of Pennsylvania Museum of Archaeology and Anthropology. A leading authority on Chinese traditional architecture, she is the author of *Chinese Traditional Architecture* (1984), *Chinese Imperial City Planning* (1990), and *Liao Architecture* (1997).

WU HUNG is the Harrie Vanderstappen Distinguished Service Professor of Chinese Art at the University of Chicago. Born in Sichuan, China, Wu worked for five years as a curator in the Palace Museum, Beijing, and subsequently received an M.A. in art history at the Central Academy of Art in Beijing. He received his Ph.D. from Harvard University in 1987. Among his many publications are *The Wu Liang Shrine: The Ideology of Early Chinese Pictorial Art* (1989), *The Double Screen: Medium and Representation in Chinese Painting* (1996), and *Transience: Experimental Chinese Art at the End of the Twentieth Century* (1999).

Preface

In 1973 I embarked upon a journey that has no end. It began as a romantic quest to experience the effects of a legendary potion. It was inspired by youthful idealism and a Ph.D. dangling like a carrot in front of my nose. I traveled to Peru, into the Amazon, and found what I was looking for. That was the easy part.

Sixteen years, three books, and many lifetimes later, I am compelled to tell the story of my journey, the story of those years.

Every mystical tradition, from the Jewish cabala to the Upanishads of the Hindus, recognizes the existence of things that can be known but not told. There are certain qualities of sense experience that seem to defy description. Frequently our most vivid and important experiences are the very ones that confound us in the telling; it is easier to abandon the effort than to relate them poorly. Such is the nature of my adventures, and two years ago I was in a dilemma. I needed to relate my story, to communicate what I knew, yet I was confounded as to how to tell it.

Many years ago a half-blind soothsayer told me that there are two kinds of people in this world: those who are being dreamed and those who are dreamers. I needed someone to dream with, someone whom I could trust, someone who believed in the things that could be known but not told—and was willing to write about them nevertheless.

Erik Jendresen and I met in 1979. In 1982 he moved to Mexico to write, and although we were more or less aware of each other's lives, we did not see each other again until the spring of 1987. In the meantime I had continued my work in Peru, and Erik had written for the stage and the screen.

In April of 1987 we traveled to Brazil together, and spent three weeks talking, reading my journals, and wandering the beaches of Rio de Janeiro.

The Four Winds is the result of our friendship and collaboration. It is my story, in his words, and it is true.

Alberto Villoldo

THE FOUR WINDS

Prologue

I am moving. And breathing.

I move through a many-layered collage of wet leaves, hanging vines, reds, yellows, greens washed gray by moonlight. My head hangs low to the ground. Faster, I pant. The ground yields slightly beneath the pads of my . . . hands and feet? They move in cadence with the throbbing in my chest. My breath is hot and humid; my heart beats too fast, and I can smell myself beyond the moist tangle of the jungle.

There is the clearing and there am I, sitting cross-legged, naked, and shining wet in the moonlight. My head is thrown back and my throat is taut, exposed. Arms thrown out lax to my sides, hands palm up on the soil.

I watch myself from the edge of the jungle. Still but for my breathing. Behind me the jungle stirs sleeplessly.

I move with the lithesomeness of a shadow, following the contours of the clearing's edge to circle my prey.

Soundlessly. Closer.

Now we are breathing together. My head falls forward. My chin touches my chest. I raise my head, open my eyes to stare into yellow cat eyes, my eyes, animal eyes. A half-breath catches in my throat, and I reach out to touch the face of the jungle cat.

October 28, 1975

Third day back in the jungle. Three days waiting while Ramón prepares the *ayahwasca*. There was a full moon last night and he placed

the fetid brew in the hollowed-out trunk of a tree that sits by the lagoon behind his thatched hut.

Tonight I will take the *ayahuasca* and Ramón will guide me through the ritual, take me to meet death. This time, I am prepared. Antonio saw to it, and Ramón knows, somehow, that I have done my work, completed my work of the South since—was it two years ago? Yes. That the *medico americano*, the gringo psychologist, showed up in the middle of the Amazon jungle with a taste for “the vine of the dead.”

The jungle overwhelms me. The air is thick, more than a tropical density. Oxygen-rich, fragrant, humid, yes, but it feels like energy. The force of the jungle. I have become more sensitive to this sort of thing. . . .

It certainly exerts a force on my perspective of this world. Eden. The Earth’s garden. I can imagine the Amazon as bottomless, a crack in the world from which spilled the living soul of the planet. A life of its own, conscious, greater than the sum of its parts.

Last night in that full moon, I wandered far from Ramón’s and, in a little clearing beside an overgrown temple ruin, sat down to meditate upon this force.

I do not know if I “left my body” and . . . *became* the jaguar that was stalking me. Though my pragmatism has been shaken by my adventures, enough of it is still intact that I must qualify such experiences.

I do know that I met some part of myself last night and my heart beats faster even as I write this.

This afternoon I fasted in preparation for this evening. I made my way to the bend in the river, and, on my small, sandy patch of shore, remembered all that has brought me here and that tonight will mark the halfway point along this Medicine Wheel. When I reflect upon the events of the past two years, I realize that I do not have the power of imagination to anticipate what lies beyond tonight’s “work of the West.”

Can it be any more extraordinary than what has come before?

South

No mind is much employed upon the present; recollection and anticipation fill up almost all our moments.

—Samuel Johnson

I left California in February 1973. It was winter in San Francisco when I boarded the jetliner, and the middle of summer when I unfastened my seatbelt in Lima, Peru. I mention this because it served then to remind me that I had made a passage through time as well as a trip through space.

As I look back on that departure and the events that led me to it, I know that any one of them could be construed as the beginning of this chronicle. It is easy to assign significance to the moments of one's past, to see fate in history.

So this story could easily begin with my adventures among the Huichol Indians of northern Mexico, or my work with doña Pachita, the notorious healer and surgeon of Mexico City, or even my research into the spiritist practices of Brazil.

Were I to go back even further, I could cite the influence of doña Rosa, the one-eyed black fortune-teller who lived on the outskirts of San Juan, Puerto Rico, and warned me of my preoccupation with death and the uncommon realms of consciousness. I am even tempted to begin with my nanny, an Afro-American third-generation Cuban, who performed weird and wonderful rituals to summon the spirits in her little room at the end of a hall in our house in San Juan.

Or, further still, I could describe the sensations of a near-death, out-of-body experience during a blood transfusion at the age of two and a half. And I could foreshadow my predisposition to study the mind/body relationship by claiming a grandfather who became chief of surgery at a New

York City hospital at the turn of the century and returned to his native Cuba to build a hospital in the city of Havana.

But this is not an autobiography, and I have documented much of the above elsewhere. I will begin simply by saying that I had reached a critical point in my studies and the fulfillment of my doctorate in psychology at the Humanistic Psychology Institute. After three years of behavioral science, learning theory, clinical psychology, theoretical systems, and neuroanatomy, a year of clinical therapy at a community health care clinic, and a few brief forays into North and Latin American Indian healing traditions, I was restless, eager to do something different.

Something different from the antiseptic theories of Western psychology. Something different from the atrophied healing traditions of the North American Indian reservations, where the old myths and legends survive as quaint folklore.

Like many of my contemporaries, I was unimpressed with the traditional Western model of psychology. In my youthful arrogance I found it convenient to regard the practice of psychology as a patchwork process in which therapists seek to understand a person's problems by dissecting and rationalizing his or her condition, symptom by symptom, making an inevitable connection to inadequate parenting or a traumatic childhood experience. Ironically, the process itself substantiates, even reinforces, the pathology. Neuroses are cultivated for harvest during therapy.

Again and again I had found myself taking a patient by the hand and hacking a pathway through his or her tangled conscious and subconscious to the revelatory meadow of the unconscious mind.

I saw contemporary psychologists as dowdy, bespectacled paleontologists, and the fears, preoccupations, behavioral traits, or other symptoms that they sought to treat in therapy were bone fragments stuck in the surface of the psyche. They labored to collect these fossils and, piece by piece, reconstruct the skeleton of the beast within. Meanwhile, somewhere on the terrain of the unconscious, the fully fleshed-out creature wreaked its havoc.

And, in the laboratory, neurologists were slicing and staining the human brain and attempting to map neural pathways in hopes of finding the human mind and the nature of consciousness.

It was in this tradition that I had been trained. I knew how to work with the mind from the outside in, and I craved to be inside looking out. I was cynical, arrogant, impatient with the system, and judgmental of the

complacency with which so many stuck a Ph.D. at the end of their name and hung up a shingle.

I was not alone. My attitude and ideology were by no means unique. On the contrary, questions regarding the nature of consciousness and the definition of mind had been posed with elegant simplicity for millennia. They are questions which remain unsolved. I would not indulge in this elaboration were it not for the nature of the adventure that lay ahead. I outline my disposition merely as a point of reference, an intellectual pre-flight checklist.

In my dissatisfaction I turned backward in time and tradition, turned my attention from the clinical psychology and neurology of the modern human to the clinical mythology and folklore of the primitive human. After all, mental and physical health are issues of equal importance, whether one is a Chama Indian of the Upper Amazon or an investment banker of the Upper East Side.

I had been able to design my doctoral thesis to support a study of traditional healing practices in the Americas and was fortunate to draw as my thesis adviser one of the world's foremost researchers in states of consciousness. Dr. Stanley Krippner was a pioneer in the study of paranormal phenomena. As director of the Maimonides Medical Center's dream laboratory, he had helped to bring dream research out of the basements and into the laboratories of universities across the country.

From San Francisco, the most accessible examples of primitive culture are in the American Indian reservations of the Southwestern United States. After I had studied the Navaho Indian tradition for a few months, it became clear to me that the displacement and acculturation of the tribes had resulted in the displacement of their tradition. My attempt to study the healing practices of the Plains Indian had been like trying to study the eating habits of a culture by examining a museum display of native basket weaving.

After that I had logged a few months in Mexico City and been fortunate enough to develop a close relationship with urban healers, who dispensed herbal remedies and practiced a variety of esoteric healing techniques, including psychic surgery. I had witnessed much sleight of hand and some spontaneous healing. This was controversial stuff, but a step in the right direction.

As so often happens, the critical instant, the decisive moment that would change the focus of my studies and the course of my life, came when

I least expected it, in a room at the end of an echo-tiled hallway at the University of California.

Brian Woodruff was an old friend, a first-year medical student at the University of California, San Francisco. I was fulfilling a graduate program requirement at the in-patient ward at a mental health care clinic north of the city, and Brian was hustling to complete his first-year requisites when he called me to suggest a late-night dinner in the city. I was to meet him at the medical school, room 601. It was after 10 P.M. when I stumbled out into the mental ward parking lot and headed south through the fog and into San Francisco.

The double door to the University of California Medical School anatomy laboratory was ponderous, institutional gray. The sound of its bar lock ricocheted off cold linoleum.

The room was the size of a small warehouse and blue-gray bright with fluorescent light. There were four rows of bakelite-topped tables upon which vague shapes were draped with black rubberized sheets. The stench of formalin wrinkled my nose. Brian set a stainless steel hacksaw beside a bucket of Kentucky Fried Chicken and an empty beer bottle, and slid off the tall stool at the head of his table.

“Hey, man! Pull up a stool. The chicken’s getting cold.”

Brian’s cadaver was that of a young woman. The rubber sheet had been folded back to expose her upper chest, neck, and head. Her skin was like calf’s hide, her complexion gray and tinged with olive drab.

“This is Jennifer,” Brian said. “We’ve been together all semester.” He lifted the surgical saw. “She’s taught me more about the human body than I knew there was to learn. I’ll never forget her.”

“Brian . . .”

“Tonight she’s going to lose her head for me, and I wanted you to be here.”

“Thanks.”

His eyes held mine in a matter-of-fact stare.

“You don’t get to see a decapitation these days without a hundred-grand student loan and a year’s worth of medical school. I thought you’d be interested.”

"Why?"

"Psychologist."

"Yeah," I said. "When people lose their heads, they come to me."

He stared at me for a second, trying to gauge my tone of voice.

"You don't have to do this if you don't want to," he said. "I just thought—I mean, if you're uncomfortable . . ."

"It's all right," I said.

"If you'd rather . . ."

I looked at the bucket of chicken. "I'm just trying to stay away from fried foods," I said. I wasn't prepared to admit that I was strangely revolted, yet irresistably fascinated by the body on the table. He handed me a beer.

"Eat afterward?" he said.

"If we can."

"Incredible, huh? Just down the hall there's a lab where they conduct the foremost research in recombinant DNA. One floor down, neurologists are teaming up with biochemists and computer gurus to simulate the neural pathways of simple brain functions. But here we are cutting up dead people just like Leonardo da Vinci did five hundred years ago." He looked around the room at all the black-draped figures.

"We start on the back because it takes a while to get used to what you're doing, and it's easier if you don't have to look at the face—as if they can really look back at you and make you feel guilty for violating them with a scalpel."

He reached down and cupped the cadaver's chin in the palm of his hand. Her head moved back slightly.

Decisively, he placed the serrated blade of the saw on a wedge of cartilage between the exposed vertebrae of her neck. I couldn't take my eyes from it. When the head was free from the body, he held it in both hands.

"You wouldn't believe some of the more creative things that anatomy students think of to do with other people's body parts." He placed her head on the table, wiped his hands down the front of his smock, and handed me a drumstick from the bucket and took one for himself.

"Here's to science," he said.

"Extra crispy," I said.

We ate the drumsticks and I watched him suck the bone clean. We talked about our plans for the future: he was committed to a four-year graduate program. The discipline was imposed, sink or swim. Mine was

self-imposed and lacked direction. While we talked he took what looked like a large dental drill from a drawer, plugged it into an electrical socket, and selected a bit, a round, disklike blade about two inches in diameter.

"They save the best for last," he said, and the handpiece whirled. "Hold her for me, will you?"

I took the head in my hands and positioned it for him, and he brought the spinning blade down on the forehead. When he was through, when he had rotated the head a full 360 degrees, he switched off the little saw. The whine of the blade still rang in my ears. There was a curious smell in the air, and a fine powder of bone dust lay on the face and clung to its eyelashes. He leaned over and gently blew it away.

"Imagine," he said. "No human being has ever seen Jennifer's brain. You and I are the first. Drum roll, Maestro."

And he pulled the calvarium away from the skull. I had seen a human brain. I had seen many, floating in formalin-filled lab jars. But that moment will always live for me.

Aristotle thought that the brain cooled the blood, that thinking was a function of the heart. René Descartes described the brain as the pump of a nerve fountain. It has been compared to a clock, a telephone switchboard, a computer, yet the mechanics of the brain are far more intricate than any analog. Theorist Lyall Watson wrote that if the brain were so simple that we could understand it, we would be so simple that we couldn't. And the source of all this theory and speculation was the walnut-shaped, fleshy, gray mass of tissue before me.

Brian looked at me and nodded his head toward Jennifer's. Once again I placed a hand on either side of her face, and Brian eased the brain from her head. He stood weighing it in his hands for a moment, then handed it to me. It was heavy.

Brian interrupted the silence.

"I don't believe it either," he said.

I smiled back at him, placed the thing on the table, sat on my stool, and folded my arms. It was easy to make the distinction between Jennifer and the 110 pounds of flesh on the dissecting table before me. It took no great leap of my imagination to accept that her body had ceased to function when her heart had stopped forcing oxygen and nutrient-rich blood through her tissues, and that this brain had regulated all of the systems that had animated it.

But the body does not define the person. Jennifer had lived for forty years. Fifteen-thousand days of consciousness. Twenty-one million minutes of being Jennifer. One billion three hundred million instants of experience unique to her and to no other living being, for none other than Jennifer had inhabited her space and experienced her perspective. At the time of her death, each of those moments, the totality of what it had been to be Jennifer, lived as memories. Just as Brian and I were seeing her brain, she had undoubtedly seen things that no one else had seen. She had experienced emotion, intuition, and flashes of creativity. She had felt joy and anguish as only Jennifer could feel them. It was hard to believe that all that had been Jennifer was lost because this thing in front of me wasn't working anymore.

Jennifer had been conscious. What had happened to her consciousness? Where had it gone? I could not help but resist the notion that it had simply ceased to be, that all that had been Jennifer was lost forever.

"What's next?" I asked.

Brian poked his nose back into the bucket of chicken. He grimaced and chose a powdery roll. "Neurology," he said. "The brain gets dissected in neurology class. Slice, stain, study its structure." He glanced down at the three pieces of Jennifer's head. "There's still some work to do on her face, but I'll get to it later." He stuck the roll in his mouth, unplugged the electric saw, and removed the bit from the handpiece.

"Aren't you supposed to have a partner?"

He nodded, wrapped the cord around the handpiece, and gave it to me. "Yeah. It's strictly one corpse per couple. I wasn't here the day we chose our co-cutters, so I got Stephanie. That goes in the drawer."

I slid open the drawer, put away the saw. "Where is she?"

"Safe in bed. Toes all tucked up. She wanted to miss this part."

I lifted a copy of the *International Journal of Social Psychiatry* from the drawer and held it up.

"Uh-huh." He nodded at the magazine. "She wants to do her residency in psychiatry. You'd think she wouldn't have missed this. Stephanie would rather medicate people with personality disorders than heal them. And she has a . . . problem with the human body."

I laughed at him. The sound echoed eerily. "Very bitter," I said. "So you're in love. How long has this been going on?"

"Three months. She's going to change her specialty, settle down into a monogamous relationship, and we'll live happily ever after."

He pointed with his scalpel at the magazine in my hands. "She thinks someone should go down into the Amazon and find the folks who dispense the 'vine of the dead.' "

"What?"

"Page 256." He grinned broadly. "It would take a psychiatrist, someone who speaks Spanish. Of course you're 'just a psychologist. . . .'"

The literature on the *ayahuasca*, also known as "the great medicine," the "visionary vine," and the "rope of the dead," was scarce and confused. The most significant research in its use had been conducted by anthropologist Marlene Dobkin de Rios, the author of the article that I took home with me that evening. Dr. Dobkin de Rios's studies had been carried out on the outskirts of the jungle town of Iquitos, and focused on the use of *ayahuasca* in folk healing and religious and magical rituals. The source of the *yagé*, the broth made from the visionary bark of the *ayahuasca*, was the *ayahuascero*, the jungle shaman or medicine man to whom the methods of its preparation and the attendant rituals had been passed down for generations.

The first Western record of *ayahuasca* use was made by British botanist Richard Spruce in 1851. Spruce identified the vine as *Banisteriopsis caapi*, a climbing vine or liana that used jungle trees for support. Subsequently a handful of early twentieth-century explorers and traders of the Upper Amazon referred to the *yagé* as a potion made from the bark of the vine and the leaves of select jungle plants.

I read of reports of the specificity and recurrence of archetypal images and visions shared by two, three, or more people under the influence of the *yagé*, telepathic experiences, and the use of the vine for psychiatric purposes, a sort of jungle psychotherapy led by the *ayahuascero*. The plant was referred to as the "vine or rope of the dead" because it reportedly "took one to the portals of death and back again." Based on the richness of the mythology and on depictions of the visionary vine on ceramics, and in rock and cave paintings, the use of the plant and ritual for visionary purposes seemed to be rooted in the prehistory of South America.

This was the adventure for which I yearned. I would go to Peru, not just to sample the psychoactive effects of an obscure jungle vine, but to

study the psychological traditions and altered states of consciousness of the medicine men and women, the shamans of the Amazon. Peru: the only country in the Americas where the Indian outnumbered the white man.

The two weeks following my dinner with Brian were spent searching for references to the vine and reviewing all that I knew about shamanism. One of the most definitive sources on the subject was the authoritative, if prosaic *Le Chamanisme et les techniques archaïques de l'extase* by Mircea Eliade. Eliade's study described shamanism as a religious phenomenon occurring throughout Asia, Oceania, the Americas, and among the ancient Indo-European peoples. Throughout this vast area the magico-religious life of society centered on the shaman, "at once magician and medicine man, miracle doer, priest, mystic, and poet." To Eliade, shamanism was a "technique of ecstasy."

I pored over anthropological and ethnological journals and texts. By the end of that second week I knew little more than when I started. Shamanism was a tradition found in virtually every primitive society, in every forgotten corner of the globe. In general, the shaman was a "person of knowledge," a "man or woman of vision," a mediator between the natural and supernatural forces of nature. Because these were the forces that the shaman held responsible for health and disease, the shaman was a healer. And, although ignorant of modern medicine, the shaman was said to be able intuitively to diagnose disease and, through ritual, could effect a positive change in a patient's health.

Legend held that the shaman acquired his or her extraordinary abilities through arduous study and ritual-laden exercise and by journeying into other realms of consciousness.

The concept of this primitive person as a traveler within the domains of consciousness fired my imagination. Was it possible to witness the nonconscious workings of the human mind? Must we rely on the vaguely recalled images and visions of our dreams as our only contact with the unconscious? Or are there ways to access the unconscious mind consciously?

By the time the check came from the student loan office, I had been packed for two days. I was holding a brand new passport and a reservation on the next flight to Miami and a connecting flight to Lima. It would be the last time for many years that I would be fully prepared for anything.

I called Brian, invited him and Stephanie to dinner, and spent the last

of my loose change on fresh pasta, vegetables, salad greens, and a bottle of 1968 California cabernet sauvignon.

I also bought a journal, a small, leatherbound volume of 250 blank pages.

"Can I have your car?" Brian helped himself to another plateful of salad.

"My car?"

"Yeah. In case you don't come back."

Stephanie frowned, but her eyes were smiling. "Brian!"

He shrugged. "Anything can happen. He's going into the Amazon, and we're talking about a 1964 Porsche, Stephanie. A convertible. Needs body work and new seats, but I could handle that."

"Is it dangerous?" she asked casually. Stephanie was a handful. She was tall and athletic, with a straight nose, strong chin, auburn hair, and blue eyes. Effortlessly beautiful, she worked at being tough. Medical school does that to some people.

"I don't know," I said. "I haven't been there yet."

"You'll probably be captured by Oogly Boogly Indians and inculcated into their tribe," Brian said. "All they'll find is a soiled diary with 'February thirteenth. Heading upriver' scrawled in pencil on the last page."

I smiled down at the gift Brian had brought, an authentic Bowie knife with a nine-inch steel blade in an oiled black leather sheath.

"Or," said Stephanie, "you'll find refuge in the altered state of some jungle brew and never come back to reality."

"You don't think much of all this, do you?"

She smiled into her wine glass. "Psychedelic drug therapy was researched to death in the fifties and sixties. Albert Hofman, Grof, Leary, Metzner. . . ."

"LSD wasn't researched to death," I said. "It was condemned to death, federally. I'm not interested in LSD, and I'm not talking about clinical research in psychedelics."

In 1943 Dr. Albert Hofman had synthesized lysergic acid diethylamine, a substance two thousand times as strong as mescaline, the most powerful psychoactive then known. A decade of subsequent clinical research was followed by unprecedented social experimentation. By the time

the substance was federally banned, it was estimated that between one and two million Americans had experienced life-altering, or at least consciousness-altering, experiences. Much of the research of the 1950s, 1960s, and early 1970s was funded by the U.S. government. I had gotten tapped, and so had my thesis adviser, by the Army Chemical Corps and the Technical Services branch of the CIA to join a couple of hundred others investigating mind-altering substances for the government and the Chemical Warfare Service. Their programs included both animal and human experimentation. There was a lot of money in it, and many academics opted to participate. The government research opportunities were unlimited. We had turned them down.

I watched Stephanie sip her wine, and leaned toward her over the table between us. "We're neophytes, Stephanie. Whether we're wearing white lab coats, administering drugs to mice and Japanese fighting fish, or interviewing tripping schizophrenics." I lifted the bottle of cabernet and filled her glass. "I'm not interested in that. It's a blade of grass."

"A blade of grass?"

I nodded. I knew what was coming would provoke her. "Claude Lévi-Strauss, the anthropologist, said that the civilized man needs to understand the workings of a blade of grass before he can comprehend the universe. The primitive seeks to know the nature of the universe so that he can appreciate the dynamic beauty of a blade of grass." She looked at Brian as though she were expecting him to say something about all this. I drained the wine bottle into his glass.

"I'm interested in folks who have entered and explored nonordinary states of consciousness for hundreds or maybe thousands of years. They're not students, they're masters, and if they know how to enter other realms of consciousness, access heightened states of awareness, healing states, then they know something that I want to know."

Her eyes narrowed. "And you expect to hack your way through the jungle and find some medicine man who's willing to share his mythology and his ritual with you."

"Yes," I said. "I do."

"Here's to it," said Brian.

He raised his glass and so did I. Stephanie smiled and lifted hers. The glasses chimed over the center of the table. Hers seemed to hold its note longer than ours, but it could have been my imagination.

When they had gone and the plates had been scraped, I dug my un-

opened journal from my duffel bag, cracked it open, and folded back the first page.

Emerson said that those who write to themselves write to an eternal public, and my first lines were necessarily melodramatic.

February 7, 1973

If the unconscious mind communicates with us through the imagery of dreams, draws from a lexicon of images to talk to us, can we not learn its vocabulary and talk back to it? Communicate consciously with the unconscious? Enter it? Alter it?

Are there states of consciousness in which we can disinhibit the body's latent healing capabilities?

Let us begin with the states of consciousness.

The only way to *study* consciousness is to experience its states directly.

*all ignorance toboggans into know
and trudges up to ignorance again.*

—e. e. cummings

You can fly into Cuzco only in the morning. The capital of the ancient Inca empire lies in an Andean valley at eleven thousand feet above sea level. The afternoon updrafts make the approach to the airfield unnavigable.

The captain muttered something through the crackling distortion of the cabin loudspeakers. The "Fasten Seatbelts" sign blinked erratically in red, and the thirdhand DC-8 banked sharply to the left, winged through a narrow gap in the overgrown mountain range, and entered the valley of Cuzco, the oldest continuously inhabited city on the continent.

Scarcely eight hours before, sometime around 2 A.M., the ten-hour flight from Miami had ended in Lima. The night was humid and starless. My senses had been deadened by the all-night flight, neutralized by the fluorescent lights and the conditioned air of the cabin, and I was struck, as I always was, by the smell of a foreign city. Lima was diesel fuel, pork rinds frying in old oil, exhaust fumes, industrial stench, and a barely discernable tang of sea air.

An *aduanera* official with brilliantined hair squinted up at me, stamped my passport, and granted me ninety days in his country. I made a nest of my duffel bags and backpack, settled into a corner of the concrete-and-tile terminal, and waited for my connecting flight to Cuzco.

I feel like averting my eyes, denying the ugliness of the city that I will see when the sun rises. It's the romantic in me.

Lima. Another capital of another third world country.

Four hundred years ago, the Spanish conquerors leveled a pine forest that stretched to the sea, and Lima is a desert city. Once the hub of colonial South America, now conquered by the twentieth century. The industries have been nationalized, the republic is governed by a military junta, and a third of the country's fifteen million have come here to live in the squalor of the *pueblos jóvenes* on the outskirts of town, to find work to buy bread or cornmeal or beans.

I don't want to see this.

I did see it, of course. Although I would return to Lima, pass through it many times during the next decade, come to know its museums, colonial hotels, and other charms, I shall always think of the city as I saw it that morning from the air, when the sun hovered above the horizon like a perfect orange ball, its rays filtered out by the *garúa*, the coastal fog that mingled with the smog and blanketed the capital of Peru in mist the color of wet ashes.

Cuzco was breathtaking—literally. The high-altitude air was cool, bright, sparkling fresh, and, like anything worth having, hard to get. I shielded my eyes from the sun, the sharp contrasts of light and shadow patterning the mountain faces and Spanish tile roofs. I hailed a taxi and headed downtown.

There is a legend that tells of Manco Capac, the first Inca, the "son of the Sun," born in the waters of Lake Titicaca, sovereign ruler of the Quechua Indians, who, when he had come of age, assembled his brothers and set out "toward the hill over which the Sun rose." He carried with him a golden rod. When he reached this valley surrounded by four great snow-capped peaks, he plunged the rod into the Earth and it disappeared. The sacred spot was Cuzco, "the Earth's navel," and here he founded his capital sometime around A.D. 1200.

His successors conquered most of Peru and Bolivia. The ninth Inca, Pachacuti, expanded his territory north to Ecuador and south to Argentina,

and, by the time the Spanish arrived, the Inca Empire was the greatest kingdom the Western hemisphere had ever known.

And Cuzco was the seat of this empire, the largest city in the Americas, a wondrous metropolis built in the shape of a jaguar, where the Sapphi and Tullumayo rivers were diverted to flow beside stone-flagged streets criss-crossing the city. It was a place of great temples and fortresses, engineering and architectural achievements without parallel in American antiquity, nestled between the terraced hillsides of this remote Andean valley.

Captain Francisco Pizarro marched into Cuzco in 1533. By that time the Europeans had “discovered” their New World, and smallpox and the common cold were spreading faster than the epidemic conquest. Pizarro installed a young nobleman named Manco as a puppet ruler, but Manco fled from the capital to raise an army of a hundred thousand to lay siege to the Spaniards in Cuzco. The last great battle of the Spanish conquest of Peru was fought at Sacsayhuaman, at the “head” of the jaguar-shaped city, and armor-plated men on horseback swinging steel swords and wielding firearms won out over men with clubs, spears, slingshots, and arrows. Finally the empire, its millions of subjects and unimaginable wealth, fell to a relatively small company of Spanish soldiers, and Manco fled high into the Andes, where none could follow, to a hidden sanctuary fortress called Vilcapampa.

February 11

Spent the day knocking around Cuzco. Now at a little desk by the open window in my room at the hotel—a cozy little place with a colonnaded courtyard, fountain, bougainvillea, the works. Colonial Latin America.

There’s a fiesta on somewhere, I can hear the music on the cool night air. This is a magical city. A real monument to the history of Latin America.

For instance, the Plaza de Armas. Wonderful. Flags flying.

This was the heart of the Inca city. Now a classical Spanish plaza surrounded by colonial arcades. There is the cathedral, the churches of Jesus Maria and El Triunfo, and La Compañía. All built on foundations made from the great stone blocks of Inca temples and palaces torn apart by the Spaniards to support their places of Catholic worship. An Inca wall, a wall of the palace of the great Pachacutec, is now a wall in the Café Roma. I ate there.

The base of the church of Santo Domingo is the Corinacha, the “golden courtyard,” an Inca temple whose perfectly fitted walls were once covered with gold. Astonishing.

Funny how the United States seems light years from this place. Thinking changes. If you let it. If you have no tour schedule to maintain, if your agenda is specific to being here rather than getting to the next place you’re going to. . . .

Different time. Life moves at a different tempo. Time to digest.

Cloistered, protected. Not from the world, for the earth is in evidence here, nature is everywhere, from the whitewashed adobe and red clay tiles and rough-hewn beams, to the fruits and vegetables still dirty with soil, to the cobblestones, to the vista of the mountains that surround the place. Terraced hillsides and snow-capped peaks.

Nature in evidence subtly in the hats the men and women wear to shade their eyes from a sun that beats down upon them, shines directly upon their city, unfiltered by the by-products of civilization. Remarkable, really. Very real. Essentially a place on Earth inhabited by man rather than a complex built on a framework of concrete, steel, and asphalt. A city that lives in nature, but hasn’t replaced it.

I’m here because the Andes are the Himalayas of South America, and Cuzco is its Katmandu—the travel hub. From here I can head for the jungle, but I’d rather go knowing something. Could go to Iquitos, where Marlene Dobkin de Rios did her research, but would rather not. In Mexico I found that there was a subculture of *curanderos*, a network of hearsay, so I’ll start in the market, ask a few questions.

Tomorrow.

The market was set up along an Inca wall that stretched between two of Cuzco’s 360 churches. Latin American markets are more or less the same, from Mexico to Chile. Cobbled walkways lead you through a maze shaded by umbrellas or stretched *manta* cloth on stilts, where the most vibrant colors of nature are arranged in pyramids or overflowing from wooden crates worn smooth from years of handling. Reds: tomatoes, apples, sides of beef and rosy pork, sliced watermelon, peppers, chiles. Yellows: papayas,

squash blossoms, lemons and grapefruit brought from the lowlands, bananas, peppers, chiles. Oranges: squash and pumpkins, mangoes, carrots, chiles. Purple eggplant and cabbage. Dappled breadfruit and grenada fruits spotted yellow-brown like a leopard. There are the grays of salted fish and sacks of grain. Little mounds of canihua and quinoa seeds, corn, wheat, and barley, arranged on burlap blankets or palm-mesh mats on the flag-stoned sidewalks, and, at your feet, dogs and chickens, household goods and utensils, both wooden and tin, nylon net *bolsas*—pastel shopping bags with plastic handles, ceramic bowls, and Inca artifacts reproduced in shopworn clay.

The vendors, proud and passionate, sing, shout, exclaim the praises of their produce, entice the people with the ripeness, heartiness, tenderness, freshness of their fruits, vegetables, meats, and poultry. What will you have? Here! Look at what I have brought for you! Look at the colors, feel the texture, smell the ripeness, taste the succulence! How many? And the pan of the crusty metal scale jerks and the needle swings wildly. *¡Medio kilo!* Only two *soles!*

I purchased a rainbow-colored *bolsa* and maneuvered my way through the throng of housewives, cooks, hungry Indians, wide-eyed schoolchildren. I bought a fresh-baked roll of sweet bread here, a banana there. Drank a blended mango and papaya drink at a linoleum juice counter.

On the edge of the market, a thick-skinned, shriveled old woman sat, legs folded beside her, on a woven mat near the sidewalk. She was an herbalist, the native druggist. Strips of bark, bits of dried seaweed, withered leaves, tiny mounds of sulphur, quinine, and other powders and grains were arranged in tidy little piles before her. Bottles of oils, sun-dried snakeskins, jars of animal organs, tiny packets—twists of paper. Her eyes were like craters, and she had the devilish look that goes with the trade.

“¿Tutacama ninacha?”

What did she say? I smiled into her eyes. *“¿Perdón, señora?”*

“¿Tutacama? ¿Munacquicho fortunacquata?”

Quechua. The language of the Indians. I had heard its curious clipped and guttural rhythms in the market, but most of the vendors spoke Spanish. The old woman reached down into the folds of her woven skirt and held three leaves in the palm of her hand. Even the palm was wrinkled.

“¿Fortunacquata?”

“She is asking if you wish to have your fortune told.”

Spanish. The voice came from my right shoulder. I turned and looked down. A young man, possibly eighteen or twenty. A white shirt and navy

blue trousers, a stack of books under his arm. He had a flat Indian face and a nose that started high on his forehead and curved down, dividing his face into two halves. He smiled up at me. "She does not speak Spanish, only Quechua. Do you wish your fortune?"

"Yes. Thanks."

He grinned and gave her the go-ahead, and she blew on the leaves and let them fall to the mat. A quick glance was all it took before she peered up at me and rattled off something in Quechua.

"Hmmm." The young man touched the end of his nose with his forefinger. "You are on a quest," he translated, "looking for something that will save your life."

She nodded, then added the punch line.

He grinned again. "And it will kill you if you do not find it, and it might kill you if you do."

I liked that.

"You are looking for something?" he asked.

"I'm looking for a healer, a good *curandero*," I said.

"You are sick?"

"No. But I would like to meet one. A good one. Do you think she knows of one?"

"She will tell you that she is one."

"If she were a good one, she wouldn't be selling her medications in the market."

"That's true," he said. "I think there are some healers. . . . But if you are not sick. . . . You are a tourist?"

"No. I'm from a university in the United States." I dug a few *soles* from my pocket and handed them to the old woman with a smile and a nod.

"A university! You are a student?"

"Well, a teacher, actually. Psychology."

He wagged his head up and down as though he now understood something profound. "We have a university. I am a student. You should see Professor Morales!"

The Universidad Nacional de San Antonio Abad del Cuzco lay in a mountain cul-de-sac near the edge of town. It was an unimpressive complex

of two-story, weathered concrete buildings ventilated by louvered windows that had been modern in 1940; the university had been founded in 1692. My young friend of the market had neglected to mention that the school was on strike and the place was more or less deserted, though it was, I think, a Monday.

The philosophy department was at the end of a dreary gray corridor. A pink three-by-five card taped to the door told me that Professor Morales's class would be meeting in the cafeteria.

Why the cafeteria was open and functioning during a strike, I'll never know. I chalked it up as one of the mysteries of Latin America, where things are seldom as they seem and rarely as they should be.

Professor Morales's students were already filing out by the time I found the cafeteria in the basement of the main building. The man I sought stood near a table in the center of the room. His hands were buried deep in the pockets of his trousers, and his head was bowed as he listened, nodding, to a young Indian student at his side.

He was a small man, no more than five feet six, but not slight. He had a durable and compact shape, but it was mostly hidden in a pin-striped suit that was out of fashion in 1945 and had lost its shape soon after. His hair was gray and straight, parted in the middle and brushed back from his forehead, but his eyebrows were black and hooded his eyes.

He withdrew a hand from his pocket and placed it reassuringly on the student's shoulder, said something, and the young face brightened. The student made an awkward little bow and joined a girl waiting for him at the door.

"Professor Morales?"

"Yes?"

I introduced myself. His eyebrows arched as I listed my credentials, not exceptional by U.S. standards, but he looked around the room and back, as if to wonder what this university could possibly have to offer me.

I mentioned my experiences with Mexican healers, my desire to study the use of the *ayahuasca* and explore the primitive healing traditions of the Peruvian shaman. I needed advice, I said.

"I am merely a philosophy teacher," he said. "You should go to Lima. There is a museum of anthropology there."

This was going to be a dead end. "I have heard of it," I lied. "But I'm a psychologist, a therapist. I want to find an *ayahuascero* and experience his form of therapy firsthand. I want to write about it."

“Write about it?”

“For my doctoral thesis.”

His eyes moved down from my face, down my shirt front, down the strap of my shoulder bag, stopped on the bag, and continued on down my trousers to my hiking boots. Then he lifted his eyes to a spot somewhere on my forehead. His eyes reminded me of someone, but I couldn’t place it.

“What brings you to me?”

“I was told that you knew something.”

His face brightened into a handsome smile. “And where did you hear this?”

“In the market.”

“In the market! There I am known only for my ability to bargain with the fruit vendors.” He frowned. There was a trace of suspicion in his voice. “Do you speak Quechua?”

“No. I was trying to communicate with an herb seller. A young man intervened on my behalf. It was he who mentioned your name. He said that you knew something about the *curanderos*.”

He nodded his understanding. “One of my students, no doubt. Very polite to help a traveling stranger.”

He pushed back the shirt cuff protruding from the sleeve of his jacket and looked at his watch, an old Timex. “Would you like a little coffee?”

Experience is the name everyone gives to their mistakes.

—Oscar Wilde

“So.” Professor Morales lifted the lid from a sugar bowl and dipped his spoon into the mound of coarse, unrefined sugar. “Do you seek to have an experience, or to serve an experience?”

“Pardon?”

“With the *ayahuasca*.”

“I don’t understand.”

“How will I explain. . . .” He held the spoonful of sugar just above the oil-spotted surface of his coffee. “Have you ever taken the Sacrament?”

“Professor?”

“The Eucharist. The consecrated bread and wine of the Catholic faith. The body and the blood of Christ. Have you tasted it?”

“Yes.”

“You are Catholic?”

“No.” I looked down at the spoon, hovering motionless.

“But you have knelt before the altar.”

“Yes.”

He nodded. “You have taken the wafer on your tongue, and it stuck to the roof of your mouth and tasted like cardboard, and the wine was cheap and sweet.”

I laughed. “Yes.”

“You have done this, yet you are not Catholic. You have had an experience of the Holy Communion, but you have not communed.” Carefully, he lowered the spoon onto the surface of the coffee. The liquid seeped into the sugar from the edges of the spoon, and the little mound was saturated

crystal by crystal. "*Experience* rather than experience served." He tipped the spoon and the thick sugar syrup oozed into the coffee. "The ritual did not serve you, for you did not serve the ritual. It is a question of intent."

I smiled at this and said: "My intentions are strictly honorable."

"You intend to study the use of the *ayahuasca* by the Peruvian shaman?"

"Well. . . . Yes."

"*That* is your intention. What is your purpose?"

I took a deep breath and let it go. Professor Morales reached his hand across the table. The cuffs of his white shirt were slightly soiled. He touched my forearm with a gently weathered hand. "You are growing impatient with my . . . semantics."

"Not at all," I lied.

"You are Latin, yes?"

"I was born in Cuba."

He nodded and stirred his coffee. I studied his brow, the bridge of his nose, the sculpture of his cheekbones, his hair. Indian. The head of the department of philosophy of the Universidad Nacional de San Antonio Abad was an Indian. A Quechua Indian. His ancestry was pure, unviolated by the Spanish conquest. But not untouched.

And I had the sudden conviction that he knew a great deal, that his wisdom was profound and his eccentricity genuine. For some reason, by some fluke of association, I thought of Merlin. As I did so, he reached into the pocket of his jacket and withdrew a tiny bird's nest. He made a sort of "hmmm" sound and produced a pair of ivory dice, a couple of kernels of corn, and a small Mexican God's eye: a cross formed by two straight twigs woven together with white and red yarn, forming a diamond-shaped bull's-eye. Tassels of green yarn dangled from the ends of the twigs. He placed this in the center of the table, returned the other objects to his pockets, and sipped from his coffee.

"The *ayahuasca* has been studied, has been written about in scholarly journals."

"Marlene Dobkin de Rios. Yes. I have read her papers. She is an anthropologist," I said.

"And you are a psychologist. You have read these accounts and are curious about the effects of this folkloric plant on the human psyche and the . . . unconscious mind."

He blinked and his eyes moved from mine, shifted to the left and

seemed to focus on a point somewhere over my right shoulder. I turned my head to follow his gaze. An empty table in the corner near the door to the cafeteria. When I turned back he was smiling at me. His eyes were younger than his face; walnut brown iris and ebony black pupil stood out in sharp definition against veinless whites.

"You want to taste the *yagé*, and you are drawn to it by a fascination with death." He sipped again from his cup.

"It's true, then?"

He raised his eyebrows for a question.

"The *ayahuasca* takes you to meet death?"

"That is the claim, yes. *Aya* is Quechua for "death." *Huasca* is "rope" or "vine." The "rope of the dead." It is one of the sacred medicines of the shamans of the Amazon jungle, and that is where you must go to find it. But if you do this, if you work with an *ayahuascero*. . . ." He cocked his head, grinned. "And if you survive, and if you write about your experience and speculate on its effects, who will read it?"

"Professors at my university. Psychologists."

"And this will win for you a doctorate?"

"Yes. This and my work with healers in Mexico."

"I am surprised that any scientist in the United States would be interested in such subjective experiences."

"Psychology is still a young science. It is not yet even fully accepted as a science, and I am capable of reporting objectively on my experiences."

His eyebrows arched. "Is any man able to be objective about his *own* experience?"

"Perhaps not, but I can document the psychological effects I experience just as I have documented the physical effects of traditional healings that I have witnessed."

"Undoubtedly. But which is more important, the cause of healing and the cause of a psychological experience, or the effect—the end result?"

I thought about this and framed my answer carefully. "They are of equal importance, but one must judge the effect before investigating the cause."

"That is a Western answer. It is rational. But you are on the brink of a realm in which cause and effect cannot be separated. If you enter this realm it will become important to understand this relationship." He leaned forward over his cup. "*Your* cause must be clear, for it will determine the effect. Your experience will be affected by what you bring to it, how you approach

. . . the . . . the *ayahuasca* ritual, for example. The realm of the shaman requires one to be impeccable of intent. It is quite a challenge."

"You know a great deal about this."

He shrugged. "I teach philosophy. I am an Indian, the only one here." A graceful sweep of his hand included the whole university. "An Indian, and an old one at that, so I must be wise." He laughed at this and said: "There are ancient traditions in my country. It is a very rich culture, and I grew up with its myths and have studied its legends. Shamans are the masters of the myths and often the makers of the legends. Men and women of knowledge, the physicians, psychologists . . ." He nodded. "Yes . . . and the storytellers of a community. They understand the forces of Nature and use those forces to maintain the health and well-being of their people." He drained his cup, set it on the saucer, and pushed them to one side. "They are the caretakers of the Earth. An intriguing notion when understood. On the surface, very quaint."

"How should I proceed?"

"Follow your instincts. They have brought you this far."

"Yes, but where will I find a shaman who is willing to work with me?"

"The villages of the *altiplano*, the high desert plateau. You will find healers, perhaps a self-styled sorcerer or two. You do not speak Quechua and you will need to hire the services of a translator. But you are interested in the *ayahuasca*, the medicine of the jungle. Do you have a piece of paper?"

I nodded quickly and dug into my pockets. Coins, my hotel room key. I reached for my shoulder bag. At last I was going to get something concrete. I pulled my journal from the bag.

"There is a custom," said Professor Morales, staring at the unworn binding, the unfingered pages, "that a shaman will share his or her knowledge with all who seek it if they present themselves with impeccable intent, purity of purpose. That is how you will know a *hatun laika*, a master shaman, from a simple healer. If you wish to enter the other world, the world of the shaman, if you wish to journey through the Medicine Wheel, then you will need to find a *hatun laika*, and you will need to be prepared to approach him or her as a student, as a beginner, not as a . . . psychologist." He produced an old-fashioned fountain pen from the breast pocket of his jacket. "If you wish simply to taste and to study the use of the *ayahuasca* you will need only to meet one who is skilled in its preparation and the rituals of the jaguar path. I have heard of a man . . . No, no! Do not tear it!"

He reached across the table and placed a hand on the page that I was set to rip from the journal. He smiled and pulled the open volume toward him. He unscrewed the cap from the pen and wrote something in the upper right corner of one page.

"The jaguar path?"

"The journey West. The second cardinal point on the Medicine Wheel." He blew gently on the ink and closed the journal, and his eyes rose to meet my curious gaze.

"The Medicine Wheel," he said again.

I shook my head.

"The Medicine Wheel, the fourfold path of knowledge. It is also called the journey of the Four Winds. It is the legendary journey that an initiate undertakes to become a person of knowledge." He lifted the God's eye from the table.

"Yes?"

"Yes. The Medicine Wheel is the mandala of the Inca shaman, although there exists no real symbol for it, just as there are no writings, no figure of worship, no human prophet, or son of a deity. None are needed. The journey through the Medicine Wheel is a journey undertaken to awaken vision and to discover and embrace the Divine within oneself, to reestablish one's connection with Nature and the mystery of the cosmos, to acquire skills and the wisdom to use them." He turned the God's eye by twisting its base between his finger and thumb.

"The Four Winds are marked out like the cardinal points of a compass." He pointed to the base of the God's eye. "It begins in the South, the serpent path, where one goes to shed the past, just as the serpent sheds its skin. The jaguar path in the West," he pointed to the left point on the cross, "is where one loses fear and faces death. In the North one takes the dragon path to discover the wisdom of the ancients and to create a union with the Divine. Finally," he pointed to the tip of the right arm of the cross, "the eagle path of the East—the flight to the Sun and the journey back to one's home to exercise one's vision in the context of one's life and work. The legends claim that this is the most difficult journey the shaman undertakes."

He replaced the God's eye in a jacket pocket. "It is said that few complete this journey of initiation. There are few true shamans, few true persons of knowledge. Many who tread this path stop along the way and are

content to be healers and medicine men. They become masters of their own direction. And then there are those who become trapped by power." He made a fist. "Lost along the way. It is a journey that can take a lifetime." He relaxed his grip. "But it is a charming program, don't you think? And so much less complicated than the sephiroth of the Jewish cabala or the Buddhist pathways to nirvana."

He pushed my journal back across the table. "But you are concerned with the *ayahuasca*, which is said to aid one along the path of the West. I have heard of a man, an *ayahuascero* in the jungle near Pucallpa. I have written his name and rough directions in your book. You can fly there from here."

"You have met this man?" I asked.

"No. One of my students is from the area and has told me of him. He has quite a reputation. I have often thought of taking myself there, but I have not found the time." He looked again at his watch. "I must leave you now. I am meeting a class at the ruins of Tambo Machay. If you return to Cuzco, I would be greatly pleased if you would be my guest to lecture to them about Western psychotherapy. They would be most interested." He smiled. "And so would I."

He looked about him, patted his pockets, and stood. I jumped to my feet and offered my hand. "Thank you, Professor Morales, for your time and patience. I was fortunate to find you." He waved it off. "And I *will* return," I said. "It would be an honor to lecture to your students."

Again, the professor's attention was drawn to something over my shoulder. I turned and this time there was something to see. Two young Indians stood dripping wet at the doorway to the cafeteria. Their straight black hair was matted to their foreheads and their clothes were sopping. They were barefoot, clutching their shoes to their stomachs. They stared wide-eyed and expectantly at the professor.

"Why do you carry your shoes, *jovenes*?"

"It is raining, maestro."

"Yes," said the professor, patiently. "I guessed that. We will have our class here in the cafeteria. But why do you go barefoot?"

They looked down at the floor. "We do not want to get our shoes wet."

Professor Morales sighed and placed a hand on my shoulder. "Yes," he said in careful English. "It would be an honor to lecture to them."

February 13
Airborne over the Amazon

Experience and experience served.

I sit in my window seat in this trembling relic of an airplane that was probably overhauled sometime during the Eisenhower administration. Outside the twin propellers tear the air to shreds and pull me closer to some jungle airstrip, and I am reminded of a similar flight three summers ago.

Oaxaca, Mexico. The Huichol Indians. Experience? Or experience served?

In 1969, at the end of my senior year of college, with a bachelor's degree in inter-American studies, I was accepted to the master's program at the new Humanistic Psychology Institute. To make ends meet during my senior year, I had been teaching summer school Spanish to a small private high school class, and when word came of my acceptance into the master's program, I decided to celebrate by organizing a four-week field trip to Mexico. It was a toss-up whether the students or their parents were more eager for the kids to disappear for the summer.

After a month of touring Mexico City and, southeast, to the Yucatán Peninsula and the home of the Mayas, I packed the students back to San Francisco, their suitcases crammed with dirty clothes, heads filled with colloquial Spanish, eyes widened by their first experience of the third world. I stayed on, flew to Tepic, on the west coast of Mexico, and hired a pilot and his single engine Cessna to take me to Mesa del Nayar, in the state of Oaxaca.

We were forced to buzz the narrow mountain airstrip twice to clear the runway of livestock: wandering pigs, sheep, skeletal cows, all shepherded by a little boy dressed in white. His name was Gerardo and I hired one of his burros to take me into the mountains above the mesa, to a village that proved to be his own.

I stayed with the Huichols for three weeks. I lived in their village, dazzled their children with maps of the world drawn in the sand, learned

something of their isolated culture and the significance of the brightly colored yarn paintings for which the tribe was famous. A painting, made by pressing naturally dyed yarn onto a beeswax-covered board, was used to portray the psychodynamic of a person in a pictograph, a "spirit catcher." The artist was a sort of psychologist who carefully designed a painting to tell the story of a client's condition. The decisive moment in this form of therapy was the moment when the soul was captured in the picture. The artist/healer would then alter the picture subtly and thereby effect a change in the client's condition.

Tourism is now the principal source of revenue for the Republic of Mexico, and the paintings have become popular curiosities, colorful souvenirs; Day-Glo synthetic yarn has replaced natural color and fiber, and the art form has all but lost its meaning.

But there, in that remote mountain village, on a stool in the doorway of her adobe *casita*, Gerardo's grandmother, doña Juanita, worked the yarn with deeply stained, callused fingers. She attributed much of her skill and insight to *hikuli*, peyote, the sacred cactus of the rural Indian tribes of Mexico.

Had I had the time and means to stay with the Huichols for more than a few weeks, I might have accompanied the members of the village on their annual pilgrimage to the northeastern desert to gather peyote on the slopes of the sacred mountain of Wirikuta. I might even have "learned to think as a Huichol" by ingesting the cactus in their company.

Instead, at the end of the second week, Juanita suggested that I "go be" with the peyote. She pointed to the crest of a mountain some two miles from the village, and instructed me to go there and meditate for two afternoons, to eat nothing, to clear my mind. So I spent two afternoons sitting cross-legged on a scorched mountaintop, trying to think of something to think about, falling asleep in the warmth of the Mexican sun.

On the evening of the second day, I returned to find Juanita standing on the outskirts of the village.

"You have the same problem a deer has," she said. "You always come down a mountain the same way you went up."

I had read accounts of the psychedelic effects of peyote, the beatific visions, the voices of whispered wisdom, the experiences of time without sequence, and my empty stomach fluttered with adrenaline as she pressed five peyote buttons into my hand and told me call upon the spirit of the

plant, to chew them carefully, to imagine that I was chewing the flesh of the Earth.

Dutifully, I hiked back to my mountaintop perch and took the peyote buttons one after the other. They tasted like twice-puked puke. Their vile bitterness set me trembling, and I spent an hour retching over a manzanita bush.

Then my stomach relaxed, the spasms were gone, and I felt alone. The manzanita bush shimmered in the white heat of the sun, and I was sitting on a world of sharp contrast, an Earth that I was not part of, but apart from.

Displaced, an alien who did not belong, dispossessed by the rocks, the twigs, the dirt, the radiant manzanita, the vista of Nature before me, I was forsaken.

I touched the brown dirt with the palm of my hand and felt its warmth, and it stuck to the sweat that oozed from my pores, and I brought the palm to my face, touched it, and the dirt smeared across my cheek and mixed with the drool at the corner of my mouth.

And the whiteness of the sunlight turned to a glowing yellow, then a radiant orange as I smeared my face with mud of dirt and sweat and saliva.

I stripped off my shirt and painted myself with russet earth, camouflaged myself, slathered my chest, arms, and neck and felt myself collapsing. As the mud dried and cracked, I knew that I was of the Earth and that it was to the Earth that I would return. This mother would care for me, cradle me, love me, although all I had done was walk upon her, unmindful of her, seeking my own pleasure, living my own melodrama.

The sun was setting and I stared at it with dilated pupils. I sucked it in through my eyes and felt its glow saturate my tissues from the inside out, held in by the shell of dried, caked-on mud. A planetary poultice.

I remember becoming aware of my breath. I breathed with the sun. I could set the sun with my breath, perceived myself setting the sun, lower with each exhalation. I remember marveling at the discovery, testing the depth of my breathing against the progress of the sun toward the horizon. A deep breath, two lungs full, a long sigh, and it was gone. And I slept.

I woke up sometime after midnight and made my way down the mountain, taking care to return to the village by a different route. Juanita was waiting for me. She eyed me suspiciously and I embraced her, let her lead me to my bed.

Ten hours later I awoke to the stink of my body, stumbled into the late

morning sunlight, and washed in the cool waters of the river that ran down from the mountains and beside the town. Downstream there was a widening in the river, a sort of pool, where I floated on my back and stared at the mountain-blue sky. A bolus of peyote and earth swallowed the day before rushed from my lower intestines in a sudden diarrheal evacuation. I moved upstream and washed myself, climbed out of the river, felt chastised. I sat on the bank and realized that no matter how much earth I smeared on myself, I was still a white man who shits in the waters from which others drink. I learned more about ecology from that one incident than from all of the books and articles I have read since.

I returned to California dressed like a Huichol: white pants, white shirt, colorful woven sash at my waist.

But I was in my early twenties then, and was convinced that the profoundness of my experience gave me the right to such an affectation. The right to advertise.

February 13

Later

We've dropped to a thousand feet. The green density of the jungle below has taken on definition, botanical detail.

A wide turn to the right, and we're . . . circling the airstrip—a gray scar—no, a tear in the woven fabric of the jungle, the deep green mantle of the Earth.

I suspect that my time with the Huichols, my communion on the mountaintop, was merely an experience. Perhaps as superficial as my reaction to it. Counterfeit spirituality. Wearing another's costume does not make one kin.

Shitting in the river may have been the most genuine act of that particular journey.

I did not serve the peyote experience (I did not know how to), yet the experience served me, continues to serve me, as I question my level of preparation for what may lie ahead and below in some invisible clearing in this jungle.

Professor Morales hinted that I was not prepared for the jungle, for the “jaguar path of the West.” First comes the “South,” something

about shedding the past. . . . Interesting how my past is with me now. The Huichols. . . . Anxiety. Morales's words have gotten under my skin.

Two hundred, one hundred feet above the airstrip, and we are level with the trees! Chihuahuaco trees that would dwarf a redwood and set the standard scale of the Amazon jungle. Primeval. The land of giants.

A blast of heat that carried with it the smell of the jungle greeted my arrival in Pucallpa. The airport was everything it should have been. Sturdy pillars held up a thick thatched roof gray with age and airplane exhaust. Tattered mosquito netting, here and there a corrugated metal wall, a rusted tin Coca-Cola sign, worn benches, mosquitoes. On the edge of the airstrip, a bus with a makeshift wooden roof, a couple of battered pick-up trucks.

The fifty-meter walk from the plane to the shady door beside the Coca-Cola sign had me fighting for breath, my cotton shirt sticking unpleasantly to my back. A bead of sweat broke free from my chest, and I felt it course down my belly as I stood before an old Westinghouse fan, leaned against the counter of the bar.

I waited while a little woman, an Indian, filled her nylon net bag with dripping wet soda bottles and counted out her *soles* for the barman, a fat, fresh-faced native. The transaction completed, she lifted a burlap-wrapped parcel onto her head, and, balancing it there, hefted the shopping bag by its plastic handles and headed out, into the heat. I looked after her a moment, realized that she was bare-breasted, pictured a *National Geographic* cover photo, and turned to the proprietor.

"Cerveza, por favor."

"¡Sí, señor!"

The little man smiled broadly, reached into a washtub crammed with beer bottles and soda bottles in ice water, drew out an Amazonas. He wiped it off with a damp towel, popped off the cap, and set it before me with a flourish. *"Una cerveza fría para el . . . español."*

"Not Spanish," I said. *"Gringo, americano."*

"But your accent . . ."

"Cuban."

His eyes widened. "Truly?"

"Before the revolution." I grinned and raised the bottle. "*Salud.*"

"*Salud, señor.*" He leaned over the bar and looked down at my backpack. "Engineer?"

I shook my head. He gave me the eye. "Oil," he said.

"No."

His lower lip came up to lap the upper. "You are not an American rancher. . . ." He brought his hand down on the counter with a soft slap. "A consultant!"

I laughed. "Psychologist," I said.

He frowned.

I said, "Doctor."

His face cleared. "Ah!" He thought about it for a second or two and said: "No. You are too young."

"You are right," I said. "Perhaps the heat will make me grow older."

"Do not mind it," he said. "Soon your body will slow down. Your heart will beat slower and you will stop sweating. You will adjust. Another beer?"

"No, thank you. I need to go down the highway. Is there a bus or taxi?"

"No. The bus is gone. How far?"

I brought my journal out of my bag and found Professor Morales's notation.

Don Ramón Silva

From Pucallpa airport south on Trans-Amazon Highway to kilometer 64. Follow path to the left two kilometers.

He peered down at the page with the earnest look of someone who cannot read.

"An hour," I said. "South."

He squinted and pointed out the door to a boy of twelve dragging a dirty canvas bag across the pavement. "Jorge. He takes mail to a plantation. He can take you." He rubbed together the forefinger and thumb of his right hand.

The Trans-Amazon Highway is a decaying two-lane pathway through the jungle. Tropical rains and sweltering heat have cracked and pitted the

roadway, and here and there thick lianas creep up the shallow embankments and slither far across the pockmarked pavement from both sides, as though to close the wound. Natives are forever keeping the jungle at bay, hacking away the groping fingers of Nature with worn-out machetes.

Jorge and I bounced along on the rusted springs of the cracked vinyl seat of his pick-up. A plastic virgin of Guadalupe hanging from the rear-view mirror jerked like a puppet at the end of its string. We talked about baseball, about the U.S. restaurant companies burning down the jungle to raise cattle, about the rubber plantation three hundred kilometers away.

I got out at the white wooden post marking kilometer 64. There seemed to be no break in the foliage left or right until Jorge jumped down from behind the wheel and pointed to a delicate banana palm standing knee high among the giants.

"Trail," he said.

We stood in the middle of the road, looked at each other for a moment, and he shrugged, shoved his hands in his pockets.

I slapped a mosquito on my cheek.

It had rained here the night before, and steam was rising from the roadway. All around, the cicadas droned and the jungle hissed. The air was thick with pungent mist and the grumble of the old pick-up's engine was lost in the steady, breathless hum of the Amazon.

"Why do you go in there?" he asked.

"To see a man."

He nodded and gazed down the road.

"Stay on the path," he said, without looking at me. "If you step off you get lost, never find it again."

"Thanks," I said.

"*De nada.*" He climbed back up into the cab, jerked the door closed. I dug into my pocket and came up with a handful of *soles*. He rested his arm on the door, looked down at the money in my hand, squinted over my shoulder to the tangle of trees, vines, dripping leaves, and then smiled into my eyes. The smile was much too wise for his twelve-year-old face. He shook his head at the money and revved the engine. It backfired with a percussive clap. And something screamed.

"*Los monos,*" he said. Monkeys.

"Thanks for the ride," I said.

"*Buena suerte,*" he said. Good luck.

I stood in the middle of the Trans-Amazon Highway and watched the truck rattle away, distort, waver in the shimmering heat waves, disappear like a mirage.

February 13

Later

Following the path. Four feet wide, hard to distinguish. Here everything is overgrown, exaggerated, tangled and wet. The jungle floor is pulpy. An overwhelming sense of the Earth as a living thing, walking on its flesh. . . .

I've been following it for an hour. It. Shit. I think this is the path. Not sure. Senses on the alert. Catching the movement of light and shadow, eyes fixed to jungle floor, peripheral threats . . . jungle noise like white noise, steady sshhhhhhhhhh, but it's background to the rustle and squish of my footfalls, moist snaps of old vines and branches, the slap of leaves . . . sinuses filled with the pungent sweetness of decay that smells like life, like a shut-up greenhouse . . . the touch of fronds and vines, vines that stretch, reach across my way and waver, brush my face . . . the taste of anxiety.

I've stopped by this tree because I've been moving too fast. My heart is beating too fast. I'm breathing too fast. Thinking too fast. I would like to know that Don Ramón Silva lives at the end of this path. Let's hope so, 'cause it's a long way back to Pucallpa. I've stopped here to rest and reassure myself.

Am I afraid?

No. Can't define this feeling. It comes in through my pores. Energized. But I could sleep here and now. Stimulated. But my pencil moves thoughtfully across the paper. Very alive. I've never felt Nature like this. It knows I'm here. I can *feel* it and I know it can feel me and I feel that it knows I am here. My God, what a powerful thing this is!

My back to the tree, my legs stretched out before me, crossed at the ankles, I closed my journal around the pencil, shoved it into my pack. I closed my eyes and listened to the jungle sing. I don't know how long I listened. I felt

myself winding down, my metabolism slowing, comfort growing within and around.

Was something slithering?

I jerked awake, hands to the ground, and pushed myself back hard against the tree. Nothing. No movement. No snakes. Just a change in the light, about a half-hour's worth: a shift in the dappled patterns, the chunks of light cut up by the tangled ceiling of leaves and branches and vines.

What startled me so?

I moved to get up. There was resistance, a gentle tug, and I looked down at my body. Here and there, on my legs, at my side, by my arms, creepers, long delicate feelers touched me, had begun to bend to coil around me. I didn't mind.

The clearing was thirty meters away, a hundred feet from where I had stopped.

No one's home.

The house sits in its clearing like the archetype of the primitive jungle paradise. A thatched roof over an L-shaped platform, walls of palm-frond mesh. Chickens, a pig tethered to a banana palm.

Out back (though it's hard to tell front from back), the jungle floor gives way to sand on the bank of a little lagoon. Ducks or mud hens with brown and green feathers. The lagoon is surrounded by the fringe of the jungle. An old, cracked dugout canoe is overturned on the bank, stern end in the water, covered with algae slime.

There is a dead chihuahuaco tree, a twisted, hollowed-out trunk on the edge of the clearing, and near this, a fire. A couple of tin cans—oil cans—filled with a dappled reddish-brown, purple, and orange liquid. The colors don't quite mix. A clay pot is hanging from a wooden brazier over the fire, and a broth is bubbling inside—a funny, sour smell.

Sit and wait. Using the thick exposed roots of the chihuahuaco tree as the arms of a chair.

"You are here!"

I struggled to my feet, got tangled in the roots of the tree. He'd

come from behind the tree, from out of the jungle. He stood about five feet four inches, a body that had been toughened by the jungle. He had a soft, square Indian face, large hooked nose, and long upper eyelids that gave his eyes an Asian slant. His hair was silver-gray and thick, brushed back from a deeply wrinkled forehead. Deep creases ran down either side of his nose to the corners of his mouth. His lips were brown, the same color as his skin.

"Don Ramón Silva?"

"Ramón," he said, and grinned, and I shook his hand. Short, thick fingers, large, maybe arthritic knuckles. He cocked his head and looked up at me out of the corner of his eye.

"*Bienvenido*," he said.

Later

He knew I was coming. He expected me. He saw me in a dream.

But he did not expect me to be so tall.

I told him I was a psychologist. He nodded.

I told him that I had heard of him in Cuzco. He smiled.

I told him that Professor Antonio Morales Baca had told me where to find him. His face showed no recognition. Then he looked past me. His eyes widened as though with surprise, then he grinned, nodded as though he understood something.

"We will have a *toma*," he said.

"A *toma*?"

"Yes." He pointed to the brazier. "*La sogá*." The rope.

"An *ayahuasca* ceremony?" I asked.

He nodded. "Have you eaten?"

Food! I hadn't even thought about it. I remembered swallowing down a plateful of scrambled eggs at six o'clock in the morning. The airport in Cuzco. I looked at my watch. It was quarter to six. Twelve hours. I was ravenous.

"No," I said. "I'm very hungry."

"*Bueno*," he said. "Then you will have a good appetite in the morning."

Fifty meters from the clearing there is a bend in the little river. The water of the lagoon is clear but almost stagnant; here it flows lazily away into the jungle, into the Amazon.

I've stripped and bathed, wrung the sweat and dust out of my clothes. I feel refreshed but achingly hungry. I am to return to the clearing after the sun sets.

So here I sit, cross-legged on a wet, sandy shore and wait for another experience. I don't know how to serve this one, either. I'm either going about this all wrong, as Professor Morales hinted, or the experience will speak for itself. Don Ramón seemed to accept me without hesitation, so I've either managed to present myself impeccably (I can't imagine how) or there are no prerequisites for this work (Ramón does not strike me as indiscriminate). It can't be the wool poncho I brought as a gift from Cuzco—he'll never use it anyway, it's so bloody hot. So I don't know what to think about this. It's almost like a set-up and that's unreasonable, illogical, and presumptuous.

Morales said something about cause and effect being indistinguishable. Maybe I should stop thinking about it.

This will be my last entry before tonight's ceremony. Before I take the *yagé*.

This is for you, Brian:

February thirteenth. Heading upriver.

And Jehovah God also laid this command upon the man: "From every tree of the garden you may eat to satisfaction. But as for the tree of the knowledge of good and evil you must not eat from it, for in the day you eat from it you will positively die."

—Genesis 2:16–17

I sat on a *petate*, a mat of woven palm fronds in the center of a room. The room was large, taking up the whole of the short leg of the L, and barren. Vertical rough-hewn wooden poles, the criss-cross pattern of palm frond walls, and, above, the underside of the thatchwork roof resting on an open framework.

One wall was open to the lagoon, and moonlight reflected off its surface and into the room. Four crude candles had been placed at the four corners of the *petate*, and they burned with tall unwavering ribbons of orange flame.

I sat cross-legged, wrists resting on my knees, and looked down at two objects glowing in the candlelight: a tall hardwood pipe carved in the figure of an Indian holding a cup, like an offering in the palms of his hands, a serpent coiled at his feet. Loosely packed tobacco hung over the edge of the cup. Beside this was a harp, a simple, hollowed-out length of hardwood, a thin wire stretched taut between its ends.

The sound of the jungle was different at night. The steady, sweltering hiss of tropical day had resolved itself into the rhythmic chant of a million insects. Somewhere a deep, resonant hum was matching its tempo, and I looked out to see Ramón silhouetted against the glistening path of moonlight on the lagoon. The murmur of his chant was measured to the cadence of the jungle. His hands held something: a bowl? He raised the thing to the sky.

I could not make out the words of his song, but the refrain was steady,

and the verse changed four times as he turned and faced each of the four directions.

It was a bowl, a wooden bowl, that he set between us, and it was filled with the broth I had seen by the fire. A thick liquid the color of mushroom soup, beet juice, and carrot juice, it gave off a pungent tang. I thought of my tissues, starved for food, anxious to absorb anything. The *yagé* looked potent and dangerous.

"You are thinking about death," he said.

I met his eyes and nodded.

His eyes moved smoothly left and right, rested on a point above my head. "It is a fungus that grows inside us."

He raised the pipe, pulled a twig from the pocket of his shirt, caught a flame from one of the candles, and held it over the tobacco. He puffed long and hard on the mouthpiece, and the tobacco crackled, sparked, and glowed. One strand, a tiny tobacco ember, broke free and fell to the floor and died. He took the smoke deep into his lungs, exhaled a long, steady stream of acrid fumes, then puffed and blew smoke over the *yagé*. The smoke hung in the motionless air, hovered over the surface of the liquid, and curled around the lip of the vessel. Then he leaned back and puffed heartily. The tobacco glowed red hot within the thick wooden walls of the pipe, and he leaned forward toward me, blowing smoke on my chest, down my arms, around my head, into my lap. Then he handed me the pipe.

The tobacco was stronger than any I had tasted. It caught in my throat and burned my lungs and I gagged, coughed, blinked away my tears, and drew deeply. Ramón was humming again, eyes closed, rocking gently back and forth, a weird melody of mumbled words with no refrain. A slight breeze set the candles wavering and played across the hairs at the back of my neck.

Then he opened his eyes and they shifted to the left. Focused. I turned my head to look, but he reached out and stopped me, his hand on my cheek. I met his eyes. He lowered his hand and took the pipe.

"You are fortunate to have such a power stalking you."

"What power is that?"

"A cat, my young friend! A jaguar black as the night. A most powerful ally, but you have much work to do before you can claim it as yours." He nodded. "The spirit of the *ayahuasca* is also a jaguar. When you have met death, it will take you across the back of the rainbow and into the next

world.” He nodded his approval. “Call upon your jaguar now. Summon it to help you on your journey.”

Call upon it? I closed my eyes and imagined myself standing at the end of the path to Ramón’s house, whistling for the cat. Here, kitty! I couldn’t help myself.

But it took an effort to keep my eyes shut. My eyelids were fluttering and my heart was beating fast with anticipation. The jitters.

I took inventory. The woody taste of the jungle tobacco, palms damp, neck and shoulders held rigid. Nervous energy, anxiety. I took a deep breath and tried to release it slowly, evenly, lowered my shoulders. A jaguar. Stalking me. All right. How shall I call upon it? Visualize it. Conjure up a picture. A sleek panther, black like polished . . . ebony. Pitch black. I imagined it moving fluidly, stealthily through the jungle, just like they’re supposed to.

“*Así es mejor.*” That is better.

The voice came from somewhere above. I opened my eyes on nothing. Ramón was gone. A cloud had passed before the moon, and the room was darker, the blackness pierced only by the candle flames. Smoke. He was behind me, blowing smoke at my back.

He returned to sit before me. He set aside the pipe.

“Tonight we will bring the death out of you.”

He hooked his thumb over the edge of the bowl and held it before me.

“Drink.”

A tremor went through my stomach as I took the bowl in both hands and lifted it to my lips. It smelled sour and my throat tightened as I took my first sip. Cold, like sour mushroom soup, an acid milkiness and bitter aftertaste. I felt it go down, coat my insides.

I nodded and offered him the bowl. He shook his head.

“All of it,” he said.

He raised his hand and made a fist, and the muscles of his forearm contracted. *Poder*. Power. Strength. A universal symbol of vigor and fortitude.

What the hell. A deep breath and I opened the back of my throat and poured it down. Two convulsive swallows and it was in. I placed the empty bowl between us and sucked the residual broth from the inside of my mouth.

He approved. “Lie down now,” he said.

I stretched out on the palm-frond mat, and stared up at the dark peak of the thatched roof. I closed my eyes and entertained a moment of perspective. I riffled through my memory and took stock of my situation. What was I bringing to the experience? My education. Where was my power? In years of theory; chalk diagrams; frayed spiral-bound pages of notes, volumes of them; textbooks; stories of psychosis and treatment, cause and effect, complexes, dreams, analysis, all of the imaginings of all of the men and women who had struggled to define the experience of ordinary consciousness and understand the influences upon it. Thinking about thinking. Psychology. The crackpot science based on nothing but theory, ideas about ideas, thoughts about thoughts. Of the frontiers of science, this was the first, and "civilized" man had only just gotten around to it.

Consciousness is like a body of water. Conscious mind and unconscious mind. The surface of the sea and its unseen depths. I ran with the metaphor. Modern psychology had taught me to study the depths, to speculate on the geography of the bottom, by observing the color of the water, the patterns of the waves, the stuff that floated up to the surface. Ask questions of a patient and get answers back. Like sonar. Send out a signal and listen to what bounces back and try to piece together what lies below.

But we hadn't learned how to dive in to see for ourselves. Afraid of getting wet? Watch the waves and see how they break and guess how deep is this ocean. . . .

Waves breaking on a sandy shore. Water sliding up the sand, sucked, saturated, sparkling crystals of wet sand shining, sunlit. Surf sounds. I open my eyes, and the sound swells and pinpoints of candlelight are rising from the four corners around me. Floating up toward the thatched roof. Neon red and pastel green luminous particles floating toward the peak and swirling . . . no . . . *coiling* . . . tightly . . . tighter. Ready to spring. The center cannot hold, is taking form and rushes, plummets toward me from the ceiling. A thundering roar and the light has jaws; I shudder at its impact.

A hand falls on my face. I flinch, but I can feel the hand and I can feel my face, so it must be my hand. What's feeling what? My mouth is open and I can feel my tongue with the tips of my fingers, but I do not feel my fingers with the tip of my tongue. Numb. Face like putty. Lump of tongue.

A sound with a texture, a colored vibration . . . a green resonance, the color of the jungle reverberates through my body, from my ears to my feet.

The room shifts, rotates upward, because I've lifted my head. Ramón, eyes closed, holds the one-stringed harp to his mouth and plucks the wire and his head vibrates with green neon and he shapes the sound with his lips and I watch it coil down the hollow of the harp. His eyelids part and his eyes take mine and lead them left to where the shadow moves, slinking around the perimeter of the room. A shadow with depth, 3-D. Follow it. The shadow stops, and the walls move left, and the room spins on Ramón's axis.

Dizzy and diseased. Oh, the smell! Fumes rising with my breath from corrupted innards. Guts withering in the vapors of decay. Spoiled tissues moldering inside. I shudder at Ramón's touch. I look down. Hand on my arm. I can see the rot inside, under my skin. He points to the jungle.

"Purgate."

Beyond the end of his finger the sand is iridescent, and my feet sink and slide in its glow. The jungle is alive with light. Spinning ultraviolet orbs that I know are elemental forces of Nature—the trees, the plants, shimmer. Drawn to the chihuahuaco, my palms on its warm bark, my body arched, vomiting fungus. *Purgate*, purge yourself uncontrollably, cathartically, from the soles of your feet. What is this toxic stuff? My stomach is like a bulb contracting, sucking the rot from intestines and expelling it with each wrenching contraction.

The tree moves, the bark shifts beneath my hands, and I fall away, backward to the sand, and watch this snake, this water boa, unwind its thick, thick brown, black, and yellow shining body from around the trunk of the tree. The size . . . unspeakable . . . Satchamama . . . serpent . . . guardian of the Amazon opens its mouth to me, webbed pink tissue, a clucking, croaking sound, and a sharp breath draws in the sweet night air, and still the body moves in layers from around the tree. No end to it. Then its tail thuds to the sand. Its head at the water's edge, cleaving its path, a sparkling wake across the mirror surface of the lagoon and away, through a black gap in the phosphorescence of the jungle.

My belly moans, movement. Scramble to my feet. Urgent. In the bushes holding onto a vine, pants bunched around my feet, holding my ankles down, evacuating my bowels, wiping myself with leaves at hand. Clean, scoured out, I stand and look, and lose myself in the beauty of the jungle. It has revealed itself to me. It *does* have a spirit.

The vine pulls at my hand. Vine? No. Ramón's arm.

He whispers: "Do not be overpowered by the *ayahwasca*. Do not be seduced. Attend to the ritual."

The ritual? I thought this *was* the ritual!

He leads me to the water's edge. I am submissive. Trust. Must give myself to his care, because I fear the pull of the jungle and the influences of the night on my fresh self. I see the lagoon, the crispness of its liquid surface.

"Can you go in?" he asks softly, mother to child.

Oh, I . . . wonder . . . shattering the surface . . . the shards could cut me and I could fall into the blackness below . . . tumble, bleeding through the blackness.

His lyric song brings me back to the water's edge, standing in the sand. Hallucinating wildly. Again. Can I go in? Let me see. I look down at the liquid mirror. I want to touch its . . .

Reflections. . . . My face, shining brightly, particles of light skittering away from its edges, skipping across the glassy surface. . . . The moon. Three-quarter moon. Stars shining through pinpricks on the water's surface. A shadow moves across the field of reflected sky, and I twist my head to look up. Something in the air. Well. . . .

Ripples of concern wave across my brow. Face looking up at me from the surface, so smooth. I lean over and it grows, smiling back at me. I am relieved. I reach out and my fingers touch the water and the reflection floating there wavers gently. Fingers move through water to its edge.

I pinch its edge between thumb and forefinger and lift it, lift my reflection from the surface of the lagoon. Like the skin or film that forms on a cup of cocoa, it has no weight. Limp, sodden reflection hanging, dripping from the ends of my fingers, twisting, writhing into a liquid stringiness, bits and pieces of face falling in colorful drops, drip . . . drip to the sand. Sand at my feet.

Bird!

A bird the size of a dog, all black and gray, wrinkled pink neck stretched from a flouncy ruffled collar and a hard, battered beak, pecks at the pieces. Stabbing at the sand.

Jab . . . jab . . . jab, jab.

Stop it!

Feathers bristle, its eyes roll, and it hops . . . awkward . . . grotesque

step . . . back. Wings stretch eight feet, gray-tipped jungle size. Its screech echoes over the lagoon. . . .

“Condor.”

Ramón’s hand tightens on my arm. “You have much work to do, my friend. Come! Quickly. Before it returns . . .”

Back inside the hut, a world of shadows. I sit across from Ramón and stare at his face. He lifts the one-stringed harp to his mouth and plucks and the room vibrates to the chord. Green and red. Water music. Pillars are wet.

Again. Lower. An octave. His heavy lids lower. Drop of water from thatch above.

Again. Lower. An octave. Flowing down.

Again. Lower. Octaves of time. . . . His face sags and blanches, drawn and hollow-checked. The harp falls away with his old hand, and he opens his eyes to smile at me one last time. Death.

His head falls lifeless, lax, to one side, eyes clouded and mouth bent in a last grin and drooling . . . something . . . ooze. . . .

My hands cover my eyes, hide them from the sight. Falling, like falling in a dream. Feel the sickening thrill in my loins, the flutter of falling. Through . . . layers, one by one. Intricate lacework, architecture . . . planes of time . . . and space! Possibilities and choices. No hand-hold. Sliding too fast to see what lies between them, knowing they are important. Vastly important.

Light below. Tunnel vision.

Tunnel? Light?

If I move my legs out of the way, I could see better, but it’s hard to move. Legs asleep. Arms? Tightening, not responding. Neck hardening and cool spreading down. Rigor . . . setting. Mortis . . . coming surely. Inside tissues not giving, and my heart thumps slower against hard walls, rigid, bloodless cavity.

Light growing, glowing white. Last nausea swelling, a final bolus thickening, rising, hardening in my throat, and I . . .

Can’t . . . breathe. Oh . . . no. . . .

There’s smoke coming from Ramón’s mouth. The pipe again. Sweet, woody smells. Blowing it onto my chest and it’s swirling. Look at that little vortex—that smoke swirling on my chest! The room is singing, a gentle, lilting hum. The sound of breathing. Long, deep breaths. Hot breath. That’s

mine. Taste the air and feel the tears swelling your eyes. You're back. I'm back. He's smiling, but shaking his head side to side, slowly.

"Come with me."

I rolled over and pushed myself up, trembling from the woven mat. On my knees, on my feet, I used him as a crutch. Let it be over.

An old woman with braided gray hair slept on a mattress in a room we passed. Ramón's wife. I lifted my watch to my face, but the dial just confused me. It was still dark and the sounds of the jungle were back.

There was a small mattress, made up with a single sheet and a pillow, in a room at the end of an open hall.

Yes. Let me sleep now and forget this and live to see another morning.

The darkness behind my eyelids was filled with laughter, colors still ricocheted inside, off the walls of my skull. I tossed and fretted, soiling the single sheet with my sweat. I struggled out of my pants and lay there, fighting to dull my awakened senses, feeling every fiber of the sheet against my naked skin, tasting the acid of my saliva. There was a lingering smell of candle wax and the essence of tobacco smoke, and the whir and hiss of insects echoed intricately in my head. The laughter mocked me. Shadows mixed and mingled. I reached under the sheet and felt my belly, the muscles there, found that I could contract and relax them, each one of them, separately, at will. And there was something else. An emptiness, a hollowness inside, where I fancied that the jungle breeze, the gentle wind that moved the leaves, moved inside of me, in the empty spaces in my gut, emptied of . . . what? Memories?

I never saw her come into the room, never saw her at any distance allowing a full description. I only know what she felt like, lying next to me in the darkness, the textures of her body and her clean smell, the closeness of her Indian face, shining eyes, black hair cushioning the weight of her head on my shoulder. So simple. I need not bear this night alone and sleep without comfort. This daughter of . . . the jungle was here to reassure me, to hold me, to hold.

I held her close. Nothing had ever been so effortless, so natural, so easy.

My footfall crashes onto the moist soil, sound is magnified a thousandfold, and I flinch from disturbing the peace and harmony of the jungle . . . this perfect garden.

No need to step on it, I can float through it and up, away from the Earth and into the blackness between the stars, an exultation of freedom and purity. Very fast I can travel along the note that Ramón plays, that I have heard before. The tone of a crystal wine glass, a thread of sound that I follow as it synthesizes into an electric hum and numbers glow red in the darkness. 6:00. Her hand reaches out clumsily and bats at the bedside table, cluttered with tippable things, and the sound is a constant, whining buzz.

Stephanie! Sits upright, terrified, covers her breasts with a bunched white sheet, looks for me. I feel you, Stephanie. Deeply. Do you feel me. There? Startled? Don't be alarmed. I know you can't see me, because I'm too black and I move too perfectly. Just a breathless shadow, but I'm strong enough to take you. Now.

I woke up, all of a sudden, alone. The sun was flooding the little room with tropical heat. I hate waking to sunlight. It always gives me a headache.

I pushed myself back up against the wall, scooted my butt up the mattress, rubbed my face awake. Where was she? Wait. Stephanie or that girl? I yanked aside the sheet, and there was the evidence of our loving.

I pulled on my trousers. Shirt? In the other room. I stood and threw out a hand for support, and it almost went through the palm mesh wall. I found a vertical post, leaned against it, and tried to clear my head.

There was no one home. In the large room around the corner, on the central mat, was my shirt, neatly folded, My pack. Beside them, a bowl of fruit.

I squatted there and fed myself. The fruits—I think there were mangoes, papayas, bananas—were exquisite, succulent, and their juices saturated my starved tissues.

No one was home. I looked for Ramón by the lagoon, beyond the chihuahuaco tree, and down the path to the bend in the little river. I bathed

there, soaked in the warm water of the shallow stream, and returned to the deserted house feeling alive, but less than human.

February 14

Brain dead.

This pencil feels funny on the paper. Scraping, scratching at words that can't possibly express my feelings. Scrape scrape. Scratch scratch. Stupid to write with a pencil anyway.

There. Found a pen. Now this is no good either. Too slippery. Make an effort, now, because in a few days your head is going to clear and you'll get serious again and you shouldn't waste paper, anyway. See? There you go.

Why am I talking to myself? Why? Because there's NO ONE HERE TO TALK TO. Feel like screaming. Go off into the jungle and start screaming.

I might just as well have survived a car accident, a near-death experience. Yes, I'm glad to be alive and everything does look different, better, brighter, take a breath, think about it, resolve never again to take respiration for granted.

Let's get this straight. I almost died. I *know* it. If Ramón hadn't breathed smoke into me—God! those spinning vortices—I'd have plunged into that light or slipped and slid through and between those . . . those . . . planes of ~~reality~~ (think twice, three or four times before using that word again) and gone away.

Jennifer on a slab.

So I feel the relief, yes it's great to be alive, and I think (though I'm in no condition) that I experienced myself, my consciousness, or let's say my thinking awareness, as separate from my body, and of much more importance than this flesh.

But goddamn it! The fear was consuming, paralyzing. What's *really* scary is what was behind the visions, on the *other side* of the shadows, *between* all those planes and layers, *under the surface* of this pretty little lagoon.

I missed it all because I was dying and too fucking scared.

There's more to this, and I've missed it. I was a guest at my own funeral and I missed it.

I'll wait here at the foot of the *chihuahuaco*, where the serpent was. I'll wait here and feel the ecstasy of each breath, the rapture of the jungle and my living presence.

But I know there's more to be had, more to being human than this, and I'm not at peace, and won't be until I understand what it is that I've missed. Again.

I'll sit and wait for Ramón.

Ramón never came.

Sometime around noon I headed back down the path to the highway. It was hotter than the day before and I shone with sweat. A mosquito got stuck on my arm. Its wings plastered to my wet skin.

I waited for two hours, sitting on my pack, and it took no effort at all to think of absolutely nothing. I caught a ride on a wagon, a shallow, flatbed wooden wagon, a pallet attached to a truck axle and a couple of worn-out tires, pulled by a burro led by a hunchbacked Indian.

We got to Pucallpa eight hours later.

In 1967, as a philosophy student at the University of Puerto Rico, I had heard a lecture by Dr. Stanley Krippner, the director of the Maimonides Medical Center's dream laboratory. Afterward, at the reception, he met my enthusiasm for his topic with a challenge. Puerto Rico had a rich spiritist tradition; why not study the dreams of the soothsayers and spirit mediums of San Juan?

And I had found doña Rosa, a one-eyed black fortune-teller living in a tiny apartment on the bottom floor of an urban housing development on the edge of San Juan. She was a fierce old woman with a patch over her bad eye, a leaf held in place by a strip of palm. The good eye was like a precious stone in a hideous setting, and the full range of her expressions were reflected in the facets of that eye, and she read my fortune by gazing with it into a fishbowl. We became friends.

"There is a power stalking you," she said. "You have great things to

do, but you will do nothing of any importance until you stop running and turn to meet it face to face.”

She told me to drive to El Yunque, the rainforest mountain outside of San Juan. Go there and wait, she said.

I did so. I parked off the road among the banana trees and tropical scrub. I sat cross-legged on the hood of my car and waited.

I don't remember falling asleep, but you never do. I do remember leaning back against the windshield and closing my eyes on the dusk.

A twig snapped. My back arched and I was on the ground on all fours, hands and feet, scrambling in pitch blackness, crashing through the bushes, rolling to my left, something clammy touching my cheek. I clawed at the banana palm leaf sticking to my face and stopped breathing, and as my eyes adjusted to the night I saw my car and the lights of San Juan. My pants were torn and my knee was bleeding through a dirty gash. I'd sprained my wrist, and when I breathed again I limped back to my car.

Things that murmur, creak, wheeze, go bump in the night. I could not bring myself to tell Rosa. I was too embarrassed. But when I visited her a week later, she looked me in the eye and frowned. “You failed,” she said.

“I fell asleep,” I said. “And something startled me.”

“You lost an opportunity,” she said.

February 14

Much later

Nighttime, Pucallpa riverfront hotel. Huddled in bed. Writing by flashlight. River-boat sounds. Old cargo steamers, outboard-powered dugouts headed downriver.

Just a couple of questions. For the record.

The cat, the jaguar. What is it?

The colors and lights of the jungle.

The serpent. Satchamama. How did I know that word?

The condor and my face. My God! I know that happened, I can still feel its sticky wetness on the tips of my fingers.

The architecture.

The spinning smoke.

That girl. Ramón's daughter? I might have really blown it there.

Stephanie. Of all people. What I felt for her.

Bothered by the girl. How tender that scene and how erotic! But, Jesus! What if she came to me for comfort? To nurse me through the night? What if Ramón gave her to me to hold. Only. I can see that. Woman, my complement. Fill me out with your femaleness and we'll travel into sleep, into the night, into the garden.

So what do I do? She is there for me completely and I kiss her, I love her, I take advantage of her, I do what every man would do. I collapse the intimacy of the moment into a sexual encounter.

Should I have stayed until Ramón returned? Or was he waiting for me to leave?

I stayed in Pucallpa for five days, explored the piers and cargo boats that had ventured there, to the last navigable port in the Amazon, thirty-five hundred miles from the Atlantic. I visited Lake Yarinacocha, swam with the pink-bellied dolphins, and sunbathed on its gray sand beaches. The more I wrote the closer I came to explaining my experience with Ramón—and the further I strayed from understanding it.

Much learning does not teach understanding.

—*Heracritus*

Back in Cuzco the strike was over. Students hustled through the halls with an earnestness peculiar to Latin American schools. Here higher education was a privilege, not a right, and not likely to be taken for granted.

I had been directed to a classroom at the end of a hall. I stood looking through the little window set into the door and watched the faces of Professor Morales's students as the professor, looking distinguished despite the silliness of his suit, walked among them.

I counted sixteen students, only two women. They were mostly Indian, Quechua, but then so was Peru. Unlike the Mixtec and Aztecs of Mexico, who had mixed with the Spanish conquerors to form the mestizo Mexican, the Peruvian Indian had maintained the bloodline, although Spanish and other whites still ruled the military and the government and held most of the republic's wealth. Few Indians held university professorships.

There was movement at my elbow, and I looked down to see the Indian student the professor had been counseling in the cafeteria the week before. He had a harried, sheepish look. Late to class.

"Disculpeme, señor."

I stood aside and he pulled open the door. Professor Morales looked up and smiled at me, and the student slid into an empty seat. I stepped into the room and stood close to the wall.

"The English prelate and scholar William Ralph Inge said that the whole of nature is a conjugation of the verb *to eat*. What do you think he meant by this?"

A hand went up. A red-haired, freckled boy.

"Fernando?"

"What is a prelate, *maestro*?"

"A high-ranking member of the clergy, such as a bishop or an abbot.

But, Fernando, what do you think he meant by his words?"

Fernando looked down at the spiral notebook on his desk.

A girl with light brown hair and a crimson scarf raised her hand.

"Yes, Francesca?"

She dropped her hand and smiled. "You are what you eat?"

Professor Morales shook his head. "That is just another proverb. Come now! 'The whole of nature is a conjugation of the verb *to eat*.' " He reached into one of his bulging jacket pockets and withdrew an apple. He placed one hand on the tardy student's desk, leaned toward him, and took a bite out of the apple. "Juan Ignacio," he said around a mouthful of the fruit, "what is the primary function of life?"

The young man slowly raised his deep brown eyes. "Eating, *maestro*?"

"Eating! Say it with confidence, Juan Ignacio, for you know it is true!" He pushed himself back from the student's desk and moved to the front of the class. "Eating. This is Nature's constant. Life depends on eating other life. Think about it! Eating, consuming, digesting. It is not the primary function? The driving force? Chickens pecking at the sand, llamas grazing on the hillsides. In the forests and the jungles and the deserts of the Earth, Nature is engaged in feeding. Eating and being eaten. Primary. Primal, is it not? Yes, Francesca, you *are* what you eat and you will be eaten. Here in this simple fact is an elegant example of the inseparability of life and death. Life itself lives by killing and eating life."

He set aside the apple, went to the blackboard, and, with a stump of chalk from his pocket, drew a circle open at the top and then filled in the details. The *uroboros*, the serpent eating its own tail. He stepped back from his drawing.

"Life as an immortal force, perpetuating itself. And here is a symbol. The serpent eating its own tail. The serpent, so simple a creature, so primal. A traveling digestive system, that is all. A creature that sheds its skin and renews its life, sheds its past and wriggles forth. And here," he tapped the board with the chalk, "here is the serpent eating its own tail, a circle, an unbroken, unending path. Immortality. The life force itself. Life is immortal and lives by killing and eating life itself.

"And we will find the serpent as a symbol in the philosophies and

religions of humanity, from the Old and New Testaments to the Upanishads of the Hindu to the traditions of your Indian ancestors. The serpent is a universal symbol. It represents an elementary idea, an idea common to the consciousness of us all. And these symbols are what Carl Jung called the 'archetypes of the unconscious.' They are powerful forces of Nature and myth."

He dropped the chalk into a pocket and looked at his watch. "Tomorrow we will have a special surprise: a psychologist from the United States, who will tell us how the human brain works. Do not be late for our guest." He grinned over their heads at me, and they all turned to look, and I felt the blood rush to my head. I nodded awkwardly. I had hardly expected him to put me on the spot, but I was just beginning to know Antonio Morales Baca.

Books thumped, papers shuffled, zippers zipped; the class collected itself and headed out into the hall. The professor asked Juan Ignacio to stay for a moment, and the young Indian shuffled up to him, head bowed. "Excuse me for being late, Professor . . ."

"Juan Ignacio Peralta Villar. Always look into another's eyes. No matter who they are. Men will receive your gaze as a sign of confidence and strength. Women find it irresistible."

"Yes, sir."

"How is your mother?"

"She cannot breathe, *maestro*."

Morales looked up, either to make sure I was still there or as a sign for me to leave. I was feeling a little put out, so I held my ground. The professor lowered his voice.

"Did you take her to see Dr. Barrera?"

"Yes, *maestro*, thank you. He said she was allergic, that it would be this way always, and the medication . . ."

"Is very expensive, isn't it?"

"Yes, sir."

"Well. . . ." He looked up at me again. "There is a man named Gomez," he said, and mentioned an address. "Perhaps you should take your mother to see him. He practices a different kind of medicine."

My introduction to Maximo Gomez and the healings that he performed would be documented in *Realms of Healing*. I would spend two weeks living

with Maximo and his wife, Anita. Two weeks that would culminate in an incident that would have a profound effect on my education, on my understanding of the realms that I was destined to explore.

At Professor Morales's suggestion I accompanied Juan Ignacio and his mother to a simple whitewashed apartment house on the outskirts of town. Señora Peralta clearly suffered from acute asthma. Every breath required conscious effort, and her face was drawn and hollow from sleeplessness. Walking across town was out of the question, so I hired a taxi.

A teen-aged Indian girl was helping an ancient man down the front steps when we arrived at the address. She supported him with one hand, and, I noticed as I paid our driver, carried his cane in the other.

A tall, delicately boned woman stood smiling at the top of the steps. One hand rested on her pregnant belly, the other held open the door.

"Brother Maximo is treating someone, but he will be with you soon," she said. She led us to the kitchen: wooden floor, counter, and sink. The room was filled with plants, green and thriving in pots and tin cans, dead and drying, hanging from the open beams and the top of the windowsill. We sat around a brightly colored oilcloth-covered table. There was a light green parakeet, a *lorito*, in a tin-and-wire cage by the window.

Brother Maximo. *Brother*. Professor Morales had told me that Gomez was an "esoteric healer" recently in Cuzco from Lima, that the local medical association was pressing a lawsuit against him for practicing medicine without a license, that here was an opportunity to observe his practice.

"You did not mention him before," I said.

He shrugged. "You wanted to meet an *ayahuascero*." He smiled into my eyes and continued. "And by the look of you, you succeeded."

"Does it show?"

"You look like you've seen a ghost."

"I'd like to talk to you about that. . . ."

"Certainly. Tomorrow. After your lecture." He had patted me on the shoulder and Juan Ignacio and I had gone off to fetch his mother.

Now, the woman who had met us at the door poured strong Peruvian coffee from a tin pot. I introduced myself.

"Yes," she said. "Brother Maximo is expecting you." She smiled, and placed a demitasse cup before me. "I am Anita, Brother Maximo's wife. You are welcome here." I thanked her for the coffee and wondered who'd foretold my itinerary and sent it around to everybody. So far no one had seemed much surprised at or interested in my presence. I passed it off as an ego-

tistical fancy, added sugar to the bitter coffee, smelled the smell of all the herbs, listened to Señora Peralta wheeze, and studied Anita's face. There was something almost ethereal in her presence, something careworn around her eyes, a sense of resignation, maybe.

Maximo was a mestizo; he had a light Indian face and a scraggly Spanish beard that only partially covered the craterlike scars of smallpox. An attention getter. Short and stocky, energetic. He obviously thought quite a lot of himself. He exchanged a few whispered words with Anita and glanced sideways at Juan Ignacio and his mother. Then his face broke into a crooked smile, and he left Anita and put out his hand to me.

"Welcome, my brother! And you have brought your cat, your owl, and your deer with you!"

I shook his hand. "Well, I hope they're housebroken," I said.

He frowned, more confused than annoyed. He turned to Juan Ignacio's mother. "Come," he said, and gestured toward the open door.

I followed, but reluctantly. How many times in Mexico had I been used to endorse the status of the healers I had visited? How many times had I seen patients reassured by the presence of the "*doctor Americano*," the important scientist who had traveled from the United States to meet the great healer?

The living room was Maximo's clinic. It was a cramped, simple room with a bare wood floor, some chairs, a table covered with herbs and oils, a small cot in the center. There was a window with a view of Salcantay, the highest of the four snow-capped peaks of Cuzco. There were candles everywhere: stumps of beeswax, red Christmas candles, votive candles of dark yellow wax poured into small glass tumblers. But none of these were lit. The whitewashed room was naturally bright, and electrical fixtures on the cracked walls and an incandescent bulb hanging on a wire from the ceiling diffused the shadows cast by the late afternoon sunlight streaming through the window.

Juan Ignacio was asked to wait in the kitchen and, after Maximo explained that I was an "important medical man from the United States," Señora Peralta removed her blouse and lay face down on the cot. She was at least fifty pounds overweight, and this position proved too much for her lungs, so Maximo instructed her to sit up, which she did, clutching her blouse to her chest. Maximo walked around the cot, circling her, watching her out of the corners of his eyes.

"Breathe deeply," he said, and she made a self-conscious effort to do

so. Then he stopped at her back and, eyelids fluttering half-closed, placed his hands on either side of her spine. He traced an invisible line with the forefinger of his right hand, stopped, and pushed his fingertip deep into her fatty flesh. She sighed and flinched and he told her to relax, continuing to trace lines down her back, applying pressure at various points, sometimes twisting his thumb or forefinger and leaning into it. She grunted with pain and I saw that his fingers were leaving red blotches and deep fingernail marks along her back.

He removed her shoes and touched a point on her left foot. Then he lifted her long black skirt and zeroed in on acupressure targets on her veined calves and puckered thighs. Then he walked away, leaving her there, shoeless, her skirt bunched at her hips. Eyes closed, she held her blouse to her chest and rocked back and forth, still breathing with a mucousy wheeze. He went to Anita and she handed him a short twig covered with coffee-colored bark and still bearing one dried leaf.

"You can go now," he said to his wife and turned abruptly back to the señora.

"Get dressed."

She opened her eyes and managed to slip into her blouse without exposing the front of her brassiere.

"Take this branch," he commanded. "I have blessed it. Boil it in water from Tambo Machay and drink the tea three times a day. Come back to me in two days. That is all."

So he used acupressure, worked along the meridians that the ancient Chinese had charted two to three thousand years ago. He prescribed herb teas, acted pompous, and told her to come back for another treatment. I had witnessed this scene a dozen times among the urban healers of Mexico. And I had watched doña Pachita slice people open with a hunting knife and remove tumors; had even held aside the intestines of a "bladder transplant" patient in the candlelit back room of her Mexico City home. I wasn't much impressed with Brother Maximo.

"I'll find a taxi," I said.

Maximo shook his head. "No. You will not find one in this poor part of town. And I want her to walk. Please stay and eat with us."

I said my goodbyes to Juan Ignacio and his mother, and Maximo ordered Anita to go out and buy some food. His tone was infuriating. We sat at the kitchen table.

"You are here for long?"

I told him that my stay in Peru depended on my success in finding and working with traditional healers.

"You are from a university in the United States?"

"California," I said.

He repeated the word slowly, emphasizing the four syllables. "I have heard of it," he said. I told him of my interest in healing traditions, mentioned that I had spent time in Mexico and was eager to study and write about the psychology of healing. He seemed impressed. He filled two glasses with a clear liquid from a bottle out of the cupboard.

"You have heard of me," he said.

"Professor Morales, at the university here, suggested I meet you."

"Oh." His eyes grew slightly rounder and then he nodded quickly. "Yes. He has been to see me also."

"For treatment?"

"No. Just to meet me. *Salud!*"

"*Salud.*" I raised the glass, sipped the liquor, and shuddered. It was like sweet gin and burned on the way down.

"*Pisco,*" he said.

I nodded and took another sip. The second one was easier. "You use acupuncture," I said.

He raised his brows. "Eh?"

"With Señora Peralta. You followed the Chinese acupuncture meridians. Where did you study this?"

Maximo shook his head and suspicion clouded his face. "I am sorry. I do not know of this. What is it?"

I explained to him the concept of the Chinese tradition, the two thousand-odd points located along vertical meridians of *chi* energy running through the body, but it just seemed to confuse him. Finally he laughed it off. "No, no! I do not do any such thing. It is much simpler. I look at the rivers of light and follow them. Where there is a blockage, I clear it."

This was new.

"Rivers of light? What do they look like?"

"Oh . . ." He stuck out his lower lip in the effort to describe them. "They are . . . light . . . blueish sometimes . . . like streams of energy. They flow through the aura. I can see them," he reached out and held his finger half an inch from the skin on my arm, "there. . . ."

"You can see them now?"

"Yes. If I look."

Maybe it was the *pisco*. Maybe it was the altitude. It was probably the combination of the two. In any case, five minutes later I was standing on a chair, stripped down to my shorts, and Maximo Gomez was drawing the “rivers of light” on my body with a tube of Anita’s lipstick. I gave him my camera, curious to compare the “rivers” with an acupuncture chart when I got back to San Francisco, and he was snapping away when Anita came home with a *bolsa* full of groceries. She dropped the bag, burst into tears, and ran from the room. It was her only tube.

February 23

Need a plan. Maximo has invited me to stay. “Stay with us and learn.” Learn what? More about esoteric urban healers? Well, sure. What I *could* do is stay here for a while and study Maximo’s practice.

What I *want* to do is follow up the *batun laika*, master shaman, rural wizard angle.

What I *need* to do is sort out what happened to me in the jungle. Got a letter. From Stephanie. Of all people. Must’ve mailed it the day I left. Thanking me for the dinner, apologizing for her “attitude.”

I think she likes me.

Perfect. I’ll unlock the secrets of the human mind. My laboratory will be the jungles, high forest plains, and desert wildernesses of the world. I’ll experience the states of consciousness and realms of healing of primitive, skilled mystics, glean their wisdom and translate it into a workable Western form. With her help. A classically trained Western psychiatrist, a rationalist. Yin to my yang. Left brain to my right. We’ll bridge the gap between the instinctual wisdom of the ancients and the pragmatic, hard-won “facts” of modern, civilized man. Hand in hand, perfect balance. Right.

Why must I see a mate in every beautiful woman I meet? There’s a limbic function for you. Reduce everything to sex.

Limbic brain. Talk about that tomorrow. Lecture to Morales’s students. Knock ’em cold with some brain theory.

But there’s no denying that I . . . felt her that night in the jungle. I wonder what her bedroom really looks like.

I'll send her a postcard. Something like:

"Ramón's daughter was beautiful. Wish you were her."

Note: Buy lipstick for Anita.

She's the more genuine of the pair. Maximo talks a good line, but she has a look. . . . Maybe it's the pregnancy. Wholesomeness. Innocence. Power. He treats her like a dog on a choke chain.

The next day at four o'clock Professor Morales introduced me to his class as a young doctor of psychology from the United States. It had been evident that Morales was unique within the university, and not only because he was an Indian. During the strike I had not seen a soul save for a janitor, the cafeteria staff, and the old professor's loyal students. I had heard the tail end of his lecture, and I knew that Morales was a rare breed, an educator rather than a simple teacher, that he had created a learning environment for his students, had won their respect, had personally engaged them in the learning process, and, I was sure, had taught them more than the university catalogue promised. Now it was my turn.

I started off with Lyall Watson's line: "If the human brain were so simple that we could understand it, we would be so simple that we couldn't," and proceeded to outline the basics of the tribrain theory.

The tribrain theory, I explained, is closely tied to the evolution of *Homo sapiens*. It describes the human brain in terms of three "subbrains," which developed separately and independently: the ancient reptilian brain, the limbic brain, and the more recent neocortex.

The first, the reptilian brain, is not much different from the primitive brain that powered the dinosaurs. This brain regulates and maintains the machinery of the human body, including growth and tissue regeneration, movement, circulation, respiration, and other physical systems. It is the brain of habit, an indispensable survival tool for the ancient reptiles, who lacked the ability to evaluate their decisions once they were made, to change their minds.

What the dinosaurs lacked in intelligence they compensated for with brute strength, plowing through life rather than steering a course through it. The great reptiles lacked any predators to challenge their supremacy, and the complexity of their brains was in direct proportion to the simplicity of their lives.

With the extinction of the dinosaurs and the rise of the mammals, the

requisites for survival became more complex. The demands of the environment on the warm-blooded, more vulnerable mammals were such that their brains developed to nearly one hundred times the size of the cold-blooded reptile brain (in proportion to body weight). In early humans the instincts of the reptilian brain were complemented by a new neurocomputer, the limbic brain.

Whereas the reptilian brain of both the dinosaur and the human was programmed with an unfaltering obedience to instincts, the limbic brain was programmed with a new language: the emotions. Over time the limbic brain became the prime driver of human experience with its four emotionally laden response programs: the “four F’s.” fear, feeding, fighting, and sex. These four drives have controlled human behavior since the birth of our species.

The limbic brain is responsible for fence building and territorial thinking, for raiding and plundering neighbors’ villages, and for branding as enemies those whose skin color or features are unlike our own.

Guided by the emotionally volatile, nonrational, acutely intuitive limbic brain, early humans began to form hunter/gatherer tribes and villages and to develop social rituals and laws that would regulate and temper the impulses of the limbic brain.

One hundred thousand years ago, in a curious and as yet unexplained evolutionary quantum leap, the brain of *Homo sapiens* nearly doubled in size. In one fell swoop Nature endowed our ancestors with a powerful neurocomputer they would not learn to use for thousands of years. The neocortex provided a logical, rational thinking cap for the superstitions and ritualistic thinking of the limbic brain.

The left and right hemispheres of the neocortex are associated with mathematical, spatial, and abstract thinking. Its frontal lobes are a center of higher brain function we know little about, but they almost certainly house the faculty of foresight. The ability to see the tool or weapon hidden in a length of bone, to see the sculpture inside the stone, to look ahead, to plan the seeding and harvesting of crops, to imagine, and to dream set humans apart from the other animals and allowed them to forge their own destiny.

With a simple tool, a digging stick that would become a rudimentary lever, and then a plow, humans began to take control of their environment. The hand of Nature was joined by the hand of humanity.

The emergence of the neocortex was the dawn of what is called mind, for with it came the ability of the brain to reflect upon itself. Early man

could now encounter his reflection in a forest pond and, rather than running away or throwing a stone at the apparition, could stand entranced by the image of himself, could begin to see and understand himself. Until this point in history, early man had been able to perceive the environment that surrounded him. Now, he could perceive something else—his own reflection in Nature. He could reflect on himself, on life, on destiny, on God.

The neocortex is also the brain of language. Language allows us to define and communicate the experience of our senses and our inner life. The limbic brain lacks the power of speech, communicating instead through body language, gesture, symbols, and music. Now sight, sound, smell, taste, touch, and emotions—all of the stimuli that the limbic and reptilian brains would simply record and react to—could be expressed with words.

The reptilian brain served the self-sufficient creature (the dinosaur), and the limbic brain flourished among the members of a small tribe or hunting band. The neocortex required a larger social unit to create the culture necessary for it to explore its potential, to create science, music, art, and architecture.

Intelligence was augmented by increasing the number of intelligent brains linked together in a society whose beliefs, traditions, folklore, and knowledge formed a society of mind, a community of consciousness greater than the sum of its parts. Soon towns developed links with other towns through commerce. Eventually the Earth was enveloped in a global network of trade and communication. But the four F's of the primitive limbic brain had to be restrained before individuals could coexist in large numbers. Religious dictates, commandments, and common law acted to restrain the emotional and often aggressive instincts of the limbic brain.

This was all pretty dry stuff, but Professor Morales's students ate it up. I could have talked about the ten billion neurons of the human brain and the hundred trillion bits of information they processed. I could have rambled on about neural networks, holographic memory and localized brain function theory, neurotransmitters, synaptic gaps, and receptor sites, and they would have struggled gamely to understand it all. As it happened, they got a simple evolutionary model: a body brain, a feeling brain, and a thinking brain.

Fernando, the red-haired Spanish boy, raised his hand.

“¿Disculpeme, doctor, pero que es la conciencia?” What is consciousness.

I took a deep breath and said:

“I don't know. Like God or love, it seems impossible to define accu-

rately. We all know we have one, although we do not know exactly what it is.

"It has been defined as the component of waking awareness perceptible by an individual at any given moment. But that's not good enough. Consciousness is our awareness of the experiences of our senses, and that awareness cannot be limited to our waking state. After all, we see, hear, smell, taste, and feel when we dream. We need to explore the limits of our perception, conscious and unconscious, before we can begin to define consciousness, or mind.

"In laboratories in the United States, we dissect the brain and examine its tissues. But just as the wetness of water cannot be described by H_2O , by the properties of hydrogen or oxygen, the properties of consciousness cannot be derived from the neurology of the human brain." I erased my simple schematic chalk drawing of the brain.

"But the fact that you are able to ask that question, that we are here wrestling with these concepts, is a celebration of our new brain," I tapped my forehead, "this neocortex. I know I haven't answered your question. It is a good question, but, ultimately, one you will have to answer for yourself."

"The wetness of water . . .," said Professor Morales when the lecture was over and the students had thanked me. "Very intriguing," he said.

"John Stuart Mill," I said. "It's an old metaphor."

"You have accumulated a great deal of knowledge," he said, glancing at the clock on the wall above the chalkboard. The clock read 3:15. It had not moved since I had gotten there. It had probably read 3:15 for years.

"I suppose I have," I said. "But it's not much good unless I can understand it. You can accumulate knowledge until you're blue in the face, but you don't necessarily end up any the wiser. I suppose wisdom comes when you take all that information," I swept my hand across the room, the empty desks, "and use it to discover something new about yourself. To self-reflect." I turned to the professor. "That's what you meant about the difference between having an experience and serving an experience, isn't it?"

He nodded. "More or less," he said. "What was your experience in the jungle?"

I told him about finding Ramón, the jaguar, the psychedelic qualities of the *ayahuasca*, the serpent, Satchamama, my reflection on the lagoon, and the condor, the feeling that I was dying. All of it. I told the part about the

young woman as though it were another hallucination. I tried to explain the sensation of being in Stephanie's bedroom.

Professor Morales listened carefully, poker-faced. When I was through he turned to me and said: "What do you think it all meant?"

"I don't know," I said. That made twice in one day. "My overwhelming feeling was fear. It got in my way. My clearest sense is that I could have gone further, that there was something more to . . ." I stopped again. "Like the lagoon. Standing on the brink but too scared to jump in. Limbic response. Fear."

"Mythically," said Morales, "the *ayahuasca* takes you to meet death. The place of the West on the Medicine Wheel is where one confronts death and is taken by it."

"Resurrection? Rebirth?"

"In a mythical sense, yes. The shaman is one who has already died. He has overcome our greatest fear and is free from it. Death can no longer claim him. He casts no shadow."

"But I didn't die. Ramón brought me back."

"Because you were not ready for the experience. The *ayahuasca*, like any sacred medicine, is a signpost where a path diverges: it helps you along the way, yet is useless and misleading unless you are on the path to begin with. Don Ramón was guiding your ritual and must have sensed that you were not prepared."

"How?"

Morales just looked at me and raised his eyebrows. Dumb question.

"What do you think would have happened if he had not brought me back?"

"You are better qualified to answer that than I am," he said. "Perhaps a dangerous psychotic episode? But then, Westerners have generally associated the shamanic experience with psychosis, have they not?"

"Uh-huh. From the Western perspective of reality, the world of spirits and such things is the world of the psychotic. Abnormal."

"Leave it to the Western culture to define normality," he said.

"What is Satchamama?" I asked.

"The spirit of the Amazon. The great serpent."

"An archetype?"

"Let's say an archetypal spirit."

"I thought it was real."

"Well, of course you did. And it was. How can you distinguish between the reality of a serpent you meet in waking consciousness and one encountered in, for instance, a dream state?"

"That's an old question," I said. "The only difference is that in the one instance your eyes are open and in the other they are closed."

"A shaman would say that if you see with your heart and feel with your head, the position of your eyelids is of no consequence."

"Where will I find a shaman who will show me that?"

"What do you think of Maximo?" he asked.

I told him what I thought. That he seemed to be like other urban healers that I had encountered, that he was congenial, pompous, and had invited me to stay and learn with him, but I was more interested in the concept of the *hatun laika*, the master shaman/sorcerer that Morales had mentioned.

"In two weeks we will be in recess," he said. "A two-week vacation. I was planning on taking a little walking tour, following parts of the Urubamba River along the *altiplano*."

"I was thinking of going there myself," I said, watching him closely. "Hiring a translator."

Professor Morales scooped the chalk from the desk and into his pocket. He grinned. "I am not for hire, my young friend."

"I didn't mean to suggest . . ."

He waved a hand at me. "But if you know how to travel light and sleep outside, then you are welcome to accompany me. I would gain a companion, and you might learn some Quechua."

"Thank you. The fact is, I can't afford a translator. I can barely afford the hotel."

"Accept señor Gomez's offer," he said. "You will save the money you would otherwise spend at a comfortable hotel, and perhaps you will learn something new. In two weeks we will see what we can find in the country."

And so it was settled. We would set out into the high plateau, the *altiplano* of Peru, and search for a *hatun laika*, a master shaman. But first I would spend two weeks living with Maximo and Anita. "Stay with us and learn," Maximo had said and I did. I learned that Maximo was a talented clairvoyant, an enigmatic healer whose training included the cabala, the tarot, yoga, nutrition, herbology, and applied astrology—what he called cosmobiology.

Although Maximo's practice was a healthy one and served his patients

well, it was unspectacular. His techniques included the laying on of hands, massage, water treatments, acupuncture, and herbal remedies. I learned that he employed the help of spirit guides, two of them, to help him in his diagnoses as well as during the healings themselves. Whatever his paranormal talents were, there were always a variety of possible psychological and physiological explanations for his results.

I also learned something of the willingness of people to put their faith in something new. Maximo was practical enough about his diagnoses to be able to distinguish between those cases requiring his herbal or paranormal intervention and those that were purely psychological. He began to refer the latter cases to me, and, within a week, I was known as *el médico americano*, the gringo healer. As was my custom, I took careful notes on Maximo's cases, a few of which would appear in *Realms of Healing*, for example, Paliza, the quadrupalegic Peruvian artist who would later dance at his own wedding.

Maximo was a great sensitive, I've no question about that. He exhibited wonderful visionary abilities, but although Maximo acted the part of the mystic to perfection and sought recognition as a privileged healer, his greatest secret was that his wife, Anita, was the better healer of the two. She was invariably present during every diagnosis, and his consultations with her were masked by the abruptness and scorn with which he treated her.

He never let down the mask, never yielded to her but once: at the end of my second week, when she told me that it was time for me to acquire vision.

The eye altering alters all.

—William Blake

Anita and I became friends. One morning in the middle of the second week of my stay, I accompanied her to the market. After an hour and a half of pressing avocados, dodging pigs, squeezing oranges, bartering for limes, sniffing cantaloupe, stepping over chickens, stripping corn husks, tripping over dogs, knocking on watermelons, colliding with housewives and children, with two *bolsas* full I steered us toward the center of town and into the Café Roma.

She protested, of course. I suspected that she had never been in a restaurant. I leaned the *bolsas* against the old Inca wall and ordered a couple of coffees and some pastry.

"Tell me about the . . . animals that Maximo sees," I said. I leaned across the table. "That you see."

Her eyes, roving the restaurant, stopped on mine, then dropped to the tablecloth. "The power animals," she said. "The elementals."

A white-jacketed waiter set our coffees and a plate of sugary breads before us, reached across, and drew the sugar bowl to the center of the table.

"They exist in nature," she said when he had gone. "They are nature energies that unite with you. The power animals serve you and you serve them. They are a part of you. They are bonded to us at each of the seven chakras." She watched me peel the thin foil from a pad of butter. "They are simple forms of energy, but powerful beings. Just as the spirit guides connect us with the spirit world, we connect the power animals with our world. And they connect us with nature."

"What do they look like?" I asked, struggling to understand.

"Animals," she said.

"So I have seven of these animals?"

She sipped her coffee and shook her head. "No. They do not always connect to each of your centers of energy, and sometimes they hide or are too young to look like anything. Of course, you can acquire more. Sometimes there are two at a chakra." She broke a piece of bread in half and offered one piece to me. I smiled and shook my head. I watched her eyes and wondered if they saw things I couldn't.

"How do you see them?"

"By not looking," she said. "It is difficult to explain."

"What are mine?" I asked. "What do you see?"

She took a moment, debating, and then said: "There is a cat, a jaguar. Here." She touched her pregnant belly. "But your relationship with it is confused. There is also a great black cat that is . . . following you, but they are one and the same. Because you have not received it, claimed it as a part of you. And it *is* a part of you. It is stalking you. It is very powerful. It is challenging you to meet it." Again, she placed her palm on her belly. "This is the center of all life, where my child is growing within me, where you were tied to your mother and fed in her belly. This cat is your mother seeking to nurture you with a gift of power. Not your biological mother, of course. I am speaking of the Earth."

"The Earth?"

She nodded. "Pachamama, the great mother, gives us the gift of luminescent energies, life forces that we represent as power animals. They are with us until the day when we return our physical bodies back to her, back to the Earth. This jaguar is your principal power in nature. Your coffee is cold."

"Hmm?" She pushed the cup and saucer toward me. I lifted the cup and drained it. "What else?"

She set aside her pastry and swept the crumbs from the tablecloth and onto her napkin. "There is a deer." She touched the base of her throat and smiled. "A stag with wonderful antlers. An owl rides with it, perched on one of the antlers. These are at your throat chakra, your center of expression and communication. There is great dignity and wisdom. This is very beautiful."

"Is that all?"

"They are the most fully formed." She frowned and looked at the tablecloth.

"Yes?"

She shook her head. "Tell me," I said.

"There is something else. It is not yours. I spoke with Maximo about it. . . . It is from somewhere else."

"What is it?" I confess, she had my attention.

"A bird. Like an eagle. It too is following you. It is . . . tracking you."

"What does it want?"

"I don't know," she said. "And you will not know unless you encounter these forces."

"How do I do that?"

"There are many ways," she nodded. "You must learn how to see." She folded her hands in her lap and nodded again. "Yes," she said, "I will speak to Maximo. I think it is time you learn to see."

March 10, 1973

Maximo and Anita have something in store for me. My "apprenticeship" with them is drawing to a close. In three days the university goes into recess, and Professor Morales and I will set out trekking.

They have been very good to me. Maximo has provided me with some provocative material, and, all in all, I've benefited from living with them, observing a folk healing practice at its most practical and workmanlike. Living here, if even for a couple of weeks, has taught me something about faith. The faith in the eyes of the people who line up to this door every day. The poor, the middle class, even a superior court judge. The other day, an enterprising old Indian woman set up her charcoal brazier in the street and fried dumplings for the gathering. People on crutches, paralyzed, depressed, skin-diseased, diabetic. . . . It's like something out of the Old Testament. Or the New Testament. Or the waiting room at San Francisco General. In any case, I'm anxious to get on with it. See what the countryside has in store.

Went to the *farmacia* today, spent about ten bucks on a selection of U.S. brand lipsticks for Anita.

Still trying to sort through her explanation of the power animals. I've tried to press her for more, but she's all but mute around Maximo, yields to his running commentary on things spiritual. Curious relationship. His abrasiveness, so distasteful to me at first, is,

I think, a kind of spiritual machismo. He's intimidated by Anita's grasp of all that he claims to be the master of. She lives what he talks, and he knows it. Macho response, knee-jerk chauvinism to cover his insecurity.

Pachamama/Mother Earth concept has me going. So much of my psychology, Western psychology, is rooted in problems with mom. Here is a way of setting her free. One need not go through life feeling abandoned, pushed away from a mother's breast, cast into a hostile world, kicked out of paradise. The Indian (through rites of passage?) bonds with the Great Mother, the Pachamama, the Earth that continues to feed us, house us, clothe us, and even receive us in death.

This afternoon Maximo asked to borrow my Bowie knife. He's been admiring it for over a week. I'll give it to him when he tries to return it. Sorry, Brian, but I'm sure you'd approve.

With past experience in mind, I've determined to devote myself to whatever ritual the Gomezes have planned, so I'll follow their simple prescription: Fasting (yet again), this time for three days. Eat only bee pollen, drink only lemon water and herb tea. Cleanse my *chakras* twice a day with the water at Tambo Machay.

I found my way to the temple on the afternoon of the day of my breakfast with Anita. I had eaten nothing since that morning, and remember thinking that I should have taken the half-pastry she'd offered me.

Tambo Machay is the "Temple of the Waters," a three-tiered spring built by Inca masons on the outskirts of Cuzco, three colossal steps of interlocking white granite set into the mossy banks of a hill. Its water flows from a central spout on the upper tier, branches into two on the riser of the second step, then converges again at the base of the temple.

The sun was setting behind Soiroccocha, at 18,197 feet, the lowest of four great mountains of the valley of Cuzco. I stripped to the waist, and, in the long cool shadows of late afternoon, placed my hands under the spout, shivered, and washed my chakras.

The concept of seven principal energy centers is common to most primitive cultures and religions, although it is generally associated with the yogic practices of the Hindus. Patanjali, the writer (or writers) that systematized the disciplines of yoga, described them in detail. The first is at the

base of the spine, at the genitals; the second is slightly below the navel—the “belly of the Buddha”; the third is the pit of the stomach, at the solar plexus; the fourth is at the center of the chest, at the heart; the fifth is at the base of the throat; the sixth is above and between the eyebrows; and the seventh, the crown chakra, is at the top of the head. They have been described as spirals of energy, vortices of light, spinning clockwise, like the smoke I saw at my chest that night in the jungle. Appropriately enough, they all correspond to nerve bundles or plexuses along the spine and with the seven major endocrine glands.

As instructed, I washed them with wet fingertips, counterclockwise. I unzipped my pants and my skin tingled with the sensation of my light touch and the icy cold water.

For the next two days, at dawn and at dusk, fortified with bee pollen, lemon water, and weak herb tea, I made my way to the hillside and, as un-self-consciously as I could, went through the motions. I even tried to visualize the chakras as whirlpools of light, of energy.

I returned to the house after sunset on the third day. I felt empty, but satisfied with my attention to the regimen. I thought I was ready for anything.

I could smell the candlewax as soon as I entered the kitchen door. And something else: the pungent woodiness of burning sage. The lights were out in the kitchen, and a warm glow came from the living room door. It was cold, even in the house, and the light was inviting, and I went in.

It was quite a spectacle. The plain little room had been all but cleared of furniture. The cot, the sofa, the wooden table, were gone, and a haze of smoke hung low in the cold, smoke that caught and diffused the flame glow of each of the forty or fifty white candles there. The candles marked out a circle in the center of the room and, from there, covered the floor, filled the corners. Within the circle there were two bowls, one large candle, two straight-back wooden chairs ten or twelve feet apart. Anita, hands folded in her lap, sat on one of the chairs. There was a small bundle of bound sage smoldering in one bowl, flower water in the other, petals floating on the surface. Maximo stood, arms folded, within the circle.

I felt a sudden thrill of affection for these people, for their care and consideration. Even though I was skilled at concealing it, I suspected that they could always glimpse the flickering light of skepticism behind my eyes, the hem and haw of doubt in my voice when we discussed the esoterica of

their belief system. Here they had made a considerable effort for me. For my own good. So that I might acquire their "vision."

"It's beautiful!" I said.

Anita smiled without looking at me. Maximo said, "Sit down, my friend."

I stepped carefully between the candles on the floor and sat on the chair opposite Anita. Her head was bowed and she was breathing with such regularity that had she not smiled, I would have thought her asleep.

"Take off your shirt and jacket," Maximo said, and, although I was still feeling the chill of the night, I did so, folded them, placed them under my chair. It was then that I noticed my Bowie knife, unsheathed beside the bowl of flower water in the center of the circle. I looked questioningly up at Maximo.

"It is time for you to acquire vision," he said. "Because you are particularly thickheaded, we must resort to unusual means."

I looked over at Anita. She had not moved.

"Close your eyes now and breathe deeply from your stomach. Calm yourself."

I closed my eyes and breathed deeply, and wondered what my razor-sharp hunting knife could possibly have to do with acquiring vision.

A sudden draft of night air reminded me somehow to attend to Maximo's instruction, and I tried to ignore the knife and concentrate on relaxing. I could hear Maximo softly murmuring, calling upon his spirit guides, the "brothers superior," to bless our circle of fire and let none enter uninvited. Then my name. He was calling upon my spirit, inviting my jaguar to enter the circle of light and curl itself at my feet. He invoked the Earth, the Pachamama, wind, water, and fire. He called upon the power animals to come and be fully present, to make themselves known to me, then lapsed into what I think was Quechua and I caught the names of the four *apus*, the four great peaks surrounding the city. It was quite splendid, but through the drama of it all, as I sensed the air clearing and the light slowly fading, I began to feel a vulnerability, an anxiety for what was to come. It was almost exhilarating.

I heard a window close, and Anita. "Open your eyes," she said.

The fresh night air had cleared the room of sage smoke; the smoldering sage bundle was gone, yet its tang still lingered in the air. The candles outside of the circle had been snuffed and all that was left was the central

candle and the candles that defined the circle itself. Anita was staring at me, at my forehead, so I could not catch her eyes. Then she looked up at Maximo and handed him something. A tube of lipstick! She smiled at me and nodded, and Maximo crossed the circle to stand at my side. He squinted at my forehead and touched it with the lipstick.

"Abajo," Anita said. Lower. *"Ah, ah, ah! There!"*

The difference was no more than a quarter of an inch. Slowly he began to draw the lipstick down toward the bridge of my nose. He stopped between my eyebrows, then drew another line across the first. I imagined the lipstick cross on my forehead, realized that I was holding my breath, and Anita said: "Keep breathing."

I exhaled, inhaled evenly. Anita told Maximo that it was too low, and he drew his finger firmly across the space between my eyebrows, wiped it on his pants, and I saw the lipstick stain. Anita nodded and I felt him draw a circle around the cross. When he was through he stepped back, cocked his head to regard his work. Anita said that it was correct, and he capped the lipstick and handed it back to her.

Anita and I locked eyes. She took an exaggerated breath and blew it out through pursed lips; her eyes fixed on mine. She was inviting me to match her rhythm and I did so. As we breathed together across the inside of the candle-rimmed circle, Maximo knelt in its center. He lifted my knife and washed the blade with the flower water, then passed it once or twice over the candle flame in the merest gesture of sterilization.

Sterilization. I knew he was going to use the knife on me, or was he? Gesture. Ritual. Drama symbolizing an act. Were these not all part of the healer's repertoire? Of course they were.

"Do not be afraid," said Maximo, and Anita began to chant softly, lyrically in Quechua. "Stay with your breathing," he said. "Meditate upon the candle flame. This will not take long."

He rose from beside the candle and bowl, and, holding the knife before him, came to stand before me and slightly to the right. I could still see Anita staring at the target on my forehead. I dropped my eyes to the candle flame wavering seductively on the floor between us and wondered what I'd gotten myself into.

I confess that Anita's presence forced me to face it stoically. I am not particularly proud of this. It is a weakness of the human male to feel challenged to conceal such emotions as fear in the presence of a woman. There

was even a moment, and this passed at the speed of light, when I wondered which I feared more: the touch of the blade or the fear itself. Then I felt the point of the knife touch my forehead, and, for an instant, became acutely aware of my flesh.

I was sweating in the cold of the room. My body was rigid, my fingers curled around the ends of the arms of the chair, like a death grip. Maximo placed his left hand on the top of my head and said: "Release your tension. Breathe out your fear. Follow Anita."

I exhaled, allowed my shoulders to drop, my fingers to go lax and Maximo pressed the tip of the knife into the skin high on my forehead and I flinched . . .

"Breathe."

. . . and a thin trickle of blood ran to the bridge of my nose, along its side to the crease beside my nostril and down my upper lip. I opened my mouth, felt the drop hanging there, and tasted it with the tip of my tongue. My blood. Familiar taste. Then Maximo, holding my head in place with his left hand, drew the knife blade down, down the center of my forehead and it hurt like hell and I felt the skin part, slashed, and the blood flowed freely, following the course laid down by the first trickle.

Shut off the pain, I told myself, but telling myself didn't do any good, so I closed my eyes and tried to control my breathing, although every breath was a series of rapid gasps and I closed my eyes and welled-up tears broke free and stuck to the sweat on my face.

I had no choice but to stay with it and fight the pain that made me tremble, and Maximo made short order of the second, horizontal cut, and the blood began to flow over my eyelids. Warm liquid flowing from my wounded head, scarred for life?

"Do not worry," I heard Anita say. "You will still be handsome. We are simply cutting through the psychic crust that hides vision from your third eye."

Then Maximo cut around the cross, cut a circle around the cross on my forehead and I felt the metal blade touch my skull, and a wave of nausea welled up from my stomach. The blood was flowing down to my chin and running down the sides of my neck and under my chin like drool and dripping to my chest. I lifted my lids and blinked reflexively at the blood and tears in the corners of my eyes, felt the blood on my cheeks, and saw it on my chest.

"All right now." Maximo's fingers gripped the top of my head and I knew that I was a fool and he took a corner, a flap of skin, between the blade and his thumb and pulled.

"Shit!"

"No, no, my friend. All is well. Calm yourself."

Anita: "Your vision will open like the blossoming of a rose."

I must have gone into mild shock at this point. I felt Maximo peel away the four sections of skin from my forehead, skin resisting, sticking, tearing, blood washing down my face and neck and chest. I disengaged from the pain, visualizing my nerve endings as cauterized, shriveled dead things that couldn't possibly send the signals of pain to my brain, and I stopped feeling the pain, only the pressure of the blade, the pulling at my flesh, the warm wetness of the blood. Savage . . . Disfigured . . .

"What do you see?"

"Huh?" I opened my eyes, but the lids were sticking with thickening, drying blood. "What?" They must have been closed for a while. . . .

"What do you see?"

I looked up at Maximo standing beside me, Anita seated across the room. She was leaning forward slightly.

"You." I said. "I see you. The room, the candles . . ." My breath caught in my throat all a lump and I sobbed. Anita, the candles, my vision, distorted as my eyes filled with tears, a confusion of blood and tears. I wiped at my eyes and my hand was trembling, tingling. I was hyperventilating. What had they done? What had I done?

"Do not worry. It will come. Prepare yourself. You must trust us and trust yourself, completely. Soon. Breathe."

And Maximo was at my forehead again. He scraped at the wound in my forehead and the pain was excruciating. I clamped my eyes against it and swallowed back a scream. My head was throbbing behind closed eyes. A dark redness behind my eyelids.

"What do you see?"

Again I opened my eyes. Anita in her chair. The room, the candles all hazy. I blinked away the haze.

"Here!" she said, and touched her forehead, her throat, her heart. . . . What was I going to see? I squinted back at her and shook my head.

I was beyond the pain now. It was medically not feasible, I knew, but the fear was gone and I was resigned to my condition. I felt detached

somehow and the nausea had been replaced by a thrill in my stomach. Adrenaline. So when Maximo repeated the procedure a third time, I closed my eyes and felt nothing but the pressure, the scraping. And then there was a light, the kind of light that you see after staring at a light bulb or a fire and you close your eyes and blink, the light of an image burned briefly into your retina. That kind of light.

I opened my eyes and saw something. Anita was leaning forward in her chair, hands gripping the chair arms, and there was a strange radiance around her. There was a luminescence, a small hazy brightness at her forehead, throat, and her pregnant belly glowed, sort of. Fleeting, all of it. I blinked and looked again through a milky gauziness and saw color around her, green and red, like a rainbow fading in the mist.

“Now do you see?”

I blinked, wiped at the blood coagulating on my eyelids, tried to focus, and the colors and lights were gone.

“Look!” she said. “Not with your eyes! What do you see?”

My heart was pounding. I relaxed my focus, stopped trying, and there came a moment I will never forget.

Anita’s forehead dissolved, just gave way to nothing, and I saw the head of a horse superimposed like a holographic image over her head. There for an instant, but vivid. I saw it. I held my breath and looked at her, softened my focus, and the aura of light around her became more distinct, brightly colored blue and violet, almost gaseous.

“What do you see?”

I started to laugh. “Colors,” I said. “And a . . .” I hesitated. “A horse?”

“Yes!” She laughed and clapped her hands.

“That is it,” said Maximo. He dropped his hand on my shoulder.

Anita asked if I saw her aura.

Her *aura*. Was it really?

“I think so,” I said.

“What color is it?”

“Blue. Soft blue and . . . violet.”

“That is right.”

And there were other things, but they were vague and lacked shape. Lights like fireflies spinning on the outskirts of the circle. Hazy, luminous, amorphous shapes. If I looked too hard they were gone. There was a small cat—I don’t know what kind—at her chest or in it, it was difficult to qualify

its location, but I saw it there where the surface of her blouse gave way, became almost diaphanous.

"Look at me," she said. "Do not focus, look with your third eye. Look at my aura. Do you see it?"

I did. I couldn't help laughing.

"Close your eyes."

I closed them, and instead of blackness, the background was gray and the light and the colors lingered. I lost Anita, but what she called her aura remained, but different, yellow.

"What do you see?"

"Yellow."

"Yes!"

Then it was red, glowing like a stop light on a rainy day. "Is it red?" she asked.

I nodded. She could change the color. She was testing me.

Then I could see her. The aura shifted and I could see Anita. I remember raising my hand and touching my eyelids to make sure they were closed. She was coming closer. Her hand, faintly glowing blue and violet again, reached out toward me and I lifted my hand to touch hers.

I opened my eyes as we touched. She was there, standing before me, smiling. I began to cry. The trauma, the tension, the release, was too much, and I was overcome with emotion, just emotion. I laughed and cried and Maximo washed my face and chest with a damp cloth.

"You did well, my friend. Now you must work to keep your vision. It is a gift."

There was blood caked to my face and dried on my chest, and Anita brought a bowl of warm water from the kitchen and another bowl that smelled like tea. They washed me with the cloth and the water turned red and Anita drew a moist brown leaf from the second bowl and applied it to my forehead. It stung. There were three or four leaves altogether, I can't exactly remember, but they bound my head with a strip of some plant to hold them in place over the wound.

Maximo told me that it wasn't that bad, that I could not remove this poultice for three days. "Do not lift the leaves from their place," he said. "And do not exercise this new vision too hard." He told me to sleep, that my night would be filled with dreams.

Middle of the night, 2 A.M. I'm in the living room and having a hell of a time. I'm scared shitless and it's fabulous. Something has happened to my visual perception centers. I can't explain it, I'm almost scared to try because maybe it'll go away. I . . . don't know what to say here. Jesus God! I've submitted myself to a mutilation. If I'd known, I'd never have gone through with it and I'd have missed this, and the thought of missing it makes me anxious even now.

Slow down.

All right. In the living room. Anita and Maximo are asleep and the house is quiet except for the sound of Lorito in her little tin cage in the kitchen. Everything is as it was a couple of hours ago here except the candles are all out (I lit one to write this by) and I'm sitting on the floor, back against the wall looking at the circle of burned out candles and the two chairs. The scene of the crime.

It's very quiet. Wait a minute.

All right. I just went into the kitchen. Little Lorito on her perch. All the lights are off and when I shifted my focus, say instead of focusing on her, focus on a point half an inch or so in *front* of her, I can see this soft light, much like the Kirlian photographs I've seen. Yes, it's what auras are supposed to look like—a soft hazy light and there are colors. Lorito's is sort of blue-green. I can't believe I'm writing this.

Back up. Classical ritual circle of fire, in this case, candles. Incantations and chanting. Anita, possibly in a hypersensitive state, guides Maximo in drawing a circle presumably around my sixth chakra, my "third eye." The son of a bitch cuts me, down and across and around the circle, peels off the sections, the four quarters of the "pie," and *scrapes* my forehead and I start seeing things.

I can't sleep. Went to my sleeping bag in the hallway and lay there until they had gone to bed and I couldn't get blackness when I closed my eyes. Light gray behind my eyelids. Went to the bathroom mirror. There are these leaves on my forehead and a headband of some long leaf like a palm leaf. I hesitated before looking.

Maximo cautioned me not to. Do I or don't I? I peeked. Lifted an edge of the leaf. The leaves are marinated or something because they're not stuck to the wound. I satisfied myself with a glimpse of a raw, inflamed redness under the leaf. I won't take it off for three days. I know I'll really look in the morning, though. Can't help it.

Went to the window and there's all sorts of madness! The trees and hillsides have a kind of soft iridescence in the night and there are lots of spinning lights like fireflies. Maybe they are fireflies.

March 14

Morning

Exhausted. Anxious. Fell asleep last night but might just as well have run a triathalon. The experience of the dream has buried itself somewhere deep in the flesh of my brain. Fading from recognition like a cloud that you watch because it looks like something. You look away then try again to find it, but it is gone—the cloud is still there but the shape is no longer recognizable—you've lost it. A watercolor dream. Abstract, light and shadow and glowing orbs and there was a cat. That's something. I knew it was the thing that scared me off the hood of my car at El Yunque, it was the thing that moved in shadow around the walls of Ramón's hut. And I knew it was the thing that Antonio saw over my shoulder. Like dogs do. You're sitting in the room with the dog. Reading or watching television and all of a sudden the animal's attention is drawn to something. It gets up, ears pricked, staring, fixated at something in the next room. What is it? You get up and look and there's nothing there. Nothing. Not a thing. You pat the dog reassuringly, he whines his anxiety and you chuckle and go back to your book. Like that. Some dream. It was a black cat, a jaguar and so very black that I could not even make out the contours of its body, but there was a sun shining and when the cat moved in its undulous way towards me, the sun glinted off its fur and it sparkled with gold.

Woke up and rolled over and felt the cool nylon of the sleeping bag on my cheek and the memory of last night came crashing down on me. Felt the stuff on my forehead, still miraculously in

place, went to the mirror and lifted the leaves without even thinking about it. There's a scab that's formed under the leaves. Scab. Around the perimeter of the circle. What has it been? Eight hours since Maximo cut into my head? And there's a scab. Formed on what looks like a very bad scratch. The skin around it is red and inflamed. A scab in eight hours. What did I expect? Well, with all the blood and pain, I expected to see bone. What the hell happened to me?

Things look normal, not paranormal. Everything's got edges this morning. Back to normal including my rationality. The whole thing has the quality of a dream. Like I had this nightmare and brought back an organic head bandage as a souvenir.

I know that in cultures the world over a healer can create a "ritual space" like a circle of fire and do their dance and sing their incantations and create ceremony that will affect those who are conditioned to believe it will affect them. This is the creation of an altered state in a willing individual and let's not kid around, that stuff works. Works on a purely subjective level just like a placebo.

And here I am. Like Maximo said, "particularly thickheaded." In my normal operating state of consciousness, I perceive the world much in the same way that everybody else does. Let's accept the possibility that in a different state, an *altered* state of consciousness, my awareness, my *perceptions* might also be altered. All right. What's it going to take?

What drives "normal" people raised in a rational Western culture to behave *abnormally*? To behave *irrationally*? When do we "lose our grip?" There's hunger. That can drive us to act out of desperation and, if it's bad enough, to hallucination. Then there's panic. Fear. The grip of terror. There's physical conflict. Violence and rage. There's love. Desire. The exultation of an orgasm. Jealousy. Jealous rage, temporary insanity.

Fear, feeding, fighting, sex. For the life of me I can't think of any others. Limbic response systems that can drive us over the edge. Into altered states. Naturally, without specific mind-altering substances.

If, in the absence of drugs, it takes one of these, then surely fear was the operative element of my altered state, my altered perceptions. I was scared shitless. Acute stress.

I know that I'm pulling the rug out from under the experience. I am compelled to write it off to the power of suggestion on a mind bent by fear and pain. Surely a simplistic psychological interpretation is available: Maximo scraped the wound three times, scraped until I "saw" something. By "seeing" I could stop the torture.

Does that make Maximo and Anita craftsmen of suggestion? Manipulators of fear?

Such an explanation does not deny the fantastical quality of the state, does not deny the astonishing programmability of the human mind, yet fails to explain how I managed to pass Anita's aura color test.

Setting aside the cause of the state of mind, the question remains: Was I creating what I saw or was what I saw there to be seen? Did I project the images or were my visual perception centers reorganized, allowing me to perceive, to become visually sensitive to, things I'd never perceived before?

Can ask all the right questions, can objectify this 'til hell freezes over. I am left with the experience.

Maximo returned the knife to me that day. I shook my head.

"No. It is my gift to you," I said.

He grinned, nodded, took my hand, and placed the knife on my palm. "Thank you," he said, "but it has opened your vision to the real world, and it is for you to keep. It has been blessed. It was given to you by a friend, and it has been used by a friend. Keep it close to you, and cherish it as an object of power."

How he knew that it had been a gift, I don't know. As I said, he was an extraordinary clairvoyant.

We said goodbye the next day. I was to meet Professor Morales at the train station. Anita gave me a bandanna to cover the bandage on my forehead. I kissed her and thanked her for her kindness. Maximo gave me an *abrazo*, and told me to take care crossing the *altiplano*, to beware of the eagle that was following me.

A few years later I learned that Maximo had left Anita, that when he left his wife his healing powers began to fade. He relied on his clairvoyance and simple herbal cures to make a living among Lima's millions.

*Why level downward to our dullest perception always and praise
that as common sense?*

—Henry David Thoreau

Professor Morales was waiting for me at the train station. I did not recognize him at first. The baggy suit, bulging pockets, and frayed white *manta* shirt had given way to a pair of rough-woven wool trousers, sandals, a blousey shirt, a simple brown poncho with a cream-colored border, and a wide-brimmed slouch hat with a satin band. A cloth bag hung from a braided cord on his shoulder, and a small, colorfully woven pouch was attached to the thin leather belt that held up his pants. In jeans, hiking boots, cotton safari shirt, parka, and backpack, I thought I was ready for anything, but then, so was he.

March 15

We have left Cuzco and the Urubamba river valley for the *altiplano*, the high plateau of central Peru. We travel third class. Oh yes. The train station. I gave a handful of *intis*, about a dollar's worth, to a boy of twelve who seemed to be soliciting for a sightless woman who must have been his grandmother. I joined Morales at a small stand where he was purchasing bread and fruit.

"Do you feel better?" he asked.

"What do you mean? I feel fine."

"That *propina*, it made you feel better?"

"Yes," I admitted. "And I'm sure it helped . . . a little."

He placed the food in his shoulder bag.

"Yes. You Americans take care of the poor, don't you."

His sarcasm stunned me, but before I could reply, we were off, running for our train.

Wooden benches, many with no backs. Chickens, pigs, a small goat attached to its owner by a piece of nylon clothesline tied to a hind leg.

Straw. The smell of maize, corn cakes and tobacco and the *campesinos* themselves. Mostly Quechua, most speak Spanish, all are unspeakably poor. With his Indian features, his hat, his poncho, and shapeless trousers, Professor Morales could be one of them. I soon discover that the fruit and rolls are not for us as much as for them; his words are for their benefit, not mine.

His eyes are a magnet and soon we are sharing our food with a handful of peasants made not to feel grateful, who listen as the professor talks to me in simple Spanish about the grandeur of his heritage, the native Peruvian, the cultural legacy that was laid waste by the *conquistadores*. "We" (he includes our fellow passengers with a simple gesture) "domesticated over a hundred food products, including the potato, established a social security system; built paved roads up to three thousand miles long, suspension bridges and tunnels to join our empire. We charted the course of the Sun and the Moon, and when we traveled, we always brought seed as a gift to a new town. We carried kernels of corn." (He produces one from his trouser pocket.) "Corn, the gift of the Sun, the Sun in its center. We are truly a great people of the Earth."

We got off at a rural train station.

"The way to help the poor is by restoring their culture," he said. "We are a raped and beaten people. The source of their hunger is the loss of their past. The Indian needs bread, yes. But he also needs pride. And hope. Here, in his belly."

On the platform one of our small audience of farmers tugged at my shoulder, nodded toward Morales's retreating figure and pulled down his lower eyelid with a callused forefinger. A Latin gesture. *Mucho ojo*. Beware.

We set off from that train station, headed off across the barren plateau known as the *altiplano*, a rugged plain of granite-studded pastures and deep *arroyos*, jagged gullies through which the water ran in the rainy season. South southeast the Andes piled upon one another, rising high above the ten thousand-foot elevation of the plateau. The air was exquisitely fresh, crisp, exhilarating to both of us. Antonio moved with the gait of an antelope. He set the pace and we talked.

I realize now that I did most of the talking; although it seemed as though we were getting to know one another, somehow I was the one telling the story. I told him of my childhood in Cuba, the family's escape to Florida, my year at a university in Pennsylvania, and our subsequent move to Puerto Rico. I told him about doña Rosa and my return to the United States, traveling across the country with Victoria, my first long-term lover, and our breakup over infidelities and irreconcilable differences. I outlined my experience at the university, described my little one-room house on a hill in Sonoma, my work at the Latin American Counseling Center that I had founded in my senior year, my training in psychology, my impatience with the system, and the scorn with which the science was regarded. He seemed particularly interested in my accounts of the neuroses and psychoses that I had treated in therapy.

We stopped by the bank of a little creek. Morales dipped into his pouch and formed little balls of yucca paste and cornmeal. I had brought along some strips of dried beef, and we lunched on this simple food and water from the stream.

"It is fascinating, really, how a philosophical difference between two cultures can lead to such extreme differences in practical psychology," he said.

"Yes?"

"The Western world," he said, "the 'civilized' nations, what is called the 'first world' cultures, rule the Earth by right of their economic and military strength. And the philosophical foundation of the Western culture is based on a religion that teaches of the fall from grace, original sin, and the exodus from the Garden of Eden. This concept is fundamental to the mythology of the West, and it represents Nature as hostile and man as corrupt."

I dipped my collapsible camping cup into the stream and offered it to him.

"Adam and Eve eat of the fruit of the tree of the knowledge of good and bad," he said. He took a drink and handed back the cup. "And God

said: 'Cursed is the ground on your account. In the sweat of your face you will eat bread until you return to the ground, for out of it you were taken. For dust you are and to dust you will return.' "

" 'And so,' " I quoted, " 'he drove them out and posted at the east of the Garden of Eden the cherubs and the flaming blade of a sword to guard the way to the tree of life.' "

"It is such a peculiar myth," he said, "The emphasis is not man's relationship to his environment, to Nature, to the Garden, but man's relationship to himself as an outcast, fending for himself, becoming self-conscious in a hostile world. The Westerner has accepted this tradition, has promoted this concept through art and literature and philosophy. Indeed, it has become ingrained and second nature, has it not?"

"I suppose it has," I agreed. "You can live your entire life in a city, for instance. It provides shelter, a controlled environment, and acts as a buffer between the individual and Nature. Even foods in supermarkets are treated before they are consumed, either artificially ripened, colored, or preserved, then packaged for consumption."

"So the Westerner," he said, "the outcast from the Garden, has turned inward, and, it is interesting that within such a culture, when the individuals experience a psychological crisis of some sort, a psychotic or neurotic episode, they will turn to religion or the psychiatrist or medication instead of to Nature to become well again. To become normal. Is this not so?"

I nodded. He offered me a ball of yucca and cornmeal.

"But," he continued, "you end up with an entirely different focus when the tradition of a culture is not founded on the fall from grace, where man was never banished from the Garden of Eden and lives close to Nature and Nature is a manifestation of the Divine. In those cultures a psychotic break or a schizophrenic episode is magical. The unconscious mind opens up, and, if the person is young, he or she is encouraged to dive into it, not pull back from the brink. They fall into their unconscious, into the realm of pure imagination, the realm of Jung's archetypes, into a world of spirit. They are allowed to experience other realms of their own minds and they are changed as a result. In many primitive cultures, they become the medicine people. They have experienced the Divine."

"So," I said, "you propose that psychotic episodes and schizophrenic crack-ups should be encouraged?"

"I propose nothing of the kind. It would be dangerous to promote such incidents within your culture, because your mythology is based on

thousands of years of tradition that such episodes are not normal, are unnatural, are unhealthy. I am merely pointing out a difference. In primitive cultures the opening of the unconscious is a blessing. It is *unusual*, yes. But not unnatural. These are children of the Earth, the Garden, living in Nature, not banished from it. In such a culture everything is *of Nature*. Natural. Even a psychotic episode. It is safe, especially when guided by one who has had a similar experience."

"Madness is a social distinction?" I said.

"Precisely," he said.

"So do all shamans, at one time or another, experience such a psychotic incident?"

"Not necessarily," he said. "They know the doorways and can learn how to open them. And to step through them, sure-footed."

"I suppose the myth of the exodus from the garden has had a profound effect on Western thought," I said.

"It is a given!" He exclaimed. "Look at the great Western philosophers of the twentieth century: Nietzsche, Sartre, Camus, Beckett, these existentialists! Brilliant *reasoners*." He tapped the side of his head. "Virtuosos of logic. But they *begin* with the premise that man is alone, a fugitive from Nature. They never question this, but go on logically to describe a philosophy based on the uniqueness and isolation of the individual in a universe indifferent or even hostile to man!" He turned away and washed his hands in the stream and splashed the spring water on his face.

"The ultimate realization is despair," I said. "The ultimate solution is often self-destruction."

"Yes," he said, and pulled a bandanna from his pocket and wiped his face. "But we were never banished from the Garden, you see. The ground was never cursed on our account, as your Bible claims. Nature is not hostile to us. We are her caretakers."

We passed a village that first day. I saw it at the base of a little terraced hill to the north.

"Should we go there?" I asked.

"No, I don't think so," he said, and we headed away from it to follow a dry riverbed around a small hill, and it was late afternoon before we came upon another.

We had been hiking a steep embankment and found ourselves on top of a ridge, perhaps five hundred feet high. The slope below was terraced Inca-style. The terraces were at least two hundred yards long, six to eight

feet high, and faced with smooth, interlocking granite blocks. We skirted the edge of the terraces along a pathway paved with large flagstones and descended to the village at the base of the hill.

The distinction between poor and primitive is important here. The people live in ancient thatched-roof stone huts and more modern adobe ones. They farm the fields and terraces, grow corn and potatoes, raise pigs and chickens and llamas on the same land that their ancestors cultivated three thousand years ago. The men farm, the women help in the harvest and weave.

There was a *tienda* sporting a bent and pitted Coca-Cola sign, selling stuff from the city, such as soda and beer and some canned and packaged foods, soap, cigarettes, a few hardware items, bridles, belts, burlap and nylon bags. There was a little market area on one of the two streets. There were seeds, grains, coca tea, a few fruits, baskets, some clothing. Primitive, yes. But poverty is subjective.

Some miles to the south, the *altiplano* fell away to low jungle valleys, and the fruits we purchased were tropical: mangoes, a papaya, a couple of streaked orange bananas.

The fruit stand was tended by an Indian girl of ten or twelve: dark complexion, Asian eyes, high cheekbones, and a long, curved nose. Her shining black hair was pulled back in a long braid that fell from beneath a narrow-brimmed hat. She wore a long black skirt, a red-and-green patterned blouse, and a burlap shawl. She was shy with strangers and as we selected our purchase, a hard-faced older woman appeared in the stone doorway of the *casita* behind her. She eyed us suspiciously, but when Morales greeted her in Quechua, her face softened toward him, although she couldn't keep her eyes from my clothes and the bandanna that covered the mark on my forehead.

He interpreted his conversation for me afterward.

"We are looking for a healer," he said after the pleasantries.

"Your companion is sick?"

"Well, yes. He has a very bad stomach ailment."

"He should take *manzanilla* tea."

"Do you have some for sale?"

"Oh yes!" she said, and disappeared into the house. We completed our transaction with the girl, and then the mother returned with a little cloth bundle.

"Thank you, señora," he said, and asked the price.

"No, no. Please take it for your sick friend."

He bowed and said thank you. "I am sure this will help, although if the cause of his sickness is not physical, he will need to see a good healer."

"There is one," she said, "and he is very powerful. A sorcerer who came to Zunita last summer." She pointed over our shoulders, toward the hill in the direction of the village that we had passed by. "He is a magician."

"Do you know this *laika's* name?"

"He is called don Jicaram."

We thanked the woman and headed west.

"So shouldn't we go to that village?" I asked when he had recounted the conversation.

He looked to the western horizon. "No," he said. "It is in the other direction, and there is only an hour or so of daylight. There are other villages and this sorcerer she spoke of sounds like the traveling variety. He won't be there now."

"But perhaps they know where he is from," I said. "He must have a village of his own."

"Not necessarily. I have heard of some who keep moving from village to village."

Morales set off with determination, and I reminded myself that I was his guest. I tried to guess his agenda. He had never mentioned the purpose of his little walking tour, and I had assumed that he was going to visit relatives, perhaps the village of his birth. Fine. But my time was limited and I was getting anxious.

As the sun set and the high-altitude chill set in, we stopped by the edge of a pine grove, where a tumble of smooth granite boulders marked the site of some unidentifiable Inca structure. Morales built a neat little fire: a grid of twigs, dried moss in its center, and I lit it with a disposable lighter. We ate fruit and dried beef and potatoes wrapped in corn husks and baked in the coals. I removed the bandanna from my head, and he gazed at the mark, now a faint reddish circle that looked as though I'd pressed the rim of a glass into my forehead.

"Tell me about this," he said. I described the carving of my third eye in graphic detail. He was delighted.

"So what do you make of it?" he asked.

"I don't know," I said. "I think I was the victim of an elaborate ritual designed to induce massive hallucinations."

"Do you really?" He cocked his head. "That leaves much that is unexplained, does it not?"

"Plenty. I know that Maximo cut me, and it felt as though permanent damage was done, but that was three days ago and look at it!"

"I can see."

"When I saw that horse and told Anita, she was pleased, but what if I'd seen a . . . a salamander! She could have agreed to anything."

"But you did not see a salamander, because it was a horse."

"You think it was real?"

"These so-called power animals are energies of Nature, elemental spirits that we personify as animals. I like to think of them as a merging of you and a force in Nature. A manifestation of an archetypal energy in time and space. Primitive consciousness personifies them as animals, and they assume that form when we connect with them. That is a good theory at least."

"Like any theory in this realm," I said. "Untestable."

"Well, what do you expect? In a dream we may witness some very real event that we experienced when we were awake being interpreted into symbols. In the same way you may define one of these Nature energies as an animal, but that interpretation does not take place in our rational, reasoning mind—that neocortex that you spoke of to my class. Theory and the testing of theories are part of our rational processes. They are intellectual and academic. Those conventions cannot apply to these phenomena."

"That's a fine argument," I said. "But *if* Anita has 'connected' with this energy form and sees it as a horse, and *if* I see it as a horse, and all this takes place on, say, a symbolic level, then that implies a common consciousness."

"A common ground," he said, and nodded emphatically. "That is why the symbols are universal. You find them in every culture in the world. What do you suppose it is that makes people respond in the same way to a particular painting, story, or song? Is it not appealing to that common ground, expressing something that is commonly felt deep within humanity's consciousness?" He placed another chunk of wood on the fire. It popped and sizzled and a cluster of sparks arced to the ground and died.

"The shaman," he said, "knows that there is a sea of consciousness that is universal even though we each perceive it from our own shores, an awareness and a world that we all share, that can be experienced by every living being, yet is seldom seen by any. And the shaman is the master of this other

world. He lives with one foot in this world”—he placed his hand on the ground,—“and one foot in the world of spirit.”

“The conscious and the unconscious?” I asked.

“If you must,” he said. He paused. I remember staring across our fire, watching the firelight play with his soft, hawklike features.

We fell silent and stared at the fire. The fresh log was burning now, charring, cracking, and the flames grew from the contours of its sides.

“Buckminster Fuller—the architect?” I looked up to see if he recognized the name.

“Yes?”

“He once said that fire is the release of the energy of the Sun from the wood of the tree.”

He rocked back and grinned. “That is wonderful,” he said. “Another common ground. The energy of the Sun, the source of everything there is.”

“Maybe that is why many aboriginal people refer to even rocks as ‘thou.’ Ultimately, animal, vegetable, mineral, we all come from the same source. The Sun. And we are just temporal forms of that energy.”

“Of course,” he said. “And the power animals are another form, at least to our people. And the light, the aura that you are so unwilling to admit that you saw around Anita, is to her what the flame is to this log: a body of energy, formless, radiating her energy.”

“Do you believe that?” I asked. I felt like a kid, telling ghost stories by a campfire.

“I believe that man has become accustomed to this state of consciousness, this waking awareness, and it is presumptuous to believe that it is the only state in which our perceptions are real.”

He poked at the fire with a stick, and the chunk of wood split in half and collapsed in a shower of sparks.

“It is pure folly,” he said. “And such a belief places severe limitations on the very objectivity that you value so dearly. Experience is always subjective and to deny the *reality* of any experience is to deny a part of oneself.”

March 15

Writing by the lingering light of the fire. Morales has blanketed himself in his poncho. I’ve rolled out my sleeping bag.

So many stars. In the darkness of this night and at this altitude you feel closer to them.

He is a wonderful companion. Somehow, arguing over such issues as the nature of awareness, subjectivity, comparative mythology, etc. is more persuasive when one's classroom is in Nature and not a lecture hall. The issues seem more tangible, more poetic, and less discursive.

The concept of the shaman as an individual holding dual citizenship in the conscious and the unconscious mind has fired my imagination. A primitive explorer in realms of consciousness which he or she regards with as much respect and reverence as we assign to the "un-altered" waking state in which we are accustomed to living. Western science is only now approaching the subjective nature of reality. Quantum physics, the outcome of an event is influenced by our observation of it, all that good stuff.

Yet the shaman begins with this assumption—no, with this belief—a belief acquired in the course of his own experience, not as the result of a preexisting philosophy, religion, paradigm. Shamanism worships no Christ, no Buddha, no Muhammed or Krishna.

So where will we find a *hatun laika*?

The separation of Man from Nature provokes the hell out of me.

Note: Look up passage in Genesis re God creating the birds, the trees, and all of the Earth to serve man. Shamans believe in the contrary, that we were created stewards, caretakers of the Earth.

That the rift between man and Nature happened is not in question. It's appealing to think that it happened along with the advent of the neocortex, self-reflexive thought, awareness of self, when he was first able to distinguish between himself and others, himself and his environment, good and bad.

Isn't the Exodus from the Garden merely an allegory of this Cartesian revolution? This "I am," this conscious separation of Man from Nature? Six, eight thousand years ago, with the self-assertion of the neocortex?

"Of course it is an allegory," said Morales when I put the question to him over a breakfast of tea and fruit.

"There is nothing wrong with the tale," he said. "The problem is the way it has been told, the way it has been taken to heart and taught by the

priests. Instead of an elegant description of an historical event or evolutionary step, it is seen as a literal statement of fact, as humanity's condition. It is always dangerous when the metaphor of myth becomes a religious dogma enforced by priests."

"Our shamans."

"What?"

"The priests."

"No."

"Hasn't the priest taken the place of the shaman in the Western culture?"

"No," he said. "The priest is a functionary. Men enter the priesthood and come to a preexisting dogma. They come to understand it and maintain it and teach it. Their experience of religion is an experience of faith, but not of direct communion. Their communion is with a tradition, rarely with an experience. They accept the faith and its conventions and its faults. They are the caretakers of myth, not the makers. The shaman is a mythmaker, and the source of his faith is his own experience of the Divine in Nature."

March 16

Have never walked so much in my life. Have no idea how many miles we've covered.

We've visited two more villages, much the same as the first, and bypassed another. We live on a diet of ground corn, fruits and vegetables purchased in villages, an occasional piece of meat, tea made with fresh spring water, and snacks of Morales's yucca and corn paste. I've become accustomed to its blandness and it is quite fortifying.

We continue our discussions. Wandering across this vast plateau, the snow-capped Andes in the distance, the jungle lowlands and the Amazon to the south, I have begun to feel less of a visitor to this place and more of an inhabitant. The vista is a constant reminder of the true nature of my home. I don't need all this stuff—frame backpack, waterproof parka, thermal socks. I look at Morales and he is at home here. He moves through the forests and across the meadows with a lighthearted assurance, an elegant simplicity that I can't help but admire. He takes nothing for granted.

His contentment is the same contentment that I've seen on the faces of the people of the little hamlets that we find at the base of a hill or a gently sloped terrace or near the bank of a stream.

The values of the rural Indians are dictated by the land they live on, not assigned by the community. I remind myself that most of the world, geographically, is inhabited by such people, ruled by such standards.

No great revelation there, it's just a firsthand perspective.

He hardly needs to point out that Nature informs the primitive philosophies of the world directly. Nature exits the Judeo-Christian scene after condemnation in Genesis and only appears in cameo here and there—usually in moments of epiphany and revelation: Moses climbing a mountain to receive the commandments, Jesus going into the wilderness for forty days and returning with his message. . . .

We continue to talk about such things. And others. We pass a half-buried Inca structure, tumbled down, reclaimed by meadow grass, and we talk about his ancestors. He inevitably brings the conversation around to the shaman, the individual whose “testament is Nature itself, whose hymns are the music of the rivers and the winds.” I would like to believe that such people exist like I once wanted to believe in Santa Claus.

As for this don Jicarum, we continue to hear of him. Hearsay. No one knows where he is from, but his reputation has spread on the wings of rumor.

They say he can change the weather.

In the morning we head west southwest, where there is a healer named Jesus.

The unknown always passes for the marvelous.

—Tacitus

Had it not been for his reputation as a sorcerer and master healer of *susto*—the “evil eye”—Jesus Zavala probably would have been the village idiot. Twenty years ago a stroke had paralyzed much of his left side, including his face. The corner of his mouth curved down in a permanent pout, and he had a habit of wiping it with the first knuckle of his right hand, so the lip was chapped and flaky. His left eyelid was nothing but a flap of dead skin drooping over most of his eye, but the good eye, the right one, reminded me of doña Rosa’s. It glistened.

He lived in a time- and weather-worn adobe hut on the edge of the village. The adobe blocks were bare, inside and out, gray-brown dried mud with bits of rock and straw showing, and the roof was half tile, half straw.

Jesus sat on a woven rug in the middle of the swept dirt floor. There was a clay stove, a bed made of pine needles, and a little altar to the Virgin Mary. Morales told me that villagers brought food to Jesus twice a day.

I sat cross-legged before him, and Morales squatted, resting comfortably on his haunches, and Jesus grunted and drew three coca leaves from a little woven bag. He blew on them, dropped them on the mat, and we all stared down at them. Without moving his head he raised his eye to look at me, then his eye moved past my face and roved the room, the walls, the ceiling.

“The *rastreo de coca*,” whispered Morales: “A simple form of divination.”

Jesus slapped the mat with the palm of his hand, drew three more

leaves from the bag, blew on them, and tossed them to the mat. They fell to form a V with a line under it. Jesus raised his head and touched the lower lid of his bad eye with his forefinger, then leveled the finger at my face.

"Black magic," said Morales, and then asked him a question in Quechua. For a reply the old man lifted his hand above his head, palm flat, and moved the thumb and little finger up and down.

Morales grinned. "A bird," he said. He fired off a string of questions, and Jesus variously nodded and shook his head.

"He says that a powerful sorcerer has sent a large bird after you. Have you offended any sorcerers recently?"

Naturally the incident in Ramón's hut suggested itself, but I said I didn't think so and asked what Jesus recommended I do about this bird. The old man's answer, gleaned from another series of rapid-fire yes/no questions, was that this bird would stalk me until I knew what I had done, that I would need to confront it, and, eventually, confront the sorcerer. He told me to beware. I agreed to do this.

"Do you have any questions for señor Zavala?"

"Tell him we are looking for a *hatun laika*," I said. "A powerful sorcerer known as don Jicaram. Has he heard of him and does he know where we will find him?"

Morales nodded and put the question to the old cripple. I could not understand the Quechua, but I caught the words *hatun laika* and the name we had heard twice now in the past four days: don Jicaram.

I watched Jesus' withered face, watched his eye widen as though with surprise. He grunted. It was like a laugh. He eyed Morales with suspicion, then me. Confusion? He raised his hand, palm up, gestured toward Morales and then toward me. Then he brought his palm to his chest with a dull slap. I didn't understand. I looked at Morales, frowned, and shook my head. And Jesus spoke, a short series of forced grunts, for the stroke had left him unable to articulate.

"What did he say?"

Morales's face was not altogether expressionless; I think one eyebrow might have been raised a quarter of an inch. "That he is with us now," he said.

I turned my head and smiled back at the disabled Indian who thought himself a master shaman.

"*Ayee me*," I said. Thank you, in Quechua. Morales got up and placed

a coin among the pine needles at the base of the altar to the Virgin Mary.

Jesus led us to the door. He place his hand on my arm and I looked down at him. He was smiling. He dropped his hand, reached behind him, and drew his fingers up the seat of his pants as though wiping himself. The healthy side of his mouth curved up in a grin, and the skin around his good eye crinkled in good humor, and he wagged his finger at me and shook his head.

We left the village and walked in silence for at least half a mile, heading west. At length we stopped and Morales turned and looked back in the direction of the village, but it had disappeared behind the crest of a hill.

"Why did he stop you at the door? Wipe himself? Did that mean something to you?"

"In the jungle," I said. "That night with Ramón. *Ayahuasca* is a purgative. . . ." We were in the forest again, or it could have been a eucalyptus grove. We never knew until we came out the other side.

"What happened?" he asked, grinning.

"First I threw up, vomited my guts out—that's when I saw the snake."

"Yes?"

"Then I ran into the bushes and shit everything in my bowels. It was incredible. Violent. Cathartic."

"I shouldn't wonder."

"I wiped my ass with a couple of leaves . . ." He started to laugh. ". . . and they must've been poison ivy or a jungle relative." He was holding his stomach now, leaning against a tree. "I got a rash you wouldn't believe." I turned, faced the direction from which we'd come, and screamed, in English, "How the hell did *you* know!" And my companion slid down the tree that was supporting him and sat, laughing, on the ground. I fell to my knees and joined in. The fact was that I'd purchased ointment at the *farmacia* where I bought Anita's lipstick and I'd run out of it just the day before. The rash was gone, but the thought of it lingered.

"You civilized folk," said Morales, wiping the tears from his eyes. "When you're not pissing in a creek, you're wiping your ass with poison leaves!"

"Well, what about it?" I asked when we'd picked ourselves up and were on our way. "How do you explain his knowing?"

"How do you explain his knowing," repeated Morales thoughtfully.

I shook my head, waved my hand in vague sort of way. "No, no, let's not get off on semantics and philosophical flights of fancy."

"It is just that your question reminded me of the old problem of defining the ultimate truth: that which can be known but not told." He pulled a stick of cinnamon bark from his pocket and chewed on it. "There is knowledge that cannot be explained."

"I know that," I said. "You know . . . that I know . . . that you know . . . that I know that."

"I am not so sure," he said. "So do not be impatient. Jesus Zavala would fall into the category of a soothsayer. He is more technician than shaman."

"Technician?"

"The *rastreo de coca* is his art. A form of augury not unlike the *I Ching* or the tarot. In his case it is combined with rather well-developed visionary capabilities."

"Anita mentioned that there was an eagle following me," I said.

"Did she? Perhaps it has something to do with your time in the jungle."

We stopped by a cluster of rocks and a narrow *arroyo* cut into the forest floor. A spring. Water gurgled from between the granite stones. Morales soaked and filled a goatskin *bota* that he had purchased in Jesus's village.

"Divination is a curious art," he said. "It has survived so many thousands of years."

"At least 2000 B.C.," I said. "Mesopotamia. There are cuneiform texts that describe the practice for consulting destiny by pouring oil on water, studying the shapes made by smoke rising from burning incense. A thousand years later the Chinese were using the *I Ching*."

"And what has your research told you about its meaning?" he asked.

"I think that it's related to the development of the neocortex," I said. I shrugged off my pack and sat on the edge of the little *arroyo*. "The frontal lobes gave man foresight, the ability to look—or at least plan—ahead. He was curious and perhaps threatened by, the uncertainty of the future. By seeing destiny as a series of chance events and creating a way to consult it, he began to bring order to the future, narrowing down all the possibilities into one or two. You could guess that those whose frontal lobes were better developed became the prophets and soothsayers of their community, divining love, fortune, war, illness. . . ."

I got up, impatient with myself. "But what difference does it make? It's all speculation. Oil on water, smoke, sticks, leaves, tarot cards: ways of

approaching the randomness of the future in a random way. Chance patterns.”

“Patterns *interpreted* by the mind,” said Morales. He slung the water-swollen *bota* over his shoulder. “It is intriguing that modern man is fascinated by the possibility of such things, yet discards them as meaningless, superstitious games. But don’t psychologists use ink blot patterns on paper to tap into the minds of patients?”

“The Rorschach test,” I said.

“Precisely. The theory is that these random patterns will suggest certain things. Your thinking brain may tell you that it is a meaningless blob of ink, but you respond *instinctively* with ‘butterfly,’ or ‘tree,’ or whatever else ‘comes to your mind.’ Where do these things come *from*? The unconscious?”

“So you think the *rastreo de coca* is a way of tapping into the unconscious mind of the soothsayer who uses it?”

“Perhaps,” he smiled. “It’s a thought.”

“But if the interpretation is right, then the information was already *in* the unconscious.”

“As you said, it’s all speculation.”

“In any case, Jesus said nothing about the future. He came up with this bird issue and knew about something that happened to me a month ago.”

“A memory.”

“Well, yes.”

“There are shamans who will tell you that memory is not kept in the brain—neither is consciousness, for that matter—but in the body and in the fields of energy that surround the physical body. They are able not only to see these fields, but to reach out with their own and see the other’s history, their present, their possible destinies, even. Señor Zavala’s coca leaves are childish compared with such a thing.”

“So where do we find such a shaman?” I asked. Tradition and folklore was fine, but I was growing impatient with all the theory.

Morales just smiled and shrugged his shoulders.

We made camp early that day. It turned out that the little rock spring where we stopped was met by another underground source fifty yards away, and we followed the widening *arroyo* all afternoon. It became a creek, then a ten-foot-wide stream, and we stripped and bathed in its sparkling cold water. Morales cooked beans that night over our fire.

I did not write in my journal that evening. I fell asleep almost immediately after dinner. And I dreamed a funny sort of dream. In it, Morales and I were playing hide and seek with a seed pod. A mimosa seed pod six inches long and two inches wide. He'd hide it in the forest while my eyes were closed and then tell me to find it. Without looking for it.

The next morning I figured it had something to do with finding the *harun laika* named Jicaram.

And when I awoke I knew that we never would. That we'd never find this master shaman, this sorcerer, this "man who had already died."

And then we did.

Neither the sun nor death can be looked at steadily.

—*La Rochefoucauld*

It was midafternoon when we emerged from the floor of the valley we had been following since late morning. We were near the edge of the *altiplano*, where it began to fall five thousand feet to mountainous jungle, green like moss, mist-filled valleys. We stood, entranced by the tropical vista below us, and then someone coughed.

There were three of them. Three men. Two were in their thirties, dressed in patched, threadbare jeans. One wore a faded baseball cap and something like a hunting vest with zippers and pockets, the other, a soft felt hat with a floppy brim and striped shawl crisscrossing his chest and tucked into his pants. He wore a pair of old lace-up boots with cracked leather and broken soles. The third man was older. He could have been sixty or seventy; at this altitude and in this climate it was hard to judge. He was thin and wrinkled; his clothes were baggy, and a poncho hung from bony shoulders. His hat was broad-brimmed, tightly woven straw, a domelike crown with two thin braids.

As we turned the old man stepped forward and removed his hat. He half-glanced over his shoulder at the other two and they followed suit. Then he faced forward and dropped his eyes to the grass.

"Tutacama, taytay," said Morales.

"Tutacama," said the old man.

Morales gave me a look. "Stay here," he said. "They are Quechua. I will speak to them."

I took off my pack, set it on the ground, and leaned on it while Morales approached the trio and engaged the old man in conversation. They

spoke for about three minutes. Clearly the old man wanted something, and he seemed self-conscious, almost embarrassed. The two younger men said nothing, merely exchanged glances and stared at my backpack. The old man also glanced up over Morales's shoulder and gave me a deferential look. He turned and pointed past his companions, back into the hills. Morales nodded, said something, and looked at me. The old man smiled in my direction and then they all nodded. The professor placed a hand on the old man's shoulder, then turned and walked back.

"They are from a village back in the hills. We passed it this morning."

"I didn't see a village," I said.

"There is an old woman. A white woman, and she is dying. They saw us passing and have asked for our help."

"So let's go," I said.

The village was tucked into a hillside a mile or so away. It was built around and incorporated a substantial Inca ruin. There were sections of wall built of granite blocks so expertly cut and fitted together that friction alone had held them in place for centuries. Plants grew from square niches meant to hold the ends of wooden support beams. In many places sections of walls had been repaired by the villagers with adobe and uncut stones. Grass-thatched wood and adobe huts had been built against the Inca walls and around a stone-flagged central courtyard where two large stone mortars had been carved into the rock floor. We had passed within three hundred yards of the place.

The Incas had built a hamlet here, near the edge of the *altiplano*, an outpost of their civilization. Now, a thousand years later, their descendants were living in its ruins, farming the terraces that sloped down the hill from the village, repairing their masonry with mud and rock, for the artistry had been lost, the skills long forgotten. Their heritage, like their village, lay in ruins.

There were chickens, pigs, a llama in the courtyard. An Indian woman was grinding maize in one of the mortars. She stopped when we entered, nodded her head, and disappeared.

The old man led us to one of the huts. In the courtyard the shadows were growing long, and it took a moment for my eyes to adjust to the darkness of the room. A woman, her head covered by a black shawl, stood holding a candle and murmuring at the head of a bed, a pallet supported by two wooden crates in the center of the room. She looked up at our entrance and moved to leave, but Morales held up his hand, and she just stepped back

against the wall. He said something to her in Quechua and she handed him the candle. Its flame cast our shadows wavering against the adobe walls.

There was a woman lying there, stretched out on the pallet, an Indian blanket pulled up to her chin, her arms resting outside of it and by her sides. It was impossible to judge her age, she was so emaciated. Her skin was yellow with jaundice and stretched taut over the bones of her face; the tendons in her neck were sharp ridges. Her hair was short and gray; her eyes stared blankly at the ceiling from hollowed-out sockets. Her mouth was open, her lips cracked and colorless, drawn back slightly from dried, calcium-spotted teeth, and her breath came in raspy whispers in and out.

Her hands were large but the skin was yellow and withered. There was a simple gold band on the fourth finger of her left hand, loose, leaning forward against a swollen joint.

She made no movement, no telltale sign of awareness, nothing to show us that she knew we were there.

Morales turned and looked at me, held up the candle, and I stepped forward and took it. He passed his hand over her face and her eyes remained fixed on the ceiling. With the forefinger and thumb of each hand he took the edge of the blanket and folded it back down from her chin to expose the top of a simple cotton dress buttoned up the front. A silver crucifix at the end of a string of rosary beads lay on her chest and around her neck.

"A missionary," he whispered.

Morales turned his head and rested his ear on her chest, listened for a moment, and then straightened. He turned and asked the old man a question. I leaned over and passed the candle back and forth across her expressionless face.

Her pupils were fixed and dilated. I watched the candle flame move back and forth, reflected on the glassy surface of her eyes. I listened, as Morales had, to her heart, so slow, so very faint that I could barely hear it for the whispered conversation taking place in the corner.

I looked down at the tarnished silver crucifix and wondered how she had come to this place.

Then Morales touched my sleeve, and we walked out into the sunset-lit courtyard.

"She was brought here two days ago by Indians from below." He gestured toward the hillside and, beyond it, the jungle.

"Her liver has failed," I said. "I think she's in a coma."

"Yes." He looked up at the sky, clouds tinged with pink and orange. "We have been invited to stay," he said. "We will spend the night here."

"Of course," I said. Behind him, there were women moving in and out of the hut. "What can we do?"

"Nothing. She will die tonight. We can only help to free her spirit."

I didn't know what to make of it.

Twenty or thirty candles had transformed the mud-and-straw hut into a sort of chapel. I sat on a sack of corn husks by the door and watched my companion, seated across the room from me, eyes closed, head resting back against the stone Inca wall. Motionless.

The Old Man was with us. I had learned that his name was Diego. An old woman, who I supposed was Diego's wife, gently applied a moist cloth to the dying woman's face.

I had thought of fetching my journal and writing of the experience, but abandoned the idea as inappropriate, too clinical. Besides, what would I have written? My thoughts in the presence of death? Would I have wondered about her life, the things she had seen, the inspiration she had felt to leave her native land and bring her faith to the jungles of Peru? Would I have compared her to Jennifer's dissected cadaver, by now incinerated in a furnace at the University of California? Probably.

Would I have related the experience to Early Man witnessing the death of one of his tribe, and the dawning awareness of his own mortality? Maybe.

But I didn't write any of these things. I didn't really even think them at the time. I felt nothing but the solemnity of a moment that had lasted nearly two hours.

A room had been prepared for us. Someone of the village had been displaced, a room swept clean, and I had left my backpack there. Morales had left his hat, *bota*, and little food pouch, and we had returned to stand vigil.

Suddenly there was a long, loud, rasping breath, and then it stopped. Was that it? Diego's wife stepped back from the head of the bed. Morales opened his eyes. Nothing had changed on the dying woman's face.

Then she exhaled and the rhythmic breathing began again. She was still alive.

Morales stood, looked at Diego's wife and inclined his head toward his place against the wall and she went there and sat.

The room was warm from so many candles, insulated from the cool of the evening by its thick adobe walls. Nevertheless, I was surprised when Morales took the top of the blanket and pulled it down to expose the missionary's body. Her dress reached to below her knees and she wore sandals, and her feet, bony and yellow with jaundice, had shrunk within them. He folded the blanket, lifted her feet, and placed the blanket, like a pillow, under them, then removed her sandals and handed them to Diego. Then he closed his eyes and massaged her feet for half an hour.

When he was through he moved to the head of the bed, and, ever so gently, lifted her head and removed the rosary beads from around her neck. Nothing changed in her breathing or her expression as he eased her head back into place. He placed the beads in the palm of her left hand and closed her fingers around them.

He looked at Diego and nodded, and the old man got up and motioned to his wife. She rose and so did I. Eyes to the floor, she moved around the foot of the bed, bowed slightly to my companion, and went out. Diego bent over and placed the sandals just outside the door. He straightened, looked at my friend, bowed his head, and whispered: "*Ayee me, don Jicaram.*"

And he left us alone.

What?

I looked at my friend, now standing at the head of the bed, his hand on the dying woman's forehead. He raised his eyes and we stared at each other for a moment. He said: "Blow out the candles. One by one."

I just stood there, staring at him. Was this possible?

"The candles. Please."

I moved to the little ledge that ran like a shelf around the room. My mind was racing, but out of gear. I leaned over and blew out a candle. I couldn't think clearly. I must have misunderstood Diego. Then I heard Morales chant, a low, murmured Quechua song. I looked back over my shoulder, and his eyes were closed, his hand still on her forehead, and his lips moved almost imperceptibly. Slowly he opened his eyes, those Rasputin eyes, and they held my gaze for a moment, told me to get on with it, and

I did. I blew out the candles until his chanting stopped and he said: "That will do."

There were three candles left, and the smoke from those snuffed hung in the air. He was at her side now, and he placed his hands just above her right leg and swept them down toward her feet as though brushing something away. Again, from her thigh, down her leg, over her foot, and his hands stopped in the air just beyond her foot, and he flicked his fingers, flicked them like flicking water, away toward the wall. Three times he brushed his hands down her leg and flicked his fingers. Then he moved to her left leg and repeated the procedure.

I moved to her head and listened for her breathing. It was the same, a shallow, labored respiration. Morales lifted her right arm by the wrist and "brushed" this too with a decisive movement. Then the left, but he was careful to keep her fingers curled over the rosary; the little crucifix dangled in the air. There was something eerily methodical and workmanlike about him as he replaced her arm by her side and began to unbutton her dress from the neck down.

When he had finished, there was nothing exposed but a three-inch-wide midline of yellowed skin, sharp outlines of ribs and sternum, a shrunken stomach, and thick cotton underpants too big for her now.

He started at a spot a inch or so above her groin. His hand, first and second fingers extended, began to make a circle in the space between her legs, a counterclockwise circular motion, and he drew his hand away, still spiraling, away and up into the smokey air. First chakra. He did this three times, then started on the second chakra, beginning at a spot half an inch from the surface of her underpants, a perfect circle, three-inch diameter, slow, faster, spinning, up and away.

Her stomach, her heart, the deep hollow at the base of her throat, her forehead—I stepped to one side—and then the top of her head.

When he was through he stood near her head, and I saw his eyes lose their focus, an almost imperceptible shift in the direction of his pupils, and then a blank, almost glassy . . .

"Look."

I took my eyes from his face and looked down at the body, the ever so slight rise and fall of her chest.

And Morales hit me in the head.

It was lightning fast. His elbow came up and struck my forehead

a hard, sharp blow. My head swam for an instant. My hand flew to the spot reflexively.

"What the hell . . ."

"Look!" he said.

It was an instant, nothing more. There was something on the surface of her body. Something milky and translucent an inch or so above the contours of her body. Then it was gone.

"Stand here."

He took my arm with a firm hand and brought me around to the head of the bed.

"Look now. Soften your focus."

I let my vision go blurry, and he tapped a delicate circle on my forehead with his fingers and then struck it with his knuckle.

And there it was. Out of focus, but clearly there, an ever so subtle glow now three to four inches from her skin as if a luminous mold of her body were emerging from the flesh. I had to concentrate not to focus. I felt an involuntary chill up my back.

"Keep breathing now," he said.

I exhaled, inhaled as evenly as I could that nothing would disturb the quality of my vision.

"Am I really seeing this?" I whispered.

"Oh, you are seeing it, my friend. A view that we have forgotten, that has been clouded by time and reason."

"What is it?"

"It is she," he said. "It is her essence, her luminous body. She would call it spirit. She wants to let go. Soon now. We will help her."

I turned to look at him and there was . . . something, but it was gone. Something around his head, on his shoulders, but I blinked and saw nothing but the sharp outlines of his face, softened only by the orange candlelight.

Morales worked on her for another hour. He repeated the procedure that I had witnessed before, repeated it with the same patient intensity, never hesitating, dedicated to the work at hand.

I stepped outside. For a moment. I breathed in the cool night air and tried to clear my head, but . . . Don Jicaram? *Truly?*

Outside the sky was clear. There would be a full moon in another week. The stars were brilliant, and in the courtyard fifteen or twenty villagers were gathered around a large fire. Someone was singing a lilting tune,

in Spanish, which surprised me. There was activity and the air carried the smell of rich food. All was as it should be. Normal.

And behind me, in the candlelight, a man I had come to think of as a friend, this idiosyncratic, strangely poetic professor of philosophy was disengaging a dying woman's "luminous body" from her physical body, helping her to die. And Diego had said, "Thank you, don Jicaram."

I rubbed the spot on my forehead. It was tender. I turned back into the room.

The contrast between my view of the outside—the courtyard, the activity, the moon and the stars—and that which greeted me when I turned will always give me a thrill.

Morales was bent over by her head, his lips less than an inch from her ear, whispering. Suddenly her chest heaved and she gasped as the air rushed through her mouth and into her lungs. It stayed there.

"Exhale!"

And there was a long wheeze, like a labored sigh, as her last breath seeped from her chest, out through her open mouth. And then I saw, suddenly, as though out of the corner of my eye, the milky luminescence, which I had not noticed since I had turned back into the room, lift and coalesce into something amorphous, without specific shape; something translucent and milky like an opal hovered there over her chest, twelve to eighteen inches over her chest. Then Morales clapped his hands sharply over her sternum, and then it was over her throat, her head, and then it just wasn't there.

"My God," I said. Morales looked up.

"Did you see it?"

I approached the bed and looked down at the face. Strange how you can see the death. She had been in a coma, expressionless, yet death still managed to show itself in the softening of her face and rigidity of absolute stillness. The face of death is unmistakable. No blood moves beneath its surface, no veins pulse imperceptibly. No living thing can be so inert. Life, like death, is a visible thing, and death is a mask, a mask of final stillness.

"What was it?" My voice was a whisper.

"What the Quechua call the *viracocha*." He drew down her eyelids with his fingertips. He buttoned her dress and pulled the blanket up to cover her completely. "I am glad that you saw it," he said. Then he blew out the remaining candles.

The village had cooked a pig in don Jicaram's honor. They had dug a pit and slain a hog and roasted it on a spit. And there was *chicha*, a beer made from corn.

Melchor (the one with the baseball cap) spoke Spanish. He told me that Diego had met don Jicaram many years ago. The *hatun laika* had been passing through and had stopped at the village and cured Diego's father of something that he couldn't translate, but I think was emphysema. The old man had since died but, said Melchor, he could breathe his last breath freely thanks to don Jicaram. Two days ago, when the Indians had appeared, carrying the old missionary woman on a litter, the villagers had not known what to do. Diego had gone into the *campo* and left there an ancient carved stone that the shaman had given to his father. It was a blessing that we had come.

Digesting the meal took all my remaining energy. The *chicha* beer had gone to my head, already spinning with the events of the past few hours. I excused myself and found my way to our room, where fresh straw had been laid down. I was too confused, too stupid with sleepiness to write in my journal. I unrolled my sleeping bag, unlaced and pried off my boots, and slid in.

I dreamed.

On my back, belly up on the sand. Looking at the sun, whiteness of sunlight, no need to squint. It's okay, I'll just lie here and look at it. But that's bad for the eyes.

Close them. Eyelids orange now. Breathing sweet desert air rushing into my lungs. Warm peacefulness, sunny comfort. Can stay here forever. . . .

Movement. A jagged shadow lurches across the field of light glowing through my closed lids. My stomach flutters danger and my eyes open on fear. A sudden threatening shadow from nowhere . . . far off . . . coming *fast*. . . . It swoops and screams and I roll sideways in the sand with the impact of the bird's talons tearing across my stomach. Roll, again on my back, sweating fear. I prop up on elbows in the sand, crane my neck to look down at the sandy, bloody gash in my taut belly, red with blood, yellow fat, then the black eagle, the monster is back, filling the sky, battering my body with its wings, pinning my arms under its blows, the dull ache of dream pain

in my thighs, its bone-white talons embedded there. Pinching, clamping my guts, my intestines, in a surgical beak, wriggling its feathery neck, tugging wildly, out of control frenzy of hunger, working my organs out through the tear in my stomach.

Take it! Tear it out and be done for Christ's sake! It stretches its wings, blots out the sky, and jerks at my entrails, and feathers bristle and I scream as it spreads its wings and flexes its feathers, bristling . . .

"Wake up!"

I gasped for breath and sat up, half out of the sleeping bag, fingers dug into the straw. Morales was leaning on his elbow, his poncho a blanket.

"You should not have made love with Ramón's daughter," he said.

March 20

Don Jicaram. How? Does he lead a double life? One minute the mild-mannered Professor Morales of the city, then into a nearby Inca temple and it's . . . don Jicaram! Shaman! *Shazam!*

Well, why not? Still, it's stunning to think that all this time my companion was the very man we were seeking. What a charade. And to what purpose?

He was biding his time, watching me, testing me. My intent. My trip into the jungle, my time with Maximo and Anita—have those been trials too? When we first met, that day in the cafeteria, he told me that there was a custom that a shaman would share his knowledge with any who asked as long as they presented themselves with impeccable intent. Purity of purpose.

Have I done this? Or has his identity come out by accident, by our happening upon this village and this old woman? The revelation came with such simplicity, such dramatic elegance. . . .

All this time that I have been seeking a *hatun laika*, a subject to study, *he* has been studying *me*. Teaching me. What next?

And what has happened to my vision? Did I see her energy body disengage?

Mornings always seem to bring into question the events of the night before.

When we left the village, we did not retrace our steps back to the edge of the clearing, but rather headed north across the tundra. An hour passed before I asked him about the dream.

"The eagle is from Ramón," he said. "It has been following you ever since your return from the jungle. It showed itself to you in your dream."

"But you have seen it," I said. "Jesus Zavala divined it. Anita and Maximo talked about it."

"Yes?"

"Well?"

He stopped and cocked his head. "Do you hear that stream?"

I listened. A distant pattering of water over rock. "Yes."

"It is somewhere over that little hill."

"Right."

"Let us say that I am familiar with this particular spring and its rocky shore. I sit here and build a fire while you wander off in the direction of the spring. You come back an hour later, completely wet. Your hair, your shirt, your pants, your boots. I say to you, 'You have been swimming.' You would not be surprised."

"Of course not."

"Of course not! You are wet. The water shows. Then I mention that you should have taken your clothes off before swimming."

"But what if I had tripped and fallen into the stream?" I asked, thinking the example childish and the reasoning flawed.

"But remember, I know the stream and the sharp rocks that make its shore and bottom, and I see that your clothes, although wet, are not torn or damaged in any way."

"All right," I said. "That's just deductive logic, based on what you know and what you observe."

"Yes, like Sherlock Holmes," he said.

"Anyone would have come to the same conclusion."

"Undoubtedly, because we are all accustomed to reasoning based on what we are used to seeing: the evidence of our conscious, waking awareness. But that awareness is only a fraction of our total awareness. It is as easy for me to see that you are all wet as it is to see this power that Ramón has

sent after you. It clings to you like the wet clothes. Sight is a skill. So is vision. You have had glimpses of such things. You should begin to understand."

"My training, my conditioning, prevents me from understanding."

"Yes. Your conventions tell you one thing, your experience, another. It is characteristic of Westerners to need to understand something before acknowledging its worth or even accepting its existence."

"Well," I said, "I *haven't* seen this eagle."

He shook his head. "You did last night."

"In a dream."

"So although you are not conscious of this power, you are *unconscious* of it. Close your eyes and dream, my friend. Master dreaming and you master the unconscious. The truest experience of life is when we dream awake."

"So you are suggesting that a shaman can see the unconscious of another?"

He shook his head. "Why must you reduce everything to a simple sentence? You will never grasp the essence of these concepts with simple word formulas. You must think like a poet. Think in terms of metaphor and imagery.

"Take, for example, the lagoon that you have described behind Ramón's hut. Here is a poetic expression of the psyche. The surface that we are accustomed to seeing is dependent upon what lies below. The unseen depths support the surface, yes?"

"Yes. I thought of that analogy."

"Good. Then perhaps you will understand."

We were off again, walking down a grassy hill.

"We are used to standing on the shore and seeing the surface of the lagoon. We can deduce very little of what lies below the surface. Anyone can fall into the lagoon, but they would have no idea of what dangers the depths might contain. It could be very deep, there could be plants waiting to entangle, dangerous currents. There could be *pirañas*."

"Fear could keep you from diving in," I said.

"Indeed, it could. But if you change your perspective on the water, see where the Sun shines on its surface and look at it from that point of view, from above, where the eagle flies, then you can see into its depths, see what supports the surface, see what lies below."

"The unconscious," I said.

"If you must." He sighed. "Once you acquire the vision, you can know the lagoon and swim where you will."

"I understand," I said. And I did, completely. Then he took the metaphor one or two steps further.

"That perspective allows you to see not only the present condition of the lagoon, but much of its history, everything that has touched its surface and sunk to the bottom. You can even see the effect that whatever has penetrated the surface has had on the life of the lagoon: a sunken log that plants have grown on and fish must swim around. Everything that has ever fallen into the lagoon has somehow altered its character. Some things are deeply embedded and are no longer distinguishable, but all of them are visible."

"Its past is visible."

"Yes, and the effect that the past has had."

"It's a good metaphor," I said. "But if you compare the mind to a pond, you imply the geography, the banks that hold the water there. The vessel that contains the liquid. A specific place within which the mind resides. That's an argument for the localization of consciousness within the brain, that the mind is inside the skull."

"I did not compare the mind to a pond, I compared it to that lagoon that frightened you. A lagoon is part of a stream. It is a place where the shore widens and the center deepens and the water slows, but the water is, nevertheless, constantly flowing through it." He grinned. "I can even travel upstream, nearer the source, and affect the lagoon in any number of ways by affecting its source. I can place an object in the stream that, eventually, if nothing interferes along the way, will reach the lagoon, and, if it stays there long enough, it might sink in." He glanced up at me out of the corner of his eye. "I can place my hand in the water and cause a ripple in the stream that will eventually reach the lagoon and reverberate through it. It might even upend the canoe you are sitting in, or save you by washing you ashore."

I laughed. "So what do I do about this eagle?"

He stuck a stick of cinnamon bark in the corner of his mouth. "Learn to see it. Learn what it has to teach you and then return to the jungle. You will need to return. To complete your work of the West."

And so began my apprenticeship with Antonio Morales Baca. Don Jicaram. He had told me that were I to meet a master shaman I would need to

approach him as a student, not as a psychologist. But although I use the word *apprenticeship*, it was friendship that formed our bond.

At the end of a day's journey from Diego's village we came to a little hill in the middle of a meadow. At the crest of the hill was an Inca ruin, tumbled down, its foundation half-buried in soil and brushed by grass. It looked as though it had grown out of the hill. It was dusk as we ascended and turned to gaze back down at the sparsely grown forest on one side and, on the other, the slope of a valley that descended more than a mile from the *altiplano* down to the deep green Urubamba valley.

"An observation post," said Antonio. He slapped the side of the granite wall with his palm. "One of hundreds that linked the Inca Empire."

He led me through a gap in the wall into a little enclosure of fallen granite blocks, and grass. One of these blocks, a near-perfect specimen of Inca stone carving, lay by the base of one wall. He motioned for me to grab one corner, and we turned it onto its side to expose a rock-lined hole eight inches deep, a foot wide, two feet long, probably part of an ancient irrigation canal. There was a long bundle there, wrapped in an old brown-and-red woven Inca cloth.

"What's this?"

"My *mesa*," he said. "We need a fire."

I trotted down the hill and gathered some firewood, and returned to find that he had built a four-sided framework of twigs, a tiny pyre, with a pile of dried grass in its center. He lit this with a match, and we built our fire around it.

"We won't eat tonight," he said, and untied a bit of twine around the parcel and spread the cloth on the grass. Inside there were two short staffs and a soft leather pouch.

"The *mesa*," he said, "is a collection of power objects through which one engages the forces of Nature. It is the center of ritual."

"And this is your *mesa*?"

He nodded. "It is very simple and very old. You will find others to be quite complex, with power objects for every occasion." He winked at me. "Every phenomena. But a *mesa* can be as simple as a bed of pine needles and a few stones."

He planted the staffs in the soil at the upper corners of the cloth. The staff on the left was of a dark hardwood carved like a lefthanded spiral. The one on the right was of polished bone or ivory, and was crowned by a handle in the form of a hooked beak.

"They represent polarity," he said. "Darkness and light." Then he proceeded to place objects from the pouch onto the cloth.

There were not many and he did not explain their individual significance to me at the time. There was a piece of carved obsidian, half jaguar, half bird: earth and sky, the winged realms. There was a wooden fish or dolphin for access to the underworld, water, the psyche; a tiny gold owl, no more than two inches high, that represented night vision and the wisdom of the darkness. Many years later I would learn that such an object was dreaded by some shamans, for it held the power of lost and ancient knowledge and had little to do with simple healing. There was an eagle, carved from some dark gray stone and inlaid with diamond abalone shell slivers. "Each one of us has a universe within," he would later tell me, and this object was used to fly into it. And there were other things, stones and shells, a shard of crystal, a small wooden bowl. All were worn smooth from centuries of use, like fetishes in an anthropological museum.

Finally he withdrew an antique glass-and-silver flask from the pouch. It was half filled with a greenish brown liquid like Chinese tea.

"Tonight we will engage with ritual," he said. "You have made important steps in acquiring vision, but you still move through Nature like an outcast, awkwardly. You should move through the forest or across a meadow as you should move through life: with confidence, respect, and grace."

The sun had disappeared over the horizon, and our fire crackled, sent sparks rising into the graying sky.

"Tonight you will take San Pedro for the first time," he said. "San Pedro, Saint Peter, the keeper of the gates of heaven. It is also called *huachuma*, 'flesh of the Gods.'"

"Communion," I said.

"Yes. Imagine the San Pedro cactus, standing alone, its arms raised to heaven and its roots growing deep into the Earth. It is the medicine of choice of the shaman, helping the shaman to enter the body of the Earth, to meet the Mother Goddess, to come face to face with the power of Nature. It grows in all of the temperate zones of Peru: the coast, the *sierras*, the desert, and the jungle. Its preparation is a closely guarded secret. When simply boiled it produces a mild euphoria, but when the essence of the plant is distilled and married with the flavors of cleansing herbs, it becomes a visionary medicine of great spirit and power. It must not be abused.

"It is the plant of ritual, of vision. In the South it helps you to see your

past in its most brazen form; in the West it gives you the strength to face death; in the North it shows you the way to mastery; and in the East it helps you to call upon your power animals, to acquire their skills as you need them to acquit yourself effectively in the world, to cast no shadow, to leave no tracks." He paused and nodded. "Yes, and it conditions you to be able to access these . . . higher capabilities of your own accord. These higher states."

He unscrewed the silver cap of the flask and poured a small quantity—about half a jigger's worth—into the bowl.

"Its use is specific and sacred. You have used drugs in the past, but without motive, purity of purpose, and a connection to the Earth, any 'mystical' experience is psychological drool. The irresponsible use of any drug only mimics and forestalls the real union with Nature and the Great Spirit. It is like entering a spiritual whorehouse and debasing your highest self in the most dangerous way, by burning up your life force. The shaman's task is to strengthen this life force, expand the envelope of energy that surrounds the human body, and vitalize it, by accumulating personal power." He stopped and blew a puff of air to one side as though to dismiss the subject, like blowing out a candle. "What you are about to receive is a natural plant substance that will cleanse and bring balance to your body and the energy fields that surround you. Only when the body, mind, and spirit are in balance can the shaman make a real act of power."

He handed me the bowl. "Stand and salute the four directions."

I took the bowl, stood beside the fire, turned my back on Antonio and faced south. I didn't really know what to do. Then his voice came softly, in gentle Spanish tones, from behind me.

"We call upon the Satchamama, the great serpent of Lake Yarinacocha, the spirit of the South, to come to us. Wrap yourself around us, ancient Mother, fold us in your coils of light."

I raised the bowl to the southern sky. I felt self-conscious, toasting the air.

"Hey!" he said, and it sounded like an *amen*, and I said: "Hey!"

I turned to the horizon, looked at the distant peak where the sun had left us.

"We call upon the spirit of the West, Mother-Sister Jaguar, golden jaguar that eats the dying Sun. Come to us, you who have seen the birth and death of galaxies. Let us look into your eyes. Teach us with your grace."

What was it that Ramón had said about the jaguar?

"Hey!"

"Hey!"

I told myself to concentrate on the ritual and faced north.

"We summon the wisdom of the North, the place of the ancient masters, grandmothers, grandfathers. I bring you one who is not of my people, but of our people. Receive him, welcome him. Bless us in our work that we may one day enter your crystal palace with but a single thought and sit in council among you. Hey!"

I raised the bowl to the north and turned to the east.

"Hey!"

"And we call upon the spirit of the East. Come to us from your mountaintop, great eagle. Teach us to see with your eyes, that our vision may penetrate the Earth and the heavens. Fly with us now and watch over us. Teach us to fly wing-to-wing with the Great Spirit. Hey!"

"Hey!"

I turned and Antonio motioned for me to bring the bowl down to the Earth. "To the Pachamama, great Mother Earth . . ." The intonation of a prayer. "You who feed us and nurture us at your breast, teach us to walk on your belly with beauty and with grace. Hey!"

"Hey!"

He raised his hand and I lifted the bowl to the sky.

"Great Spirit Viracocha, mother and father, we salute you, that all we do is in your honor. Hey, hey!"

"Hey!"

He nodded for me to sit across from him. He nodded again and I drank the San Pedro. It tasted faintly of anise.

Antonio closed his eyes and began to breathe deeply, exhaling through pursed lips. I followed his example and soon the rhythmic rustle of a rattle marked the tempo of my breathing in three-three time. His chant was Quechua. I wondered where the rattle had come from. I thought about what he had said, about San Pedro, a plant I had heard of, about his discourse on the use of substances without motive, purity of purpose, connection to the Earth. Experience and experience served. Then I gave myself over to the hypnotic rhythms of rattle and chant. I became aware of my body. There was a tightness in my neck and shoulders, a soreness from the straps of my backpack. Eyes closed, I dropped my shoulders, moved my head from side to side, sinuously stretching the muscles. It felt wondrous. I lifted my shoulders and rotated them back, and never before had I experienced such musculature, such an immediate relief and relaxation, and I

realized that my motions were unusually fluid, sensitive to each sore muscle, stretching, unclenching. Eager to explore this new facility, I twisted my upper body, placed my right hand on my left knee and pulled myself, torqued my body to the left and felt three vertebrae crack. Then to the right and three more popped and the relief was tremendous. I wanted to move, to stretch and exercise, and the light of the fire was beating against my eyelids—a light show of pinpoint colors, as though single pastel photons were passing in between the cells of my lids, penetrating to the pupil and registering at the visual cortex at the back of my brain.

I had no idea how much time had passed, but then I opened my eyes and, for an instant, there was something so hawklike about Antonio's face that I blinked it away. He was smiling at me over the *mesa*. He sipped from a tiny bottle that I had not noticed before, then reached down and lifted the gold owl from the cloth and held it between his palms as though in prayer. Then he took the little object in one hand and held it before him and blew a fine spray of sweet oil on it. The smell of the oil penetrated my nostrils and hummed in my head. The gold owl caught the light from the fire and seemed to glow. Then he made a fist around it, extended his arm toward me, and opened the fist.

"Take it. With your left hand," he said.

I took it.

"Hold it, and close your eyes, and see it with your inner vision. A power object is a focal point, like a tuning fork."

I closed my eyes and imagined my forehead opening . . . glowing . . . the light was violet.

"That is the way. Excellent, my friend."

And I saw a woman, a dream image woman with owl wings folded around her, a feathered shoulder lifted, head turning to look at me over the shoulder, eyes opening, feathers . . . opening . . . with eyes. Eyes in the feathers. I caught my breath. I opened my eyes and looked down at the object on my palm, then up into his eyes.

"How do you feel?"

"I feel wonderful."

"Get up and walk," he said. "Go down the hill and into the forest."

I leaned over to replace the object. His hand touched mine.

"No, no. Take this with you. Never leave a *mesa* or medicine circle without protection."

I nodded for some reason and stood. My legs were aching to move and

I did. I moved out of the light of the fire and down the hill and into the forest.

A pine tree grove that resonated. The trees were defined each by their own light, glowing pastel outlines that moved with the branches swaying ever so slightly, pine needles vibrating in the northerly breeze. Living things with flesh and nutrient fluids coursing through them, drawing upon the Sun's light, which seemed to linger in each of them, rising from the soil. . . . How was it that I had never noticed that before? Their gentle presence was tangible, known to me for the first time, and I had walked among them only hours before, not seeing, unaware of their spirit, their gently pulsating life. Their consciousness. Our kinship was profound and I felt the breeze at my back and I began to run. Did my feet touch the ground? Yes, so perfectly, swiftly across the pine needles.

I had never run like that, running from nothing, toward nothing, moving so swiftly for the sake of the movement itself, the exhilaration of grace, slaloming though the forest on no path, the cushion of cool soil and pine needles, faster. I ran with my whole body, feeling every muscle loose and tuned in perfect harmony, the air parting, swirling around my back. . . .

"Close your eyes. . . ."

The light shed by the trees reassured me that they were still there, and I moved, ran, liberated from sight, through the forest, like the air.

I knew that something was moving me, something inside of me that I had never felt before.

*For in and out, above, about, below,
'Tis nothing but a Magic Shadow-show,
Played in a Box whose Candle is the Sun,
Round which we Phantom Figures come and go.*

—Omar Khayyám

March 22

Still reeling from the events of the past few days. The death of the missionary, my first experience with San Pedro. The revelation of Antonio's identity sits undigested in my stomach.

I saw a magician once, a slick trickster. He, or rather, his sequined assistant, rolled a footlocker to center stage. With her help he stepped into a mailbag secured at the top by a chain and padlock, and the bagged magician lay down in the locker. The lid was closed and locked at four points. His assistant stood atop the chest, lifted a curtain from the floor to surround herself, and . . . dropped it. Or did she? For it was the magician who stood smiling from atop the case, and when the padlocks were removed, his assistant emerged from the mailbag. In the blink of an eye.

I was eight. I remember the moment, how it forced me to think, to replay all that I had seen.

Let me see it one more time.

Just one more time to discover the secret of the wonder of the thing.

Antonio lifted a palmful of pine forest earth and gazed upon the pine needles.

dles with the earnestness of a tea leaf reader. The coarse brown dirt fell to the ground through the spaces between his fingers.

"There are two kinds of people in this world, my friend. There are those who are dreamers and those who are being dreamed." His eyes glanced at me sideways.

"There comes a time in every man's life when he must encounter his past. For those who are dreamed, who have no more than a passing acquaintance with power, this moment is usually played out from their deathbeds as they try to bargain with fate for a few more moments of life time." He moved his hand from side to side, sifting, then dropped his gaze to the stuff on his palm.

"But for the dreamer, the person of power, this moment takes place alone, before a fire, when he calls upon the specters of his personal past to stand before him like witnesses before the court. This is the work of the South, where the Medicine Wheel begins.

"You see, we assemble our present with the bits and pieces of our past, seeking to avoid those circumstances that caused us pain, seeking to recreate those that brought us pleasure. We are helpless captives."

I cleared my throat. "'Those who do not remember the past are condemned to relive it,' " I said.

"Or to avoid it," he stressed. "And I am not speaking of *remembering* the past. Anyone can *remember* the past and, in remembering, we reframe it to serve and justify our present. Remembering is a conscious act and therefore subject to embellishment. Remembering is easy."

He blew the remaining pine needles from his palm to reveal a charred wood chip, an acorn-sized cinder, a relic from a *campesino* campfire.

"The person of power sits in the prisoner's dock alone before the fire. He *confronts* his past. He hears the testimony of these . . . specters. And he dismisses them one by one. He acquits himself of his past. Do you comprehend this?" He lifted his eyes from the cinder and fixed them upon mine. "The man of power has no past, no history that can claim him. He has cast aside his shadow and learned to walk in the snow without leaving tracks."

He looked down at his palm and raised an eyebrow, as though seeing the tiny cinder for the first time. He grinned, let the cinder roll down his palm to his fingertips, and held it before him. "How appropriate. Isn't it lucky I found it here."

Our work has begun in earnest. By Antonio's reckoning we will reach Quillabamba by noon tomorrow and catch the train back to Cuzco, from there to Aguascalientes and on to the ruins of Machu Picchu, where I will perform my "work of the South."

Have spent the last two days exercising my vision and trying my patience, the last two nights discussing the theory of things past.

Antonio has refused to discuss my San Pedro experience, how I ran in the forest at night with my eyes closed. He became impatient when I blamed it on the psychoactive effects of the San Pedro. It was the ritual, the summoning of power through ceremony—why must I always dismiss an experience with the handiest explanation? What happened, he said, was that my mind had spread its wings and taken flight.

Why, he asked, must I wake up the next morning and think myself again an outcast from Paradise when I had run in Nature free, unfettered?

I have been touched by power, he said.

I call it a wild and magical run through the woods, lucky that I didn't fall and rip my face open.

It rained the night before last. Torrential. We found half-shelter under a granite outcrop in the forest. Yesterday, while our things dried in the sun, Antonio instructed me to sit on a boulder that stuck out above a rain-swollen pond.

For three hours I sat there, contemplating the reflection of my face and the clouds in the sky above and behind.

Fascinating thing and so simple: Both the clouds, thousands of feet above, and my face, three feet from the surface of the pond, are reflected on the flat plane. Antonio told me to focus on the reflected clouds and, when I did, my image split into two out-of-focus blurs. The trick, he said, was to work the muscles of my eyes to bring the two faces into focus while maintaining my concentration on the clouds.

This is not easy. Just when I thought I had it, I'd realize that I'd

stopped focusing on the clouds. . . . start again. But the trance state that it produces is profound. There were moments when I lost myself altogether. He told me also to concentrate on the space *between* my two faces and there were moments, flashes, when I thought I saw things. Other faces. My father's, my grandmother's. I don't know. These occurred later, when I was in such a meditative state that I know I'd lost track of time and situation. My awareness of the moment was abnormal, deep trance, and Antonio had to shake me out of it. Later he reminded me of the myth of Narcissus, spurned by Echo, so captivated by his own image in a forest pond that he was transformed into a flower growing on its bank.

The exercise is designed to retrain the eyes to look at the spaces in between things. Like Anita, who he said could look at a spot half an inch from my face while keeping my face in focus and there see my aura. My chakras spinning. My energy body.

"You are trained to focus on objects, on things," he said. "The world of the shaman happens in the spaces in between things."

Games with consciousness. Awareness games. A curious meditative state can also be created by watching myself watching myself.

Aware of awareness. Aware of myself breathing myself breathing. Hard to describe. I sit looking at our evening fire. I start a dialogue with myself:

"I'm sitting here, looking at the fire."

Sitting, looking at the fire.

"I'm sitting, looking at the fire."

Sitting, looking at the fire.

"I *really am* sitting here, looking at the fire!"

Yes. Still sitting, looking at the fire.

On and on, over and over, like a mantra. The I who a nanosecond ago was preceiving myself looking at the fire through my eyes, really is looking at the fire. It is a strange duality, watching my own mindstream. The duality of the self that is engaged in the act and the self who is aware of the first self's reality and can describe it as it happens. It is almost a way of stopping thought. Antonio calls it stopping time.

Tomorrow I will begin a fast to prepare for my work of the South, to shed my past like the serpent sheds its skin.

The past. As individuals we are at the mercy of our past. The traumas of our past prey on our fear in our present. The joyous events feed on our present, limiting our future as we seek to recreate the circumstances of past joys.

Does this hold true for a family? A tribe? A nation? A race? A culture? The species?

Antonio's answer would be that it does until the individuals gain control over their destiny. Free themselves from their pasts. And he proposes that in this shamanic model one can confront one's past.

Literally.

We boarded the train at Quillabamba station and got to Cuzco by noon. My dream of a fresh melon and papaya juice downtown was waved off by my companion, as were the taxi drivers who offered to take us there. From the station we headed on foot for Tambo Machay.

"It is called the Bath of the Incas by most," said Antonio. We climbed to the top of the hill. "Imagine." He squatted down, resting on his haunches, elbows on knees, hands clasped before him. "The United States is overrun by another race of people, who do not believe in your ways. The population is killed or beaten into submission, the cities are laid waste, the Library of Congress is destroyed utterly, so that no records remain. A thousand years later an archaeologist picks his way through the rubble and uncovers the reflecting pond that now stands before the Washington Monument. In a few years the guidebooks refer to it as the Bath of the Americans."

"And what *is* Tambo Machay?" I asked.

"The source of Cuzqueña, the finest beer in Peru." He laughed, pushed himself up, and shoved his hands deep into the pockets of his trousers. "The Temple of the Waters. A place of cleansing and purification. Its source is the convergence of four underground rivers from the four directions. The four niches in the wall of the upper level once housed figures representing the four *apus*, the four great snow-capped peaks that surround Cuzco, the four cardinal points of the Medicine Wheel. The Inca trail to

Machu Picchu begins there.” He pointed to a ridge ten kilometers to the East. “It is eighty kilometers to Machu Picchu, and it was here that the traveler filled a *bota* and cleansed the chakras before the trek to the citadel.”

“We walk to Machu Picchu?”

“We take the train. At,” he consulted his watch, “1:10. The Indian train,” he said. “There is time for you to fill your canteen. There is a ritual.”

March 24

Ritual. Ceremony. Are they the mechanisms with which early man accessed the limbic brain of imagery and the reptilian brain of body function? Turned on the visionary faculties of the neocortex? If one approaches ritual with pure intent and the firm conviction that it will transform them somehow, alter consciousness, heal, then is it not a placebo of sorts? We behold a feather. Our neocortex allows us to reason that it came from a bird (we may even know what kind of bird), that feathers are used by man as ornaments and for dusting. . . . But we are told that this feather has special power, that when held in the left hand and passed under the nose while chanting “do wop do wop, sha na na,” it will cure hiccoughs or even a serious disease.

For those who truly believe this to be so, the feather has become a magical symbol with healing properties. It has been transformed into an *image* that the limbic brain can believe. The neocortex understands, the limbic brain believes, the reptilian brain effects the change by relaxing the muscle spasm when the feather is passed under the nose.

Those who cannot free themselves from the logic of the neocortex, who see just a feather, will sneeze when it tickles their nose. Their hiccoughs remain; their condition is unchanged.

Hospital studies have shown that a placebo is as effective as morphine in 80 percent of the patients that are told that what they’re getting is a revolutionary new painkiller.

The placebo effect is based on tricking the brain into believing in a powerful cure. Is it possible that instead of tricking the brain as one would a child, that we can ally its healing resources?

If our primitive brain, our unconscious mind, expresses itself through symbols during our dreams, can we not use our neocortex to string together symbols (as we do words) to communicate with it?

If we can consciously communicate with our primitive brains, the brains of body functions and the four F's, can we not reprogram them?

I stripped to the waist and followed Antonio's instructions, beginning at the uppermost spout, working my way down and across the second tier, where the water branches into two streams, to the bottom, where they meet again as one, drinking the ice cold water, cleansing my seven chakras by "unwinding" them counterclockwise. Then I "charged" them, spun them clockwise. It felt, as it had before, vaguely ridiculous, numbingly cold in the thin Andean air.

Antonio met me at the base of the temple.

"Fill your canteen." He handed it to me and I placed it in the stream of sparkling water. "Some will claim that the purpose of the ritual is to cleanse the psychic debris attached energetically to your chakras, loosening the energy coordinates of who you have been so that you may reorganize them to serve who you are becoming or, at least, who you will be today."

He folded his arms across his chest and regarded the temple. "Water is a universal ritual cleansing agent. John the Baptist was its greatest advocate in the West." He smiled broadly and turned to look at me. "But self-conscious ritual is no ritual at all. Attend fully to the steps we take. You must give yourself to the process, as you did when you ran in the *altiplano*. Try not to let your focus blur or your attention stray. You must honor these exercises and honor yourself as you perform them."

March 25

Despite our friendship, Antonio thinks I am conceited. A twenty-four-year-old hotshot psychologist brimming with information, data, academic and paperback philosophy, lugging a backpack full of thermal underwear and toilet paper.

I can see it now and then in his eyes and in his smile, and on his lips when he refers to my "*study* of shamanism."

Just when I thought I'd passed his tests, earned his respect, impressed him with my earnestness, I catch this smile.

Machu Picchu, grandfather peak. Huayna Picchu, lover peak. Their mossy granite slopes rise dizzily from the protective serpent coil of the white waters of the Urubamba. We left the dingy train station at Aguascalientes and made our way to the edge of the river.

"You may cross the river here," Antonio said. He squatted and produced his bag of yucca and cornmeal. "You should follow Bingham's course up the side of the mountain, retrace the steps of the first white man who entered Machu Picchu. There is a cave, there." He aimed his forefinger at a spot two-thirds of the way up the mountain, to a dimple in a sheer bald spot of white granite. "Take your thermal blanket, the water in your canteen. It is comfortable, though cold at night. Tonight, tomorrow, tomorrow night, and the day after, stay there and fast. Before the Sun sets on the third day, make your way to the top, to the ruins. As you go, collect wood for your fire. Choose it carefully, but do not enter the ruins. I will meet you there."

"And then?"

"We will lay out the *mesa* and summon the frayed ends of your past, and you will do your work of the South." His tone was matter of fact.

He sighed and squinted up at the late afternoon sun. Before us the Urubamba tumbled and roared through the valley. Near us, near its shore, little eddies swirled bits and pieces of flotsam into spirals.

"This is what you must do, my friend. You are young, but have left much debris behind you. You are a bundle of loose ends. The past keeps you bound to your image of yourself. You must put yourself into a fire that will consume your past, but will not burn you. Erase your personal history." His fingers, kneading together yucca and cornmeal, moved quickly. "Shed your past as a serpent sheds its skin. This is what you will do in Machu Picchu, but first you must prepare yourself as best you know how. You must spend this time remembering, calling upon your memories of the past, thinking about who you have been and what you have become. Apply *your* psychology to yourself. See where it takes you. You will find it difficult, yet this is what you must do . . . as a student. What you do in the ruins you will do

for yourself as a man.” He leaned forward and handed me a portion of yucca and cornmeal paste.

“Knowledge can be had only when one can exercise power over destiny, and your destiny is a daily victim of your past. Spirit cannot grow with the dead flesh of the past clinging to it. You must bring no history to your study of shamanism.” He looked down at the food in his hand and laughed.

I smiled at his good humor. “What’s funny?”

“I sound like a real mystic, eh?”

I took the course prescribed by Antonio, following, as he had remarked, the footsteps of Hiram Bingham, the “discoverer” of the sacred city of the Incas, in 1911.

Later

Western conceit. Hiram Bingham, intrepid gentleman explorer in the golden age of adventure, when rugged individuals were knighted for their rugged individualism. Wide-brimmed felt hats, leather boots laced to the knee, or leggings, travel-worn notebooks with rough pencil sketchings of the masonry of a bygone race perched atop a beetling crag or masked by creeping vines and dripping orchids.

Romance, adventure, and the satisfaction of revealing to the world the treasures of ancient cultures in faraway lands.

Perhaps that is how Bingham saw himself. But when a “civilized” man is shown a place where third-world natives have lived for centuries, he is called its discoverer. As if the natives were keeping a secret from the rest of the world.

I think there’s some truth in this, although my tone is cynical. If Bingham hadn’t “discovered” the lost city at the top of this pinnacle, I wouldn’t have had to climb it on an empty stomach.

The cave that Antonio had pointed out from the far bank of the Urubamba was little more than a hollow, a cleft in a bold granite wall. A lip of mossy soil led across the face to the entrance, and along this I groped. The sun was setting in deep orange, and I moved hand in hand with my shadow across the smooth rock face two thousand feet above the river. There was room to

turn at its entrance, and I did so, to gaze back down into the Urubamba Valley.

Later

Tucked away in my little hole I feel abandoned, embarrassed. A little scared, and I know how hungry I can get. But I've transcended all of that before. I've pushed myself before, denied myself comfort in the name of adventure or to acquire some experiential trophy.

The sun has set and the last rays of March 25 are brushing the underbellies of the clouds with salmon pink and orange. I can sit back eight feet, back against the stone wall, and see this through the irregular opening of my tiny cavern, framed by the lips of the mouth of this cave. I feel like Jonah.

And day sighs into night.

I've made my nest—unpacked my backpack—all the shit I've been carrying. Survival kit, including needle and thread, fishing hooks, salt tablets, waterproof matches, band-aids, snake-bite thingamajig, thermal blanket. A Hershey bar.

With almonds.

I'd forgotten about that. I've placed it on a little granite shelf.

Later

This is not easy. My mind is so filled with recent events, and I am hyperconscious of my situation and the purposefulness of this effort.

Perhaps that's it. I am trying to make this preparatory time into a significant self-revelatory experience. I am trying too hard, and I know better.

Frustrated though. So much information. Need time to digest and distill and instead I am preparing myself to engage with my past and this fourfold path of knowledge.

Random thought: Seems that those who seek spiritual adventure inevitably end up social castaways. As if they lose themselves somewhere along the way, redefining their identity in terms of their "quest." Silly sycophants. Sycophanatics. Disciples, promoters of a

mystical convention or spiritual tradition. Astrology, numerology, Judaism, Catholicism and all its et ceteras, Hinduism, and all the other isms. Belief systems, paradigms. Reductionism? The scientific method? The crowning glory of Western thought? How many professors have I seen genuflecting before the altar of hypothesis and clinical validation?

And then there are the figures of worship: Jehovah, Christ, Guatama Buddha, Mohammed, Krishna.

But Antonio, professor of philosophy, amiable companion, shaman. Awfully well adjusted for a "person of knowledge." He seems to take it all in stride. A pragmatic mystic.

I miss the *altiplano*.

Tired. I'll try to sleep now. Face my situation in the morning.

I dreamed that night, but the memory scattered, helter-skelter, displaced by the panicky disorientation of waking in a strange place. I gargled with the water from Tambo Machay, rolled up my sleeping bag, and ventured out onto the ledge.

The morning was Andean, and a few deep breaths of chilled thin air restored me. A mist had settled into the green Urubamba Valley, obscuring the river nearly half a mile below my little hermitage.

I sat cross-legged on the ledge, closed my eyes to the splendor of the vista, and willed myself into as blissful a state as I could manage.

In his preface to *Freud: The Mind of the Moralizer*, Philip Reiff writes, "Man is tied to the weight of his own past, and even by a great therapeutic labor little more can be accomplished than a shifting of the burden." The Western tradition of psychotherapy certainly substantiates this observation. Western people excavate their past with the tool of memory, an unreliable instrument at best. And we are ill used to exhuming our past fully and alone. We are more accustomed to summoning our pasts to represent ourselves to others with the stories we choose to tell, the incidents we select to embellish our personalities. We are iconographies of carefully framed impressionistic and abstract paintings. During my brief time on an Indian reservation in the U.S. Southwest, I heard of the tradition of telling your life story to a stone: a distinctly humbling experience if taken seriously. It is easier to address to an object, be it a pebble, a rock, or a passive therapist, than it is to address

yourself. Perhaps the act of telling lends order to an otherwise shapeless quantum of memory.

I cannot recreate the structurelessness of my experience in the side of that mountain; but I can touch on the highlights, for they form the conscious foundation for much of what happened on the evening of the third day and the early morning of the fourth.

My paternal grandfather. Large, liver-spotted hands too rough for a surgeon's, but he was an old man. Wispy gray-white hair, and a softly creased aquiline face. I think he smiled at my father. He was graduated from Columbia School of Medicine in 1905 and became chief of surgery at a New York City Hospital. In the 1920s he returned to his native Cuba and built a small clinic in the city of Havana, only to find that the municipal public works could not provide his facility with adequate electricity. He built a hydroelectric plant to light his hospital. He was an eclectic Catholic and a devout capitalist.

My father was an attorney and businessman with a healthy practice and a vigorous bank account. A handsome man with wavy hair and a pencil mustache, dashing aristocratic. He lunched with Batista. Stubborn, opinionated, self-absorbed. In the 1940s he successfully sued the Vatican for a divorce from his first wife, maintained custody of his son, and married my mother a few years later.

My birth was incidental to my parents' preparations for a European vacation. When they returned from "the Continent" my mother is said to have been surprised to find a new addition to the household. She was a beautiful lady with liquid brown eyes lifted in adoration of my father.

I was raised by my nanny, and I like to think that I was saved from many of the more mundane parent-related neuroses that are a psychotherapist's bread and butter. Tati was an Afro-American, third-generation Cuban, the descendant of slaves. As I remembered her, she must have been in her mid twenties. We bathed together, showered together, played together, but she was a servant, like our chauffeur. This was before the revolution. I loved her dearly, treated her shamefully.

March 26

The impotence of my feelings of regret for past behavior is exaggerated by my isolation here. It's a lot easier to fast when you know

that food is at least available. I listen to my stomach and force myself to meditate on its noise. This may be an appropriate visualization as I reach into my gut to bring up memories. And the longer I apply myself to the task, the emptier my stomach becomes.

Tati was a spiritist. She used to flush medicines down the toilet. I remembered sneaking down from my room to peer through the bushes at old Rodolfo, Tati, others of the household staff, and friends of theirs who were strangers to me, singing, dancing, spinning in the moon and candlelit night in the yard by the sea wall when my parents were away. Dark adventures, armed with a pocketknife and Boy Scout flashlight, climbing down from my window, crawling over the sea wall to hunt for hermit crabs.

When I was ten years old I heard gunfire and felt our home rocked by nearby explosions. Time was meaningless to these early recollections, and it may have been weeks or months that we lived with these sounds. People walked in different ways on the streets of Havana in 1959. A woman—a neighbor whom I do not remember knowing—hosed blood from her sidewalk. I stopped going to school and my father's face was lighted by the yellow glow of burning papers in the fireplace. That was in the house of a family friend, close to the airport.

My fingers were smaller than his, and I shoved tight rolls of hundred-dollar bills into cigar tubes; he removed the light switch plates and dropped the tubes down between the walls. I remembered that he had not been there when we left Havana. The airport confused me.

Miami was surf fishing for lunch with my older half-brother, my sister playing in the sand, and my father meeting with people, a house full of white-collar refugees and leaders of the counterrevolution.

I thought we were a family again in Puerto Rico, but hindsight had touched up the faded snapshots of my memory. Father was reestablished in business, the construction business, and I felt like a freak at the Jesuit High School of San Juan. Summers at the Caribe Hilton. I was on the swim team and thrilled to win medals, which I still keep in my sock drawer at home. And I helped the surveyors at construction sites. After all, I was the son of the owner.

Teaching SCUBA to tourists. One couple had a daughter with wavy blond hair, and we made love awkwardly in a coral forest twenty feet down.

Today should be easier. I can leave here before the sun sets. The end is in sight.

Have thought a lot about Victoria. First love, first commitment. Driving across country, her purple VW. I loved her as much as I was capable of loving. Perhaps I have never loved, just labeled my feelings with the word. The definition changes over the years.

She taught me to play bridge. Determined to impress her and her friends with my intellectual prowess, I struggled manfully through the night. Performance anxiety. The intensity of my concentration was trancelike. I stumbled into bed countless hours later, only to fall into a waking sleep, dreaming vividly hand after hand, spades, hearts, diamonds, clubs, bidding, tricks, slams and grand slams. I woke up exhausted.

Like this morning. I cannot remember falling asleep, merely waking to memories of my memories of the night before.

All the loose ends, all the polluted relationships, all the sorrows and joys.

The second full day was humbling. I found that I could no longer meditate on the condition of my stomach. I focused instead on the Hershey bar. Exercise was out of the question; after three push-ups I felt that I was burning precious fuel.

My memory of that day is with me still. I can call upon it now and relive its ruthlessness. We all experience moments of mortality, pangs of insignificance in relation to the Earth, the cosmos. You may be walking along a beach. The dog has bounded off after a piece of driftwood or a Frisbee. You gaze thoughtfully after her, down the long sweep of shoreline. The sound of the surf wafts through your subconscious, a whimsical *leitmotiv* reminding you of the omnipresent rhythm of Nature. You turn to the horizon and the setting sun; your personal concerns become meaningless and you sigh at your smallness, the immortality of a grain of sand, the infinitely abiding universe. The dog is back, errand accomplished, wet and frisky. She drops the Frisbee at your feet. You smile at her, pick it up, and get on with the game. My experience in that hillside cave was somewhat less

sentimental, saved from cliché by the heartlessness of hunger and the intensity of my loneliness.

I dwelled upon my choices, the identity that I had created for myself, the people I had touched and how I had touched them. The people I had used and how I had used them. How I had been used.

Later

Today I feel abandoned, *desterrado*, like that time with the peyote only more so.

If I were to die tomorrow, what would I leave behind? Is there anything of value? Anyone I've helped? Or are my acts handouts, like that *propina* at the train station? How authentic is the work I do? Am I handing out therapy like Band-Aids? Maybe it's even worse. Maybe doing therapy is a handout to myself. Am I merely acquiring stature?

Trying to nap. Unable to sleep. Waiting for the sun to drop. I close my eyes, exhausted from the effort of remembering, and I think I can feel the walls of my stomach rubbing against each other. Water from my canteen coats my insides. I can feel it go down. I close my eyes, but I've started something I cannot finish.

Renting the house in the woods with Victoria. Holding forth on the subject of my bachelor's thesis, playing the world-wise rebel. A romantic rogue with the soul of a poet. She saw right through me. You con artist.

I open my eyes. The sun has intruded upon my hole. Half of my face is sunburned. I'm sweating. My neck is cramped. I drink.

I am hungry and stupid enough to think that I know hunger. But even the salt of my tears refreshes me. I am spoiled and continue to spoil myself.

Hunger is the greatest teacher. No wonder the psychology of the west is oral and anal. We are overstuffed.

Sometime in that late afternoon I realized that measured by my peers I was a success, a twenty-four-year-old *wunderkind* psychologist, a wild-ass protégé; yet measured by the Earth, whose granite walls enveloped me, I was a parasite. My purpose was, as yet, ill defined; I was living for myself.

And then I left. I packed my gear, then sat for a time watching the Earth rotate away from the Sun. There was still another hundred feet to climb, and I had no idea of what waited for me at the summit. Would Antonio be there? Would I confront the ghosts of my past?

I wondered also if I would encounter the memory of the past two and a half days, and, if I did, what it would look like.

The ruins of Machu Picchu have been assigned many functions since their discovery in 1911. They have been called the last refuge of the Incas, the last Inca capital, the Lost City of the Incas, a secret hideaway for the Chosen Women, the Virgins of the Sun. Salcamayhua, the seventeenth-century Peruvian historian, recorded that the first Inca, Manco the Great, ordered works to be executed at the place of his birth, consisting, in part, of a masonry wall with three windows. The presence of such a structure indicated to Bingham that rather than being the last capital of the Incas, Machu Picchu may have been the birthplace of the first. Later it would occur to him that it might have been both, that he had, in fact, discovered Vilcapampa, the principal city of Manco and his sons, the Incas' final refuge from the Spaniards.

Half an hour of climbing brought me to a rounded granite promontory, and, around this, a flight of a dozen stone-faced terraces, each the height of a man. With less than half an hour before the sun set behind the distant range to the right of Huayna Picchu, I made my way along one of the widest terraces. Here and there I saw walls of ruined houses, glimpses of the exquisite granite joinery of the Sacred City. A huge overhanging ledge; below it a cave lined with perfectly fitted stone, above it and behind, the Temple of the Sun following the natural curvature of the rock, keyed to it by master stonecutters. I proceeded along the side of the mountain, knowing that I was edging along the perimeter of the city, below the ruins. The altitude and my anticipation conspired to make my breathing short and labored. Ahead of me and to the right, a grassy knoll sloped up and away from me. The glow of the setting sun touched its summit: a small thatched structure, an irregular object, and the figure of Antonio waited for me in the dusk. I realized that I had neglected to collect my wood, had forgotten his instructions. A long flight of stone steps led to the base of the hill and

hugged the side of a moss-grown broken wall. I made my way up, pausing to pick up a twig here, a small branch of mesquite there.

I passed the Gateway of the Sun without turning to look in, and, turning my back on it, panted resolutely up the hill. Halfway up I stopped to lift a sliver of wood from a tangle of weeds. I turned and caught my breath at the spectacle before me. Overgrown and semiexcavated shells of buildings, granite ashlars, temples, walls of mortarless stone, plazas and courtyards, all in shades of flecked white-and-gray granite, green moss, and pastel lichen. A hundred terraces. Beyond the ruins, towering above them to the north, the pinnacle of Huayna Picchu. Below me, to the west, the Temple of the Sun and a sheer cliff falling away to the Urubamba. To the east a small ruined temple with three great windows facing the direction of the rising sun. Fog was rising from the valley below and to the west, the direction from which I had come. It rose vertically and bent slightly to the east, swirling over itself as though to cover the city or like a hand groping for a handhold.

Before a thatched-roof hut at the top of the hill the Death Stone sat like an abandoned canoe, a miniature ark high and dry on the summit of Ararat.

Antonio's smile of welcome was expansive. My ordeal must have left its mark.

"You look terrible," he said.

"*Gracias, profesor.*"

"And you will need more wood."

I sloughed off my pack and wandered away to complete the errand. Where had Antonio been for the past three days? Twice I caught myself staring in wonder at the setting of my adventure, a fossilized citadel, an aerie of pre-Columbian culture shrouded in mist like the ruins in an Arthurian legend. I remembered Antonio's instructions to choose the bits and pieces rather than to collect them like kindling, so it took more than half an hour to produce two armfuls. At the top of the knoll Antonio handed me a length of twine, and I secured my bundle and set it aside.

"When can we enter the ruins?"

"You cannot."

"I cannot?"

"You can enter the *ruins* as a tourist whenever you wish, although that is a profanity born of ignorance." He turned his back on the Death Stone and gazed at the ruins below. "But you may not enter the *city* until you have

completed your work of the South and the West, until you have learned to live the life of a spiritual warrior, until you have freed yourself from your past and faced death, until you have disengaged yourself from your physical body, as we do when we die.”

“Then why are we here?”

“For you to begin your work of the South, but you will do this outside of the city limits. There is a cave below the Temple of the Condor.” He gestured to the right, toward the edge of the ruins.

“To fully address your work of the South, you must release yourself from fear. Fear is in the realm of the West, where you confront death. But you cannot exorcise death until you have completed your work of the South. It is something of a vicious circle, a Mobius strip . . .”

“A catch-22.”

“Your work of the West will come later. Tonight we can only put death on the agenda, do what we can to prepare you for your ritual. The Death Stone is in the shape of a canoe, with its bow facing west. It is here that an initiate’s spirit leaves the body and travels West to the regions of silence and death. The legends say that it returns from the East, where the Sun rises and new life is born.”

“The legends?”

“Yes. Lie on the stone, with your head facing the bow. Take a few minutes to calm yourself.”

I stretched out on the cool granite slab and tried to will my heart rate to a meditative rhythm. He left me alone and I closed my eyes on the twilight. The temperature had dropped to a comfortable cool, and I had forgotten the hollowness of my stomach. The stillness of the approaching night was complete, its silence enhanced by the stirring of the dry grass. What was Antonio doing? As my breathing became regular I heard his whistle, faint and almost breathless. I sensed him beside me and heard his chant, a polysyllabic rhythm reverberating like the hum of a tuning fork. The temperature was dropping and a faint stirring of air at my forehead sent a shiver down my spine. It would be another cold Andean night. I looked up through my eyelashes as he passed his hands from my forehead to my throat, on to my sternum. Disengaging my chakras; spinning them counterclockwise; charging them; spinning them clockwise; chanting into them. I took stock of my sensations and felt nothing but relative tranquility, a slight easing of my anxiety and anticipation, concern over the lack of specific sensation.

I felt nothing.

The chant ended with a decisive *¡ho!* He whistled again, softly, and it faded with the breeze.

"You can get up now."

I opened my eyes and though scarcely five minutes had passed, the night was upon us. Sparkling stars above low cirrus clouds, and the ruins were luminous in the moonlight. Antonio was squatting by his *mesa*, a few feet away.

"Sit there."

I sat cross-legged, facing him over the Indian cloth.

He handed me the wooden bowl. There was more San Pedro in it this time. "Your work is with the serpent tonight. Call upon the spirit of the South, summon it here, and salute the four directions. You know what to do."

I stood and raised the cup to the south and tried to remember the formula. "I call upon the spirit of the South, the serpent, Satchamama. Come to me, help me to shed my past." It had sounded better when he said it. "Hey."

"*Hey!*" he shouted. "Power, my friend. Purpose. You needn't address yourself to the wind. You do not need to say anything. Think it. Summon the power and salute the Four Winds as you would form a prayer."

That was easier. I did my best, said a silent prayer to each of the cardinal points, visualized the animals that represented them, the jaguar, the dragon, the eagle. Then I saluted the Mother Earth and the Great Spirit, drank half the contents of the bowl, took my place, and offered it back to him.

"All of it," he said. Just like Ramón.

I leaned my head back and drained the cup and set it on the cloth. Then I closed my eyes and breathed slowly, rhythmically, trying to orient myself to some center.

I opened my eyes and he was looking not at me, but at something between us; the focus of his eyes was not on my face, although he seemed to be looking directly upon me. The spaces in between things.

What was he seeing?

His focus shifted and he fixed my eyes with a searching look.

"You have been avoiding power all these years," he said. "Not acclaim or recognition—you barter for them regularly—but power in the face of Nature. Before you connect with your power you must shed your past. And

the past must be recaptured before it is freely released.” He handed me the little bottle of sweet oil and then drew the carved bone staff from the soil.

“The sword of fire, of light,” he said, and handed it to me. “Charge it. Hold it in your hands and summon its power. From the East, the place of vision and the rising Sun. Blow sweet oil on it.”

I took the liquid into my mouth. It was strong, pungent on my taste buds, but I held it in my mouth and raised the staff and blew a mist of the stuff into the air, onto my hands and the staff they held.

“Take this with you. Hold it in your left hand. If you sense danger hold it firmly in your right. It is to sever your connections with your past.”

He lifted my bundle of wood from the ground, took my arm, and led me away from the *mesa* and down the hill. My heart pounded with anticipation. I felt nothing from the San Pedro.

“Can I enter the ruins when I am finished?” I asked.

“You are not going to be finished,” he said.

“Where are you going?”

“I have my own work to do.”

The entrance to the cave was hidden in a fold of granite on the side of the hill beneath the Temple of the Condor. On the ground before the entrance was a small stack of wood and dry grass.

“The cave is shaped like an L,” he said. “Go to the turning point, and use this wood to build your fire. Not a white man’s fire; do not burn all your wood at once. Build it four by four. Place your memories in the fire one by one. Do not put a stick or branch in the flames unless it has a memory.”

“All right.”

“Face the wall. Concentrate on the fire,” he said. “Do not allow it to die. Do not take your eyes from it. You can lose yourself if your attention strays. Call upon the vision of the eagle. The song of the East, *hoy, hoy, charaguay, charaguay, hoy.*” He placed a hand on my shoulder. “I will see you in the morning.”

I found the apex of the cave by the sulfur flare of six or seven matches. There must have been two entrances, for the place was ventilated by a gentle

cross-breeze. I planted the staff in the dirt floor of the cave and built my fire as he had: four-sided, four groups of four sticks, dried grass in its center. I had almost exhausted my match supply by the time I lit the little pyre. The grass crackled, the kindling held its flame, and the granite walls were illuminated by its light. I remember asking myself if the flames were not slightly more defined than most, or had the quality of my vision changed? Was this an effect of the San Pedro? I could not recall ever seeing anything with such clarity.

I fed the fire with bits from Antonio's pile until I felt confident of its flames. I sat back and even as I looked, the flames changed, my perception of them changed. My focus was shifting and what had been sharply defined became luminous, glowing, as though seen through a gauze. I lifted the staff from the dirt and checked my vision against its edges. Though I could see every detail, every crack and imperfection in its ivory surface, the fire still shimmered opaquely.

I closed my eyes and breathed deeply, mimicking Antonio's style. The light of the fire beat against my eyelids and the sensation was dizzying. Then the light began to flicker and play its game behind my eyelids as it had on the *altiplano*, but there was a sound, a rushing sound associated with the tiny particles of light. The colors were luminous, pastels, glowing like embers.

I opened my eyes. The fire was radiant and I felt comfort in its glow. I looked at the pile of wood I had collected. Which to choose? A worn piece of mesquite caught my eye. It was smooth like driftwood, like a small bird with wings pressed close to its side, streamlined for a dive. I set aside the staff of the light, lifted the object from the pile, and placed it squarely in the center of my fire. It settled into the flames; its weight pressed down on a charred branch and its edges browned. My eyes shifted, searching for an image, not knowing what to expect. There was something, movement in my peripheral vision. I turned slightly to look for it and felt a surge of adrenaline. But the light from the fire played against the walls of the cave, tricking me. I exhaled, realized that I had been holding my breath. My body was tense, my back and shoulders rigid with expectation. I was trying too hard.

Breathe.

Again I closed my eyes to assess my condition and wonder at the effects of the San Pedro. The lights were there still, but larger, more luminous, and they rushed past me with a sound like wind through the trees and the regularity of ocean surf. One luminescent orb lingers before me. An-

other. I raise my hand and brush aside the mosquito netting of my little bed and wriggle on the cool sheets to make room for this presence. It moves, hovers next to me, and I feel that it is smiling.

I cannot remember opening my eyes. All I know is that one instant I was a very little boy, snug in bed, and in the next I was back, in the cave, below Machu Picchu, before the fire. I looked at my watch. 8:04? The bird-shaped hunk of mesquite was charred, black and gray, glowing. Had I fallen asleep? A dream image, a memory of a dream. Experience of a memory of a dream. A child's secret. Suddenly I thought of Tati. A picture of her intruded itself into my thoughts, and I reached for another offering, a curved mesquite branch still bearing a few leaves at the end of a twig. I leaned forward over crossed legs and placed it on the fire.

I shivered, shuddered convulsively, and my stomach sickened with adrenaline. There was fear on the back of my neck, and my eyes shifted away, reflexively probing the darkness beyond the dancing shadows and the firelight. The staff of the light! Which hand to hold it in? A bolus of something rose in my throat. *What!* I haven't eaten for three . . . I retched, coughing spasmodically, and a draft of cool air lifted ash and spark from the fire. Smoke, a pungent haze of incense, beeswax votive candles, cheap Cuban cigar. Tati is stripped to the waist, and her skin glows with sweat in the candlelight as she rocks rhythmically back and forth over a bowl of smoldering leaves. She is doing something with her mouth, but her back is to me.

"Come here, boy!" Her voice is low, guttural, like Rodolfo the gardener's.

"Tati?"

She turns and I catch my breath. Her face is twisted, grimacing; her eyes upturned and heavy-lidded. A cigar hangs pendant from her pouting lower lip.

"Come here." The cigar wags at me. "Stand here."

I am four. She is my nanny. I do as I am told, and stand before the bowl of burning stuff. She takes the cigar from her mouth, turns it around, and molds her lips around the wrong end, the burning end, and inhales, smoking backward, filling her lungs with smoke and blowing it back into my face, purifying me with smoke. "You are a good boy, a good young boy, and strong. I will visit you in your dreams."

"Tati?"

"No."

I reach out and touch her wet mahogany skin.

"I want some milk, Tati. Get it for me. Now."

The mesquite leaf sizzled, hissed, and blistered above the embers. I felt my face, touched it with my hand, seeking reassurance. Wet. My face was wet. Three days' growth of beard. A tear caught in the corner of my mouth, and I tasted it with the tip of my tongue. A sob convulsed my chest and I realized that I was weeping. This is not a dream. Not a dream. Distinctly visual. Straight to the perception centers . . . limbic. Hallucination. No. None of the whimsy, the eccentricity, of hallucinogenic states. Stay with it.

The branch collapsed, its center crumbled into the live coals.

Focus.

The next branch was heavier than it should have been. Or was I getting weaker? Nonsense. But it was just a little branch. I placed it in the fire's center. Rounded bluish flames hovered above and around dying embers. Was there enough flame to ignite this wood? How could I have let it burn so low? And . . . what is on the palm of my hand? I turn it palm up and stare with wonder at the brown-and-white-striped conical shell that fills the center of my childish little hand. Grains of moist sand cling to my skin, in the delicate creases of my palm. The shell tickles and moves. A pointed, furry leg like a tiny finger ventures out from beneath the shell. I grasp my wrist to steady the hand. Musn't scare it. The shell shifts and the miniature crab appears. Hermit crab. Tiny legs and delicate claws. It moves, scurrying sideways across my open hand, tumbling from it onto the sand at the water's edge.

I looked down at my hands. The right was clenched, the left covering it, holding it close to my stomach. I pried open the fingers and held it close to my face. It was moist with sweat. No sand, my palm, familiar, adult.

I looked up. The walls of the cave seemed to have reformed themselves, closed in on all sides. I was in the center of a granite eggshell. Fear spread from my belly up, into my chest, my heart, my throat, and the light from the fire seemed to throb as its color changed from yellow to orange, and blackness threatened to snuff it out. I could not let it die, yet the only fuel left was that which I had gathered. No choice, but a pile of choices.

Without taking my eyes from the embers I reached blindly for wood, placing a mesquite stem and a tiny bough of heather into the coals before recalling Antonio's admonition. One at a time.

My father. His despair at the loss of his fortune, his land, his place, his world. He holds his head in his hands and weeps as I reach for him across

the flames. He is a victim of a persona that has lost everything, everything taken from him, but he clings to it, a stranglehold on his identity. There, across from me, separated from me only by a fire that is consuming me.

I hold myself, hugging the ivory staff to my chest, rocking back and forth, keening with the weight of his pride and my own desperate desire to please him, to play his game, to adapt to the world of *his* values, *his* standards, his conceit. I see that he will never be free from his pride, and that I will release myself from the competition. I wipe a tear from under my chin. I will free myself from his example and distance myself from his disdain, but my *abuelita*, my grandmother, shakes her head. "Take care of him, Bombi." My baby name. "Do not abandon him."

From that instant I could not stop. I fed the fire with the cuttings of my past, and the vapors rose from the fire, swirling, spiraling, cavorting, in a babble of moments and emotions.

Of all of my experiences in the realms of healing and consciousness, the twelve hours I endured beneath the Temple of the Condor were perhaps the most poignant. I have carried its memory in my heart ever since.

Someday I shall shed it too. I shall encounter those twelve hours and release them into the flames of another fire. But for now, I can see myself still, cross-legged before the steadily burning cinders, crying, laughing, deep in the throes of self-induced catharsis. Cell by cell, hair by hair, finger by finger, limb by limb, placing myself into the fire. Friends and relations, patients, the faces of Huichol Indians staring with wonder at a map of the world drawn in the sand. There were instants when I thought it was over, when the fire would burn down, and I would invoke Antonio's chant, summoning the vision of the eagle and blowing on the embers, raising smoke and sparks before consigning another twig or branch or bough to the flames. A draft of air would clear the room of smoke, but images would linger, their presences surrounding me, penetrating me.

And there were unidentified emotions, a woman I did not know, a face familiar but unknown to me, images that were not mine, that bore no relation to who I had been, and, with them, the urge to dump my remaining wood into the fire.

Sometime that morning the fire died. The ordeal ended and the walls of the cave were once again the walls of the cave.

I walked out, carrying the ivory staff by my side. Antonio sat on a rock, silhouetted by the bright morning sun. I remember that he placed his hand on my shoulder.

"Did you have enough wood?" he asked.

"Yes. There was some left over."

"There always will be," he said.

Together we climbed up to the Temple of the Condor, the edge of the ruins. A busload of tourists had arrived, and we watched them make their way down the hill from the Death Stone and enter the Lost City of the Incas. Then Antonio led me down a path, away from the ruins.

"You will return here many times," he said. "The next time you will enter the city, and the stones carved by the hands of the ancestors will speak to you."

I was too tired to wonder about the meaning of his words.

March 28

Perhaps there are two kinds of memory. All those we carry with us, available to conscious recall, like those I remembered during my fast. Subjective memories. Sounds, images, feelings, trivial details that are made all the more vivid as we assign significance to them with the benefit of hindsight. They are the memories of retrospect. Under hypnosis an adult can remember the color of his crib. Objective memory. Like those I engaged and wrestled with. They had a life of their own. Like a dream, not subject to conscious control, they ran wild. Independent of me. Not retrospect, but retrospectacle.

But I am in no condition to write about this. We are in a small hostel in Aguascalientes. There are hot springs here at the base of Machu Picchu.

I remember that Albert Einstein once defined science as the attempt to make the chaotic diversity of our sense experience correspond to a logically uniform system of thought.

So how do I approach what has happened to me in a scientific fashion? I leave for California in two days.

My pen is getting heavy and my writing sloppy, but it occurs to me that as the nature of our sensory experience changes, so must our science, our definition of our system of thought, the way in which we think.

I'll think about it in the morning.

West

*Canst thou not minister to a mind diseased,
Pluck from the memory a rooted sorrow,
Raze out the written troubles of the brain,
And with some sweet oblivious antidote
Cleanse the stuffed blossom of that perilous stuff
Which weighs upon the heart?*

— William Shakespeare

The airport in Cuzco was socked in. The sky had fallen, the clouds settled over the city. Visibility at the airport was measured in feet; the last departure had been more than two hours ago, and flights were backing up into the following morning when, I was assured with a Latin grin and a definitive nod, the fog was “scheduled” to lift.

I had returned to Cuzco to find a message waiting for me at the hotel. Though I was no longer registered there, a handful of *soles* at the reception desk had bought me an address and phone number in case of emergency. There was even a letter from Brian. The phone message was from my father. My paternal grandmother had suffered a stroke. Perhaps, he suggested, I should return to California via Miami.

I had booked a flight, Antonio and I had dined together, and, the next day, he had accompanied me to the airport.

I shook my head, hefted my backpack over one shoulder. “You can’t *schedule* fog,” I said.

He looked at his watch. He was as I had seen him that first day, Professor Antonio Morales Baca. A baggy suit, frayed white shirt, dark tie, hair combed back, pockets bulging. Impeccable sloppiness. His skin was a few shades darker from the sun of the *altiplano*, and there was a healthy lightness to his manner, a rejuvenation that showed at the corners of his eyes and on his mouth when he smiled.

“It will clear,” he said. “Half an hour.”

I looked down into his eyes and smiled. “You think so.”

“Of course.”

"How do you know?"

He grinned. "Because I am an Indian."

I laughed. "I almost forgot. Indians know everything."

"Everything but how to live in a godless world of physical objects and right angles." He placed his hand on my shoulder. "I must go. I have a class at one o'clock."

"Thank you," I said.

"Thank *you*, my friend. We are good traveling companions."

I opened my mouth, but there were no words.

"You have tasted knowledge," he said. "Soon you will have an experience of power. But do not wait for it."

"Goodbye," I said.

I offered him my hand, and he just looked down at it and shook his head. "It is said that shamans say goodbye only once."

I kept my hand before him. "Who says such things?" I asked.

"We do," he replied. "You and I do. For us it will always be *hasta pronto*." Until we meet again.

And he took my hand.

Half an hour later the fog cleared. The sky opened up over the airport, and a young woman in an Aero Peru uniform announced the boarding of the flight from Cuzco to Lima.

I spent a day in Miami. My father looked me up and down. His eyes were tired and he frowned at my hair, uncut since California, my mustache, and rumpled clothes. "You should see your grandmother," he said.

"That's what I came for, Papi," I said.

I shaved, and Soledad, my parent's maid of forty years, gave me one of my father's pressed and starched shirts. I took my grandmother to lunch.

The stroke had been minor, a cerebrovascular accident. Her frailty was nothing more than old age. She took my arm and I led her into a brightly lighted restaurant near the water.

We talked of this and that. She was excited for me, or sensitive to my excitement. I looked well, she said, and she liked my long hair. She was squinting a lot and I asked was there anything wrong.

"It is so dim. They should turn up the lights."

I reached across and removed the thick glasses from her face and wiped them with a linen napkin and slid the bows back through her gray hair and over her ears.

"That is much better," she said, and laughed without embarrassment. We had always laughed like that together. Her hand sought mine across the tablecloth and we sat there, at a table for two, holding hands like lovers. This woman who had mothered me, who had appeared to me in a fire in Machu Picchu, whose spirit was so strong, but whose body was wearing away with the friction of time. We would never sit like that again. I knew it then, and I smile at the memory now.

I returned to California. It had been winter when I left, and it was the first day of spring when I returned. I started compiling my notes for my thesis, resumed my work at the mental health clinic, obtained a grant from the Office of Child Development to develop mental health programs for the Head Start school system, opened a small private practice, and fell in love with Stephanie.

Brian's infatuation had gotten him nowhere. Mine was a one-way ticket, a package tour to a place I had been before and would return to again and again. Yes, the human experience depends on pairs of opposites, yin and yang, and darkness and light cling to one another; the darkness enhances the light and the light defines the darkness, and the centers of pleasure and pain lie next to one another in the human brain, and you rarely experience one without stimulating the other. I loved Stephanie and we shared the anguish and ecstasy of being together and being apart.

As I had suspected, she was a handful: a stubborn romantic, a sensitive feminist. She was still recovering from a traumatic separation, a two-year relationship with a dental student named Edward, when we fell in love. We feasted off of one another that spring. We agreed on monogamy that summer.

My work at that time was unique in its diversity. I began to incorporate my thesis notes into a book, *Realms of Healing*, that I would write with Stanley Krippner. At the clinic I was exposed to examples of extreme psychosis: multiple personality disorders, schizophrenia (an ill-defined condition), sociopathic breakdowns, and attempted suicides. In my private

practice I guided patients through depression, sexual insecurity, substance abuse, and trauma. And at the Head Start school I witnessed firsthand the standards for achievement and the criteria for normality that is imposed on the young. I watched underprivileged and minority students, children of half a dozen cultures, conform to our culture, become assimilated to an educational system. Children customized to fit in, to serve the program so that the program could serve them. It should have been the other way around. A question-and-answer-oriented system of evaluation and teaching that failed to play to the personal and cultural strengths of the individual child was, in my radical eyes, producing systematically mentally retarded kids.

It didn't take long for me to develop a reputation as flamboyant and eccentric in my work at the clinic, as hotheaded and arrogant with regard to education.

Strangely enough, although I was acutely aware of the effects of my work with Antonio, I didn't talk about it much. I thought about him a great deal in those first few months, even made a point of finding a spot in the Sonoma hills, a nature retreat, a waterfall an hour's hike into the hills, where I would go on weekends to meditate and exercise my vision. But for the most part, my work of the South was confined to my consciousness and the pages of my journal.

June 1, 1974

Back from the clinic. Glass of wine and . . . thought I'd crack you open and fill a page. It's been too long. Gloria was readmitted tonight. Ascension Thursday. First it was Ash Wednesday, then Good Friday. They saved her again and tomorrow morning it'll be my turn. Back to the drawing board.

Still feeling centered, potent. The effects of my work in Machu Picchu? Gut-wrenching, soul-searing ritual—an evening's worth in a state of consciousness in which the elements of my personal history were dealt with directly, visually, cathartically. Not analytically, intellectually . . . neocortically? There I go, trying to localize the stuff that dreams are made of. Assign it to the limbic brain. That's the problem. There are no straight lines, no convenient theories, no pigeonholes. So how do I integrate my experience? I know that the

work of twelve to twenty-four month's worth of intensive therapy was accomplished in a night. If I accessed my unconscious, do I need to explain the process? If I want anybody here to understand it, I do. If credibility is important to me . . . who am I kidding? Science has determined the nature of our reality ever since the age of reason, and you can't apply scientific method to consciousness, be objective about that which is the very essence of the subjective experience. I must content myself with having experiences, *serving* experiences, collecting "data."

Sounding sour and cynical. Why?

Stephanie hasn't called.

Gloria is back.

Gloria Pierce was almost a nun, a novitiate on leave from a convent near Napa. She was twenty-three years old, a contemporary Mary Magdalene: sensuality touched by piety. She had made her novitiate vows on the first of the year after twenty-three years of preparation. Christ had appeared to her mother during three days of labor, and Gloria's devotion to God was pre-ordained, prenatal.

A nun's vows are her wedding vows, her ritual marriage to Christ. Here was a young woman who had been engaged to Him since birth. An arranged marriage. Her devotion was genuine and passionate, and passion was her demon. Gloria's emerging sexuality had taken her by surprise, had proved too much for her. Lust was the object of her despair. She was, in her mind, a virgin living in sin. So she had cut her wrists crosswise on Ash Wednesday.

She had been stitched up at the county hospital and hustled over to the mental health clinic for evaluation and counseling by one of my colleagues. Then she did it again, on Good Friday. I was on call.

I took a lot of flak regarding my "approach." We used the hospital as our therapy environment: the emergency room, the intensive care unit, the maternity ward. Trauma, death, birth. We snuck out for long walks in the Sonoma woods, and she began to open up, share the anguish of her feelings of lust and her love of Christ, the agony of her self-inflicted orgasms.

Soon her history began to assert itself, and we got past the emergency and started scraping away at her past. Her scars were healing; one the color

of oyster flesh (Ash Wednesday), one delicate and rosy. Daily sessions became weekly. Then she missed one, then another. She had failed to return my call the day before. She couldn't. She'd drunk from a can of Drano.

Now the scars were forming inside. Throat, stomach, Drano-scorched mucous membranes.

I'll never forget walking into her room. She did not look up, just stared at the wall, clutched a pillow like a child or a lover. The fear in her eyes was infectious, and something snapped inside of me. I told her that if she wanted to die she could use my Swiss army knife, but she'd have to cut *down*, not across. She'd have to make the sign of the cross with the slashes on her wrists.

I dug into my pocket and pulled out the knife. Nickels and quarters scattered across the sheets and rattled on the floor.

"Here," I said, and tossed the little red knife onto the bed sheet. "Do it right."

She threw it at me.

I sat on the bed and held her until her tears turned to laughter, and I realized that I had a lot to learn. Nothing anyone had ever said to her had made the critical difference. The decisive moment had evolved spontaneously out of fear, through drama.

She was discharged the following week. She quit the order soon afterward. I was summoned to the chief psychiatrist's office and thoroughly chewed out for my unprofessional conduct. I argued that our profession had become a palliative. We were psychoparamedics, patching up people's psyches until the next crisis. I saw Gloria months later, when she called to introduce me to her fiancé.

One Friday in June, I realized that I had a free weekend. Stephanie was visiting her parents in Santa Barbara; I'd seen my last patient at the clinic, my last client at my office, and, although I could have spent a couple of days working on my thesis, I opted instead to prepare some San Pedro. The cactus itself was fairly common, readily available, and, although I knew little of its preparation, I sliced one up, boiled it for a few hours in a liter of

water, funneled it into a canteen, and headed off for my spot in the woods, an hour's hike from a dirt road above the far end of a private vineyard.

It had rained late into the spring that year, and there was still water flowing over the thirty-foot rock face and into a shallow pond at its base and along a rocky creek bed into the woods. I sat on a tiny sand bank in the middle of the stream: coarse sand and smooth stones and leaves and twigs from the overhanging oak trees. Sat there and meditated on the sound of the water trickling over the stones; robins arguing over *piracantha* berries; the smell of oak, oats, wine country earth; the sun on my upturned face.

And I felt as though I had returned to be in the company of my natural environment. I felt closer to the life of my little nature retreat than ever before. It was as though I had learned how to feel at ease with Nature in Peru and had brought the lesson back home with me. The life of the *altiplano* had been Antonio's, and this was mine.

Sometime in the midafternoon I drank a cupful of San Pedro. I paid my respects to the four directions, called upon the archetypal spirits of the Four Winds to come and sit with me, and drank. I had gone without breakfast and lunch, nevertheless, after another hour I felt nothing. My blissful state was altered only by my expectation of the effects of my concoction. I started to think about Antonio's references to the distillation of the plant and the use of "cleansing herbs." Then I realized that, deep down, I was recalling his last words, his reference to an experience of power.

Years later I would learn that only certain San Pedro cactus, grown, tended to, and prayed over by shamans in "power places" in the mountains, had any effect. The American garden variety that I had prepared produced nothing but a toxic stomach upset.

It was a hot day. Sunlight reflected off the surface of the water that rippled gently on either side of my sand bank. I took off my shirt and stood. Testing my sensations. Is anything happening? Do I feel anything? Forget it. I'm becoming preoccupied with the substance, and that's getting in my way. I feel fine. I feel good. Relax and feel the strength of a body at ease. I'll walk over there to the waterfall. Through the water. My boots are wet now, and besides, they're awkward. I'm not hiking, I'm standing in a stream. Take them off, throw them back onto my sand bank, my *mesa*. The water falls so carefully over the rock, steep, it slips and slides down the slick algae-slime face from . . . thirty feet? I can climb that. There would be a

good spot there beside the stream. Easy. I can climb it quickly, elegantly, hands and feet.

Swiftly. Like a cat.

And there I sat, in near bliss, where the little brook fell over the rock cliff, level with the tops of the oak trees, my sand bank and my hiking boots looking very small.

There was nothing particularly mystical. There were no great epiphanies, merely a mildly euphoric sense of accomplishment, a sense of coming home and being there fully.

I don't know how much later it was when I realized my situation, realized that I didn't remember climbing up the rock face. It was growing dark when my reasoning brain kicked in, and I peered down the face of the cliff and was astonished to see that there were no handholds, there was no conceivable way of getting down. To the right, where the water ran, it was slick with organic film. To the left and directly below, it was a vertical drop of thirty feet. My boots were down there. My little daypack, canteen, car keys. I knew that I had to go down, had no idea how I'd come up, and, as the sun set and darkness fell, I felt fear in my stomach. There was movement in the trees below. Lights and shadows. My fear was palpable, intensified by the coming night. I debated how to proceed, resolved to recapture the power and strength I had felt hours before. I visualized my cat.

My cat. For some reason the thought of this alleged power animal presented itself to me. Here, I reasoned, was an opportunity to test it, to call upon it. I closed my eyes and imagined it emerging from the jungle—no, woods, these woods, moving steadily, purposefully, head low to the ground, legs moving in perfect cadence, paws flopping forward, perfect placement, infallible, one after the other, hands on rock, left, right, loose and fluid movement, knowing without thought, forward, inexorably, inch by inch.

And then there was a moment of such exhilaration, such intoxicating power, that can be known, but only poorly described. It was an instant, a breath in time, it was the sensation of a cat realizing that he is a cat.

I caught my breath and slipped into a rational state, and there I was, ten feet from the bottom of the cliff, facing down, a 45 degree angle, one palm resting against a slight bulge on the rock, the other on a tiny ledge hidden under the falling water, and I fell, head first, broke the fall with my left hand, spraining my wrist, and rolled over into the shallow pond. I jumped to my feet and shook the water off. The pain was nothing compared

to the exhilaration. For an instant, an unmeasurable moment, I had become the cat.

The next day, Sunday, I got a phone call from Miami. My grandmother had had a heart attack. I tried to reach Stephanie in Santa Barbara, but she was out. I left a message with her mother and left for Miami.

June 14

Hospitals belong to the night. The dead of night. What curious places they are. Whitely sterile, disinfected, fluorescent. The place we "visit" until we come here to die.

A waiting place. We wait in it and it waits for us. Here we wait to feel well again, wait to die, wait to be free from disability. Patients cultivate patience and patience is the art of hoping.

Maria Luisa is dying. My father found her, gave her some kind of CPR, brought her back from the brink, and now she's being kept there artificially.

Four IVs. A central line in her neck to push drugs and fluids, one in each arm for good measure, an arterial line in her left arm to draw blood and for hooking up to a transducer for constant blood pressure readings. There's a nasogastric tube running through her nose and into her stomach. It's hooked up to a suction machine on the floor to drain her stomach constantly so that she won't aspirate, regurgitate into her trachea. And there's an endotracheal tube down her throat, a ventilator because she can't comfortably breath by herself. She doesn't have the energy. And she's on a steady diet of intravenous morphine, nitroglycerin and Valium. Sedated because anxiety increases the heart rate and uses more oxygen and everybody's trying to save that heart muscle. Anxiety? It occurs to me that the only thing she has to be anxious about is all the crap they're shoving into her, all the discomfort they're causing her. There she lies, plugged in at six places to a life support system in a whitely sterile, disinfected, fluorescent cubicle.

And she'd been at home.

She told me so. She saw me. I bent over her face and her lids, heavy with drugs, slid up and she looked into my eyes and said: "I was at home."

And then I took her hand and she squeezed it with a strength that surprised me and then let go and her forefinger began tapping—a nervous tic—on my palm, and I began to sob. Her hand tightened on mine again, comforting me in her pain.

Then I had to step out because they were inserting the endotracheal tube, and it's usually a bit of a struggle to get it down the trachea when they're conscious.

My God! We fear death so much that we take eighty-year-old women ready to die and pick them up off the floor of their homes and plug them into the technology we've created to keep that precious life alive because anything, *anything* is better than death.

It's barbaric. Where's the humanity in this? And all these interns and residents, all these smart, smart young men and women, all these health care professionals nodded when their college philosophy professors talked about life and death, the great circle, the noble uroborus, the nature of things, the natural cycle. They understood, didn't they? Or did they write it down in their notebooks and choose the correct multiple choice question on their final exam and leave it at that?

Do they, does anyone here know what it is to face death honorably?

Do I?

Know what it is to exhale that last breath freely rather than holding it, holding it in, holding onto life so hard that we crush it, strangle it.

Death is not a tragedy. The tragedy is how we face it. It's pathological.

Oh, Maria Luisa, can't I help you to die?

I could not. I stayed there long after my father had left. We had had an argument. It was he who had initiated this treatment. He had called the

ambulance and told the paramedics to do whatever they could and they had done just that. Standard operating procedure.

"She's ready to die," I had said.

"How do you know? I saved her life."

I had made the mistake of taking issue with him and he had reminded me that she was his mother and stormed out.

I went into her room and listened to the whir and hum of the suction machine draining her stomach, the wheeze of the ventilator. She was drugged senseless. I held her hand and thought of that night on the edge of the *altiplano*, the face of the missionary, the elegance of her death. The contrast was unbearable, and then a nurse pushed open the door and asked what was I doing there? I told her I was Maria Luisa's grandson, that I was a doctor, that I'd come from California to be with her. But visiting hours were over. She was willing to argue, so I led her out of the room and we stood in the hall and I demanded to see the on-call resident and went back into the room.

He showed up half an hour later. Again, we stood in the hall. He was a mess, four hours to go of a thirty-six-hour shift. Red-eyed and weary, he didn't have time for me. He quoted policy, tried patiently to make me understand, told me that she would be fine through the night; there was a chance she'd hang on for days.

"I don't think she's fine."

"I'm sorry, but I don't think you're qualified . . ."

"Yeah, I know," I said. "I'm just a pain in the ass."

He gave me a half-laugh. "She's in stable condition. If you have an issue with her treatment, you'll need to talk to the immediate family. Now I've got to get to the E.R." He sort of patted me on the arm, and then turned and took a few steps. He stopped. "I'm sorry," he said, then his shoes squeaked off down the hall, and his white coat billowed out behind him.

I turned and walked back into the room. I told her that I loved her and kissed her forehead and kissed her hand. There were two nurses waiting for me at the door, deciding whether to call security. I told them goodnight and walked out into the hot Miami night.

Up the drive and to my right, an ambulance idled by open emergency room doors. A couple of paramedics moving with professional urgency slid a stainless steel stretcher from within, and the intern met them at the door and placed a hand on the chest of the admission whose emergency this was.

Maria Luisa died two days later, in spite of all of the attempts to keep her on the brink.

My return from Florida was marked by a peculiar incident that would serve as a preface of things to come. Stephanie had extended her stay in Santa Barbara and returned a few nights after my arrival. I was feeling particularly sentimental. As the months had passed, my dependency on her had grown. I longed for her when we were apart, and her ambivalence regarding her separation from Edward gnawed at me.

We dined at my place.

I lit candles, a dozen in the living room, and we made love in their light. For more than an hour we toyed with each other, teased each other's bodies, indulged in each other's sensations, caressed the possibilities . . . here? or . . . here. What about . . . this? Anything is possible when you abandon your detachment, yield to the flesh, perceive with your body, focus with your touch, and I ran my finger from her forehead to the tip of her nose, over parted lips and down her throat and between her breasts, and shuddered and I saw a man.

Saw him, felt him, sensed him completely in an instant.

"Don't stop. . . ."

I caught my breath, and held it as long as I could.

"Not now. . . ."

I was aware of the room, the candlelight, the sweat cooling on my body.

"What is it? What's wrong?"

Adrenaline, that breathless, heart-thudding sensation of danger, the body's protective device, strength when you need it most. When you are threatened. For it wasn't merely the sensation of him, but the knowledge of her loving another. Fresh. Recent. I knew it like a hound knows where a fugitive has run.

"Who did you see?" I asked, not a whisper, and the sound of my voice broke the erotic state, cracked the shell.

"What?"

"You slept with someone."

Her eyes widened and her brow and ears moved back in an involuntary spasm.

She drew away from me, scooted up against the pillows, stopped with her back against the sofa. "What did you say?"

"You heard me."

"What *is* this!" Anger. "What are you doing?"

"What am *I* doing?"

I stood and slid into my pants and walked away. I drew a glass of water and leaned against the tile kitchen countertop. Then I put a hand to my chest and felt the palpitations there. The tips of my fingers were tingling, and I realized that I was almost hyperventilating. My whole body was reacting. Systemically. The demon jealously rising from my stomach, through my chest, my throat. . . . A minute later she was behind me, a towel wrapped around her, held in place over her breasts.

"What's happening here!" I demanded. How could you . . ."

"*What!* How could I *what?*"

She shook her head, looked at the floor as though searching for something. "You have me *followed*? Then you wait? You wait to accuse me when we're making love?"

A nervous laugh caught in my throat and I shook my head. "Don't do this. Don't turn this around." I drained my water glass. "I didn't have you followed."

"Turn it around? Turn *what* around! I can't believe this!"

We got over it, but she was right. She wouldn't believe it. Wouldn't believe that I could describe the man, that I knew how he had touched her. It spooked her and, ironically enough, I don't believe she ever really trusted me after that night. It happened again, a month later, but I kept it to myself, and, although we agreed to attempt a committed relationship, and although it lasted for most of the year, every so often I would catch her looking at me, evaluating me out of the corner of her eye. Some part of her would always suspect that I was a little nuts.

January 2, 1975

A dream.

I am sitting at a white-painted wrought iron table in a Spanish-style courtyard with Stephanie. Talking nonsense like *Alice in Won-*

derland. I tell her that she can choose either to sleep with (or marry?) me or to sleep with others (there's an obscure figure in gray overalls). Next I am entering a room where Stephanie is lying in bed. I climb in from the roof, like a spider, down the wall of the narrow little room. I know that she still has a sexual debt to pay. A sexual debt?

In bed we are having sex. She is on top of me but facing toward my feet, squatting, then she turns and looks over her shoulder and says, "Now we can have the baby you want to have."

But I think to myself, No, we must be making love face to face—we must be face to face before we can have a child.

In Machu Picchu, on the hillock beside the Death Stone, Antonio and I had "put death on the agenda," and, curiously enough, death became my companion that year. Peculiar how the transient themes, the subtextual patterns, of your life are illuminated by hindsight.

I thought often of the Medicine Wheel, the journey of the Four Winds. The mythic South, where you exorcise the past that haunts you, binds you, restricts you. The West, where you lose fear by facing death, free yourself from an unknown future. And, although I had no sense of when I would return to Peru, if I would resume my work, return to Ramón and engage with the work of the West, death made its presence felt.

I found myself continually confronted by the specter of death, and with each confrontation there was a lesson. It had begun with the death of the missionary, and I had learned by witnessing, learned something of my vision and the *viracocha*. Gloria's flirtation with death had taught me something of the drama of psychological healing. And then there was Maria Luisa, an astonishing, painful demonstration of death in the Western world.

August 22

There is a hospital bed waiting for me too.

Maria Luisa was eighty-two. The resident who had ministered to her was probably thirty. So. Twenty-five years from now, when I am in my early fifties, a child will be born who will grow to become the doctor who will pull the plug on me.

How will I die? What will I die from? Playing with the concept of

future life progressions. . . . I see myself dying of a heart condition at an early age. Oh, maybe that child has already been born. I see myself lying in a hospital bed, surrounded by family members not telling me the truth.

Denial.

Denial.

Denial.

Why?

Death is fearful. We cower so from it, and deny it when it comes.

But we incubate it within us, like a germ within us.

Why a heart condition? What is the condition of my heart? Have I ever really opened it up to anyone? Have I ever allowed anyone to come very close? Perhaps I'm setting myself up to die of a heart/love condition. That's it.

Must change that.

Have had a measure of success leading Holly and her family to hold her imminent death in a life-positive way. Easier for Holly than her parents. Her mind is too young to have been permanently imprinted with tradition and taboo. She is eager, willing to explore death, to approach it as a life experience. Her parents are so overwhelmed with her loss that they could well miss the gift she is giving them, the lesson she is willing to teach them. But her pain is in the way. I've tried everything. Balancing her energy, visualization techniques—closing pain valves, discharging her pain into the Earth. Today, in a light meditative state, she saw a banana.

Holly was seventeen years old and dying of ovarian cancer. She had been referred to me by a friend at the University of California Medical School, and we had worked together for six weeks. Her cancer had metastasized in spite of drug and radiation therapy. All that was left was the pain and her death.

After four weeks she had asked if she could work with me alone, without her family, and in my desperation I took that as a sign of progress. Her request was not a rejection of her parents, but a declaration of her need to work with her pain and face death alone. Her attitude toward herself and

her disease was healthy. We discussed the importance of examining her past, her illness, her pain, and freeing herself from her obligations, from the ties that kept her bound to this life, from her parent's desperate desire that she live. I asked for their permission to take her to my home one evening, and there, in my backyard near the edge of the woods, we built a little fire and she consigned to the flames the bits and pieces of her past that haunted her still. She characterized each one of them with words or simple drawings on square bits of fine Chinese paper, folded them or twisted them into shapes, and we sat before the fire for three hours. We laughed together, cried together.

But the pain was getting in her way. Then, at the end of a session in which we had continued to work on a self-induced trance state, she had seen a banana. The next week she saw a whole bunch. She started to dream of a banana tree, and, in a light meditative state, could summon the image. It was the only thing we had to work with, so I encouraged the image, began to guide her imagery, and eventually there was a whole banana tree. Neither of us had any idea of its significance, and I discouraged her from analyzing it, although we were equally curious.

August 31

Breakthrough with Holly.

My clinical supervisor keeps insisting that the banana is a phallic symbol, repressed sexuality. Jesus! Let's put her in a pigeonhole in a conventional Freudian rolltop desk!

Then today, the banana tree acquired roots. I told her to focus on those roots, see how they grow, their delicate, translucent tips, pushing slowly deeper, deeper through the soil, deep into the Earth.

"An underground stream," I said. Her eyes were closed. Her head, covered by a bright blue scarf, was bowed slightly forward. Her breathing was perfect, from the stomach, her hands hanging loose and relaxed from her wrists. She was good at this. "An underground stream of cool, mineral-rich water, spring water running through a vein in the Earth, a channel in the rock and soil, quartz crystal walls shining, glowing with phosphorous, and the water trickles steadily. And look up. Look where the roots of the tree have broken

through the soil above. Little bits of soil fall and are carried away by the steadily trickling stream. Your roots, the roots of your tree, thirsty, seeking that water, seeking to tap into the clear, cool, nourishing vein of the Earth, reaching down. . . . Feel them. New cells forming, roots growing, tenderly reaching . . . almost . . . there. . . .”

There were tears in her eyes and she drew a long, deep breath, opened her eyes, and smiled.

Six months later she died, consciously. In those six months she achieved a 50 percent to 60 percent reduction in pain. The roots from her banana tree had grown, reached deeply into the Earth, nurtured her with the cool spring water we found there, and she was able to release much of her pain through those same roots, back into the Earth. Her father had taken her into the hills of Napa to run in a field of poppies, and her ashes were scattered there later.

I went to Brazil later that year, and the results of my work and experiences were documented in *Realms of Healing*. During that trip, and during the course of my later research in Brazilian spiritism, I experienced a lifetime's worth of paranormal phenomena. I met Dr. Hernani Andrade, a physicist and the director of the Brazilian Institute for Psycho-Biological Research, and we became lifelong friends. With Andrade as my guide I began to investigate the spirit religions of the Candomble, the Umbanda, and the outlawed Quimbanda, techniques of mediumship and astonishing healing skills, yet all the while I was aware of a fundamental difference between the spiritism of Brazil and the shamanic creed. The practices of spiritism maintain a strong subject/object relationship with the supernatural and the “spirit world.” Healing and insight are achieved through a medium, a person who channels a spirit and becomes the spirit's instrument. The healing states and ecstatic states of shamanism are specific to the individual, and the elements of “spirit” are instruments of the shaman's consciousness. A spirit medium will yield his or her body and voice to be used by a spirit, but the shaman never loses control. The shaman is a spiritual warrior and engages directly and masterfully with the domains that he or she visits in the “spirit flight.”

October 11

São Paulo

Dreamed of Antonio again. Walking in the *altiplano*. He has a mimosa seed pod. Hide and seek. I remember having a similar dream when I was there. This time he hides it, and I am to find it by asking the trees to help me. The wind is whispering through the pines, and they are shimmering with their own light. I address a tree. "Where is the seed pod?" Antonio laughs and tells me that I look very stupid standing there talking to a tree. I become angry and stomp off, and later I ask without asking, I think my question and a bush begins to glow just ten feet away. I go there and find the pod.

Tonight Andrade has invited me to attend a seance.

Called Stephanie. She sounded tense.

Later

It's 2 A.M. Exhausted but must write this down before sleep. The seance. All M.D.s and psychologists interested in channeling. They meet every Thursday night, like a poker game. Andrade explained that the purpose of the sessions was to heal certain people who had died but whose spirits were still tied to their biological experiences. People who had died unconsciously and were "caught between this world and the next," still experiencing their pain, the symptoms of the diseases that had caused their deaths. Andrade frequently functioned as a sort of spirit therapist. There was a medium, a beautiful middled-aged Brazilian woman named Regina. We all held hands and she went into a deep trance and "incorporated" a variety of "spirits," and Andrade engaged them in a sort of classical psychotherapy dialogue. Three cases, two men and a woman, and Regina's voice changed remarkably with each. The session was conducted in Portuguese.

Close of session, Regina seems tired, confused. The Lord's Prayer is recited and the lights are turned on and suddenly Regina starts speaking Spanish. A gentle, tremulous voice. "Where am I, God help me . . ." Andrade begins to speak to her. She is in great dis-

comfort and she is scared, her lips are so dry, such a hollowness in her chest. Andrade explains that she is now beyond death, no longer in her former body.

"That is confusing me. . . ."

"Look!" he says. "Look down. Feel your body." Regina's hands move over her dress.

"Are those your hands, your breasts?"

"No. . . . They are young."

Andrade tells her that she is occupying the body of a medium. Her spirit has regained consciousness and awakened from the nightmare she was caught in, not fully alive, not quite dead.

Then Regina looks at me and gasps.

"Bombi! Is that you, my little one?" I stand up, knock over my chair, and Regina throws herself into my arms. "Help me! Help me, please."

I go blank. Andrade and another pull her away from me and Andrade counsels her. I listen in a daze. Only my grandmother called me by that name. As I listen, Andrade encourages her, tells her to look about her and see that there were others there to help, that it is safe to reach out and be guided into the next world, and she starts to see things, identify her mother, her father, her husband—my grandfather—by name.

Her pain and discomfort diminish, she feels younger, stronger, and Andrade tells her that she is leaving the physical world, the nightmarish realm between the worlds.

She turns to me again and says:

"Thank you for being here. I will always love you and be with you. Take care of your father."

No one here knows about Maria Luisa.

Perhaps Regina was a sensitive. Perhaps she sensed my loss and obtained all the relevant names and information telepathically. I know no more now than I knew then, for I did not feel compelled to analyze the experience. Andrade was sympathetic, yet matter of fact about the whole thing. I was

moved, deeply, and admittedly consoled by the thought that my grandmother had been released from her suffering and allowed to die.

But I had had enough of death.

October 13

Could I have done more for her? Eased her suffering and helped her to die in Miami?

I'm returning to Peru. Tired of being stalked by death, cats, eagles. Booked a flight: São Paulo—Lima—Cuzco.

I suspect my "work of the West" started back on the *altiplano*. I'm going back to finish it.

*Should this my firm persuasion of the soul's immortality prove to be
a mere delusion, it is at least a pleasing delusion, and I will
cherish it to my latest breath.*

—Cicero

The news of Professor Morales's illness struck me as wholly unreasonable. There are some people that you never conceive of as unwell.

An intense-looking young man with wire rim glasses had taken over his classes, although the university was once again on strike. I introduced myself to him, and he told me that the professor had been away for more than a week with pneumonia.

"Can you tell me where he lives?"

He drew his head back and squinted at me. "You are a friend?"

"Yes," I said. "A very good friend."

"Pardon me, but you do not know his house?"

"No. We have spent most of our time together traveling."

His eyes widened behind his glasses. "Ah, I know you." He nodded. "You are the psychologist from California."

We shook hands and he directed me to a house ten or twelve blocks from the university. It was an old house of whitewashed adobe, and the walls were at least three feet thick. Small windows, tiled walkway, red-tiled roof. I knocked on the door and it was opened immediately by a fat, middle-aged man with a pencil mustache. His head was half-turned back into the room, and he was fiddling with the catch on an old black leather bag.

"*Penicillium notatum*! Mold, my friend! It grows on rotten fruit and ripe old cheese, and if you don't take the medicine, it'll probably grow on you! Just because it comes in a little white pill doesn't mean it isn't good for you!" The yellow rubber tube of a stethoscope was caught between the handles of the bag, and the man shoved it inside.

There was a cough inside and Antonio's voice: "Don't patronize me."

"Then stop being such a sanctimonious old fool! You have a visitor."

The man turned to me and said excuse me, and he walked out, down the path and up the street. I pushed on the door and it swung open. The room was stocked with simple wooden furniture: chairs, a dining table. The ceiling was beamed and the walls covered with bookcases crammed with old volumes and artifacts. There was a window with a view of Salcantay and the ruins of the Inca fortress of Sacsayhuaman. Antonio stood by the window. He was wearing his traveling pants and *manta* shirt and tying a small bundle of something or other with a piece of string. He looked thin and pale, shadows around his eyes, but his face brightened as he turned to see me. He crossed the room in three steps and gave me an *abrazo*. He had certainly lost weight.

He pushed himself away and regarded me at arm's length. "So! Are you ready to travel?"

"Travel? But you're ill."

"No, no. I am convalescing."

"Who was that man?"

"Dr. Barrera. He is an old friend. We live to argue with one another." He lifted his poncho from the back of a small sofa. "Like George Bernard Shaw, I enjoy convalescence. It makes the illness worthwhile."

"Are you taking penicillin?"

"Of course. That and my own herbal preparations. I tell Barrera that I am not taking it. It irritates him so much." He chuckled. "I have been away from the countryside too long. My lungs congest when they are not refreshed."

"Where are we going?"

He lifted a long hardwood staff from its place in a corner near the door.

"To visit a man who has died," he said.

October 17

Second leg of the trip. Second bus. In spite of his good humor, Antonio is tired, and he is asleep in the seat across the aisle of this rattletrap. Have ridden buses through most of Latin America, but this is an experience. Pen jumping all over the page, but I've noth-

ing better to do, just thankful I have a seat. First bus, gave my seat to an old Indian woman with gas and stood in agony for two hours while she relieved herself and Antonio slept.

We travel to see Antonio's teacher in some rural hamlet north of Cuzco. Word came (how I don't know) that this old man is dying and Antonio is traveling to be with him. I gather the man we will meet (if we are in time) was his mentor. He referred to him as "the man I learned from."

Death. Again.

Traveling light this time. Just a daypack. Exhilarated.

We've stopped on the road. Barren *altiplano*. There is no sign, not a building or ploughed field in sight, but three women and a young boy with a pig and two chickens. I count only two seats. Here we go again.

We got off at a similar stop two and a half hours later. Although we were still on the *altiplano*, the character of the land was less wooded and reminded me of the Mexican chaparral: dense scrub, few trees, outcroppings of granite. We followed a dried-up riverbed until the sun set, and then made camp in the little gorge.

We built a fire and its light bounced off the walls of the *arroyo*.

"There are acts of power," said Antonio, "acts of confrontation with spirit, with Nature, with the unconscious mind, with life. Your decision to abandon traditional practice and venture into a realm unknown to you was such an act. Your confrontation with your past in Machu Picchu was such an act."

"And my work with Ramón?"

"No," he smiled. "That was more an act of boldness, of imprudence, although it was instructive. Curious, is it not, how the quest for an exhilarated state leads one to test themselves against death."

"The centers of pain and pleasure lie next to each other in the limbic brain," I said. "Although fear can paralyze us, it can also stimulate. Look at the warriors, the heroes of old."

"Fear is a volatile emotion." He drew a grenada fruit, green with brown speckles, from his bag. "Nothing so robs the mind of its powers as

fear, and, as Seneca said, such is the blindness of mankind that some men are driven to death by the fear of it." He pried the fruit in half and handed me a portion. "But you cannot face death by creating experiences that bring you near death. Death is the greatest act of power to the shaman. The spirit flight, the ecstatic state of the shaman, is a journey beyond death. To learn how to die is to learn how to live, for you are claimed by life and can never be claimed by death. In a sense the person of power spends a whole life learning how to die."

"The person who has already died," I said.

"The shaman is a spiritual warrior with no enemies in this life or the next, free from desire and fear: desire formed by our experiences of the past, and the fear of death that haunts our future. They are the twice-born, once of woman and once of Earth."

"The work of the South and the West."

"Yes. By making the journey West and facing the jaguar in life, the spiritual warrior not only frees himself to live in his present fully, but when death finally comes it will know him and he will know the way." The West is where the body and spirit, the *viracocha*, part." He wiped his hands on a red bandanna. "This is dying consciously, with your eyes open. The way to leave this world alive."

"Immortality?"

He shrugged. "The body is a vessel of consciousness, of life . . ."

"Of energy."

"Yes." He reached toward the fire and slowly passed his cupped hand through the flames, then made a fist and held it before me. "When one dies consciously, one leaves behind the vessel and identifies oneself with that which the vessel holds."

He opened his hand and, for the life of me, I thought I saw the light.

"And that is . . . ?"

"And that is God." He shrugged his shoulders. "The life force, energy, call it what you will. The stuff that dreams and the cosmos are made of."

Later

We travel not only to be with this old man, this teacher of Antonio's, but to share in his rite of passage, to partake in the final act of power of a shaman.

Sitting by the fire in a dried-up riverbed. Antonio has excused himself and wandered off to exorcise his mourning, so that he may be fully present to celebrate the death.

We are a half day's journey from the old man's home. We got off the bus because, as usual, the way we get to where we are going is as important as what we do when we get there.

I hoped out loud that we wouldn't be too late, and Antonio said no, we would be in good time, and I asked him how he knew.

"He will wait for me," he said.

Thinking of Maria Luisa.

Thinking of my father.

Thinking about mortality.

Dying to your flesh, born into your spirit. The body is a vessel of spirit, of energy, of consciousness. Remember comparing the psyche to a lagoon. Lagoon a place where the river widens, deepens, but the river flows through it. I sit in the bed of a river, but where is the stuff that this riverbed held? Where is the water that ran between these walls? Something stopped the water from flowing and that which was here continued on. To the ocean? And its particles will rise with evaporation and fall to Earth elsewhere to flow again in another riverbed, or to cut a new one in some far corner of the world. To nourish a plant, to flow through the veins of a blade of grass.

Stream, streams of consciousness.

Sitting in the corpse of a river.

Now, off in the distance, I can hear Antonio singing. What is it? Beautiful, faint, a melancholy tune.

Bone tired. I'll sleep.

We set off the next morning, and there was a lightness, a peaceful resolution to Antonio's manner that I had not seen before. I sensed that we were climbing most of the morning, and trees began to appear. The land was looking more familiar.

At midday we stopped by a solitary eucalyptus tree and ate yucca and

cornmeal and fruit, and Antonio cleared a small space at the base of the tree and dug a hole. From his bag he withdrew the little bundle that I had seen him tie together at his house.

"What is that?" I asked.

"Fishmeal." He opened the packet and held it under my nose and laughed at the face I made. He placed the paper-wrapped bundle in the hole and covered it over with soil and poured water over it from his *bota*.

"What's the idea?"

"The idea!" He sat back on his haunches and his face broke into a smile. The weariness was gone. It was as though his face was regaining its life, its health, its character. He leaned forward and slapped my knee with his palm. He was pleased that we were together again.

"The idea, my friend, is that you give something in return."

"In return for . . . ?"

"You know, or at least begin to suspect, that the plants as well as the animals have spirits. When you use a plant for sacred purposes, you connect with its spirit. That connection becomes unique to you. Last night I engaged with the spirit of the San Pedro to help me to summon my power so that I could attend to my old friend. I offer this fishmeal as a gift in return. One should always leave something: hide a crystal in Nature, plant a plant, bury a coin at a crossroads, even, to honor the gift, to give something in return for what you have been given. Fishmeal is a precious fertilizer from the coast."

"You used San Pedro last night?"

"Very little, nothing more than a homeopathic dose." He stood and filled his chest with the air of the high plateau. "My lungs are clearing. Let's go."

I had assumed that we were destined for a village, but, sometime before dusk, we crested a hill and there was a fringe of pine trees and, just before them, a *casita* with a low stone wall forming an enclosure for chickens and goats. There were a couple of burros wandering behind the house, and a young Indian boy was removing a simple saddle from the back of an old horse by the break in the wall.

Antonio told me to wait and he headed down the hill and I watched him disappear into the house. I started to feel self-conscious. Was it appropriate for me to be here? I saw one or two people move out into the enclosure and back inside. How many were there? Who were they?

They were friends. They were students, healers, shamans. They were *El*

Viejo's only living family, and there was a roomful of them, sitting in chairs and on stools arranged around a rocking chair in the center of the room. His only blood relation was a granddaughter in her fifties, who served little sesame cakes to those gathered.

Most of them were Antonio's age, early sixties, Indians. I counted six women and four men. El Viejo, the old shaman, sat in the rocking chair. He was a small man, shrunken with age, covered with a brightly woven Indian blanket. His hands were unusually large and liver spotted, the nails were long. His nose was arched and thin and seemed to start high on his forehead, also high and sloping, accentuated by baldness on top. The fringe of long gray-white hair that surrounded his pate was pulled back and tied in a ponytail, and his eyes, under sparse brows, were soft and gray. His skin was delicately wrinkled, like tissue paper, thin and pale, almost translucent; the only color was high on his cheekbones, a blotchy pinkness, wine-stained tissue paper. He was a remarkable-looking man.

Two of the visitors, a man with a white shirt buttoned up to his neck, and a young woman with a purple shawl, had left their seats for us, had moved to sit on burlap sacks against the wall. I felt like an interloper. I protested to Antonio.

"It is a place of honor," he whispered. "Accept it graciously."

He sat in a chair beside the old man, and I took the stool behind him. Next to me sat an old woman, a Peruvian crone with peppery gray hair parted in the center and braided on one side, the braid tied off with a strip of woven ribbon.

El Viejo squinted over at my companion and nodded his welcome, a corner of his mouth lifted in a grin, and Antonio placed his hand on his teacher's and spoke to him in Quechua. He mentioned my name and the soft gray eyes shifted in my direction, but did not seem to look at me. Like the eyes of a blind man, they had no focus. I smiled at him and he whispered something to Antonio and Antonio nodded. I felt the blood rushing to my face, felt lightheaded and embarrassed. Then Antonio placed his other hand on my knee, and I smelled something acrid, heard a crackling sound. The old woman was lighting a pipe, a long hardwood bowl carved into the face of a fanciful owl with a stem and bit of bone like an antler. She puffed the tobacco without inhaling and the smoke wafted across my face, and she touched Antonio's shoulder and he took it from her and handed it to the old man, who raised it ever so slowly to his lips and drew on it, inhaling the smoke of the glowing tobacco.

He exhaled through his nostrils, like a dragon, two narrow streams of white smoke, then blew it out his mouth and this stream caught those from his nose and carried them into the center of the room, and I noticed the bed there. The floor was wooden planks. There was an adobe fireplace or stove in one corner, and each of the four walls had a large latched wood-framed window.

The old man handed the pipe to Antonio and he drew the tobacco deep into his lungs and I thought about his recent pneumonia. Then he handed it back to the crone, and this time she inhaled before passing it to the man on her left. El Viejo closed his eyes while the pipe was passed to each of the guests, and the room filled with its pungent fumes, stronger than any cigar, stronger even than Ramón's jungle tobacco, but the windows stayed closed. Not a word was spoken. No one save Antonio and the old man had breathed a sound since our entrance, and when the pipe had made the circuit and come back to the crone, she touched my arm and offered it to me. She smiled, a crack in her face, and I took it and looked at the old shaman and he opened his eyes and inclined his head and I drew on the bone bit, inhaled, and thought that my lungs would explode.

I coughed out the smoke and doubled over in an uncontrollable paroxysm of coughing. The crone turned to her neighbor and made a wisecrack about "*el jovencito*," the young one, and the room laughed. The ice was broken and she patted me on the shoulder and took the pipe from me.

"What *is* this?" I whispered, not out of respect, but because I was still fighting for breath.

"The most powerful *huaman* tobacco," said Antonio. "Its spirit is the falcon, and it is visionary although it is nothing but tobacco. You are an honored guest."

"Thanks." I looked around the room and they were smiling. The old man's granddaughter was at my side. She offered me a sesame cake and I thanked her. She moved to her grandfather's side and whispered in his ear, and he nodded and lifted his hand as though to acknowledge her words. There was a murmuring of Quechua behind me, and I half-turned to see a middle-aged couple holding hands, heads together, staring at me in a distracted way. I smiled and gave them a nod, and they looked almost embarrassed, smiling back at me. Then Antonio touched my shoulder. He cleared his throat and leaned close.

"We need to perform a healing," he said.

"Uh huh?"

"The room has been cleansed with sage and tobacco and all present have prepared themselves, cleansed themselves, for El Viejo's death. When he makes his final journey to the West, he will go alone, the moment is his."

"Yes?"

"A number of the guests have noted the presence of another, uninvited."

"I'll leave," I said, anxious not to interfere.

"No, no. You have been invited. You are an honored guest. It is not you, it is a spirit that you have brought with you."

"What?"

"I do not know how I missed it. Perhaps my illness. It is very clear now."

"What is?"

"A woman who has died. Her spirit is still attached to your heart chakra." He touched my chest. Beside me, the crone was loading the pipe from a cloth pouch.

"They can see this?"

He nodded. "A dim bubble of light, connected to you by a cord, like an umbilical cord of light. El Viejo has asked that we perform a simple healing and release this soul. They have agreed."

I turned and looked at the people seated behind me. It was one of the eeriest sensations I have ever felt. They were looking not at me, but at something before me, something near my chest. Maria Luisa? The old witch had the pipe going now, and she drew the smoke deep into her lungs, eyes closed, then opened them and blew the smoke at a spot eighteen inches or so from my neck. There was a tapping sound and I looked to see the old man, the dying shaman, tapping the arm of his chair with the fingernail of his middle finger. Tap . . . tap . . . every two seconds.

"Turn around," said Antonio, and I shifted on my stool to face the gathering. The crone had started to hum, a low, resonant sound with no melody, and it was met by a similar sound at a higher octave by the second person to blow smoke at my chest, pass the pipe, close her eyes. Others were lighting their own pipes, filling them from the crone's cloth pouch, inhaling the acrid fumes, and soon I was enveloped in a cloud of dense *huaman* smoke, and the room was vibrating to the haunting sound of the shamans' song.

"Close your eyes," said Antonio. "Concentrate on this spirit. Exercise your vision."

I closed my eyes, watery with tears from the smoke, and felt Antonio's fingers tapping a circle on my forehead. I thought of Maria Luisa, the seance in São Paulo. . . . There was talk in the room, someone giving an opinion and another agreeing.

"What is happening?" I asked Antonio, without opening my eyes.

"They are directing energy toward her. She is glowing with their love. They are charging her spirit so that it can free itself from you."

There was a general murmur now.

"What are they saying?"

"She is angry with you, this woman. You have taken something from her." I felt the warm bowl of the pipe placed in my hands. "Take the smoke and give it to her. She died in a hospital, and you have taken her dignity."

I placed the stem between my lips and drew the smoke into my mouth and exhaled. El Viejo coughed.

"*Hurgó los huesos. . . .*" He picked at the bones. . . .

Antonio said, "You have picked at the bones of one who has not yet died. She is not free."

I opened my eyes and the smoke was there, suspended before me, egg shaped, the size of a watermelon.

"You have taken something from her. . . ."

My hand flew to my chest. My medicine pouch, a leather pouch, a gift from Stephanie.

". . . her head. . . ."

I grabbed the leather thong at my neck and pulled the pouch out from under my shirt, opened the flap, and withdrew the slide, a microscope slide dipped in plastic, a slide containing a microthin slice of Jennifer's brain. The crone drew in her breath through her teeth, a gentle hiss. There was an astonished silence.

The man with the white shirt stood up.

"What is that?" Antonio.

"It is a slide, for a microscope. A human brain."

He raised an eyebrow. "Why do you carry it with you?"

"I . . . a friend gave it to me."

"You carry it like an object of power," he said.

"It is," I said. "For me. I . . . learned more from this brain . . . from holding this brain in my hands . . ."

"Do you see her spirit? Do see how she is attached to this?"

"No. I thought I saw . . ."

"You must make peace with her. Free her spirit. She is ready now. She has stayed with you because through you she can find her final rest. It is not your fault. Spirits are drawn to light, like fireflies to a burning candle. Go. Go outside into the woods and offer this to her, return it to her and release her. She can go now, you will perform her final healing."

I looked at him pleadingly.

"I will explain it to them," he said. "Come back when you are through."

I stood and the room rocked, shifted dizzily, and I steadied myself, a hand on Antonio's shoulder.

October 18

We must find our own ritual. We must find our own ceremony, our own access to the realms of consciousness that exist within and without.

Writing has become an ingredient of my ritual, and I faithfully execute it here, within the tree line of the little wood beside El Viejo's *rancho*. Waiting in the dark.

Jennifer, a woman I never knew, could never come to know because I can't find the essence of life or self by picking at the bones of the dead. I don't know how you died, but I can guess that your moment came in a hospital bed while the healthy and the living did everything they could to keep you in their world.

You may have been well schooled in living, but surely, death was unfamiliar to you and came early and you fought it and if you have been somehow attached to your physical body, the vessel that held you, I am sorry. Sorry that it was not honored, that you were not helped to be free from it before it was defiled. It is our tradition.

Now, I am sure that your body has been burned and the Sun has been released from the flesh and all that is left is this morsel of tissue that is yours.

But all that was you has not ceased to be, and isn't it a wonder

that your spirit should follow the last remnant of flesh and find freedom here, so far from home, in the company of such remarkable men and women.

I have broken the slide and removed what it held and buried it here, near the base of a pine tree.

I feel your presence.

Will this place be a reference for you?

Thank you for what you taught me. I will cherish the knowledge in my head and your spirit in my heart. Forever.

I begin to understand what is sacred.

I spent more than an hour there in the woods with Jennifer. The moon had passed between the Earth and the Sun. A new moon, a crescent sliver, and the night was unusually dark. When I returned to the house the room had been filled with candles. The windows were open now, but no wind disturbed the fifty or so tapers of light. The old shaman was lying on the bed in the center of the room, and the crone was singing a faint melody. I took my place on the stool, behind Antonio, beside the crone, four feet from the old man's body. His head turned toward me as I sat, and he stared at me, stared into my eyes and my mind went blank, blank like the gray of his eyes. Then he coughed a shallow cough and turned his head away, eyes toward the ceiling, and he closed them.

The *shush-shush* of a rattle started up somewhere behind me, and someone whistled, like you whistle when you call to a bird, and a song started, a murmured chant, and it was as though this simple song was a vehicle that carried with it the peace that settled on the room. I leaned forward slightly and saw that Antonio's eyes were closed. Before us the old shaman's chest was rising . . . and falling, and a sort of tremor shivered through him. I wanted to take his pulse. Instead I closed my eyes and allowed my body to measure itself to the rhythms of the rattle and song. . . . Found myself transported effortlessly to a state of serenity, perfect harmony with the song. . . .

It was much later when I opened my eyes, and the recent past had the feeling of a dream. I woke to the dream of the room, the faces, the dying man before me. The rhythm of the rattle, constant. The old man's breathing, slow and regular, and the rattle shook thirteen times for each breath. There

was time to count the breaths, time to feel the texture of the air, the charge of it, the sweet intensity of it. The candles had burned low since I had closed my eyes.

There was rapture in the air, on the faces of these men and women, these students of El Viejo, and it was bewitching, as tangible as the smell of spring in April.

Then Antonio half-turned to look at me, and I realized that I had been staring at the old man, the rise and fall of his chest, counting the thirteen shakes of the rattle, breathing with him. Antonio reached out and touched my left temple with his middle finger, then tapped, drummed his fingertips, in a circle on my forehead.

"Look," he whispered. "Look carefully."

I let my focus go, and my eyes shifted to a spot six inches above the old man's chest, and there it was, that intangible form, a hazy violet hue there . . . and gone . . . there again, disappearing with each long breath, rising with every exhalation.

The crone squeezed my left hand. I turned and looked at her, then down at her brown, callused hand, dry and cool. I covered her hand with my right hand and nodded, and her eyes wrinkled with a smile. She raised the pipe to her lips and inhaled and blew the smoke at me, dipped her head and neck and blew it from my lap up, up my chest to my face, and there was something wondrous about her face and the dip of her head and neck, something tender, caressing. Something almost erotic.

She put the pipe into my hands, clammy, palms sweaty. The rattle stopped and the room hummed with silence.

When I turned my head, I could hear the cartilage crackle in my neck.

I couldn't see the energy body; the glow was gone. I saw the old man's body convulse once, twice, and sigh in the silence.

And I raised my eyes to an orb, a luminous ball of opalescent light, cords of light spiraling from his forehead, wrapping around it, blending into it, a radiant egg supported by a helix of spiraling light, and if I looked at it, it was gone, so I focused on empty space, for it could be perceived, but not seen.

Then Antonio took the pipe from my hands. I had forgotten that I was holding it. He puffed on it and the last ember glowed and caught the dry tobacco. He rose and blew the smoke across the dead man's forehead, and, as though out of the top of my vision, I saw the *viracocha* pulsate and scatter into a thousand points of light, like the light you see when you close your

eyes and press on the lids. They scattered through the room, leaving trails, tracers of light, and seemed to touch the heads of the old man's students and the rattle went *shush* and when I looked again, the orb was back, hovering in the center of the room, and Antonio was standing with the granddaughter beside the shaman's body, dipping his fingers in a bowl of herbs and touching the shaman's chakras, his kneecaps, the soles of his feet, his elbows and hands.

And there were hands on mine. The old woman to my left, the man with the white shirt to my right. Antonio and the granddaughter were joined by others, and we stood, hands joined in a circle, and the old woman beside me sang a plaintive song. Her voice sounded like a flute, and I recognized the weird melody. I had heard it the night before, heard Antonio singing it in the night. It was the song of the woods, the high plateau, the song to summon the spirits of the grass and the pines, for, as Antonio later explained, the elementals, the forces of Nature that were El Viejo's power animals, had been set free. And I saw the energy body, the light of this old soul swirl and dissipate like a drop of dye in a glass of swirling water, and Antonio led me to the window, rubbed my forehead, stimulated my vision, and said: "Breathe. Breathe deeply and look quickly!"

For that instant the woods were alive with a light like I had seen in the jungle, radiant halos outlining the trees with pinpricks of light like fireflies scattering, flashing, playing in the spaces between the trees, and the tops of the pines swayed ever so slightly and the scent of the pines swept on a breeze through the room.

The candles wavered, and the smoke cleared. And the song ended.

Every parting gives a foretaste of death.

—Schopenhauer

The morning after the death of the old shaman, the party feasted on fried yucca, fruits, breads, and cornmeal. The mood was festive and there was much talk, mostly about local diseases and afflictions. Antonio explained that these people had traveled great distances to be present for the old man's birth into the spirit world, that they were shamans, healers, all touched by the teachings of El Viejo. He smiled at the mood of the group. Their joy, he said, was from the knowledge that the spirit of their teacher was with them fully now that he was free from the confines of this world.

The old man's *mesa* was laid out, and each of his students went to it and took an object: a staff, a crystal, a stone, ancient objects of power; and there was no argument, no hesitation or indecision. Antonio told me that specific objects had been given to them during the old man's death. They had been told what was theirs by the spirit of the shaman.

October 19

We left the house near the woods at about 11 A.M. We talked about immortality.

The knowledge that we are made of somatic and spiritual matter is fundamental to the shamanic experience. If one learns during their lifetime to separate themselves from the physical body, to experience themselves as "beings of light," to learn the spirit flight, one may die consciously, die to the flesh and be born into the spirit—a

spirit that one has already met and claimed. If one does not die consciously, one's energy body returns to the "Great Pool of Consciousness."

When I pressed Antonio to explain this Great Pool, he shook his head. I hate it when he does that.

"It is a metaphor of the myth," he said, "a poetic expression of a concept. Leave it at that. If you are not satisfied with the image, then form your own, my friend, but do not base it on the experience of others."

"All right," I conceded. "But this . . . *individuation* of the spirit: is it believed that by dying consciously you maintain your individuality after death?"

"Individuality?" he asked. "Now there is a muddy concept. If you must insist on reducing everything to theoretical formulas, you would do better to be more precise."

"Damn it!" I stopped, shrugged off my daypack, and dropped it on the ground. "I'm trying to understand with the means that I'm accustomed to!"

"Yes," he said, "you are in a delicate position. You are on the path of experience. A path that will lead you to understanding. Caught between two worlds, between a waking state and a dream state. You have experienced power, yet you are still confused by the difference between your experience and your beliefs. But your beliefs are based on the theories of others."

"Theory is important," I said. "For God's sake! Theory is what allows us to exercise foresight! It's what has led the human race into the future: think ahead, propose a possibility, test it, prove it, move forward. Neocortical thinking, logic is a fact, a forum of Western thought. It cannot be discounted just because other cultures approach the mystery of the cosmos from the opposite direction! Besides, even Western science is ending up in the mystical realm. Look at quantum physics. . . ."

"What will I see?" he said.

"What you already know. That consciousness is a determining factor of reality. That the outcome of an event is influenced by the observation of the event. That a photon, subatomic light, is not a wave and not a particle. It is neither and it is both. It's astonishing! The whole process of the Western scientific method is based on reduction. . . ." I started ticking off points on my fingers. "We're trying to explain brain function by studying the molecular biology of the central nervous system. Molecular biology is stud-

ied in terms of atomic physics, and atomic physics is the realm of quantum mechanics, the uncertainty principle: the observation of an event influences its outcome, the mind of the observer is integral to determining the nature of reality."

"So," he said. "Scientific reductionism has reduced itself to consciousness. Physicists are becoming poets."

"Yes. The study of the human mind inevitably turns to the consciousness of the one who studies."

"And the new shamans will come from the West."

"What?"

"It is a vision I once had," he said.

He lifted my pack from the ground and handed it to me. "Now," he said. "For the sake of theory, let us say that one may maintain not *individuality*, but integrity of consciousness after death."

I slipped the pack over my shoulders. "All right," I nodded, and we continued on.

"What does that suggest to you?"

"Immortality," I said.

"And?"

"I'm not sure. It's like infinity. How do you resolve such a concept in a practical way?"

"How do you apply quantum mechanics to everyday life?" he challenged. "Does quantum theory teach you how to walk on the Earth? How to change the weather? How to identify yourself with the creative principle, with Nature, with the Divine? Does it teach you how to live every moment of your life as an act of power? No. Theory. Logic. Conceptualizations. Games to amuse ourselves with something that transcends all human research and conscious thought." Now it was his turn to stop and face me.

"It is through the experience of life through death that one becomes a spiritual warrior and identifies oneself with the life force." He held his hand in a fist before me, reminding me of the fire of two nights ago. "My old teacher has died to his flesh and yet maintained the integrity of his consciousness. You, on the other hand, have maintained the integrity of your body. You exercise your body, but your consciousness atrophies. El Viejo knew the truth for most of his life, and he walked in the snow without leaving tracks. Not literally, my friend, but mythically, poetically."

He placed his hand on my shoulder. "Our brains are not seventy-two-year clocks. We are not connected to this Earth for a finite time between

birth and death. And the Divine does not come from somewhere above, it exists beyond time and space, and informs life. The Earth is our home, and once we have transcended the shadow play that we call biological reality and identified ourselves with the Divine force, we realize that we have no choice but to become caretakers of this Earth.” He turned and walked ahead.

“Caretakers of the Earth,” I said, and caught up to him.

“It is our responsibility. Ours.” He spread his arms, gestured toward the land around us. “Honor thy mother and thy father. Mother Earth and Father Sun. The person of knowledge has no choice.”

“And the new shamans will come from the West?”

“Of course,” he said.

October 20

Last night, after eating, Antonio drew a mimosa seed pod from his little bag.

I looked to the edge of the little pine wood where we were camped and recognized it from my dreams.

Déjà vu.

“You have imagined this?”

I looked at the pod, dried and wrinkled, four inches, curved. “I have dreamed it,” I said.

“You have imagined it,” he said. “We have imagined it together.”

“Dreamed together.”

“Where does the imagination come from?” he asked. “Freud and Jung felt that it came from the unconscious, and that the unconscious spoke to us in our dreams. Close your eyes and imagine. Close your eyes and see things. See with your eyes closed. Dream.”

“We dreamed together.”

He nodded. “A shaman will often begin a lesson on such a fundamental level.”

“Consciously?” I asked.

He bowed his head over the object in his hand, and the firelight shone on his silver-gray hair. “That word begins to lose its meaning, does it not?”

I shook my head. “No. I still know when I am conscious. It’s the reality of my experience that has lost definition.”

“The planes of reality,” he said, without lifting his head, “are the levels

of the possibly conscious. You can slip between them.” He raised his head and looked at me. “Willingly.”

He leaned forward and placed the pod on the fire. There was still some moisture in the thing, and as it evaporated in the heat of the fire, it twisted, writhed a half-turn, and its wrinkled surface browned before it caught flame.

“You must go back to the jungle. Complete your work of the West.”

“I’ve finished with the South, haven’t I?”

“No. One is never finished. Remember that the medicine wheel is a circle. A great spiral. You have entered the world of myth and have encountered elements of your past. And you have begun to shed the skin of rational thought that you have worn these years. The past has begun to lose its grip on you, and death is stalking you like that cat.”

His eyes shifted and I turned to look back, over my shoulder, into the darkness.

“And there is the eagle that is waiting to prey on you. You must return to Ramón, return to that lagoon.”

I nodded and Antonio shook his head. “Do not fool yourself,” he said. “Do not think that once you have reconciled yourself with your past and freed yourself from death and the fear of the future that you will live the life of a warrior, that you will step fully into your present as a person of power. Do not be trapped by the simplicity of this theory. The present does not last. It is past even as we revel in it. You are still standing in the shadow of the mystery. It is the shadow you cast. Your shadow.”

“But the person of power, of knowledge, walks in the snow without leaving tracks. Casts no shadow.”

“Many who travel along the Medicine Wheel become seduced by its power. Few complete the circle, commune with the ancient ancestors and their knowledge in the North and overcome their power in the East to become persons of knowledge, children of the Sun.” He smiled up at me from across the fire. “And if you wish to take the metaphor literally, consider the one thing that casts no shadow.”

“And that is?”

October 21

The Sun is the only thing that casts no shadow.

Are energy and consciousness the same? The energy of the Sun is the energy of all life—all matter, for that matter—an energy that forms all structures as there is a consciousness that informs all life.

We returned to Cuzco and I made a reservation on a morning flight to Pucallpa.

October 24

Came to Peru to experience the *ayahuasca* and was introduced to Death. Came to Peru to find a shaman and found a roomful.

Tomorrow I return to the jungle, return to the garden.

Eighty thousand year ago we acquired a thinking brain, a reasoning machine that set us apart from Nature. In one quantum long-jump, the brain nearly doubled in size. We could evaluate. Reason. Think. And the hand of Nature was joined by the hand of man.

There is a Gideon Bible in the drawer beside the bed in this hotel room. "And Jehovah God went on to say: 'Behold, the man has become like one of us in knowing good and bad, and now that he may not put forth his hand and take fruit also of the tree of life and eat and live to time indefinite—' With that Jehovah God put him out of the garden of Eden to cultivate the ground from which he had been taken."

I return to the garden to put forth my hand and eat of the tree of life everlasting.

Spoke with Stephanie. She sounded long distant. Must return to the States for some last-minute editing for *Realms of Healing*, so I'll recover from the jungle on the plane ride home. Will meet Antonio at the airport in the A.M. to say goodbye. For how long?

Antonio never came.

I telephoned the school, but there was no answer. I waited until the last possible moment, then boarded the twin-engine plane for Pucallpa. I was scheduled to return in five days. I would have a couple of hours in Cuzco before my connection to Lima and home. I could see him then, surely, take a taxi to the school and see him before I left.

Nevertheless, I felt uneasy. Why hadn't he come? There was so much to say.

The eyes are not responsible when the mind does the seeing.

—Pubilius Syrus

I was in time to catch the bus at the Pucallpa airfield. In time to stand in the breeze of the old Westinghouse fan and drink a *cuzceña* at the bar. The barman remembered me.

I got off at kilometer sixty-four and looked for the banana palm that had marked the entrance to the path, but it had grown such that I could not identify it, and I had to guess.

There was something in the air, something that penetrated even the pungent pulpiness of the jungle. Something that had settled in the clearing around Ramón's house. He was there, his back to me, stooped over a thick, twisted tree branch on the sand. He straightened as I emerged from the trees, turned, and I saw that he held a machete in his hand. We stood there, motionless, looking at each other across thirty feet of clearing. I smiled and he squinted at me, then raised his eyes and tilted back his head to look at the sky. There was no sign of recognition or surprise, no friendliness. He sniffed once or twice and lowered his gaze to mine.

"What is it?" I asked.

"Burning," he said. He shook his head and looked at the ground.

October 25

Somewhere to the south, far to the south, thirty or forty kilometers to the south, the jungle is burning. Chains are slung between tractors and the life of the jungle is stripped and burned to create grazing land for cattle. Beef for U.S. food chains. And the waste is precious—exotic hardwoods.

Never a man of many words, Ramón is particularly taciturn. There is a darkness about him. He is alone here and I hesitated to ask after his wife and daughter. When I did, he just nodded. "We need rain," he said, and it is raining now, a torrent in the pitch darkness. An Old Testament kind of rain. To stop the fires? To wash away the white men?

How does he feel? Angry, resentful. I am welcomed begrudgingly. Somewhere the jungle is burning and a white man walks out of it and into his home.

Uneasy. If I feel this way in the morning, I will leave.

I slept too late. It was almost noon when I awoke. The rain had stopped and the jungle was steaming. Something was brewing on the brazier over the fire in the sand and Ramón was gone.

I wandered. To the bend in the little river where I had bathed and written in my journal years before. I followed the little stream, wading where there was no shore, where the jungle had overgrown the mud and sand banks. An hour's wandering, meandering, and there was another bank, a stretch of sand and a path, and I followed it to a clearing a hundred feet into the jungle, where there was a ruin, some sort of building, a small temple perhaps, draped with the ornamentation of the jungle, eight hundred years of growth, vine-worn grooves in smooth granite blocks. The friction of time. A scene from a nineteenth-century explorer's lithograph. There were the remnants of a fire in the center of the clearing, wet with the night's rain. Who came here? Did Ramón?

I started across the clearing, toward the ruin. Suddenly the jungle stopped.

The cicada hiss stopped. The high-pitched cacophony of the birds and the insects, the chatter and hum that fills the heat and throbs in the heavy atmosphere of the Amazon, ceased, suddenly, and the last sound was the squish of my footfall before I stopped, and listened to the silence.

October 26

Sitting on the sand by the lagoon. Late afternoon, watching these two ducks cleave the surface. At the far shore they feed, rolling forward, tail to the sky, then back, shaking the water from their heads, working their bills.

Paradisiacal place. The jungle is simmering all around.

Sh-sh-sh-sh, ssssss.

I can close my eyes and lose myself in the sound, open them on this little body of water that has become for me a symbol. I have mythologized this place, sanctified it in my imagination and it has become for me a place of power, somewhat sacred. Magical things have happened here; it exists in my mind—a place to come to in the twilight. A landscape of my imagination, my consciousness? But I am here now. Really here.

A rational construct.

I am here, writing.

A conceptual construct.

But I really am here, now.

As I write this.

I can exist here for a moment, realize that I am here, write that I am here, thus the writing of it represents reality twice removed.

There is a point to be made here and it has something to do with the difference between book-read philosophy that we understand with our thinking minds and applied philosophy—direct experience. The experience of the abstract happens in a different place. Perhaps because experience involves the whole brain, the whole body, the whole consciousness and not just that part, that fraction that we use to think.

So who has the direct experience? The elite? The men and women moved to go forth and touch the mystery become the subject of myth and religion and through them the mass of humanity experiences spirit vicariously. The heros. Difference between experience and faith.

Sure. And, though Buddha and Christ, Mohammed and Black Elk may all have touched the Divine, experienced power and loosed themselves in the stream of consciousness that informs all life, the commonality of their experience has been lost in the telling or, rather, the enforcement of the telling, and experiences and knowledge that should unite all humanity have divided the world because a common experience has been told in different ways.

Sacred places.

There is a place in the jungle. An hour from here. Something chilled me there. Something. . . .

I'll go back there, though the thought scares me. Fear. That's what I've come for. I think I'll

"Have you eaten?"

I had not heard him approach, but he was by my side. He sat beside me in the sand. I closed my journal and said no. He nodded, stared across the lagoon.

"You are welcome here," he said.

"Thank you," I said. "I was not certain. . . ."

He shook his head. "They . . ." he looked to the south, "do not see," he said slowly, "the Nature . . ." he looked into my eyes, ". . . of things."

Later

The *Nature* of *things*.

Ramón is a man of few words.

"There is an eagle following you."

I shifted on the sand, the better to face him.

"Yes," I said, "I . . . am sorry."

He frowned. "Sorry?"

"Your daughter. . . ."

He cocked his head and looked at me sideways. "She was honored," he said. He shook his head and almost smiled.

"Honored? But the eagle . . ." I stood up, my back to the lagoon. "You did not send the eagle?"

"No," he said simply.

"But I have been told, and . . . I *feel* that it is not mine."

"It isn't," he said. "It is from a man of great power. A man to the North. The one you have worked with."

"Antonio?"

He shrugged his shoulders and nodded his head at the simple fact.

"He told me that *you* had sent it!"

Ramón's eyes opened wide. He coughed out a laugh and shook his

head as though to shake away the grin that was tugging at his mouth. He stood and walked away toward the brazier. He bent over to stir the embers, and it was the only time I ever saw him laugh. Doubled over, hands on his knees. It may have been the funniest thing he'd ever heard.

I spent the afternoon with Ramón, watching him prepare the *ayahuasca*, cut and mash plants and roots and vines.

"Go back to that place," he said, as the sun began to sink into the jungle.

"What place?"

"Where you were."

"This morning?"

He nodded.

"What do I do there?"

"Sit." He poured the broth from the hanging pot into a wooden bowl, and I followed him to the hollow *chibuhacuaco* tree. He placed the *yagé* inside. "Prepare yourself. Summon your power. We will take the *yagé* tomorrow night. Come back when you are ready."

How vivid are the sensations of that night. Retracing my steps along the river bank and through the water and along the path when the sun had set and the jungle play of shadows had resolved itself into darkness. Eyes adjusting, stepping into that tiny clearing before the ruin, a looming blackness, for the moon was not yet high.

Surrounded by the fear I had felt in the daylight, returning to it in the night. Sixth-sense fear as heavy as the air in which it lived. I remember sniffing the back of my hand, my forearm, its hair matted smooth with sweat. Was I smelling the fear? The jungle noise was its nocturnal self, the sounds distinct, *vibrato*, *staccato*, the long treble hiss. The only thing between me and the darkness and whatever lived in it were the clothes that I wore.

I lost the fear by giving myself to it, offering myself to it, tearing off my clothes, clumsily, hands shaking, and . . .

What am I doing?

Standing alone and naked in the middle of the Amazon. Trembling in the heat, defenseless in the claustrophobic darkness, the smell of my fear, sweat, stench of mosquito repellent, radiating out from the clearing.

But the foolishness that I felt, that peculiar brand of humiliation, was, I think, a symptom of my fear: something to feel instead. My eyes darted here and there. The moon was on the rise, and I began to see things in the periphery of my vision, different shades of darkness.

I sat on my shirt and closed my eyes and meditated on the sounds, trying to separate the birds from the insects, far-off shrieking from nearby cicadas. . . .

If you stare at a violinist in a symphony orchestra, you can almost separate the sound of that particular instrument from the rest, so I breathed from my stomach and conjured up images, visualizations of the creatures of the jungle, focused on their sounds, the tick-tick-tick of a hard-shelled horned beetle, the chuckle and cluck of a giant macaw somewhere . . . far off . . . and there was the *plap* of a drop of water on a broad, waxy, green, elephant ear palm. . . . Filter out the sounds, hear how the rest dissipate in the darkness . . . silence themselves.

And there was my breathing. The thudding of my heart. Quickening. The passing of leaves, vines, low to the ground.

I was moving. And breathing.

And I could smell myself beyond the moist tangle of the jungle.

Moving like a shadow.

Sitting, sweating, naked in the moonlight.

I slept there that night. Awoke and the memory of the cat, the memory of myself, brought me to my feet. I slipped into my trousers, tied my shirt around my waist, and followed the path to the river.

I cleansed myself in the water, followed the stream like an Ariadne thread, out of the maze of the jungle, back to Ramón's.

It begins with a sound.

I lay back on the sand, on a flat spot near the brazier, twenty feet from the water. The air was warm and moist. Mosquitoes whined near candle flames, the candles stuck in the sand. The smoke from Ramón's pipe hung over me in the humidity. Suffocating smoke married with the moisture in the air. Heavy.

I felt fine. I had spent the day fasting, sitting by the bend in the river,

writing, reviewing, reliving the recent past. I had even stripped and cleansed my chakras in the water that flowed through the lagoon and around the bend, rubbed my body with leaves that Ramón said would keep the mosquitoes away.

I had taken stock of my thoughts and feelings. For each of them I had chosen an object: my clinical curiosity—Would this night's ritual replay the events of the first?—this was a triangle of paper torn from a page in my journal; the security I felt, my courage in facing the darkness and the jaguar of the night before, was a sharp sliver of wood; my expectations, my desire for an experience of transcendence, was a braid I fashioned from three strips of palm; my confidence that I would come back, that I would go beyond the moment of near-death and return to life, was a leaf with five points, like a hand. Each of these I placed in the stream, like offerings into a fire. I watched them float away. The open-palmed leaf touched the edge of the bank and turned, rotated a full 360 degrees, before disappearing around the bend.

Now, on the sand, I felt my potency, although my preparedness nagged at me. Must separate my desire to serve this ritual from the experience. Ramón had nodded satisfaction as he handed me the cup of *yagé*, and again as he blew the smoke over me. Had he felt my strength?

Looking up at the stars, I remembered the moment when the light met at the ceiling of Ramón's hut and fell, opening its jaws to me. That was a long time ago. How would this be different?

This? What?

Wait. I am waiting for it. The stars are in their place. The moon, so full, lights the clearing, as it should. Ramón has danced a circle in the sand and cleansed me with tobacco and we have smoked and I have taken the *ayahwasca* and all that I feel is the discomfort of an associative memory: the bitter aftertaste of the *yagé* and the memory of a nausea that I do not feel. This time. Stop comparing. Expecting. Investing the moment with anything but your presence.

Look at you! You're sitting up! Looking at Ramón as if to say, Is everything all right? What's happening to me? Is anything happening to me? Lie down. Lie back down. But Ramón's eyes . . . he is a sorcerer. Look at those eyes! He's not just a shaman, a master of the West, a gardener in this Eden. He is a trickster. He could do anything with me.

Do you know what I am thinking?

He nods, his head inclines forward, not a nod, he's looking. Down. The serpent beside the leg stretched out before me, my leg. The snake, dappled gray in the moonlight, opens its mouth between my legs.

It begins with a sound.

Like a cataract. Water rushing to the Earth. A great falls, roaring, water mistified. . . .

It takes both of my hands to grasp the snake below its jaws, forked tongue in midflick as it opens its pink membranous mouth. I know you.

All throat, all muscle, it works its way through my grip, scales sliding this way and that against my fingers and palms.

"Cannot conquer me the way you conquer women. Cannot subdue me the way you subdue yourself."

Back and forth the great head shifts through my grip. Back and forth to the song Ramón is singing. Snake charmer humming Satchamama, serpent, spirit of Lake Yarinacocha, protector of the garden, giver of the fruit of the tree of knowledge. Archetype, wrapped around my leg, sliding toward me, my trouser leg bunching up, pulled by its scales.

I let go and its head falls with a thud on my stomach, a sickening blow. Pass over me that I may cleanse myself of this foulness in my stomach.

Black-and-white jungle. Film noir. Moonlight wash. Ramón stops me at the edge of the trees.

"No. Here."

Follow the line from his finger to the sand, drop to my knees and vomit, roaring from the bottom of my stomach, a wide-mouth primal sound that echoes back from the wall of foliage, a hundred voices, screaming back at me, Ramón, blowing smoke at me, moving closer and filling me with his strength, body humming from the inside out, like a sonic vibration starting deep within, a green-and-violet hum.

And I stand and the jungle around me wavers wetly, sickeningly. The trees, the brush, the vines, the leaves, green now and luminous, liquify and run in rivulets into the lagoon.

Fluid jungle flowing into the sand, running in rivulets toward the lagoon, and I, standing witness, watching the waters until . . .

There was nothing but the lagoon, the water rising as the jungle ran into it. Water rising, at my ankles, warm and invigorating. I dipped my hand into its phosphorescence, and the water crystallized on my fingertips, sand drops falling, and I walked down, down into the desert beneath the water.

There, beneath the surface, the sky was a web, a holy architecture of

stars connected by strands of crystalline light, a star at every crossing, every star an intersection of every strand, every star connected with every other, each a mirror reflecting the whole, the fabric of the universe, a three-dimensional filigree, and I knew that I traveled along that infinite pathway, every juncture an act of power, of choice, leading me to the next . . . all infinite possibilities.

Lost in it. Seduced. By this creature, this holy woman, this essential, sensual Madonna before me, her back to me now, clothed in a mantle of feathers with eyes, a thousand brown feathers, the feathers of an owl, flecked with silver, standing just beyond my reach, facing away, her head turning, slowly, face obscured by a veil made from this fabric in the sky. I reach out to pull it away, but my fingers brush the air an inch from her face.

"How many times must I call you to come to me, my son?"

Move! Nearer. She is still. Another step forward. Reach for it, but no, again, so close to seeing the face behind the veil, a face that is laughing with such sweet music that I am overcome by its joy and fall to my knees in the sand. Back into the sand and the web of the sky is broken, torn to shreds. Something is moving between me and it.

Again, the eagle, wings stretching, shrieking toward me out of the night, blotting out the architecture of the night, but for what? You're not a scavenger and this flesh is dead, cold. Lividity has set in and the blood has stopped flowing and seeks the lowest point, collects in the veins and arteries, and in the capillaries and cavities in my back, lying on my back, flesh mortifying, dead already, food for flies and condors, worms and ants. I'll be dismembered and carried away piece by piece now, so why do you bother and why do you fly away so swiftly?

I see the cat approaching; the eagle soars away, into the blackness.

I can have two thoughts at once, three. I can see an infinity of things concurrently, because time is like that sky, no beginning and no end, and every moment is a reflection of every other. And vision takes no time.

Where is *she*? And what was it that she said . . . ?

Rays of sunlight beam toward me, skewer the darkness, play an every-colored spectrum across the plain of the desert, piercing the night from a tunnel source on the treeless horizon and along their path, within the light, the jaguar walks so perfectly, so resolutely. Poetic fluidity, remorseless motion, so black that I cannot see its contours, its musculature beneath the shadow-black hair, but there! As the sun source at the tunnel's end catches it just right, the black hair glints, golden. Glistens.

She sniffs at me, at the mortified flesh that I am apart from, and, satisfied, turns back toward the light and I follow. We move together like we did before, as one, toward the source of the light. I turn and look back, moving forward, but we are too far along the tunnel, the desert is lost in a play of colors.

I will never return. The light is closing in behind me, and I know that I will never go back, that the moment of death has already passed. Passed without a whisper, never announced itself. Effortless. A revelation. That was death. Somewhere, back there. Did I?

Breathe out?

Die consciously?

Voices.

The chorus swells. It sings to me with one voice. The dead. The familiar. Here humanity speaks with one voice in many tongues.

Welcome.

Bliss.

There, there is the light. Bright, brighter, brightest. Blink? No reflex! That's funny. Not curious, funny. I cannot blink, for I have no eyes, and I would laugh at the thought, but I have no tongue, and my laughter is my last, ever last joy.

An exultation that starts within me and expands away. Fills the universe . . . spreading . . . inclusive of everything that ever . . .

I can see time. I can feel time, follow any pathway, ride the shock waves of this explosion whose center is the light.

Discover that the future is not ahead, and the past not behind. I never knew that. I thought that time. . . .

Was . . . what? Did I ever know?

Can't remember. Memory. Memory?

When was my last breath? When is it?

Lost. I am lost in far-off echoes of light.

Contracting now.

The echoes contract. From there to here. All that expands contracts, collapses.

And the Lady is there, in her mantle of feathers. Her head turns smoothly, a cat, an owl.

I will never forget her face, because I could never remember it afterward.

The eyes behind the veil. Pupils dilating . . . everything that expands . . . contracting, head falling back, open-mouthed in ecstatic birth.

She sighs and my heart aches, chest hurting.

Breathe.

Gasping as my face breaks the surface, lagoon water in my eyes. I inhale a scream. Take my first breath.

I don't remember what happened next.

I heard a scream. I awoke, chilled by the sound, listened to it resolve into a howl, a long howl that echoed distantly. I was in the moment fully. I knew that I had been traveling, that I spent the evening in ritual, and that I was awake, on my back, in the little thatched room where I would recover.

A stillness hung heavily in the night, the moisture suspended there, waiting to rain. Again. Far off. Excruciating. Echoing in the stillness. Beckoning in the dark. The jungle listened with me to the sound, not so very far off as I thought. . . .

I stood, naked, and moved quickly through the house. I went because I had to. I moved without thought, then stopped myself as I felt my toes dig into the sand outside, on the bank of the lagoon. Ramón's machete was in my right hand. That stopped me.

Was I dreaming? No.

There was Ramón, still smoking the pipe. His profile shadowed by a single candle in the sand, he was distantly aware of me.

Standing on the edge of the lagoon, facing the break in the trees that marked the path to the bend in the river. Fully conscious? My God, yes! In the moment and tuned to it. I looked down at my body, already glistening in the liquid air. My chest was heaving.

It was a cat, screaming in the night down that path, at the bend in the river. I knew it. I had known it all along. Then the air moved, shifted toward me in a gentle breeze before the rain, blowing the scent of the animal toward me. I smelled its musk. Sensed its scent and followed it into the jungle.

I moved in a half-crouch, swiftly along the path. Following the scent and the banshee wail. My turn now.

Stalking the cat. Does it know that there is a power stalking it?

Going to meet it. Going to kill it. Maybe. I did not know. I knew that nothing had ever been so important.

And I knew that my scent, the twentieth-century smell of me, was ahead and behind, and I felt the jungle recoil and grow tentative, holding its breath as I moved in something like silence toward the bend in the river.

Almost there, I left the path. The advantage was mine now. I stepped into the river, waded stealthily through the water, leaving no footprints in the silt beneath the surface.

It was there, on the silver sand, screaming, stretching, writhing in an ecstasy of lust, black like ebony, side to side, howling, luxuriating in itself and the sand. Wailing. Moaning. It smelled like sex.

I don't know what it was doing. I know that I stood there, naked, knee deep in the river, Ramón's machete in my hand, heart beating furiously, blood rushing to my head. A cooler breeze brushed my back.

The wind had shifted.

The sky rumbled. Any second now. . . .

The jaguar thrashed on the sand, on its belly, all of a sudden standing, arch-backed, frozen in a low crouch, paws dug in, perfect stillness. Then its long tail twitched. Once. Twice. Reflex. Its eyes were yellow, wide, staring with perfect focus. Fifteen feet apart we stood, locked in each other's stare and reflected in each other's eyes.

I raised my hand, reaching out across the space that separated us. A tremor passed through the cat, rippling its fur from head to hindquarters. Its ears folded back.

Sand skitters across the water. The jaguar leaps, instant acceleration, sideways, pounces through the leaves and into the green darkness of the jungle. Gone.

Wait! Don't go. . . .

The breeze that blew my scent to it carries me through the water to the sand. I drop to my knees and touch the markings, the hollow place where its body was, the long gashes in the sand. Running my finger along the ridges in the sand, tiny grains falling along the slope, pushed along by my finger. Finger to my nose, I can smell it, its primal catness. Lean in, closer. My hands follows the marking, fingers digging deeply into the sand. . . .

The sky rumbles.

Stretch out. Flat on my belly. Lie in it. Roll in it, the sand scrubbing

my chest, my loins, my back. I work my legs back and forth through the sand. I breathe in the smell, can't get enough of it. Not smelling, breathing. Fast. Faster. There is a stirring in my belly. Breathing so fast, breaths become short and urgent. Stephanie. . . .

She appears as a thought. I roll onto my back and close my eyes and draw my hands down my body, down the layer of sand sticking to it.

My breathing fills my head, and I am moving through the hallway. The cat, moving purposefully down the short hall, black-and-white night vision. I slink into the room unnoticed, smelling sweat and Stephanie, her short, urgent breaths.

Stephanie and. . . .

Stephanie grunts, sighs from her chest, heaves up against the man. I stop in my tracks, low to the ground, the Persian rug. Up! Silently. Treacherously. Up atop the chest of drawers. Looking down. The peach-colored sheets are twisted and bunched at the foot of the bed, and a pillow has fallen to the floor. Her lover's back is broad and hairless, and his head moves back and forth on a limp neck as he slides himself in and out of her. He is a stranger to me.

The rage surges through me, rage held dormant in my belly, rushes, rising through my chest, filling my head, stomach hollow now, but fluttering with adrenaline, body bristling. Upper lip twitches over teeth. I am deadly.

Kill him.

I can do it. I can gut them both, leave them lying together in each other's blood.

Swallow it. Wait. Down from the chest top to the rug, thudding front feet first on the Persian rug. Move slowly to the bedside.

Will I recognize you? With your face straining, tendons taut, lips drawn back from straight white teeth as you finish on top of her. Hair a mess, matted to the sweat on your forehead, you look stupid.

Will I remember you and the nausea in my belly? The hollowness of the fact of Stephanie's infidelity, the murderous rage that I swallow?

My cry is lost in the thundering rain.

Last image: Stephanie pushing him off her, sitting up in alarm.

"What is it?" he says.

She shakes her head.

"Nothing. It's . . . nothing."

But you know that isn't true.

This is an essential experience of any mystical realization. You die to your flesh and are born into your spirit. You identify yourself with the consciousness and life of which your body is but the vehicle. You die to the vehicle and become identified in your consciousness with that of which the vehicle is the carrier. That is the God.

—Joseph Campbell

Rain. Pouring into the river, pummeling the broadleafed jungle, cratering the sand with pockmarks. On my hands and knees, the rain beating on me. Sobbing.

There was a stranger in the clearing when I emerged, soaking wet, naked, wide-eyed and trembling. An Indian, a middle-aged man in a short-sleeved shirt and old jeans, a straw hat streaming with water, dragged a litter across the clearing toward the house. He froze at the sight of me, bent at the knees and eased the litter to the sand and crossed himself. The litter was covered with banana palm leaves shining waxy in the rain.

Ramón appeared on the wooden veranda. He looked at me and then stepped down onto the sand and into the rain and went to the man. They spoke for a moment, and Ramón helped him carry the litter inside. At the door he looked back at me, nodded sideways, and I followed, went to my room, put on a pair of shorts.

October 28

It is early morning. Sun's not up, dark gray. The rain has stopped. Ramón has stopped the rain?

Will I believe any of this when I read it?

My head is clear, perceptions sharp-edged. I am sitting on the edge of the veranda, feet on the sand.

I should be asleep. I should be dead, but I have never felt more alive. Tuned to the moment, sensitive to the subtleties of the morning.

I know that I am coming off the *ayahuasca*, know it because nothing that happened last night seems as important as the drama that I am witnessing as I write this.

There is an Indian here with a young boy, I assume his son. Ten years old, I guess. The boy has been bitten by a snake, a jungle viper. He is unconscious and feverish. Ramón has built a fire on the sand and the boy is stretched out, naked on the litter that his father used to get him here from who knows where.

Ramón is working on him, kneeling beside the boy, beside the fire, working on his spirit, working with his hands before him and above the child, lifting the air, disengaging the boy's energy body from the physical, raising it before him.

How do I describe this?

He started with smoke, blowing smoke into the boy's chakras, humming into them, then lifting the spirit from the body. Now he is healing it. I have never seen Ramón like this. His face is drawn and placid. His concentration is trancelike as his hands trace the outline of the spirit body before him.

Now his palm touches the boy's forehead. He makes a fist and draws it down the length of the boy's body. More smoke from the pipe.

He speaks to the father, who stands stupefied and fearful beside him. The anxious parent. Again he says something and his tone is sharp. The man snaps out of his distraction and tries to untie the knot in a dirty cloth drawstring bag. Ramón snatches the bag from him and opens it. He reaches in and withdraws the snake, four feet long and speckled. It is dead. Its head deformed, bloody and torn by repeated blows.

He carries the snake to the edge of the jungle and kneels in the sand, laying the serpent's body out before him. He heals the snake.

Drawing his hands down its length, flicking his wrists toward the trees, making a sharp *whoosh* sound with his mouth. He handles the body with reverence.

A sacred object.

At the boy's side again, Ramón slices off the head of the snake with a long knife. I think I left his machete downriver.

He presses it, the head, to the boy's leg. He binds it there with a strip of palm, a leaf, another strip of palm. He leans close and whispers into the boy's ear and the patient groans.

I am in another world. I have done what I came to do and discovered that there is more to be done. A lifetime's work ahead of me.

I slept that day and through the night. It was the blackest sleep I have ever known. A dreamless void. Curious how I give myself so fearlessly to sleep, free my consciousness from the concerns of living, abandon myself to something like death, allow my body to lay dormant and my mind to wander. In any case I lost a day and a night. I remember nothing but waking.

The boy was recovering. His fever had broken and he was eating. His father told me that the bite was usually fatal, that don Ramón was a sorcerer.

I have every reason to believe that the boy recovered, that he and the creature that had almost killed him had both been healed, that some kind of balance had been effected, that Ramón had set things right with Nature.

But who knows? How can you test such things?

I returned to Cuzco the next day.

October 30

Airborne

Heading for Cuzco. I am seized by the anxiety that comes with discovery. Close to understanding something fundamental, wary of collapsing my *feelings* into an intellectual construct. A neat package.

Looking down from this height at the jungle below, feeling my kinship to this place, to all of it, to the essential power of Nature.

In facing death I know that I experienced the death also of my rational consciousness, the death of ego and logic. Things can never be the same again. . . .

Should I say a few words over this corpse before consigning it to the sea? This body that I left, lying in the sand in that desert at the bottom of the lagoon, covered by a pall woven from a fabric in the sky. Burn it on a funeral pyre, bury it, no matter, nothing will be lost because it's just a form of energy, an interpretation of consciousness that served a purpose for a time. I'm babbling. Don't give a shit, because I'm thrilling with the force of this new awareness. Feel like a child. Dead to the flesh, born into the world of spirit, an infant.

The jungle slides away to the southwest below me. This is where evolution began and begins, a continuum. The Garden was not kicked out from under us. We left it, turned our backs on it. Cut the umbilical cord.

I can't write fast enough.

Organize. Understand as best you can, because what you have experienced must be translated. Made understandable.

Early man. Limbic and reptilian brained, living in an animistic environment, inseparable from the trees, the rocks, the animals, the sunshine. There was no distinction—his brain was *incapable* of *making* a distinction between himself and the rest. There was no duality, no subject/object evaluation. No this and that. The Earth was a garden of timeless unity, because none could *experience* it as otherwise. One with Nature, literally.

Then, the neocortex. Self-reflexive consciousness, the ability to experience awareness itself. Reason. I and thou. Duality comes in, distinctions of this and that, subject, object.

Man could separate himself from Nature, set himself apart from the plants and the animals, evaluate his *experience* of Nature's influence. Self-reflexive.

We ate from the tree of the knowledge of good and bad and went East of Eden. We lost our connection to Nature. Lost a connection to ourselves as an integral part of Nature. Lost our connection with the Divine.

The Cartesian revolution: I think, therefore I am. Awareness shifts from experience to an intellectual construct of experience. Separation. A reasoning brain, a brain of language and definition, de-

fended by thick walls of logic from visions we could not explain. Laws are conceived, written, programmed into the *tabula rasa* of the neocortex, laws to explain what we choose to see, myths and religions to turn to for guidance and answers to the unanswerable.

Did we simply lose our vision? Lose our ability to access the Divine within Nature, within ourselves?

Here we are, Westerners, born with the burden of a disconnection from God, our destiny fixed in an ever-burgeoning quest for facts, answers, a logical framework in which to place them. We have limited the dimensions of what it is to be human.

Yet, Nature abides. Below me, there in the jungle. Within me. I have been there.

If consciousness is energy, and our energy comes from the same source (that which casts no shadow), if we all come from the same biological ground, is it any wonder that there is a level of consciousness that is common to all things? That an individual can learn the skill of accessing these nonconscious realms, enter and engage with reality on a fundamental level?

Disengage the spirit body from the biological, heal it? Tap into the fucking source!

The energy that pours into the Earth from the Sun courses through me like the blood that flows through my veins from my mother and father.

The energy, the consciousness, the Divine.

This is the message of Christian myth.

The Buddhist creed.

The Cabala.

The Upanishads.

The underlying principle of myth and religion. Principles that I once understood, had faith in.

But faith is meaningless and the faces of God stand between us and the experience of the Divine.

I need to see Antonio, for I have begun to understand him.

I never saw Antonio.

It was Friday afternoon, and I was told that he had left early. He wasn't at home and I couldn't wait for him. I had to go back.

I flew to Lima and, as the Miami-bound plane left the runway, I tried to remember our last moment together. Our return from the *altiplano*. In front of my hotel. It was late and I was headed for the reception desk, the phone, to make a reservation on the morning flight to Pucellpa. We were going to meet at the airport. He hadn't come.

In front of the hotel, he'd placed his hand on my shoulder as he had countless times.

And he had said goodbye.

North

Can you experience power and not lose yourself in the process?

—Antonio Morales Baca

Years passed. 1975 to 1979.

I stepped back into my world and surrendered myself to its concerns.

Oh yes. Fresh from the jungle I confronted Stephanie with her infidelity and we had a scene. It was more than she could bear. I remember how mystical and self-righteous I was. Her indignant defense was seeded with references to my “psychedelic masturbation.”

She moved to Los Angeles. She wrote to me later that year, after the publication of *Realms of Healing*. She congratulated me, suggested we see each other the next time I came south. I wrote back. We corresponded for a time, then lost track.

I understand that she is now practicing psychiatry at a Southern California university.

I received my degree, was able to add a Ph.D. to my last name, and thought I detected something like deference from headwaiters, airline reservation clerks, credit organizations.

Realms of Healing was well reviewed, well received, well read. It went through five or six printings, and shoved me into the limelight of the human potential movement of the late 1970s.

I met my first wife quite by accident. It seems as though serendipity always follows the “once upon a time” that starts the myth of romantic love. She was a psychologist, the author of a best-selling, groundbreaking book on female sexuality. She was beautiful, brilliant, pragmatic, challenged my intellectual and emotional maturity to within an inch of its life, and we stumbled into love with each other.

I fell for her.

We set up house together, a house stuck to the side of a mountain in Marin County, California, across the Golden Gate Bridge from San Francisco.

She wrote another best-seller. I worked at my private practice and accepted all speaking engagements in order to pay back the accumulated student loans that I had been living and traveling on for years.

And I taught, tried to translate what I knew. I accepted a professorship at San Francisco State University, developed a transcultural psychology course, theorized, conceptualized, brought my theories and concepts into the laboratory.

With great success. My classes were eclectic and popular for that reason, at least. The Biological Self-Regulation Laboratory I founded was a testing ground, a brain/body interface playpen.

My experiences "in the field" were essentially visceral. By this I mean that the seat of the experience was deep within me, in my gut, systemic, emotional, rather than intellectual, of the head. And yet upon my return, I found that the experiences that I held so dear, like a pregnant woman holding her belly, rose to my head. What had been a living thing deep within my consciousness lost its life as it became an intellectual construct.

Like Pythagoras.

Let me explain. There is music: deep, vibrant harmonies of Nature. What can it be compared to? Music and its effect on us is, like love, a mystery that collapses once it is solved. In one of the greatest triumphs of neocortical thinking, the Greek philosopher discovered that music contained a structure and form that was perfectly logical and could be described mathematically. Yet his formulas could not move anyone to tears or laughter, stimulate one from within.

And I felt like a hero. The protagonist of myth, returned to fulfill his social responsibility.

Joseph Campbell, preeminent scholar, authority on mythology, once defined the two types of heroic deeds. One, he said, is the physical deed, in which the hero performs a courageous act in battle or saves a life. The other kind is the spiritual deed, in which the hero learns to experience the supernormal range of human life and then comes back with a message

My anxiety to form a message based upon my experiences consumed me.

I used the cutting edge of brain research to slice through my experiences. Nobody tried to stop me.

I began to reason. My reasoning went something like this:

The human mind has the ability to create any imaginable neuroelectrical configuration, yet it does not innately know how to do this. The neocortex is a clean slate, a *tabula rasa*. The skill of programming the thinking brain is not instinctual, it is learned (instinct lives in the limbic and reptilian systems). Biofeedback laboratories have demonstrated that the celebrated feats of yogis, from controlling pain to walking on red hot coals, can be developed in anyone. The self-organizing, self-programming capabilities of the human brain are awe inspiring, and the implications for self-healing and personal transformation are staggering.

Primitive ritual is a formula, a recipe that conveys information to the neocortex, information encoded in symbolic dance, music, visual stimuli, to which the limbic brain responds, information that instructs the regulatory centers of the reptilian brain to accelerate otherwise normal healing processes. The circuitry of the neocortex is thus imprinted with a set of healing instructions that then can be verbally and symbolically communicated to accelerate healing in ourselves and perhaps in others.

Although access to the visionary centers of the limbic brain has been denied by the rational, theoretically oriented neocortex, they can be reached through ritual. The self-reflexive brain, which controls and evaluates waking awareness and limits it to a fraction of what the mind is experiencing at any given moment, can be programmed to access the unconscious. Programmed by experience. Psychotropic substances such as San Pedro and *ayahuasca* provide shortcuts to accessing those centers of consciousness, lay down a pathway that later can be followed in an ordinary waking state. The existence in the brain of biochemical receptor sites for the mescalines, harmalines, and harmolamines, the psychoactive complexes of these plant preparations, can infer that the brain is capable of producing such chemicals naturally *once it is programmed to do so*.

Finally, the frontal lobes of the neocortex have opened up a new faculty of visionary foresight as well as a testing ground for Einsteinian and quantum mechanical concepts of relativistic time and space. Time could be perceived as flexible, and space as something without boundaries. Previously these qualities had developed in rare individuals, spontaneously, often against their wills.

When the neocortically deficient Neanderthals were on their way to extinction 50,000 years ago, *Homo Sapiens* were left to carry the torch of evolution. The neocortex that set them apart from their ancestors would evolve, eventually develop the necessary neural tracks that would allow it to become fully functional and to navigate the course of human events. The individuals that developed such neurological connections, whether by practice or accident, were the oddities and geniuses of their time, the saints and soothsayers, the miracle workers. The experience of the sublime has been the exclusive domain of prophets and mystics, revered and persecuted throughout history.

The neocortex is still evolving, its circuitry is still forming. We must learn to harness its power to create psychosomatic health. And the isolated visionary will become a thing of the past.

I spoke of such things in the classroom, tested trance states in the lab. The cathartic transformations that I had experienced in the context of ritual and altered states, the healings that I had witnessed from Mexico to Brazil and Peru, had far surpassed the end-product expectations of Western psychological therapy and confounded my understanding of medicine. In every case the common denominator was the state of mind, the one mind, of the shaman and the subject, the healer and the patient.

In the classroom I presented the idea of the individual who, through specific training, familiarized himself or herself with the multiple states of consciousness latent in the human mind, learned how to tune these states, to resonate to the harmonies of Nature, to transcend linear time and three-dimensional space, to mobilize the body's self-healing mechanisms and choreograph such states and mechanisms in others.

The process of interpreting these concepts into discursive prose frustrated me. My work in the laboratory, although successful, was met with polite interest. All of it, a curiosity. But that was fine. What wasn't fine was the nature of my preoccupation.

My last experience in the jungle had swept me away, had pulled me under, down into profound depths of perception, the full-body, kinesthetic perceptions of the "man who has already died." I had experienced a full-blown release from the constraints of thought and reason, from the boundaries of my learning. I had gone beyond the limits of precedent, surpassed all previous experience of myself, had identified myself with an energy, a form (cat? nature? body? call it anything but that which I left on that lagoon's desert floor). And in that form I had traveled an odyssey through

time and space, had stepped into the light, had even glimpsed the face of the Lady of myth, the “veiled lady” who was said to lead one into the *nagual*, the transcendent.

I had made my way along the Medicine Wheel. I had sloughed off my past, confronted fear and death. I stood fully in my present, full of myself and dreams of the future.

March 24, 1976

Home

The past is not immutable and death is no end, so let us craft our future, forge an image of the new century, visualize, conceptualize, capture its essence, as it were, in a yarn painting, a sand painting, a spirit catcher, an architecture of light.

I was driven. Not by desire or fear, but by responsibility and anxiety. Had Antonio been near me, he would have warned me that, once again, I was premature.

I would conceive and edit a book, *Millennium: Glimpses into the Twenty-First Century*, a view of the future according to eighteen of the world's most imaginative and visionary scientists and philosophers. I would find a curious dissonance between the authors' dreams and their words, between the content of our interviews and the chapters they delivered.

I would become obsessed with translating shamanic myths and models of the mind in the classroom and producing measurable biochemical and physiological responses to heightened states in the laboratory.

May 11

Home

What is the nature of the ecstatic state, the out-of-body state, the healing state? What were the mechanisms that divided our consciousness into a waking state and a dream state separated by the veil of sleep? How did mind evolve? Further, now that I am convinced that we can engage with it consciously, where and how shall we lead ourselves into the future?

We have irrevocably altered the process of natural selection. Survival of the fittest is no longer the rule of evolution for our species. The triumph of rational Western neocortical thought is nowhere

better evidenced than in the achievements of Western medicine. Science has arm wrestled with Nature and . . . won? Well, we've demonstrated that we can conquer infant mortality and support the genetically weak, the disabled and mentally ill, overridden Nature's prime rule of evolution by saving the lives of those who would otherwise perish. And there is no turning back, short of cataclysm.

The human experience is not on a seventy-two-year clock. God, I know that now. Death is no end to individual consciousness, and the species must stop making bottom-line decisions based on a short-term rental of this space. We're shitting in our own nest. If what I know is immortality, then, yes, we have no choice but to become caretakers of the Earth. I understand that now.

Write a book, *Futuremind*. Research origins of mind. Trace evolution of consciousness and extrapolate.

And on. And on.

Yes, when all conceptions of space and time, life and death, are exploded, when the grip of the past and the fear of the future are, themselves, conditions of one's past, then does one live in the present fully.

But I did not know how.

The present is immeasurable, splitting time and space, dividing past and future. And yet I felt as though my present was expanding, and I began to fill it with frustration. I began work on *Futuremind*.

In *Realms of Healing* professional discretion had required me to qualify the experiences I related in support of the concepts presented. I had been cautious in presenting a subjective view of incidents that, according to medical science, were objectively insupportable. In *Futuremind* I wanted to avoid such qualifications by presenting a rational evolutionary model of consciousness and reasonable hypotheses regarding the capabilities and potentialities of the human mind as the species quantum leap-frogged toward the future. I began at the beginning of time and took it step by step. It was an enormous undertaking, a project that could consume its creator, yet at that time it was but another fragment, a shard of incidental experience in an increasingly fractured present. I taught, worked in the laboratory, spoke at conferences, wrote, served on committees, invested in business interests in the name of hobby, tried to remodel the nest I was making with my wife,

refused to surrender myself to my love for her, found weakness instead of strength.

Antonio had once told me that I was in a delicate position: trapped between two worlds, teetering on a fulcrum, easily toppled. That, too, I came to understand.

My thinking and activity became increasingly baroque. My wife wrote another best-seller, and I whipped myself into a frenzy of activity. Our home became an office. The distance between us was stretched by financial issues, competition, insecurity, dependency. I began to lose my balance.

November 4, 1977

Second week. Hepatitis. *Hepa*: "liver." *Titis*: "inflamed." Red, swollen, angry. Second week in bed. Second week of feverish exhaustion, bilious nausea, skin like fish fat left in the sun to yellow, orange piss and gray diarrhea. Second week staring out of the window from bed, watching the houseplants grow.

Heal myself? I don't have the energy or inclination.

My dreams are gray too. Gray and undefined. Amorphous shapes that are terrible somehow and move with an intentional lack of purpose. . . .

Adultery is not the only form of infidelity. All adulterers are infidels, but not all infidels are adulterers. I am both. So is she. I love her, but the love ebbs and flows. It's a tidal love. For both of us. Slack water now. I am in agony.

November 7

Dream. Of sand. Dirty sand. Like a high-water mark on a beach, all the refuse combed there. My body, torn and bloated there.

The part of me that is in Peru.

Walking to the bathroom today, stopped by the window and looked across the bay to the city. Place of the thinking mind. The place we built when we left the Garden. The lines are straight, the angles precise. Artificial environment. Second Nature. Where is the

power? In money and representations of wealth. Power objects jingling in pockets, loose change. Balance is defined as the amount of money in a savings account.

In Peru I could not move through the jungle without the jungle stopping and listening to me, sensing me and my foreign presence. Alien, because I am a creature of this second Nature. This is where I function and I am not functional even here. Now. Now after all my time seeking knowledge, being used by clever craftsmen of suggestion, hucksters of mysticism.

Was I not the subject of their primitive sorcery? Like the audience member at a magic show? The volunteer who leaves his seat and stands onstage and submits to hypnosis? Bark like a dog. Submit to humiliation, see what I can do to you? I will hypnotize you and, in return, you will leave a morsel of dignity and a chunk of humility on this stage.

What sweet revenge on the white man! You wish to learn our secrets and traditions? You wish to poke and pry and search for whatever you left us from our past? Yes! We will share it with you. We will carve open your vision, show you the folly of your ways, teach you to build a fire that will illuminate the ghosts of your past, show you what death is, and you will leave your body here for us and return to your place, confounded, schizophrenic, because civilization is unable to support a mind free from thought. You cut the umbilical cord to Mother Earth, and it has shriveled and scabbed there in the dry, dusty places you have built. The place where the clock has been ticking for thousands of years, marking the time since you left the garden.

The joke is on me.

I came to believe this. As fervidly as I believed in the validity of my experiences, the traditions that I brought back with me, the love I felt for my wife, I believed that I had been the victim of Maximo's trickery, Anita's self-effacing sensitivity, Ramón's sorcery. Antonio's premeditated friendship.

December 11, 1978

Psychological DTs.

Dream. The Eagle. Older than it was years ago. It soared up, over the crest of a hill, hovered there, wing feathertips fluttering, carried aloft by an updraft, then I remember it above me, legs spread, talons clutching my shoulders left and right, pecking at my head.

The thought of returning to Peru is festering inside of me.

Two faced, twin souled, split apart. Professionally in demand, cannot fulfill demands on myself.

There is a tradition among the practitioners of Quimbanda, the black magicians of Brazil, that one's soul can be captured in a crystal, held there for eternity. I had glimpsed eternity, seen it reflected in the stars on the ceiling of the lagoon, and I knew that a part of me was captive there.

It is said that few complete this journey of initiation. . . . Many . . . stop along the way and are content to be healers and medicine people. They become masters of their own direction. And then there are those who become trapped by power. Lost along the way.

—Antonio Morales Baca

Professor Antonio Morales Baca had disappeared. Without a trace. Without leaving tracks. He had retired from the university. His old adobe house in the cul-de-sac near the tail of the jaguar that formed the urban plan of Cuzco had been rented by a Chilean businessman. There was no forwarding address. The clerk at the post office squinted at me and waved his hand as if to clear the air of my question. It was at the old Café Roma that I found myself watching the coffee seep crystal by crystal into the mound of sugar on my spoon, and thought of Dr. Barrera.

I found his clinic a short block from the Plaza de Armas, ended up thumbing through a ten-year-old *National Geographic* in his waiting room. It did not matter that I merely wanted a word with him. The Indian woman with the poncho-wrapped infant, the *campesino* with the gauze-covered eye, the varicose-veined Spanish matron, and the little boy with the urine specimen in the jelly jar were there ahead of me. I waited my turn.

"Professor Morales?" The good doctor arched his brows and leaned back in his leather chair. He was heavier than I remembered.

"Yes," I said. "I was a friend of his, as, I recall, were you."

"And I still am," he said. He frowned. "Did we meet? You and I?"

"Not really. We passed each other in his doorway. Years ago."

Barrera reached out and slid a gold pen across his desk and up against the edge of a prescription pad. He folded his arms across his chest, then reached up and ran a thumbnail along his little grizzled pencil mustache.

"He is gone," he said.

I nodded. "Do you know where?"

He shook his head. "I am sad to say, no."

I nodded again, looked down at the floor. "Did he say goodbye?" I lifted my gaze from the black-and-white checkered linoleum. There was a long, considered silence.

"Yes," he said.

And that was all.

January 3, 1979

Son of a bitch if Antonio hasn't died.

That I question his motives, the purity of his purpose and the authenticity of our relationship is bad enough. The thought that I will never know fills me with rage. That I cannot see him again, am cheated out of confronting him—My God! What have I done to myself that my feelings are so self-satisfaction-centered. But it would be like him to leave me with this eagle at my back, a torn heart and agonized conscience. Like the son who never had the chance to . . .

If ever I needed to center myself, realign my Self with my nature, and summon my power to heal myself, it is now. But the poetry has been lost in the prose.

What has happened to me, that I lost my arrogance years ago in the *altiplano*, informed my innocence, exercised my power, and find myself overburdened with knowledge, stuck in this place between two worlds, losing myself in my concerns.

Where did I go wrong? Where did I lose the lightness, the magic?

If you see the Buddha on the road, kill him. For he is not the way. Do not make obeisance to him or what he represents. To bow before him is to lose yourself, to prostrate yourself before a graven image, a mask of God. So if you see the Buddha along the road, kill him.

Antonio. Have you saved me the trouble? Taken yourself away? My despair is perfect.

Am going to see Ramón.

The plane to Pucallpa was delayed. I sat in the airport and allowed the misery to turn in my stomach. I sat with my butt on the tiles and my back

to the wall. Sat next to my Brazilian leather duffel bag and my soft cloth, leather-trimmed shoulder bag. There was a man across from me, a thin man with a sunburned, freckled face. He wore cotton pants and a wrinkled safari shirt. Beside him, on the next fiber-plastic chair, was a frame backpack with lots of convenient outer pockets and leather straps. He had been there for an hour, and I had watched him check his ticket and his watch, smoke two cigarettes, crumple up an empty pack, and peel the cellophane from another. For the past half hour he had been writing in a clothbound journal. Writing without thinking too hard, which I appreciated. He clicked back the ballpoint, stuck the pen in one of four shirt pockets, pulled a thick rubber band off his wrist, snapped it around the journal, and harnessed the book under the flap and strap of his pack.

He had a light blue aura. Turquoise, actually.

My eyes snapped back to normal. Why had I looked? I had not thought to. There had been a time when I was accustomed to looking. Once I had even opted to change planes for a psychology conference in Monte Carlo because the passengers' energy was curiously dim, vague, close to their bodies. (The plane developed engine trouble and made an unscheduled landing). So it was curious that I looked now, without meaning to.

He withdrew a pair of rimless glasses from another shirt pocket and looped the loops over his ears and squinted at me for what must have been the fourth or fifth time.

I nodded and squeezed out a smile.

"Pucallpa?" he asked.

"Mmm-hmm."

"Me too."

I looked at his oversized frame pack. "Engineer?" I asked.

He shook his head and grinned.

"Oil," I said.

"Nope."

"You're not a rancher. . . ." The memory of the barman at the Pucallpa airport brought up a laugh. He just looked at me.

"Anthropologist," he said.

I held his gaze for a couple of seconds.

"I know you," he said.

And he did. He had attended a symposium on holistic health at UCLA, where he was on the faculty. I had spoken on shamanism. He knew my work.

"The damnedest thing!" he said. "I've been on the coast, Temple of the Sun. I met Eduardo Calderon."

The name meant nothing to me.

"A shaman/healer in Trujillo," he continued. "An amazing man. I would have spent more time with him, but I wanted to get to the jungle . . ."

"Don Ramón Silva?" I asked.

His blonde eyebrows arched. "Yes!" He frowned. "How did you know?"

I shrugged. Realized that I would not be seeing Ramón now. And that I did not particularly care. . . .

"I think Eduardo's expecting you," he said.

I looked hard at him. Then soft. The blue was bluer, brighter, excited. I sensed something else. It could have been a wolf: fidelity, intelligence . . .

He continued:

"He didn't use your name, just described you to me, asked if I knew such a man. I said no, but seeing you here . . . it must be you. Don't you think?"

I stood. My heart might have been beating a little faster. I don't remember what I felt. I thanked him and we shook hands.

"Say hello to Ramón for me, will you?"

"I thought you were going to . . ."

"So did I," I said. "It's not important."

He looked confused. We had that in common.

"I don't know exactly where . . ."

"Kilometer sixty-four," I said. "Trans-Amazon highway, south. There's a path to the left." I squeezed his hand. "Stay on it," I said, and walked out into the sunshine.

I leaned against the wall for a few minutes, waved off a taxi driver, and breathed from my stomach. Then I went to the Aero Peru ticket window and bought a seat on the next plane to Trujillo.

How appropriate that Antonio had said goodbye, that I was prevented from seeing Ramón by the presence of that young American, that I should travel to the northern shore of Peru, where Eduardo Calderon waited for me.

Yes, the ability to see fate in history is a trick of hindsight, and hindsight is just another form of perception, and perception is the *leitmotiv* of my story. Serendipity, besides being one of the sweetest-sounding words in the English language, is a sign of well-being, an endorsement of the path of true choice.

Yet even though I felt the gentle prodding of the old ungloved hand of Nature, even though that aptitude called precognition played a part in our rendezvous, Eduardo Calderon was surprised to see me. He laughed so heartily as I stepped off the bus in Trujillo that I stood there, gripping my bag and grinning back at his laughter, smiling at the vague dizziness of *déjà vu*.

"*Compadre*," he said, and took my hand.

There is no word in English equivalent to *compadre* in this context. English is a language that has not yet found expression for intimacy. *Friend* has lost its meaning among so many definitions.

He stepped back from me and we looked at each other. If there is an archetypal shaman, a cross-cultural hybrid of a native healer, I imagine that Eduardo embodies the image. A Buddha's belly and smile, Asian Confucius eyes, a long, full, drooping mustache parted below flaring nostrils, straight black hair tied back with a leather thong and falling to the middle of his back. The laughing shaman.

He stopped laughing and his eyes described a circle around me, from head to foot and back. He shook his head and chuckled.

"You are surprised to see me?" I asked, still confounded by his heartiness.

"Yes!" It sounded like, What did you expect? "I am always surprised when a vision steps into my life. It is a happy thing. And I am surprised that you come with such darkness around you. We must attend to this."

January 5

Last night I submitted myself to don Eduardo's healing.

A circle of yellow cornmeal on the sand, a small pile of hay inside the circle. A sacred circle, the place of ritual and magic. Eduardo laid it out with the concentrated ease of a painter preparing his palette. He set out his *mesa* on a reddish brown woven cloth from the ruins of an Inca *huaca*, a power site. Two conch shells on either

side of three fields: *ganadero*, *justiciero*, *medio*—dark, light, neutral (balance between light and dark). Stone figures, a deer's hoof, an Inca sling, fetishes, a whistle in the form of a pelican, crystals, ceramics. Two flat seashells. Power staffs stuck in the sand before the *mesa*, short swords, carved hardwood and bone staffs, nine altogether.

The sky was clear. A half-moon over the flat horizon of the Pacific. There was no breeze to disturb the neat little fire that burned in the sand before the *mesa*, but there was a sea air tang.

I stood erect and self-conscious in the circle of cornmeal, shoeless, stripped to the waist. In my left hand I held St. Michael's sword, the sword of fire, held it lightly by my side. Eduardo sat cross-legged behind the *mesa*. He took up his rattle, a stick with a soiled brown hollow gourd, the Earth spinning on its axis, and he shook it back and forth from the wrist. It sounded like *chee, chee, chee*, and he sang for my spirit to come and be present. He sang to the spirits of the Earth, air, fire, and water, called upon the spirits of the lakes, the lagoons, the mountains, and the forests.

I shifted the sword from left to right, and Eduardo approached the circle, rattle in one hand, a shell of alcohol, tobacco and sweet oils in the other. He drew the shell up my body, front and back, raising it through my energy centers, then lifted it to his nose, rested its lip above his mustache, and tilted back his head, drinking the mixture through his nose. Nasal cavity, proximity to hypothalamus, limbic brain—refills the shell and gives it to me, tells me to raise it along the blade of the sword, sword in my left hand again. My hand, holding the shell, began to tremble and I spilled some of the mixture on the sand, lifted it unsteadily to my nose, threw back my head, and it ran in, back along my cheeks and under my ears, and I felt my glottis close involuntarily as the mixture fired and choked my sinuses, and I opened the back of my throat and felt it go down and in and the feeling I felt had nothing to do with the potion, for it seized me in an instant. The trembling of my hands had worked its way up my arms and filled me from within.

I can recreate the events, document them like the psychojournalist I was once. I cannot write about the pain.

The anguish and rage that welled up and expelled itself in a scream. I fell to my knees in the circle and cried out my fury, struck my head, my forehead, with a white-knuckled fist, and I saw stars. I saw the forces gathered around us, looming just outside the circle of light, saw the form of the jaguar, mine, circling the perimeter, protecting me from . . . what? The negative forces waiting to claim me in my vulnerability? They were nameless, but I knew them somehow, sensed their intent, at one with the malevolence inside of me. On my knees, at their level . . .

Eduardo called my name. He made a fist around the handle of the rattle, and the sudden spasm shook the rattle once. *Poder*. Power. Strength. I stood, drew myself up slowly against the muscles that held me doubled over in the grip of something like tetany. And Eduardo captured my attention with his eyes, wide, peering with something like astonishment into mine. Then he looked to the horizon, and I followed his gaze to the dark line between the night and the sea, saw the plane of the ocean, the rippled surface that stretched from there to here, flash silver as lightning electrified the sky. Single veins of lightning from cloud to sea, and a cloud passed over the moon.

“¡Fuego!” Fire! He turned and lifted an ember from the fire and dropped it onto the hay at my feet. It smoldered, filled the circle with smoke, then caught. I remember looking down at my hand, the hand gripping the sword, and seeing the orange light of the fire playing across my skin, wet with sweat or sea air.

I felt the fire fill the circle, fill a space like a bell jar.

I stepped over the burning pyre, crossed it south to north, east to west, and back. I washed my hands and feet in the flames from the fire, cleansing myself in its flames, then barefoot, danced on the fire, crushing the flames that had singed away the darkness that had oozed from my pores. I stood there, staring down at the sand and my feet, blackened with the ashes of the burnt hay. Eduardo sat behind the *mesa*, arms folded. The cloud had passed by, the sky had begun to clear again, even to the horizon. In the light of the half-moon he looked at me, before me, around me.

He said:

That I had held much power.

That I was stuck in a relationship with a woman I did not know how to love.

That power and magic are neither white nor black, good nor bad, it was a question of intent and expression. Unable to express my power, it had turned black within me.

That I had hunted and been hunted by an eagle, and it had fed from me. He saw where it had torn at my liver, bloated with energy turned black.

Hepatitis.

He stood and came to me, took the sword from my hand, and, standing outside of the circle, passed the blade down my body, cutting away the connections to these things past, present no longer.

That I sever my connections with the past that created my ills.

That I may put to rest the spirits of the women in my life so that I need not seek similar relationships to finish the work of the old ones.

That the eagle which came from a powerful source in my past, the eagle that was also the spirit of the East, embrace me and lead me on my journey into the North—into the *feminine*, he said.

Then he held the sword to the sky, filled his mouth with clear water, blew a mouthful along the blade and to the South, then the West, the North and East. Then at me, to purify my cleansed self.

I hope so.

Something has begun. There is something moving inside of me. Moving me. I will follow its lead. For I know that it is I moving myself.

The story of my work with Eduardo has been told in outline many times, repeated symbolically step by step by many people over the past few years. It all began with that healing on the beach near Trujillo, although Eduardo would later claim that it had begun six months before, when he first saw me in a dream, when my presence began to intrude itself on his meditations. We had even traveled together in a dream, he said. We had journeyed to Machu Picchu and stood before the Pachamama stone and he had known then that

together we would travel to the sacred places of legend, where the forces of Nature dwelled in the landscape of places sanctified by ritual for thousands of years. We would undertake the journey to the North together, as *compadres*.

Our journey would span years. Years that would see the dissolution of my marriage to my first wife, the abandonment of *Futuremind*, the writing and publication of *Healing States*, the marriages of six of his fourteen children. Years that would see us together in Europe and the United States, experimenting with the translation and transplantation of shamanic concepts into a new "psychology of the sacred."

The Medicine Wheel described to me so long ago by Antonio, embraced by Eduardo as the traditional map and commonsensical approach to the journey of the Four Winds, would be our guide. The sacred places of power that the legends spoke of would be our rest stops, our places of communion.

We would travel to the Giant Candelabra of Paracas, a six-hundred-foot-long, three-pronged tree of life carved into the side of a barren peninsula that rises from the waters of Paracas Bay, three hundred kilometers south of Lima. There, for centuries, shamans and seekers of knowledge had come to meditate for a vision, a transforming vision, to give meaning and purpose to their existence. There the eagle that had stalked me, preyed upon me for years, would fold me in its wings. Eduardo would see a condor, the giant condor that had been the power animal of his teacher, don Florentino Garcia, the keeper of the sacred lagoons of Las Huaringas.

From Paracas we would travel to the *altiplano* at Nazca, the high desert where it never rained, where unknown artists had broken through the reddish upper crust of the plateau to expose the pure white silica sand and thus carved gigantic figures of fish, reptiles, birds, mammals, human figures, and geometric shapes over an area of 350 square kilometers. There on this heavenly mesa, the "place of the power animals," we would take San Pedro, and Eduardo would watch the spirits of my past combust, burst into flame as I disappeared from sight, walking along the edge of a giant spiral in the sand. The work of the South. There we would consign our spirits to each other as *compadres*, as warriors of the heart.

And we would go to Machu Picchu. I would return to the ancient Inca City of Light. Eduardo would enter its gates for the first time. Together we would begin to discover its meaning.

The traveler follows the Dragon Path in the North to discover the wisdom of the ancients and to create union with the Divine.

—Antonio Morales Baca

April 29, 1979

The Death Stone. Again. I must commit to paper here the sweetness of a memory.

Have told Eduardo to go to the cave beneath the Temple of the Condor, outside of the ruins, the place where I performed my fire ceremony so many years ago. He is overwhelmed being here. Having visited it in dreams, Machu Picchu stands below and before him now in all its green-gray lichen-and-granite beauty. He is sort of breathless. Not the altitude. There is something ominous in the air. We both feel it and twice Eduardo has looked at me with a conspiratorial, childlike grin. "Do you feel the power, *compadre*?" I love him like a brother. An older brother, sometimes. That's a queer thing, considering that he is the Indian, certainly, a simple shaman/healer working matter of factly in the context of his community, yet with me he has found the opportunity and means to stretch himself, to live the drama of the legends that he learned from.

He has gone to prepare for his work of the West here, at the Death Stone. I need a few moments myself.

Now, sitting on the grass, the Death Stone before me, a perfect squat canoe of granite floating in a sea of grass and yellow wildflowers.

Antonio. A panoramic memory of standing here so many years ago,

carrying my hubris, my Western preconceptions, and my skepticism in a backpack. Seeing the ruins of the Inca City of Light for the first time, dusk, like now, the mists of the Urubamba Valley rising up and over the edge of the precipice. Lying on the Death Stone, Antonio chanting over my chakras, his plaintive whistle, the rustling of the grass. It was here that we “put death on the agenda.”

He told me that I would return to this place. That I would enter the city and begin to understand its secrets.

Where are you now? I don't feel your presence. And I miss you.

So here I am. I have shed my past anew in Nazca. The South. I will lie on the Death Stone again. The West.

Which way is North?

I closed my journal on my pen and slid it into my shoulder bag, sat there in the grass and wildflowers, breathed from my stomach, let the cool night air soothe my sunburned face.

An hour passed.

Lying in state on the Death Stone. Eduardo is chanting over me. The granite is cold on my bare shoulder blades and the small of my back. I listen as he pays our respects to the Four Winds, asks that my spirit be taken to the West, the regions of silence and death, blown there by the winds of the South, that it may return from the East, where the Sun rises, that I may be born in spirit as a child of the Sun.

He has had his turn here. I let instinct form my incantation, disengaged his chakras, stepped back, and waited. And I thought I saw something vaguely luminous, something that was Eduardo, but thinner, younger perhaps, disengage from his great belly rising and falling with each breath. I told him afterward that he was carrying too much weight, too much softness, with him. I have often sensed that his work of the South is incomplete, that he has reconciled himself with his past, his ancestry, but he is burdened by it still.

He told me that he felt himself going into the stone, felt a powerful fear in his belly, the claustrophobia of premature burial. Then he saw below

him a light, far off, growing larger, coming nearer, and as he fell into its whiteness, I brought him back. He is impressed with my skill.

Now he is disengaging my chakras, touching my forehead, my neck, my heart. . . .

And I wonder, What is the difference between birth and death? Death, the light at the end of the tunnel, the birth canal, light at the end, the light of the world into which we are born. Perhaps, I think, the fear of death, beyond the associative fears of pain and loss, is a vestigial memory of the first fear, the fear of birth, the unknown at the end of the tunnel.

Breathing, regular heart rate, meditative. Wind rustling the grass. I open my eyes, smiling, turn my head to look at the figure at my side, standing over me, arms extended, palms down, a gold bracelet from which a feather hangs, an arm band of hammered gold. Breath catches, held high in my chest. The face: Incan, chiseled brown face framed by two feathers, earring ornaments piercing the dead ears of the jaguar headdress that covers his head and shoulders with black-furred catskin. I reach out impulsively to touch him, my hand passes through his arm, and his eyes, too black to see, open, and he turns away as I sit up, hang my legs over the side of the Death Stone, see Eduardo sitting cross-legged in the grass at the base of the stone, the stern end of this granite canoe.

“Eduardo!”

He blinks up at me, and I jerk my head in the direction of the jaguar priest, walking—moving, rather—down the hill toward the Gateway of the Sun, the entrance to the ruins.

It was after midnight when we entered the ruins of Machu Picchu. We lost sight of the apparition as it moved down the hill, and by the time we stood at the Gateway of the Sun, we may have been the only visible presences in the place.

We had specifically planned to spend the night of the full moon there, and its light cast shadows on the courtyards and glinted silver-gray on the edges of the fitted granite block walls.

I led the way to the Temple of the Condor, past tumbled-down walls revealing rooms open to the weed-grown stone pathway, into an open area, where three massive walls and a stone dais are all that is left of the Great Temple.

“There!” Eduardo nodded toward the central wall. “The place of the spirit flight.”

We continued on, between the walls of the ball court, descended a

short flight of steps to the right, and stood among the ruins of the Temple of the Condor, directly above the cave where I had once performed my work of the South.

There is a flat, smooth, vaguely triangular stone in the ground at our feet. The stone suggests a condor, a fanciful condor, its head turned back on itself, looking within, neck folded back from the collar at its throat, and I know that the ridges along its beak allowed blood to flow from the surface of the stone and into the space within the collar.

In one of the most spontaneous moments of my life, I withdrew a Swiss army knife from my pocket and cut a small slit in the tips of each of my middle fingers.

And I brought my hands together in the position of an inverted prayer, palms together, fingertips touching, pointing down, and the blood dripped from my fingers and onto the granite beak of the condor.

"What are you doing, *compadre*?"

I still don't know. Once a condor had appeared to me on a silver slip of sand by the lagoon behind Ramón's hut. It had surprised me, had surprised Ramón, and it had pecked the pieces of my dripping face from the grains of sand. It had fed on the mask that I had worn. Now, as the blood stained the gray granite beak, I knew that that condor was the same as the eagle that had taunted me for so many years, the spirit of the East, of vision, of Antonio, worrying me, challenging me to complete my journey.

And I realized something else in that moment. I realized that the work of the West is not only about giving yourself to death so that you can be claimed by life, but it is also about your willingness to give your life for something that you believe in.

I staunched the bleeding with my bandanna, and we climbed the steps and walked back into the courtyard where the Great Temple had stood.

"We can fly here," says Eduardo, and climbs up onto the dais, an enormous stone step protruding from the base of the central wall. He sits in an attitude of meditation, an Indian Buddha, head resting back against the water-stained granite blocks of the wall. I sit in the courtyard, facing him. The bleeding has stopped and I watch Eduardo closely, try to will myself into a sympathetic state, abandon the effort, and concentrate instead on centering myself.

Ten minutes pass and Eduardo is down from the stone, whispering to me. He has seen a figure, older than the Incas, a man in ceremonial feathers, a glowing golden breastplate over his heart.

"Here!" He moves to a spot between the wall and the place where I sat. "He stood here and pointed down." Eduardo places a hand on my shoulder. "I saw him from above, *compadre*. There is something buried here, I think it is a room. We must dig to discover what lies below." He taps his forehead.

I take my turn at the Temple of the Spirit Flight, boost myself up onto the stone and lie on the smooth granite bed, and feel Eduardo touch my forehead with his palm.

A sense of peace and relaxation settles over me, from my head down, as though my whole body sighs, oxygenated blood tingling through my veins. I exhale all tension and anxiety. I can lie here for a long time, no matter that I am in my body, that I see nothing but the blackness behind my eyelids, that I do not soar like an eagle, and it takes no effort to stop my mind from even these reflections.

I do not know how much time has passed, but I hear Eduardo.

"Good. Sit up now."

I sit up, step down from the stone, and cross the courtyard to where he stands, smiling, staring still at the dais.

"Well?"

His head turns, face still grinning foolishly, he looks at me and gestures toward the stone. I turn and look at my body, lying still on the stone. My face there smiles.

"Go back now."

And I opened my eyes on the stars, ghosts of clouds passing across the sky, the moonlit granite wall rising above me to the right. I jumped to the ground and Eduardo clapped his hands and our laughter echoed in the spaces between the maze of the walls of the citadel.

In the years that followed we would explore every corner of the Inca City of Light. I would hike the sixty-kilometer Inca Trail from the outskirts of Cuzco to the Gateway of the Sun, come to know the secrets of the Temple of the Waters and the Temple of the Serpents. Every chamber, angle, and nuance of the place would be known to me, and I would understand the Indian legends that speak of Machu Picchu as the doorway between the worlds, where the veil that separates us from our dreams and the stars becomes thinner, diaphanous, easily drawn aside. That night my footsteps led me north through the courtyard, to the edge of the city, where there was a stone rising out of a meadow.

I knew which way was North.

*What is god, what is not god, what is between man
and god, who shall say?*

—*Euripides*

The Pachamama Stone stands in a meadow at the edge of the ruins of Machu Picchu. Twenty feet long, ten high, an irregular, curved edge, smooth granite face, like a precision-cut cross-section of a boulder that grew from the soil of the field. Behind it and to the left, Huayna Picchu looms darkly, its peak a thousand feet above the ruins.

The full moon cast a shadow of the stone onto the meadow, a shadow of its other half. We stood in the grass at the edge of the irregular shadow of the stone, and Eduardo told me that there was a legend that told of an old medicine woman who lived within Huayna Picchu. The caretaker of the temple.

“Grandmother peak,” I said.

“Yes,” he said. “The Temple of the Moon. It is said that there are tunnels and labyrinths inside the mountain. It is the way into the *nagual*, into the North.”

I stared at the speckled granite surface of the stone. It could play tricks on you with its gray-and-brown, black-and-white stone face. You could see things in it, but nothing more than you could see in any patterned surface if you looked hard enough.

“No,” I said. “The way to the North is here . . . and here.” I touched my belly and heart and remembered Anita, sitting across from me at the Café Roma, touching her pregnant belly. “All along, I imagined it was here.” I tapped my forehead with the side of my forefinger. “But it’s not.”

And I realized that that was the trap: that our rationalization of things ephemeral, our intellectual framing of the transcendent, the thinking brain’s

version of the Divine, was just another mask of God. That all expressions of God, like the word itself, formed in the brain of language, were merely thoughts about that which is beyond thought.

No. *Before* thought.

Before consciousness itself. To speak the name of God is to name the unnameable, to carry a concept of the Divine within our heads is to carry a shield between us and the experience of the Divine. Jehovah. The "I am that I am." It cannot be thought about. All notions of God are blasphemies.

Things that can be known but not told.

April 30

I thought that the *nagual* would look like infinity.

I thought that I would experience the *ayin*, the divine nothingness spoken of in the cabala.

I thought I would look into the eyes of the Lady behind the veil and see the birth and death and destiny of the universe.

I thought there might be a blackness of such infinite hollowness that I might fall into it, into echoing bliss, and I was willing to risk never returning, losing myself in a self-transcendent flame-out (so maybe I *am* beyond fear).

I thought that in a grand way I might experience myself as God. . . .

"We should perform a *mesa*," Eduardo said.

"Later."

I stepped farther into the meadow, nearer the Pachamama, into the shadow, and sat down. I had no purpose. We had taken no San Pedro, had engaged in no ritual, save for those that had evolved spontaneously: the Death Stone, the Temple of the Spirit Flight. There was no anticipation to sensitize me to the moment. I just wanted to be there, at the doorway to the feminine, sit in a meadow that was somehow ideal. Ideal Earth, the gentle Earth, of which we are caretakers, the potential Earth, of which we are at once co-creators and stewards. I wanted to dream there for a time. I could sit there breathing until the Sun came up to wake me.

I open my eyes with that last thought, aroused, suddenly, by some-

thing that approaches me from the stone, stepping through every grass blade and weed stalk between me and the Pachamama.

"*Hija de la montaña . . .*" Eduardo, standing by a stone ledge, off to the right, hisses. "Daughter of the mountain . . ." standing over me now, in the moon shadow of the stone. Her eyes shining darkly down at me, a braid of perfectly black hair falling over her shoulder, beside her naked breast. An Indian maiden, her feet bare, sunk into the soil, like a double exposure, like my own legs, crossed before me, under the surface soil, among the roots of grass and weeds. I touch the soil, take a handful, and it sparkles, iridescent, glistening moist, and my loins are aching the dull, engorged ache of arousal.

"*Compadre . . .*"

She touches me with her hand, at my shoulder, pushes me back, on my back, chest deep in the soil of the meadow. She on her knees, over me, stretching out, laying over me, chest to chest, crotch to crotch, thigh to thigh, the Earth rocking gently beneath us, with us, shuddering with us, a series of orgasms, my groans, my sighs lost, muffled as she pulls my head down into the soil, and I understand something about the nature of sex, something of the male perversion of intercourse, of penetration: the gaining of power through conquest, when, in fact, the collapse of the duality of male and female is a doorway, a way back into the Garden. Something like that. And I think she whispers to me, "my son, my child, my lover, my brother."

I give myself to her, surrender myself to the aged crone that she is when she lifts herself from me, eye to eye, her face worn and wrinkled, the thin gray braid: the medicine woman from the *altiplano*, she who held my hand as El Viejo died. Her breasts sag like wrinkled pears, her lips stretch in a yellow-toothed smile, the corners of her glistening black, black eyes wrinkle, and she laughs and I draw her down to me, inside of me.

Strange that I feel no repulsion, stranger that as I surrender myself to her, she is once again blemishless, young and strong, the daughter of the jungle? Breathe in her humid scent, the Amazon?

Lover, sister, mother, crone. What metamorphosis is this? Do I change too? The heartbeat that I feel is within me, not mine, above and below, at once.

As am I. Where is my place? Are there two of me? Here in the meadow and here, beneath the ruins, seeing the city from the bottom up? Cradled by the Earth, the dirt and stone. Three of me, because there must be *another* me, the one thinking this thought.

A shuddering climax in the meadow, she pushes herself up from me

and back. Legs straighten and she stands before me, Indian maiden, daughter of the mountain, walks away, toward the stone, stops there. She turns her crooked yellow medicine woman smile to me, a last look, and steps into the stone.

. . . But the North was none of these things that I thought.

Last night I fell into the Earth, returned to it, a prodigal son. I witnessed something that I will try to understand, then leave alone.

Time is not inflected by gravity in the center of the Earth.

Time lapsed.

And there was the I that lay in the meadow, dreaming.

The I that fell into the Earth saw it from the inside out, sensed its fertility, its pregnancy. Floating in space within the Earth, a prebirth experience in a rock-and-crystal-lined amniotic sac, feeling all the while that I knew what it was to be pregnant, to hold life forming within me.

And there were faces there. I saw them on the walls of the space that I inhabited, on the edges of my awareness, in the corners of perception. Faces ancient as the mountains and of the same stuff, earth, rock, volcanic wrinkles, liquid eyes, everywhere I looked, at every moment, within the moment, simultaneous, infinite exposures.

Was this the council of elders? The crystal cave of legend?

Another mind began to assign historical, religious significance to them, the Christ, the Buddha, undreamed-of faces that I knew, recognized, but could not identify. . . . Antonio? Don Jicaram?

"Antonio?"

The word is carried on a wave, a concentric wave, before me, and the rocks shift, the ice melts, water trickling along new crevices, features forming, replacing the old with the new, another face, and no! This mind is stuck in the past. The mind of graven images. I need not will myself to see and understand. Yes, I can see that other mind thinking now, as the shapes shift. Let go. I do not need to identify you to know you. All of you. I need not think here.

There are memories here in these faces, faces of the ancient ancestors. I cannot place them, need not place them, but will I remember?

Meanwhile, there were still stars above. The moon was steady in its

orbit, moving across the Machu Picchu sky, the shadows were shifting, Eduardo was approaching, cautiously. . . .

And I wonder if I cannot claim the lineage of these men and women of the past. We are family, of course, because we come from the same place, share a heritage.

The Sun impregnates the Earth, and life is born of that union, the mating of Sun and Earth. The creative principle, single-cell consciousness. It is the Nature of things.

I awoke this morning, cold and stiff at sunrise. Damp with morning dew soaking my shirt, clinging to the narrow weed stalks of the meadow. I slept in a fetal position, huddled against the cold of the night. Eduardo draped a poncho over me last night. I found Eduardo not far off, asleep in a corner of a thatched-roof stone hut fifty paces from the Pachamama Stone (which looks particularly cold and formidable in the light of day).

Thought awhile before waking him up.

The sun was not yet over the mountains to the east, and there was time to think before waking him, before the first rays of the morning touched the Inti Huatana.

I decided that I had fallen asleep and dreamed. Eleven thousand feet and we had been hiking all day yesterday and I had been overcome by the grandeur of this place and my own physical exhaustion. I decided that I had fallen asleep in the meadow and dreamed the maiden, the descent into the Earth, the walls of the space in the center of the Earth, my fractionated consciousness, my many minds, a kaleidoscope of ecstatic states. . . .

A dream.

And Eduardo had left me to dream, covered me with a poncho and left me there in the meadow, in the playing fields of sleep.

"You've been fucked by God, *compadre*." Eduardo's first words to me on waking.

Eduardo had stood on the edge of the clearing and witnessed my lovemaking with the maiden.

I tested him. The clinician to the last, I said nothing, just listened. His description of the Indian woman was correct to the final detail. He laughed at his own description of me copulating with the crone in the meadow before the stone.

He said that I had appeared to fall into a trance, *un ensueño*. He was afraid to approach, afraid to disturb my state. He sat nearby, on the edge of the clearing, and the night was alive with energies. Luminous figures, many with golden breastplates, hooded figures of men and women, white condors with ruffled necks, spiraling lights. In a reverie he had traveled to the top of Huayna Picchu, where, he said, there was a Temple of the Moon, long ago destroyed, walls, pillars, portals, existing as energy forms etched with geometric figures, and, at the entrance, a Sun framed by two half-moons shaped like cats: the marriage of the Sun and the Moon, masculine and feminine.

He had returned to the meadow, seen that I had fallen asleep, had covered me with a poncho.

We left the Pachamama and crossed the courtyard, climbed the steps to the Inti Huatana, the "hitching post of the Sun," where the Sun was tied by Inca priests on the occasion of the winter solstice.

As the Sun crested the mountains to the east and its first rays touched the stone, so did we touch our foreheads to the cool granite surface. And, in so doing, acknowledged the gifts of this place, made our obeisance to the spirits of those who lived here, died here, and the legacy of insight that these stones represented to those who came with purity of purpose and impeccable intent.

East

No theory is good except on condition that one uses it to go beyond.

—André Gide

I need not elaborate much on my years of work with Eduardo. As he had foreseen, we traveled together, laughed together, discovered together the places of power and how they lent themselves to the stages of the Medicine Wheel.

Although curiosity about non-Western healing, both physical and psychological, had drawn me to research and document healing traditions in Mexico, Brazil, and Peru, my experience had taught me something of the fundamental concept of shamanism: that changes in health cannot occur without changes in lifestyle. With time my interest in healing became an interest in personal transformation. It had become increasingly clear to me that the journey of the Four Winds, the path of the Medicine Wheel, was a journey into Eros, the feminine, the intuitive mind, the place of myth and dreams. Most of the human species was living under the dictatorship of logos, the patriarchal, rational mind of the last half of the second millennium.

The concept of a psychology of the sacred began to take shape, and, in 1983, I invited twelve individuals from five countries to join Eduardo and me on a journey of initiation, an introduction to the steps of power along the Medicine Wheel. We would travel, as Eduardo and I had, to Paracas Bay, to Nazca, to the Temple of the Sun and the Temple of the Moon near Trujillo, and to Machu Picchu. The extraordinary experiences shared by this cross-cultural “tribe” would form the basis of *Healing States* and a six-hour documentary film of the same name.

There is no specific formula for transformation within the shamanic

tradition. There is the concept of the Medicine Wheel, the Journey of the Four Winds; but the lessons learned and skills acquired along the way are not dependent upon specific places of power. Shamanism is not a religion; it is not a regimented system of devotion. Ultimately it is an attitude, a personal discipline, a state of mind. I once asked Antonio if the healing spirit occupied the unconscious mind. He shook his head and replied that spirit is simply mind at its purest. That exchange has always held for me something of the essence of his teaching.

Nevertheless, Eduardo and I had discovered a tightly knit program, a travel itinerary, that served the steps of the Medicine Wheel, and the high plateaus, sacred peaks, and wild jungles of Peru would be my laboratory, my classroom, where I would experiment, teach, and learn.

Perhaps in creating a forum for learning through experience, by leading groups on such expeditions, I began my own work of the East. According to legend, the eagle path in the East is the return to one's tribe. In the East the individual accepts the gift of vision and the task of exercising that vision to create a better world politically, ecologically, and personally, to dream the possible future. Indeed, I had no interest in people seeking a self-serving transcendental experience. Luckily, those who have traveled with me over the years have, by and large, used their experiences as starting points for their journeys, not as the end products.

But although I imagined that I had found the way East, I was only half right. As usual, there were challenges yet ahead, just over the horizon.

Don Florentino Garcia had been Eduardo's teacher, his mentor. I never met the old man, although I would have reason to feel the effect of his death. Don Florentino was the keeper of the sacred lagoons of Las Huaringas, the place where legend held that shamans had come for centuries to receive their initiation as masters. When the old man died one February, it fell to Eduardo to take his place, to journey to the lagoons and claim his stewardship over its waters and initiations. According to untraceable tradition, he had one year from the date of don Florentino's death to assume his responsibility.

But Eduardo, my friend and *compadre*, had begun to fall under the spell of his own power, become seduced by his own persona and the sychophancy of the New Age Europe and United States. He traveled the shamanic circuit, serving the popular folklore. It is the trap that waits for those who identify themselves with their teachings, carve graven images of themselves. We continued to work together, but I soon became sensitized

to his growing weakness. He avoided his journey to the lagoons, and the responsibility began to follow him and sap his strength.

As the February approached and, with it, the date that would mark the anniversary of don Florentino's death, I invited a select group of friends and traveling companions to join Eduardo on his pilgrimage, to participate in his ceremony of the redemption of Las Huaringas. It would be a difficult expedition, requiring us to pack into the hills on horseback and on foot, with burros to carry our gear.

When we gathered in Cuzco, Eduardo announced that we would not be going. There had been rains, he said, and the roads and paths had been destroyed. Another time, he said.

We made the best of it. We traveled instead to San Pedro las Castas and the lagoons of Marcahuasi, situated atop a mesa at twelve thousand feet. We descended to the lagoons through ancient ruins to a natural amphitheater surrounded by smooth granite monoliths carved by time and the elements and eerily resembling human faces. There we performed a ceremony of initiation that mimicked that which Eduardo had avoided in Las Huaringas. It was a powerful experience to those who had made the journey, but it was not what we had set out to do, and, watching Eduardo there, I knew that he had failed his challenge. That he had lost an opportunity.

Two events that followed in close succession are worth noting.

The group assembled in Machu Picchu. All those gathered had been there before, and our spirits were high as we entered the ruins at the Gateway of the Sun while Eduardo stood to one side, learning against his carved ceremonial walking staff, and I brought up the rear. I paused before entering and smiled at him. He shook his head and turned to enter the city, planting his staff before him.

Before my eyes, and the disbelieving stares of our group, Eduardo's staff, six feet long hardwood carved in the form of a serpent, leaped from his hands and snapped, fell to the ground in two pieces. He was profoundly shaken by the incident. I suggested to him that this might be an omen, a sign that he, or perhaps we, should not enter the ruins. He waved me off with an impatient gesture, and we crossed the courtyard together.

Ten minutes later, at the Inti Huatana, Eduardo was seized by what I and a medical doctor with the group recognized as an epileptic seizure. He screamed my name and fell face first onto the stones, his eyes crossed hideously in his badly torn face, and, had we not managed to force a bandanna into his mouth, I am sure that he would have bitten through his tongue.

Elliot, the physician, and I carried Eduardo from the ruins, down the hill to the hotel. He recovered physically from his anomalous seizure, although I feel that he is still recovering emotionally, psychologically, spiritually.

Las Huaringas was destroyed later that month, one year to the day after don Florentino's death. The wooden thatched-roof huts that ringed the lagoons were burned; the standing walls of the temples there were knocked down, and the waters were polluted with the charred refuse from the fires. There were shamans in the area who, angered by Eduardo's resolution to share his knowledge with outsiders, disapproving perhaps of his work in Europe and the United States, may have been responsible for the ravaging of this place of legend. We will never know and it is of little consequence. Perhaps someday Eduardo will return to the lagoons and begin to repair the damage. I will be honored to help him.

It was also at this time that an idea that had been struggling to form itself for years began finally to take shape. I cannot identify the moment when it crystallized. It did not spring fully formed and armored like Athena from the head of Zeus, but I was able, one night in Cuzco, to write about it in my current journal.

June 21, 1983

Tambo Machay

Think of Medicine Wheel as a neurological map for overriding the four operative programs of the limbic brain—fear, feeding, fighting, and sex.

Can look at the Medicine Wheel as a simple progression starting in the South: shedding of the past, death, birth, flight.

South, West, North, and East.

Fine. Can we relate the four directions to the four Ps?

The mythological themes of the South seem to address the feeding instinct, the “making sure our plate is full,” our hunger for love, support, and filling our bellies. Our attachment to the things of the

world. In the South we shed our personal past, shed the self that is an outcast from the Garden and condemned to travel naked, hungry, and unloved by Nature.

And we free the spirits of our personal past, that they may find peace and that they may no longer feed on our present.

Am I grasping for straws, or am I close to something here?

I think I am close, because the South is the Serpent Path, the uruboros, life engaged in the process of eating, life eating life. Feeding.

There is something here, it is metaphorical, mythological. . . .

The West. This is easy. One goes to meet one's death and step beyond fear. By facing death and learning the spirit flight, we identify with the transcendent, immortal Self, we free ourselves from the grip of fear and claim our lives to the fullest, for we can no longer be claimed by death. We face the unknown, that which we fear the most. Fear.

The North. The Feminine. Eros. Where we claim the lineage of men and women of knowledge. The place of the androgynous mind, the creative principle that we personify as God, the union of Sun (masculine) and Earth (feminine), from which all life claims a common ground. Sex. Obviously.

The East. The way of the visionary, whose task is to overcome pride and self-aggrandizement, to envision the possible human. The place of nonviolence in a world divided by struggle. Fighting.

How curious that this ancient formula could relate to the prime functions of a primitive brain, functions that have kept human behavior and consciousness in check for millennia.

Thoughts tumbling over one another: The neocortex developed at a time when primitive man was living under the influence of an absorbed limbic brain, i.e., an animistic environment in which all things in heaven and Earth were visible, living things. The limbic brain was supersaturated with the stimuli of the environment when the neocortex made its appearance, allowing the human to become self-reflexive and distance himself from the environment and its in-

fluences by invoking logic and assigning definition to experience—the exodus from the Garden—here man has become as one of us in knowing good and bad. . . .

And, even after the appearance of the thinking brain, the limbic brain continued to drive the neural machinery and steer the course of human history.

Feeding—our oral and anal fixations—our first act as infants, to seek the breast, to continue to associate food with security and satisfaction.

Fear—of conflict, pain, death certainly. The unknown. We will go to any length to avoid the things we fear.

Sex. Need hardly make the point. We are a race driven to distraction by lust, capable of consumption by passion.

Fighting, the violent impulses that we harbor, that can be directed outward toward others, or inward toward ourselves. Suicide is an internalized murder impulse.

Sociological manifestations:

Grain is rotting in silos while millions go hungry at home and abroad.

Billions of dollars are made annually by advertisers targeting our fears.

Sex and violence share equal billing. Violence in the media is graphically unprecedented. New forms of pathological violence are breeding in our cities: the madman with the automatic weapon who massacres schoolchildren, the woman who kills middle-aged men and buries them in her backyard, the pack of teenagers who beat and rape, laughing, sliding on the razor edge between pain and pleasure.

Are we approaching saturation? Again?

Is the ability to override the prime directives of the primitive brain, to step into a new and grander consciousness the next quantum leap in the evolution of this species?

A consummation devoutly to be wished.

A few months later I stood beside the Death Stone, on the little hill overlooking the ruins of Machu Picchu. The group had worked diligently in

Paracas Bay and Nazca. Now we were preparing to engage in the ritual of symbolic death before entering the gates of the city.

The Sun, radiant in the thin Andean air, had broken through the cloud cover of the morning.

"In Nazca," I said, "we discovered that the past that binds us, restricts and guides our behavior, must be captured before it is set free, found before it is lost, worn until it is sloughed off."

I shielded my eyes from the glare of the Sun and happened to glance down to my right. A group of children had entered the ruins. They were headed for the Inti Huatana.

"What we are doing is attempting to enter into a realm of metaphor and myth. With the use of ceremony and ritual, we are engaging with, playing with, the symbols and poetry of a primitive consciousness, bypassing the question-and-answer discourse of our rational minds. There are no hard and fast rules. Our only obligation is to be fully present in the context of these rituals, to free ourselves to whatever we experience. . . ."

That, I believe, was the gist of what I was saying when I glanced again to my right and noticed the figure leading the children. It is some distance from the Death Stone to the Sun Stone, too far to identify an individual, but there was something about the way he moved. A poncho and a wide-brimmed straw hat moved with a familiar stride away from the Sun Stone and disappeared around a corner.

I interrupted myself, excused myself from the group, and trotted down the hill, through the Gateway of the Sun, and across the courtyards of the city. The schoolchildren were not wearing uniforms; they were Indian children, probably from some rural community or village nearby. They sat politely around the Sun Stone, chattering, playing with flutes, whistles, and other such artifacts available at the train station at the base of the mountain.

I hitched up my pants, squatted beside one, a little girl, and asked where her teacher was. She smiled up at me and pointed back toward the Temple of the Spirit Flight. He had gone, she said, to fetch Julio.

There is a room, a chamber behind the Temple of the Spirit Flight. It is an echo room where words whispered reverberate, can be heard even on the other side of the wall, at the dais of the temple. It was there that I found him. He was tying a strip of cloth to Julio's leg. The little boy had wandered away, tripped, and skinned his knee.

"Antonio?"

He looked up from beneath the brim of his straw hat, and the wrinkles of his face creased in a wide grin. His eyes still glistened.

"There!" He held Julio's face in his hand and said, "Run back to the group now. I will be with you in a moment. You be in charge until I return." The little boy smiled and wiped his cheek with a soiled hand and ran off to join his playmates.

*I can't just suddenly tell you
what I should be telling you,
friend, forgive me; you know
that although you don't hear my words,
I wasn't asleep or in tears,
that I'm with you without seeing you
for a good long time and until the end.*

—Pablo Neruda

Antonio had grown old. There was nothing surprising in this, it was only that my assumption of his death had frozen the image I carried of him. But here he was, a handsome old Indian in his mid-seventies, sitting on a lip of granite. He removed his hat and I saw that his hair, once silver-gray, had turned white.

I just stood there, transfixed by his presence.

"Well," he said. He looked me up and down, my trousers, hiking boots, cotton shirt, sunglasses pushed up on my forehead. "I am glad to see that you have not turned into an Indian. Are you hungry?"

He reached under his poncho and produced his little woven pouch.

"Where the hell have you been?" My question bounced off the walls a couple of times, and I moved to a spot I knew would not produce such a raucous echo. Don Jicaram molded a ball of yucca and corn paste.

"I am an old man," he said. "I have returned to my people. When you returned to your home, I realized that my old suits were as unbecoming on me as a poncho and straw hat would be on you." He smiled at this and handed me a portion of food. Our fingers touched and he looked up into my eyes. "It is true that a shaman can leap between the worlds, not only of spirit, but the worlds of culture. You have shown that. So have I. But it was time for me to go home."

"I thought that you had died."

He raised his eyebrows and nodded. "I did," he said. "I died to one of my lives. But you should have known that there was no cause for mourning or anger. Like the jaguar, we have many lives. Part of our task is to learn to leap gracefully from one to the next when one comes to its natural end." He unslung his *bota* from his shoulder and took a drink and handed it to me. "You have been busy," he said. "I am glad."

And I began to tell him of my work, my return to Peru, my meeting Eduardo, my journey North, but I stopped just after I had begun. He knew where I had been. I could see it in his eyes. We grinned at each other. And then he changed the subject on me.

"The thing to understand," he said, "is that the awakening of the ancient memories of the North is not you, the individual, remembering, because you will only remember the events of your life. It is, rather, stepping through the crack between the worlds and taking your place among the twice born, all those who have conquered death. They are those who have done battle with the archetypes and the forces of Nature to become persons of knowledge. They are our ancestors, the trustees of the Earth." He pulled two cinnamon bark sticks from his pouch and handed me one and stuck one in the corner of his mouth.

"The maiden who came to me from the Pachamama . . ."

Antonio laughed with delight. "So! You met the crone, the spirit of the Mother. How did she appear to you?"

And I explained to him how she had stepped out from the Pachamama Stone, maiden and crone, had made love to me, had impregnated me with an awareness of life there, in the meadow.

"She touches us all in different ways," he said. "When I first met her she took me through the labyrinths." He inclined his head in the direction of Huayna Picchu and the Temple of the Moon. "Obviously she used the means that would most capture your attention."

"Did you see the faces?" I asked.

He nodded. "They are the ones who have come before us and who will follow." He removed the cinnamon stick from his mouth and said: "Become them and allow them to become you, and their memories will grow in you, for they are who you are becoming. You must stand on their shoulders, just like Julio and the other little ones will someday stand on yours."

There was a long pause. He stuck the bark back in his mouth. "History trusts us with a responsibility and we abdicate, take refuge in the drama of our personal past. We dishonor history and the lineage of our species when

we do not honor our ancestors. We must step outside of ordinary history and go beyond."

"And the Eagle Path?"

"The way of the visionary," he replied. "Where we dream with our eyes open. We all have a future, my friend, but only men and women of knowledge have the possibility of a destiny. In the East the shaman assumes full responsibility for who we are becoming and influences destiny by envisioning the possible."

"There is a popular belief that there are ways of achieving transcendence and gaining control of one's destiny," I said.

He sucked his teeth and shook his head. "Destiny is not something over which you seek to gain control. Control of one's destiny is . . . an oxymoron. But a man or woman of power can *influence* it. Learn to dance with it. Lead it across the dance floor of time."

"Where do you begin?" I asked.

He lifted his brows in a question, looked at me for a long moment, and then nodded. "With the children," he said. He tapped the top of his head with his forefinger and smiled broadly. "The crack between the worlds," he said. "The gap in the skull that we are born with, that closes soon after birth. The seams are still there. They mark the spot." He waved his hand as though to brush away all but this: "We can split atoms and splice genes. The threads of our destiny are in our hands. The task is in braiding them together and leading ourselves into the future."

"And it begins with the children," I said.

He nodded, then stood. "And I must get back to mine."

He slung the *bota* over his shoulder. He placed a hand on my shoulder, as he had done so many times in the past. "Don't stop now, my friend. Stand on our shoulders and look to a distant horizon. We live through you and within you. I see you every month in my full-moon fire." He cleared his throat. "We will meet again," he said. "We have traveled well together, and there are places where I cannot go alone."

He took my hand in his. "It is good to know these things, is it not?"

I squeezed his hand. "*Hasta pronto*," I said.

"*Hasta pronto*," he said. And he was gone.

I have not seen him since.

I returned to the group; we completed our work at the Death Stone, entered the ruins, and spent the night there.

The next morning we made our way down the mountain and boarded

the train to Cuzco. There are little girls, Indian girls of ten or twelve, who sell trinkets to the tourists, souvenir ceramic beads, necklaces made from old Peruvian coins, flutes and whistles, and such, and over the years I had come to know most of them. As I was boarding the train, one of them, the youngest, called my name. I turned and smiled down at her.

"The old man told me to give you this," she said. She held out her hand, and I took the tiny cloth-wrapped bundle from her palm. I thanked her, bought a couple of simple silver earrings, kidded with her, took my place on the train, and unwrapped the gold owl from don Jicaram's *mesa*. Night vision, forgotten knowledge, the object that I had held the first time I had run, fully conscious, through a forest on the *altiplano*.

*Between the idea
And the reality
Between the motion
And the act
Falls the Shadow.*

—T. S. Eliot

*April 5, 1987
Machu Picchu*

After hours. Writing by the light of the fire, the best light to write by. This is a unique group. Ten of the eighteen have *not* been inordinately blown away by ritual, have *not* sought instantly to frame their experiences in intricate superstructures of logic and preconception. Their skepticism is healthy, not a thing to fall back on, to find temporary comfort in.

C. is making an issue of keeping me in line. I'm getting sick of her feminism, though. East Coast liberal, stubborn, privileged, Phi Beta Kappa-type, pain in the ass that she is. An M.D. to boot. At least two of the men are in love with her and she remains independent and aloof, her spirit is indomitable. *She* is indomitable, or acts as though she *thinks* she is. We'll see.

"Close your eyes."

"Why?"

Why. We had boarded the train from Machu Picchu to Cuzco. I had purchased the tickets that morning and had doled out a small fortune in *mordida*, money to assure the group of first-class seats on an overbooked train. It had been easy to arrange for us to share a compartment.

"A surprise," I said.

Her eyes, hazel green, searched mine. I raised my eyebrows. "Close them."

She drew a deep breath, exhaled with something just short of a sigh, and closed them. I pulled a grenada fruit from my pocket and split it open with my thumb. She was smiling. The fruit was ripe, juice dripping from my fingertips to the floor of the compartment.

"Well?" she said.

"Open your mouth."

Her smile lifted into a grin, and she leaned her head back and to one side. I looked at her neck. She shook her head.

"Don't you trust me?"

"No."

"Open it," I laughed.

She seemed to make a decision. Her shoulders dropped half an inch, then her lips parted, tongue ready to taste anything. I reached across, hand wavering slightly with the rocking of the train, and placed a wedge of the fruit between her lips. She bit down and the juice ran down her chin. She caught the drop with her forefinger, opened her eyes, and smiled at me with them.

I went to Brazil to write. She returned to New York, then followed. A month later I held a seminar in Germany. She surprised me there. I moved back to Marin County and she gave up a second-year residency at a prestigious hospital to move with me. She applied to three hospitals, was accepted by three, and is currently working at Stanford University Medical Center.

In February of 1988 I led an expedition on a trek along the Inca trail to Machu Picchu, and returned to witness the birth of our son in March.

January 7, 1989

Death Valley

Second day, three-day workshop in the desert. Missing C. terribly. No phone. Spoke with her night before last. Aching for her. Ago-

nizing over whether or not Ian will remember his father after a week's absence. What sweet pain this is.

Midday and the group has scattered, wandered off into the desert. We are fasting and they have left our circle for a day's vision quest. I have built a makeshift signpost of desert driftwood, a red bandanna tied to a long branch like a flag to mark our rendezvous point. I should stay here to maintain a center for them, yet I feel that by-now familiar something moving me.

There is something out there on the eastern horizon. I can see where it is, though there is nothing to see but sand dunes, a mile off.

But I must wait here. It is my responsibility to wait, to hold the center.

Later

Hell with it. This is too strong a pull, and the anxiety is turning my stomach.

I left the circle and headed off over the dunes. January in the desert and the sun was baking the sand and the air that during the night had been near freezing. It was much farther than I had thought, like those dreams where you walk toward a thing on the horizon that keeps receding, because a horizon is relative to you, and you know that you will never reach it, although you feel yourself drawing nearer.

The sand was virgin, soft and deep, and by the time I reached the base of the dune that I sought, my legs were aching, the sweat was dripping down my face, neck, and chest. I had shed my parka and tied it around my waist, peeled off my shirt and tied it around my head. Above me was a lip of sand at the crest of the dune, wind-whipped to a fine edge, and I struggled up the slope, two steps up, one step lost, sliding back in the sand, halfway up, only to slip back to the base, sand sticking to my arms and chest, overheated, panting at the effort.

I turned and looked back in the direction from which I had come, squinted against the reflected sunlight, could not see the bandanna. I checked my watch and realized that I had walked an hour to get to where I was. Three miles? Maybe.

I looked back at the slope, the crest above me, and saw something that I had failed to notice before. To the right, other footprints in the sand, on the slope, leading up, over its edge. The prints were indistinct, dimples in the soft sand, but the spacing was unmistakable. Someone was there, over the crest of the dune. Waiting for me? One of the group? I looked back along the way I had come, at my trail of footprints in the sand, saw that there was another, that I had walked along without realizing that I walked in the footsteps of another.

By now I had caught my breath, although my heart was pounding at the eeriness of it all. Adrenaline rushing, I scrambled up the slope, and, although the crest gave way, a miniature sandslide, I managed to make it over the top.

The footprints were there, on the top of the dune, those that had gone before me, those that I had followed. They ended there. I scanned the horizon, 360 degrees of dazzling bright wind-sculpted dunes. From there I could see the bandanna, a tiny fleck on the horizon, miles away. Then I felt a presence. Felt it between my shoulder blades. Behind me now.

I turn back and the Sun makes me squint, sweat stings my eyes and I blink it away, and there, where the footsteps end, am I. Stripped to the waist, sunburned and sinewy, healthier than I, leaner than I, he sits, cross-legged, wrists resting on knees, eyes closed, head leaning back slightly. His throat is taut, exposed.

It is I, there is no mistake. There are no moon shadows here to play tricks on me.

I have seen so much, encountered so many manifestations of life and spirit in my travels, yet, it is somewhat comforting to know that I can be astonished. As Eduardo said, I am always surprised when a vision steps into my life. It is a happy thing.

And there is a self that clings to semirational consciousness, and I knelt in the sand and touched one of the footprints. Like pinching yourself when you think you might be dreaming.

And as I look across the sand, his eyes open and his face breaks into a grin, and I think, Is this a trap? An hallucination brought on by the Sun?

And I realized that I had a choice.

I could have walked away from the man on the dune. I could have returned to the self that never left the circle, that swallowed the urge to

wander off, that waited dutifully for the members of the group to wander back from their day in the desert.

I have returned, back to the circle. The first back. No one need ever know that I left. . . .

And he laughs, laughs at my foolishness, my self-doubt. And I laugh. I came out of curiosity, no expectations. I came seeking nothing, following an impulse. To find the other. He whom I had left in the jungle.

He told me so.

He unfolded his legs and stood before me and the Sun at my back cast one shadow, mine, across the sand and through him. He spread his arms, palms up.

We embraced.

And I sat in the sand at the crest of the dune, closed my eyes to the Sun, and remembered things that had no business being in my memory.

There is no such thing as an integrated self, a real you. Antonio's last words begin to make sense. The concept is manifesting itself. . . .

It is not a question of multiple states of consciousness, but of multiple selves.

I have met a significant other. The one I left in the jungle, the one who has followed the path of the warrior while I was engaged with my life, searching for destiny, looking to the North. He has been traveling all this time.

I am hard pressed to describe the things I learned. There will be a time and space elsewhere to test, explore, experience the knowledge that settled into my consciousness that afternoon.

I would not relate this particular incident here were it not for its sublime irony in the face of what had come before. After so many years the hunter and the hunted, stalking power and being stalked by it, to come to the top of a simple sand dune and there live an echo of an experience in a clearing before a ruined temple when I had encountered myself in an attitude of meditation, had opened my eyes to stare into the eyes of the jaguar. I had left that self at the bottom of a lagoon, to find him years later at the

top of a dune in Death Valley. That the power that I connected with should manifest as myself, should rise from the bottom of a lagoon and walk, casting no shadow, a warrior, an etheric self.

Since writing this I have begun to understand the challenges that lie ahead of me. But, as I have said, these things belong in another space, at another time.

Suffice it here to say that I began to know something of the nature of the Medicine Wheel, the journey of the Four Winds that I had been traveling since I first boarded that jetliner so many Februarys ago.

I know that the power that one may acquire on the journey of the Four Winds is made of more than knowledge gained, epiphanies of spirit, responsibility felt, and the skills to become a caretaker of the Earth. It is also the acquiring of different lives.

There is an energy body. One acquires this in the South.

There is a Nature body, an etheric body that one acquires in the West. The body of the jaguar. This is the body I found on the dune.

There is an astral body, one that has a lifetime of the stars. This is in the North. The body of the ancient masters. A mystical body. Wisdom of the universe.

There is, I think, a causal body in the East. The thought before the action. That which exists before the fact. Creative principle. The eagle body.

So here I am, knowing that I must continue my journey. There are new questions to be answered. There are experiences yet to be served.

I sat in the sand for a time, and when I stood and walked down the dune, I took care to go by a different route.

I turned at the far base of the dune and looked up and watched the sand sliding down, a crystalline wave, a ripple that swept slowly, slipping along the face of the dune to cover our footprints. And I recalled that the person of knowledge walks without leaving tracks.

June 12, 1989

Home

Sitting in the living room, before the fire. I went across the street where there is a steep embankment down to a creek that winds through town. There are oak trees and eucalyptus, and I gathered the wood for this fire, made three trips.

This is a fire that cannot be built of store-bought logs.

My lover, my sister, my wife, and friend just returned from thirty-six hours on call. Healing the sick, dispensing care. She walked into the living room, saw me here, came up behind me and touched my shoulder. She said she was going upstairs to see our son, fifteen months old. She sits with him when he sleeps.

She whispered that she loved me and left. She saw the things on the floor, knows what I am doing here. I have an urge to leave the fire and follow her upstairs, to kiss our son and to take her to bed. I feel my love and desire for her glowing, rising from my belly, but I must attend to business.

She saw the journals spread out in a semicircle before me. Volumes of them. Some are cardboard-bound composition books, there is one spiral-bound without a cover. Many have lost their stitching or the glue that holds the pages has decomposed and the pages are loose. There's one that's all taped up, another held together with a rubber band.

Then there is that one, first one, leather bound, the heaviest of them all.

I have been through them all, some for the first time in years. I've made my selections and there is a manuscript on the desk in the office.

This has been my journey East. This book, an attempt to serve the experiences that have changed me. To share them as best I can. But here, before me, all these memories, the experiences, fatuous philosophy and revelations of spring water clarity. Fifteen years of work. A life captured in words.

Experiences that I can serve best by freeing them. Honor them best by giving them to the fire, consigning them all to the flames of this

fire. I welcome the spirits that will rise from the fire, bless them and honor them all, free them and free myself, that I may once again step into my present fully. And live every moment as an act of power.

So here I am, a finished book, my work of the East, and I'm already doing the work of the South. Again.

Full circle, like the Medicine Wheel, a circle passing through the cardinal points of the compass, the stages of evolving consciousness, the seasons. Never-ending circle, cycle, uruboros.

And I've learned something else. That of all of my experiences, in all of my travels across the Earth and through it, of all the feelings I have felt, my love for her is the holiest. There is perfect truth in that. Something that can be experienced but not told.

What, after all, have I been searching for? What, after all, is the power that I have acquired in my journeys? I can summon Nature within me, can see things hidden from sight, can soar beyond myself, can teach others such skills, yet the ultimate state of consciousness, the Divine within me is the thing that glows in my belly, rises through my body, illuminates my Self with a healing light when I look at her.

There.

I have found that I need to tear the pages from the bindings, for I do not want anything left readable in the morning.

The older the pages, the faster they burn.

Nevertheless, the fire seems to hesitate, as if the flames are reluctant to touch the last, the oldest, the first.

It must be my imagination.

All that is left is this.

Writing this last sentence before adding it to all the others, hoping that I'll remember what I wrote, because it might, after all, be the best way to close the ceremony, to end the book.

I had every intention of writing a last sentence and placing it in the fire, creating a dramatic moment. But, as Antonio once said, self-conscious ritual

is no ritual at all, and as the last page torn from the journal neared the flames, my hand began to tremble.

I was just wondering why when I heard a yawn, and, turning, saw her standing beneath the archway of the living room. Our son was in her arms, his head on her shoulder. Half-asleep, half-awake, between two worlds and in his mother's arms.

I realized that my journey is best marked by beginnings, not endings.

I tossed the page into the fire, stood, slipped the little gold owl into my pocket, and turned to join my family.

PUBLISHER'S NOTE

All praise and thanks belong to Allah, Lord of the Universe. May Allah's blessings and peace be upon the last of the prophets and messengers Muhammad, his family, Companions, and all those who follow his footsteps till the end of time.

This is the second book of the Islamic Creed (*'aqeedah*) series by Dr. 'Umar Sulaymaan al-Ashqar. It deals with the world of the Angels, an integral part of the Islamic faith. Persons denying the existence of Angels go outside the pale of Islam.

As usual, Dr. Al-Ashqar has discussed this issue exhaustively. His arguments are based on the texts of the Qur'an and the Sunnah. He has covered all aspects of the topic: definition, origin and characteristics, kinds and their relationship with mankind and other creation. Moreover, he draws a comparison between mankind and the angels in their respective roles as determined by Allah. A number of editions of the Arabic original have been sold out.

We are pleased to present this excellent English translation of a very popular book. May Allah bless with acceptance the efforts of the author, the translator and all those associated with the publication of this work.

TRANSLATOR'S FOREWORD

In the name of Allah, the Most Gracious, the Most Merciful

Belief in the Unseen (*Al-Ghayb*) is one of the basic tenets of Islam, and forms an important part of Islamic teachings. One of the unseen worlds of which Islam tells us is the world of the angels, who are described in great detail in the Qur'an and Sunnah and who are involved with man throughout his life.

From the moment an individual is conceived in his mother's womb, until his death and beyond, angels play a role in human life. Angels accompany the human being, protecting him and keeping a record of all his deeds. Angels bring forth the soul of the deceased person/s and they bring comfort or inflict torment in the grave. An angel will sound the Trumpet on the Last Day, and angels will be present on the Day of Judgement until they accompany people to their ultimate destination in Paradise or Hell.

Almost all human cultures, ancient and modern, have some kind of belief about angels. The pre-Islamic Arabs believed them to be daughters of the Almighty. Some philosophers thought that angels were the stars in the sky. In modern times there has been a resurgence of interest in angels, and they feature prominently in movies and other forms of popular western culture. Stories featuring angels circulate on the internet and various kinds of gifts, bearing supposed images of angels, gift shops in the west.

But these myths have no role to play in the belief of the Muslim. Our beliefs are based on the teachings of the Qur'an and Sunnah, which tell us all we need to know about the reality of the unseen, including the world of the angels. Belief in the angels brings comfort to man's soul; this belief makes man feel that he is important in the sight of Allah, and that he matters a lot to Him; this belief also encourages a person to strive in the path of goodness. Hence it is of the utmost importance for the

Muslim to understand what Islam says about the angels, and what the implications of this knowledge are for his daily life. In this book, Dr. 'Umar al-Ashqar draws on the sources of Islam to give us a comprehensive picture of who the angels are, their origins, their role in the universe and their interaction with mankind in this world and the next.

May Allah reward the author for his presentation of the Islamic belief in the angels. May He guide us on the Straight Path which leads to Paradise, and may He grant us admittance to that eternal abode where the angels will welcome the believers with greetings of *salaam*. May Allah bless our Prophet Muhammad and his family and Companions, and grant them peace.

Naṣiruddīn al-Khaṭṭāb

Translator's Note:

All translations of the meaning of the Qur'anic quotations have been taken from "Translation of the Meanings of the Noble Qur'an" by Dr. Muhammad Muḥsin Khan and Dr. Muhammad Taqī-ud-Dīn al-Hilālī, unless otherwise stated.

AUTHOR'S FOREWORD

Praise be to Allah. We praise Him and seek His help, forgiveness and guidance. We seek refuge in Allah from the evil of our own selves and from our evil actions. Whomsoever Allah guides, none can lead astray, and whomsoever He leads astray, none can guide. I bear witness that there is no god except Allah alone, with no associate or partner, and I bear witness that Muhammad is His slave and Messenger.

Belief in the angels is one of the basic principles of *'aqeedah*, and faith is not complete without this belief. The angels form one of the worlds of the Unseen, belief in which is commanded by Allah, Who praises those who believe in what Allah and His Messenger (ﷺ) have told us about them.

The texts of the Qur'an and Sunnah speak in detail about all aspects of this subject. Whoever studies these texts will come to have a clear belief in the angels and realize that this is not an obscure topic. This will deepen and strengthen his faith, for detailed knowledge is stronger and firmer than general knowledge.

The only reason why the texts go into such detail on this topic is that the human mind on its own is not able to learn about the angels. Human senses are unable to see the angels or hear their conversations, but this inability is no doubt in man's best interests, for if man could hear and see everything that is going on around him, he would not be able to survive. It is sufficient for us to imagine how hard it would be for a man if he could detect all the sounds that are picked up by a radio set; the result would surely make him lose his mind.

No one should assume that studying this principle is a kind of superfluous knowledge. The facts stated in the texts which speak of this topic have a great effect in counteracting the myths and false beliefs that exist in people's minds concerning this matter. Since ancient times there has been a widespread belief that the angels are divine or that they are

the daughters of Allah, and some philosophers think that the angels are the stars which we see in space.

The facts which are stated in the texts implant in our hearts the firm belief in the One God Who is in control of all of creation, Who has appointed His troops of angels to take care of the various affairs of this universe.

The relationship of the angels with us, their role in our formation and their watching over us, speaks to man of his importance and valuable status, and it refutes the idea that human beings are insignificant and worthless. Thus man can fully appreciate his own value and strive hard to play the great role which he is required to fulfil.

If we were to count the positive effects which stem from man's belief in the angels, and to study the texts which speak of them, the introduction would turn into a lengthy article. So I will leave the reader to look at those texts which, when studied in depth, will supply him with these inspiring effects.

We ask Allah to benefit people through this book, and to make it sincerely for His sake, for He is the best of helpers and supporters.

'Umar Sulaymaan al-Ashqar

INTRODUCTION

DEFINITION OF THE ANGELS AND BELIEF IN THEM

The Angels form a world different to the world of mankind and the world of the jinn. It is a noble world, completely pure. They are noble and pious, worshipping Allah as He should be worshipped, fulfilling whatever He commands them to do and never disobeying Him.

From the texts of the Qur'an and Sunnah, we will see their attributes as described therein.

The word *malak* (angel) is derived from the root *alaka*; *ma'lakah* and *ma'lak* mean message. From this root is derived the word *malaa'ik* (angels), because they are the messengers of Allah.

It is also said that the word *malak* is derived from the root *la'aka*, and that *mal'aakah* means message. The phrase *wa'alikni ila fulaan* means 'convey to him from me.' *Al-Mal'ak* means *al-malak* (angel) because the angels convey (messages) from Allah.

Some of the scholars said *al-malak* (angel) is derived from *al-mulk* (sovereignty). He said: if one of the angels is in control of some affairs, he is described as *malak*, and if a human being is in control of some affairs, he is described as *malik* (king).¹

Belief in the angels is one of the principles of faith. A person's faith cannot be correct unless he believes in them. Allah says:

﴿ءَاْمَنَ الرَّسُوْلُ بِمَا اُنْزِلَ اِلَيْهِ مِنْ رَبِّهِ وَالْمُؤْمِنُوْنَ كُلٌّ ءَاْمَنَ بِاللّٰهِ وَمَلٰئِكَتِهِ
وَكُتُبِهِ وَرُسُلِهِ لَا نُفَرِّقُ بَيْنَ اَحَدٍ مِنْ رُسُلِهِ﴾

«The Messenger [Muhammad] believes in what has been sent down to him from his Lord, and [so do] the believers. Each one believes in

¹ *Baṣṣaa'ir Dhawi al-Tamyeer*, by Al-Fayroozabadi, 4/524.

Allah, His Angels, His Books, and His Messengers. [They say,] ‘We make no distinction between one another of His Messengers.’ ﴿
(Qur'an 2:285)

How should we believe in the angels?

Suyooti narrated that Al-Bayhaqi said in *Shu'ab al-Eemaan*: “Belief in the Angels” means the following:

1. Belief that they exist.
2. Giving each one of them his rightful status, and believing that they are the slaves of Allah, created by Him, like mankind and the jinn. They are commanded to do things and they are accountable. They are not able to do anything except that which Allah has enabled them to do. Death is possible for them, but Allah gives them a long life, and they do not die until their appointed time comes. They should not be described in any way that would imply association with Allah, and they should not be regarded as gods as they were regarded by the ancients, some traditional cultures of early people.
3. Acknowledging that among them are messengers whom Allah sends to whomsoever He wills among mankind. He may also send some of them to others. This implies acknowledging that among them are the bearers of the Throne, those who stand in ranks, the keepers of Paradise, the keepers of Hell, those who record man's deeds and those who drive the clouds. The Qur'an has mentioned all or most of them.”²

This book will describe in detail what is said in the texts (of the Qur'an and Sunnah) about belief in the angels.

² *Al-Habaa'ik fi Akhbaar al-Malaa'ik* by Suyooti, Pp. 10. See *Mukhtasar Shu'ab al-Eemaan*, 1/405-406.

CHAPTER ONE

THEIR PHYSICAL CHARACTERISTICS, ATTRIBUTES AND ABILITIES

In this chapter we look at what we have learned from the *ṣaḥeeh* texts about the physical characteristics as well as the attributes of the angels, then we will discuss the abilities which Allah has granted to them.

1 - PHYSICAL CHARACTERISTICS

(1) What they were created from and when

The substance from which Allah created them is light. In *Ṣaḥeeh Muslim* it is narrated from ‘Aa’ishah (may Allah be pleased with her and her father) that the Messenger of Allah (ﷺ) said: “The angels were created from light, the jinn were created from smokeless fire, and Adam was created from that which has been described to you.”¹

The Messenger (ﷺ) did not explain what light this is that they were created from. Hence we cannot indulge in trying to say more about this matter, because it is the matter of the unseen concerning which no further clarification has been narrated, apart from this hadith.

It is narrated that ‘Ikrimah said: “The angels were created from the light of glory and *Iblees* was created from the fire of glory.” And it is narrated that ‘Abd-Allah ibn ‘Amr said, “Allah created the angels from the light of the arms and chest.” It is not permissible to accept these views, even if they are narrated through sound chains from these scholars, because they are not infallible, and they may have taken these ideas from the

¹ Muslim, 4/2294, hadith no. 2996.

Some of those who claim to be scholars reject this hadith and others like it, claiming that it is a hadith *aaḥaad*, and that a hadith *aaḥaad* cannot be relied on in matters of *‘aqeedah*. I have criticized this view and explained its flawed nature in a paper entitled *Aṣl al-I’tiqaad*.

Israa'eeliyyaat (reports from Jewish sources).²

Wali-Ullah ad-Dehlawi said: "The hosts on high (the angels) are of three groups: a group upon whom Allah made the system of goodness was dependent, so He created them from physical light similar to the fire of Moosa and breathed into them noble souls;

A group which was created from a mixture of very light vapour and other elements, which resulted in the emergence of great souls with a strong aversion to animalistic behaviour;

And a group of human souls who are very close to the hosts on high, who keep striving to do deeds which could save them and help them to catch up with (the angels), until they shed their physical cloaks and follow in their footsteps, and are counted as being among them."

There is no *ṣaḥeeḥ* evidence to support this definition and this division of the angels into these categories.

We do not know when the angels were created, for Allah has not informed us about that. But we do know that they were created before Adam, the father of mankind. Allah has told us that He informed the angels that He was going to create a *khaleefah* on earth:

﴿وَإِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّىْ جَاعِلٌ فِى الْاَرْضِ خَلِیْفَةً ۗ﴾

«Behold, your Lord said to the angels, 'I will create a vicegerent [*khaleefah*] on earth.'» (Qur'an 2:30 - A. Yoosuf 'Ali)

What is meant by the word *khaleefah* here is Adam (ﷺ), and He commanded them to prostrate to him when He created him:

﴿فَاِذَا سَوَّيْتُهُۥ وَنَفَخْتُ فِیْهِ مِنْ رُّوْحِیْ فَقَعُوْا لَہٗ سٰجِدٰتٍ ۙ﴾

«So, when I have fashioned him completely and breathed into him [Adam] the soul which I created for him, then fall [you] down prostrating yourselves unto him.» (Qur'an 15:29)

² *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, 1/197.

Seeing the angels

Because the angels have bodies of light which are of a low density, mankind cannot see them, especially since Allah has not given our eyes the ability to see them.

No one among this ummah has seen the angels in their true form apart from the Messenger (ﷺ). He saw Jibreel twice in the form in which Allah created him. The texts indicate that human beings are able to see the angels when the angels appear in human form.

(2) Their great physical size

Allah says concerning the angels of Hell:

﴿يَتَأْتِيهَا الَّذِينَ ءَامَنُوا فَوْاً أَنفُسِكُمْ وَأَهْلِيكُمْ نَارًا وَقُودُهَا النَّاسُ وَالْحِجَارَةُ عَلَيْهَا مَلَائِكَةٌ غِلَاطٌ شِدَادٌ لَا يَعْصُونَ اللَّهَ مَا أَمَرَهُمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ﴾

«O you who believe! Ward off yourselves and your families against a Fire [Hell] whose fuel is men and stones, over which are [appointed] angels stern [and] severe, who disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.» (Qur'an 66:6)

It will be sufficient to quote the *ahaaadeeth* which speak of two noble angels.

The great size of Jibreel (ﷺ)

The Messenger of Allah (ﷺ) saw Jibreel twice in the angelic form in which Allah created him. These two occasions are mentioned in the *aayaat*:

﴿وَلَقَدْ رَآهُ بِآلَافٍ مِّائِينَ﴾

«And indeed he [Muhammad] saw him [Jibreel] in the clear horizon [towards the east].» (Qur'an 81:23)

And:

﴿وَلَقَدْ رَآهُ نَزْلَةً أُخْرَىٰ ۖ عِنْدَ سِدْرَةِ الْمُنْتَهَىٰ ۚ عِنْدَهَا جَنَّةُ الْمَأْوَىٰ ۖ﴾

«And indeed he [Muhammad] saw him [Jibreel] at a second descent [i.e. another time].

Near *Sidrat-ul-Muntaha* [a lote tree of the utmost boundary over the seventh heaven beyond which none can pass].

Near it is the Paradise of Abode.» (Qur'an 53:13-15)

- that was when he was taken up to the highest heaven (during the *Mi'raaq*).

In *Shaheeh Muslim* it is narrated that 'Aa'ishah (may Allah be pleased with her) said: "I asked the Messenger of Allah (ﷺ) about these two *aayaat*. He said, 'That is Jibreel; I never saw him in the form in which Allah created him except on these two occasions. I saw him descending from the heavens, with his huge size filling the space between the heaven and the earth'"³

'Aa'ishah (رضي الله عنها) was asked about the *aayah*,

﴿ثُمَّ دَنَا فَتَدَلَّىٰ﴾

«Then he [Jibreel] approached and came closer»

(Qur'an 53:8)

She said, "That is Jibreel (ﷺ). He used to come to him in human form, but on this occasion he came in his real form, and he filled the horizons of the sky."⁴

It is narrated in *Shaheeh al-Bukhaari* that 'Abd-Allah ibn Mas'ood said: "Muhammad (ﷺ) saw Jibreel with six hundred wings."⁵

Ibn Mas'ood said concerning the *aayah* –

﴿لَقَدْ رَأَىٰ مِنْ آيَاتِ رَبِّهِ الْكُبْرَىٰ﴾

³ Muslim, 1/159, hadith no. 177.

⁴ Muslim, 1/160, hadith no. 177.

⁵ Bukhaari, 8/610, hadith no. 4856, 4857.

﴿Indeed he [Muhammad] did see of the Greatest Signs, of his Lord [Allah]﴾ (Qur'an 53:18) –

“This means green cushions, filling the horizons.”⁶ These cushions that filled the horizons were what Jibreel was seated upon. Ibn Hajar mentioned that An-Nasaa'i and Al-Haakim narrated with their *isnaads* from Ibn Mas'ood that he said, “The Prophet of Allah (ﷺ) saw Jibreel (ﷺ) with his own eyes, on a cushion which filled the space between heaven and earth.”⁷

Ibn Hajar mentioned that Ibn Mas'ood said, according to a report narrated by An-Nasaa'i: “Muhammad (ﷺ) saw Jibreel with six hundred wings, filling the horizon.”⁸

In *Musnad al-Imam Ahmad* it is narrated that 'Abd-Allah ibn Mas'ood said: “The Messenger of Allah (ﷺ) saw Jibreel in his true form. He had six hundred wings, each of which filled the horizon, and there were multi-coloured pearls and rubies falling from his wings.”

Ibn Katheer said, concerning this hadith, its *isnaad* is *jayyid*.⁹

Allah said, describing Jibreel:

﴿إِنَّهُ لَقَوْلُ رَسُولٍ كَرِيمٍ ﴿١٩﴾ ذِي قُوَّةٍ عِنْدَ ذِي الْعَرْشِ مَكِينٍ ﴿٢٠﴾ مُطَاعٌ ثَمَّ أَمِينٍ ﴿٢١﴾﴾

﴿Verily, this is the Word [this Qur'an brought by] a most honourable messenger [Jibreel (Gabriel)], from Allah to Prophet Muhammad]. Owner of power, [and high rank] with [Allah], the Lord of the Throne,

Obedient [by the angels in the heavens] and trustworthy.﴾

(Qur'an 81:19-21)

What is meant by the “most honourable messenger” here is Jibreel, and the Lord of the Throne is the Lord of Glory, may He be glorified.

⁶ Bukhaari, 8/611, hadith no. 4858.

⁷ *Fath al-Baari*, 8/611.

⁸ *Fath al-Baari*, 8/611.

⁹ *Al-Bidaayah wan-Nihaayah*, 1/47.

The great size of the bearers of the Throne

Abu Dawood narrated from Jaabir ibn ‘Abd-Allah (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “I have been granted permission to speak to one of the angels of Allah, one of the bearers of the Throne. The distance from his earlobes to his shoulders is the distance of a seven - hundred year journey.”¹⁰

This is also narrated by Ibn Abi Haatim, who said: “... as a bird flies.” The editor of *Mishkaat al-Masaabeeh* said: its *isnaad* is *ṣaḥeeḥ*.¹¹

Ṭabaraani narrated in *Al-Mu‘jam al-Awsaṭ* with a *ṣaḥeeḥ isnaad* from Anas that he said: “The Messenger of Allah (ﷺ) said: ‘I have been granted permission to speak of an angel, one of the bearers of the Throne. His feet are in the lowest earth and the Throne is resting on his horn. The distance from his earlobe to his shoulder is like that of a bird flying for seven hundred years. That angel says, ‘Glory be to You, wherever You are.’”¹²

(3) Their most important physical characteristics

(i) The wings of the angels

The angels have wings, as Allah has informed us. Some of them have two wings, some have three or four, and some have more than that.

﴿الْحَمْدُ لِلَّهِ فَاطِرِ السَّمَوَاتِ وَالْأَرْضِ جَاعِلِ الْمَلَائِكَةِ رُسُلًا أُولِي أَجْنَحَةٍ مِّنْهُ وَتِلْكَ وَرِيعٌ بَزِيدٌ فِي الْخَلْقِ مَا يَشَاءُ إِنَّ اللَّهَ عَلَى كُلِّ شَيْءٍ قَدِيرٌ﴾

﴿All the praises and thanks be to Allah, the [only] Originator [or the (Only) Creator] of the heavens and the earth, Who made the angels messengers with wings, two or three or four. He increases in creation what He wills. Verily, Allah is Able to do all things.﴾

(*Qur'an* 35:1)

¹⁰ *Ṣaḥeeḥ Sunan Abi Dawood*, 3/895, no. 9353.

¹¹ *Mishkaat al-Maṣaabeeh*, 3/121. See also *Silsilat al-Aḥadeeth aṣ-Ṣaḥeeḥah*, hadith no. 151.

¹² *Ṣaḥeeḥ al-Jaami‘ aṣ-Ṣagheer*, 3rd edn., 1/208, no. 853.

What is meant by saying that Allah made them with wings is that some of them have two wings, some have three or four, and some have more than that.

We have already mentioned the hadith in which the Messenger (ﷺ) stated that Jibreel has six hundred wings.

(ii) The beauty of the angels

Allah has created them in a noble and beautiful form, as Allah says of Jibreel:

﴿عَلَّمَهُ شَدِيدُ الْقُوَىٰ ذُو مِرَّةٍ فَاسْتَوَىٰ ۖ﴾

«He has been taught [this Qur'an] by one mighty in power [Jibreel (Gabriel)].

One free from any defect in body and mind then he [Jibreel – Gabriel in his real shape as created by Allah] rose and became stable.»

(Qur'an 53:5-6)

Ibn 'Abbaas said: 'one free from any defect in body or mind' means one whose appearance is beautiful. Qataadah said: one whose form is tall and beautiful. And it is said that 'one free from any defect in body or mind' means one who is possessed of strength. There is no contradiction between the two views, for he is both strong and of a beautiful appearance.

The idea that angels are beautiful is well-established in people's minds, just as the idea that devils are ugly is also well-established. Hence we see them likening beautiful human beings to angels. Look at what the women said when they saw Yousuf:

﴿فَلَمَّا رَأَيْنَهُ أَكْبَرْنَهُ وَقَطَّعْنَ أَيْدِيَهُنَّ وَقُلْنَ حَاشَ لِلَّهِ مَا هَذَا بَشَرًا إِنْ هَذَا إِلَّا مَلَكٌ كَرِيمٌ﴾

«Then, when they saw him, they exalted him [at his beauty] and [in their astonishment] cut their hands. They said: 'How perfect is Allah [or Allah forbid]! No man is this! This is none other than a noble angel!'»

(Qur'an 12:31)

(iii) Is there any similarity in appearance and form between angels and humans?

Muslim narrated in his *Ṣaḥeeḥ*, and At-Tirmidhi narrated in his *Sunan* from Jaabir (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “The Prophets were shown to me, and I saw Moosa, a man of average build, looking like one of the men of (the tribe of) Shanu’ah. And I saw ‘Eesa ibn Maryam, and the person I have seen who most resembles him is ‘Urwah ibn Mas‘ood. And I saw Ibraaheem, and the one who most resembles him is your Companion (meaning himself). And I saw Jibreel (جبريل عليه السلام); the person I have seen who most resembles him is Duḥyah.” According to another report: Duḥyah ibn Khaleefah.¹³

Is this a similarity between Jibreel’s true form, or the form which Jibreel took when he appeared in human form? Most likely it is the latter, because as we shall see, Jibreel often used to appear in the form of Duḥyah.

(iv) Variations in their physical shape and status

The angels are not all the same in their physical shape and status. Some of the angels have two wings, some have three, and Jibreel has six hundred wings. They vary in their status before their Lord:

﴿وَمَا مِنَّا إِلَّا لَهُ مَقَامٌ مَّعْلُومٌ﴾

﴿And there is not one of us [angels] but has his known place [or position].﴾
(*Qur'an* 37:164)

And Allah said concerning Jibreel:

﴿إِنَّمَا لَقَوْلُ رَسُولٍ كَرِيمٍ ﴿١٩﴾ ذِي قُوَّةٍ عِنْدَ ذِي الْعَرْشِ مَكِينٍ ﴿٢٠﴾﴾

﴿Verily, this is the Word [this Qur'an brought by] a most honourable messenger [Jibreel (Gabriel), from Allah to Prophet Muhammad]. Owner of power, [and high rank] with [Allah], the Lord of the Throne.﴾
(*Qur'an* 81:19-20)

¹³ Muslim, 1/153, hadith no. 167.

i.e., he has a high status and important rank before Allah.

The best of the angels are those who were present at the battle of Badr. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Rafaa'ah ibn Raafi' that Jibreel came to the Prophet (ﷺ) and said: "What do you think of the people of Badr among you (i.e., those among you who were present at Badr)?" He said, "They are among the best of the Muslims" or similar words. Jibreel said, "The same is true of the angels who were present at the Badr."¹⁴

(v) They cannot be described as being male or female

One of the reasons why the children of Adam go astray when speaking about the worlds of the unseen is because they subject those worlds to human criteria. So we see one of them expressing his amazement, in one of his articles, that Jibreel used to come to the Messenger (ﷺ) a few seconds after a question had been put to the Messenger (ﷺ) that needed a reply from Allah. How could he come at such an extraordinary speed? When light needs millions of light-years in order to reach nearby heavenly bodies.

This poor man did not realize that he is like a mosquito trying to measure the speed of an airplane using its own standards. If he had thought about the matter, he would have realized that the world of the angels has its own standards which are completely different from our human standards.

The *mushrik* Arabs also went astray in this regard, as they used to claim that the angels were female, and they mixed this idea, which is far removed from the truth, with an even greater myth, when they claimed that these females were the daughters of Allah.

The Qur'an refuted them on both counts. It pointed out that they had no sound evidence for their claims, and that this notion was nonsense. It is strange indeed that they attributed daughters to Allah, when they themselves hated daughters; when the news of (the birth of) a baby girl

¹⁴ Bukhaari, 7/312, hadith no. 3992.

was brought to any of them, his face would become dark, and he would be filled with inward grief, and he would hide himself from the people because of the evil of that whereof he had been informed (cf. Qur'an 16:58-59). This doomed fellow might even lose his mind and bury the newborn girl alive. Nevertheless, they attributed children to Allah, and claimed that these children were female. In this manner myths grow and take root in the minds of those whom the divine light has not reached.

Listen to these verses which tell of this myth and criticize those who believed in it:

﴿فَاسْتَفْتِهِمُ الرِّبَّكَ الْبَنَاتُ وَلَهُمُ الْبَنُونَ ﴿١٤٩﴾ أَمْ خَلَقْنَا الْمَلَائِكَةَ إِنَاثًا وَهُمْ شَاهِدُونَ ﴿١٥٠﴾ أَلَا إِنَّهُمْ مِّنْ إِفْكِهِمْ لَيَقُولُونَ ﴿١٥١﴾ وَلَدَ اللَّهُ وَإِنَّهُمْ لَكَاذِبُونَ ﴿١٥٢﴾ أَصْطَفَى الْبَنَاتِ عَلَى الْبَنِينَ ﴿١٥٣﴾ مَا لَكُمْ كَيْفَ تَحْكُمُونَ ﴿١٥٤﴾ أَفَلَا تَذَكَّرُونَ ﴿١٥٥﴾ أَمْ لَكُمْ سُلْطَانٌ مُّبِينٌ ﴿١٥٦﴾﴾

﴿Now ask them [O Muhammad]: ‘Are there [only] daughters for your Lord and sons for them?

Or did We create the angels female while they were witnesses?

Verily, it is of their falsehood that they [Quraysh pagans] say:

‘Allah has begotten [offspring – the angels being the daughters of Allah]?’ And, verily, they are liars!

Has He [then] chosen daughters rather than sons?

What is the matter with you? How do you decide?

Will you not then remember?

Or is there for you a plain authority?﴾ (Qur'an 37:149-156)

Allah will make these words a testimony for which they will be brought to account. One of the greatest of sins is to speak about Allah without knowledge:

﴿وَجَعَلُوا الْمَلَائِكَةَ الَّذِينَ هُمْ عِبْدُ الرَّحْمَنِ إِنَاثًا أَشْهَدُوا خَلْقَهُمْ سَتُكْتَبُ شَهَادَتُهُمْ وَيُسْأَلُونَ ﴿١٩﴾﴾

﴿And they make the angels who themselves are slaves of the Most Gracious [Allah] females. Did they witness their creation? Their

testimony will be recorded, and they will be questioned!﴿

(Qur'an 43:19)¹⁵

(vi) They do not eat or drink

We indicated above that the angels cannot be described as being male or female. Similarly, they do not eat or drink the type of food we (humans) eat and drink. Allah has told us that the angels came to Ibraaheem in human form, and he offered them food, but they did not stretch out their hands towards it. He felt afraid of them, but when they told him of their true identity, his fear left him.

﴿هَلْ أُنَبِّئُكَ حَدِيثَ ضَيْفِ إِبْرَاهِيمَ الْمُكْرَمِينَ ﴿٢٤﴾ إِذْ دَخَلُوا عَلَيْهِ فَقَالُوا سَلَامًا ﴿٢٥﴾ قَالَ سَلَامٌ قَوْمٌ مُنْكَرُونَ ﴿٢٦﴾ فَرَأَى إِلَيْكَ أَهْلِيهِ فَجَاءَ بِعِجْلٍ سَمِينٍ ﴿٢٧﴾ فَقَرَّبَهُ إِلَيْهِمْ قَالَ أَلَا تَأْكُلُونَ ﴿٢٨﴾ فَأَوْحَسَ مِنْهُمْ خِيفَةً ﴿٢٩﴾ قَالُوا لَا تَخَفْ وَبَشِّرُوهُ ﴿٣٠﴾ بَعْلَمَ عَلَيْكُمْ ﴿٣١﴾﴾

﴿Has the story reached you, of the honoured guests [three angels; Jibreel (Gabriel) along with another two] of Ibraaheem [Abraham]? When they came in to him and said: ‘Salaam, [peace be upon you]!’ He answered: ‘Salaam, [peace be upon you],’ and said: ‘You are a people unknown to me.’

Then he turned to his household, and brought out a roasted calf [as the property of Ibraaheem [Abraham] was mainly cows].

And placed it before them [saying]: ‘Will you not eat?’

Then he conceived fear of them [when they ate not]. They said: ‘Fear not.’ And they gave him glad tidings of a son having knowledge [about Allah and His religion of True Monotheism].﴿

(Qur'an 51:24-28)

¹⁵ Therefore, Muslims should beware of speaking about such matters without knowledge. Those who claim that man originated from animals, monkeys or whatever, should be told the same thing: “Did they witness their creation? Their testimony will be recorded”. And Allah says, ﴿I [Allah] made them [Iblees and his offspring] not to witness [nor took their help in] the creation of the heavens and the earth and not [even] their own creation.﴾ (Qur'an 18:51)

In another *aayah* it says:

﴿فَلَمَّا رَأَوْا أَيْدِيَهُمْ لَا تَصِلُ إِلَيْهِ نَكِرَهُمْ وَأَوْجَسَ مِنْهُمْ خِيفَةً قَالُوا لَا تَخَفْ
إِنَّا أَرْسَلْنَا إِلَى قَوْمِ لُوطٍ ﴿٧٠﴾﴾

﴿But when he saw their hands went not towards it [the meal], he mistrusted them, and conceived a fear of them. They said: "Fear not, we have been sent against the people of Loot [Lot].﴾

(*Qur'an* 11:70)

Suyooti narrated from Al-Fakhr ar-Raazi that scholars were agreed that the angels do not eat, drink or get married.¹⁶

(vii) They do not get bored or tired

The angels worship and obey Allah, and carry out His commands, without getting tired or bored. They do not feel what humans feel of tiredness and boredom. Allah says, describing His angels:

﴿يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ ﴿٢٠﴾﴾

﴿They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].﴾

(*Qur'an* 21:20)

The meaning of 'they never slacken' is they never become weak. In another *aayah* Allah says:

﴿فَالَّذِينَ عِنْدَ رَبِّكَ يُسَبِّحُونَ لَهُ بِاللَّيْلِ وَالنَّهَارِ وَهُمْ لَا يَسْأَمُونَ ﴿٣٨﴾﴾

﴿Then there are those who are with your Lord [angels] glorify Him night and day, and never are they tired.﴾

(*Qur'an* 41:38)

Suyooti inferred that the *aayah* "(and) they never slacken (to do so)" (*Qur'an* 21:20) means that the angels do not sleep; he narrated this view from Al-Fakhr ar-Raazi.¹⁷

¹⁶ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, Pp. 264.

¹⁷ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, Pp. 264.

(viii) The dwelling-place of the angels

The abode and dwelling-place of the angels is in the heavens, as Allah says:

﴿تَكَادُ السَّمَوَاتُ يَتَفَطَّرْنَ مِنْ فَوْقِهِنَّ وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ ﴿٥﴾﴾

«Nearly the heavens might be rent asunder from above them [by His Majesty], and the angels glorify the praises of their Lord.»

(Qur'an 42:5)

And Allah has described them as being with Him:

﴿فَإِنْ أَسْكَبُوا فَإَلْذِينَ عِنْدَ رَبِّكَ يُسَبِّحُونَ لَهُ بِاللَّيْلِ وَالنَّهَارِ وَهُمْ لَا يَسْئَمُونَ ﴿٢٨﴾﴾

«But if they are too proud [to do so (i.e., to prostrate to Allah)], then there are those who are with your Lord [angels] glorify Him night and day, and never are they tired.»

(Qur'an 41:38)

They come down to the earth by the command of Allah, to fulfil the tasks with which they have been entrusted:

﴿وَمَا نَنْزِلُ إِلَّا بِأَمْرِ رَبِّكَ ﴿٦٤﴾﴾

«And we [angels] descend not except by the Command of your Lord [O Muhammad].»

(Qur'an 19:64)

They come down a lot on special occasions, such as *Laylat al-Qadr*:

﴿لَيْلَةُ الْقَدْرِ خَيْرٌ مِنْ أَلْفِ شَهْرٍ ﴿٢﴾ نَزَّلَ الْمَلَائِكَةُ وَالرُّوحُ فِيهَا بِإِذْنِ رَبِّهِمْ مِنْ كُلِّ أَمْرِ ﴿٣﴾﴾

«The Night of *Al-Qadr* [Decree] is better than a thousand months [i.e. worshipping Allah in that night is better than worshipping Him a thousand months, i.e. 83 years and 4 months].

Therein descend the angels and the *Rooḥ* [Jibreel (Gabriel)] by Allah's Permission with all Decrees.»

(Qur'an 97:3-4)

(ix) The numbers of the angels

The angels are many; no one knows how many they are except the One Who created them:

﴿وَمَا يَعْلَمُ جُودَ رَبِّكَ إِلَّا هُوَ﴾

﴿And none can know the hosts of your Lord but He.﴾

(*Qur'an* 74:31)

If you want to know how many they are, listen to what Jibreel said concerning *Al-Bayt al-Ma'moor* (the Much-Frequented House), when the Messenger (ﷺ) asked him about it, when he reached it on the night of the *Israa'*: This is *Al-Bayt al-Ma'moor*; every day seventy thousand angels pray in it, and they never come back to it."¹⁸

In *Ṣaḥeeḥ Muslim* it is narrated from 'Abd-Allah that the Messenger of Allah (ﷺ) said: "On that Day, Hell will be brought with seventy thousand ropes, each of which will be pulled by seventy thousand angels."¹⁹ Based on this, those who will bring forth Hell on that Day will be forty-nine million angels.

If you study the texts which have been narrated about the angels who are appointed to take care of each person, you will realize how great their number is. There is an angel who is entrusted with the *nutfah*, two angels appointed to write down the deeds of each person, angels whose task is to protect each person, and an angelic companion (*qareen*) to guide a person.

(x) The names of the angels

The angels have names, but we only know a few of those names. Below are the verses in which some of the names of angels have been mentioned:

¹⁸ Bukhaari, 6/103, hadith no. 2207. Muslim, 1/146, hadith no. 162. This version is narrated by Bukhaari.

¹⁹ Muslim, 4/2184, hadith no. 2842.

(a) Jibreel and (b) Mikaa'eel

Allah says:

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَى قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِمَا
بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَى لِلْمُؤْمِنِينَ ﴿٩٧﴾ مَنْ كَانَ عَدُوًّا لِلَّهِ وَمَلَائِكَتِهِ
وَرُسُلِهِ وَجِبْرِيلَ وَمِيكَالَ فَإِنَّ اللَّهَ عَدُوٌّ لِلْكَافِرِينَ ﴿٩٨﴾﴾

«Say [O Muhammad]: 'Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur'an] down to your heart by Allah's Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and guidance and glad tidings for the believers.

Whoever is an enemy to Allah, His Angels, His Messengers, Jibreel [Gabriel] and Mikaa'eel [Michael], then verily, Allah is an enemy to the disbelievers.'»
(*Qur'an* 2:97-98)

Jibreel is the trustworthy *Rooh* mentioned in the *aayah*:

﴿نَزَلَ بِهِ الرُّوحُ الْأَمِينُ ﴿٩٦﴾ عَلَى قَلْبِكَ لِتَكُونَ مِنَ الْمُنذِرِينَ ﴿٩٧﴾﴾

«Which the trustworthy *Rooh* [Jibreel (Gabriel)] has brought down Upon your heart [O Muhammad] that you may be [one] of the warners.»
(*Qur'an* 26:193-194)

And he is the *Rooh* whom Allah sent to Maryam:

﴿فَأَرْسَلْنَا إِلَيْهَا رُوحَنَا ﴿١٧﴾﴾

«Then We sent to her Our *Rooh* [angel Jibreel (Gabriel)].»

(*Qur'an* 19:17)

(c) Israafeel

Another of the angels is Israafeel, who will blow the Trumpet.

Jibreel, Mikaa'eel and Israafeel are the angels who were mentioned by the Messenger (ﷺ) in the *du'aa* with which he opened his prayer at night:

“*Allaahumma Rabba Jibreel wa Mikaa'eel wa Israafeel, Faatir as-samaawaati wal-ard, 'Aalim al-ghaybi wal-shahaadah, anta tahkumu*

bayna 'ibaadika fima kaanu fihi yakhtalifoon, ihdinee lima ukhtulifa fihi min al-haqq bi idhnika, innaka tahdi man tasha' ila shiraatim mustaqeem (O Allah, Lord of Jibreel, Mikaa'eel and Israafeel, Creator of the heavens and the earth, Knower of the unseen and the seen, You judge among Your slaves concerning that in which they differ. Guide me by Your Leave with regard to that in which they differ concerning the truth, for You guide whomsoever You will to a straight path).²⁰

(d) Maalik

And among the angels is Maalik, the keeper of Hell:

﴿وَنَادُوا بِمَلِكٍ لِّيَقْضِيَ عَلَيْنَا رَبُّكَ قَالَ إِنَّكُمْ مَكْنُوتُونَ﴾

﴿And they will cry: 'O Maalik [Keeper of Hell]! Let your Lord make an end of us.' He will say: 'Verily, you shall abide forever.'﴾

(*Qur'an* 43:77)

(e) Ridwaan

Ibn Katheer said: "The keeper of Paradise is an angel called Ridwaan, as is clearly stated in some *ahaaadeeth*."

(f) Munkar and (g) Nakeer

And among the angels whose names were mentioned by the Messenger (ﷺ) are Munkar and Nakeer. They are mentioned in the *ahaaadeeth* which talk about the questioning in the grave.

(h) Haaroot and (i) Maaroot

And among the angels are two whom Allah called Haaroot and Maaroot. Allah says:

﴿وَمَا كَفَرَ سُلَيْمَنُ وَلَكِنَّ الشَّيَاطِينَ كَفَرُوا يُعَلِّمُونَ النَّاسَ السِّحْرَ وَمَا أُنْزِلَ عَلَى الْمَلَائِكَةِ بِبَابِلَ هَارُوتَ وَمَارُوتَ وَمَا يُعَلِّمَانِ مِنْ أَحَدٍ حَتَّى يَقُولَا إِنَّمَا نَحْنُ فِتْنَةٌ فَلَا تَكْفُرْ﴾

²⁰ Muslim 1/534, hadith no. 770 from 'Aa'ishah *Umm al-Mu'mineen*.

﴿Sulaymaan did not disbelieve, but the *Shayaateen* [devils] disbelieved, teaching men magic and such things that came down at Babylon to the two angels, Haaroot and Maaroot, but neither of these two [angels] taught anyone [such things] till they had said, 'We are for trial, so disbelieve not [by learning this magic from us].﴾

(*Qur'an* 2:102)

From the context of the *aayah* it is clear that Allah sent them as a test for mankind at some time. Many myths surround them in the books of *Tafseer* and history, for which there is no proof in the *Qur'an* and *Sunnah*. It is sufficient to know about them only what is indicated in this verse.

'Azraa'eel

According to some reports, the Angel of Death is called 'Azraa'eel. However, this name is not mentioned in the *Qur'an*, or in the *ṣaḥeeḥ aḥaadeeth*.²¹

Raqeeb and '*Ateed*

Some scholars mentioned that among the angels are two called *Raqeeb* and '*Ateed*, based on the *aayah*,

﴿إِذْ يُلْقَى الْمَلَفَيَانِ عَنِ الْيَمِينِ وَعَنِ الشِّمَالِ قَعِيدٌ ﴿٧﴾ مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَنِدٌ ﴿٨﴾﴾

﴿[Remember] that the two receivers [recording angels] receive [each human being], one sitting on the right and one on the left [to note his or her actions]

Not a word does he [or she] utter but there is a watcher [*raqeeb*] by him ready [*'ateed*] to record it.﴾

(*Qur'an* 50:17-18)

What they mentioned is not correct. The words *raqeeb* (watcher) and '*ateed* (ready) here are adjectives describing the two angels who are always present and witnessing, who are never away from a person. It does not mean that these are the names of the angels.

²¹ *Al-Bidaayah wan-Nihaayah*, 1/50.

(xi) The death of the angels

The angels die just as humans and jinn die. This is stated clearly in the *aayah*:

﴿وَنُفِخَ فِي الصُّورِ فَصَعِقَ مَنْ فِي السَّمَوَاتِ وَمَنْ فِي الْأَرْضِ إِلَّا مَنْ شَاءَ اللَّهُ ثُمَّ نُفِخَ فِيهِ أُخْرَىٰ فَإِذَا هُمْ قِيَامٌ يَنْظُرُونَ﴾

﴿And the Trumpet will be blown, and all who are in the heavens and all who are on the earth will swoon away, except him whom Allah wills. Then it will be blown a second time, and behold they will be standing, looking on [waiting].﴾ (Qur'an 39:68)

The angels are included in this *aayah*, because they are in the heavens. Ibn Katheer said in his commentary on this verse:

“This is the second Trumpet-blast, the blast which will cause all creatures to fall unconscious. This will cause all living beings in the heavens and on earth to die, except for those whom Allah wills, as is clearly stated in detail in the famous hadith about the Trumpet. Then He will take the souls of those who are left, and the last one to die will be the Angel of Death. Then only the Ever-Living, Self-Sustaining will be left, Who was the First, and Who Alone will be the Last, Everlasting and Eternal. He will say, ‘Whose is the Sovereignty today?’ three times, then He will answer Himself by saying,

﴿لِلَّهِ الْوَحْدُ الْقَهَّارِ﴾

﴿It is Allah's, the One, the Irresistible!﴾ (Qur'an 40:16).”

Another verse which indicates that they (the angels) will die is:

﴿كُلُّ شَيْءٍ هَالِكٌ إِلَّا وَجْهَهُ﴾

﴿Everything will perish save His Face.﴾ (Qur'an 28:88)

Will any of them die before the Trumpet is blown? We do not know the answer to that, and we cannot discuss it, because there is no text that can give us a positive or a negative answer. Everything will perish save His Face.

2 - ATTRIBUTES

The angels are honourable and obedient

Allah has described the angels as being honourable and obedient:

﴿In the hands of scribes [angels].

Honourable and obedient.﴾

(Qur'an 80:15-16)

i.e., the Qur'an is in the hands of scribes (*safarah*), i.e., the angels, because they are the emissaries (*sufaraa'*) of Allah to His Messengers and Prophets. Bukhaari said: "*Safarah* refers to the angels. The singular is *saafir*. *Safartu* means 'I reconciled between them'. So the angels, who bring down the Revelation of Allah are like emissaries who reconcile between the people."²²

Allah has described these angels as being "honourable and obedient", i.e., He has created them honourable, good and noble. Their actions are obedient, pure and perfect. Hence the one who learns the Qur'an by heart should be one whose actions and words are proper and correct.

Bukhaari narrated that 'Aa'ishah (رضي الله عنها) said: 'The Messenger of Allah (ﷺ) said: 'The one who reads the Qur'an when he knows it by heart is like the honourable scribes and the one who reads the Qur'an and tries his best, and it is hard for him, will have two rewards.'²³

The modesty of the angels

Among the attributes of the angels mentioned by the Messenger (ﷺ) is their modesty. In the hadith narrated by Muslim in his *Shaheeh* from 'Aa'ishah it says that the Messenger of Allah (ﷺ) was lying down in his house with his thigh or his shin uncovered. Abu Bakr asked for permission to come in, and he let him in and spoke with him whilst he was in that state. Then 'Umar sought permission to come in, and he let

²² Bukhaari, 8/691.

²³ Bukhaari, 8/691, hadith no. 4937. Muslim, 1/549, hadith no. 798. This version is narrated by Bukhaari.

him in and spoke with him whilst he was in that state. Then ‘Uthmaan asked for permission to come in, and the Messenger (ﷺ) sat up and rearranged his garment, then he let him come in and spoke with him. When he left, ‘Aa’ishah said: “Abu Bakr came in, and you did not stir or pay too much attention. Then ‘Umar came in, and you did not stir or pay too much attention. Then ‘Uthmaan came in, and you sat up and fixed your garment.” He said, “How could I not feel shy of a man of whom the angels feel shy?”²⁴

The phrase “you did not stir” means you did not welcome him warmly.

3 - ABILITIES

(1) Their ability to take on different forms

Allah has given the angels the ability to take on forms different from their own. Allah sent Jibreel to Maryam (Mary) in human form:

﴿وَأَذْكُرْ فِي الْكِتَابِ مَرْيَمَ إِذِ انْتَبَذَتْ مِنْ أَهْلِهَا مَكَانًا شَرْقِيًّا ۖ فَاتَّخَذَتْ مِنْ دُونِهِمْ حِجَابًا فَأَرْسَلْنَا إِلَيْهَا رُوحَنَا فَتَمَثَّلَ لَهَا بَشَرًا سَوِيًّا ۖ قَالَتْ إِنِّي أَعُوذُ بِالرَّحْمَنِ مِنْكَ إِنْ كُنْتَ نَقِيًّا ۖ قَالَ إِنَّمَا أَنَا رَسُولُ رَبِّكِ لِأَهَبَ لَكِ غُلَامًا زَكِيًّا ۖ﴾

‘And; mention in the Book [the Qur’an, O Muhammad, the story of] Maryam [Mary], when she withdrew in seclusion from her family to a place facing east.

She placed a screen [to screen herself] from them; then We sent to her Our *Rooḥ* [angel Jibreel (Gabriel)], and he appeared before her in the form of a man in all respects.

She said: ‘Verily, I seek refuge with the Most Gracious [Allah] from you, if you do fear Allah.’

[The angel] said: ‘I am only a messenger from your Lord, [to announce] to you the gift of a righteous son.’

(Qur’an 19:16-19)

²⁴ Muslim. 4/1866, hadith no. 2401.

The angels came to Ibraaheem (ﷺ) in human form, and he did not know that they were angels until they told him who they really were. We have quoted above the *aayaat* which speak of that.

The angels came to the Prophet Loot (Lot) in the form of young men with handsome faces and he was grieved on account of them and feared that they may be harmed by his people, for they were an evil people who committed evil actions, and they used to commit sodomy:

﴿وَلَمَّا جَاءَتْ رُسُلُنَا لُوطًا سِئَءَ بِهِمْ وَضَاقَ بِهِمْ ذَرْعًا وَقَالَ هَذَا يَوْمٌ عَصِيبٌ﴾

﴿And when Our messengers came to Loot [Lot], he was grieved on account of them and felt himself straitened for them [lest the town people should approach them to commit sodomy with them]. He said: 'This is a distressful day.'﴾ (Qur'an 11:77)

Ibn Katheer said: "The angels appeared to him in the form of handsome young men as a test and a trial, so that proof might be established against the people of Loot, and Allah might seize them with a mighty punishment."²⁵

Jibreel used to come to the Messenger (ﷺ) in different forms. Sometimes he came in the form of Duhyah ibn Khaleefah al-Kalbi (a *Ṣaḥāabi* who was of handsome appearance), and sometimes in the form of a Bedouin.

Many of the *Ṣaḥāabah* saw him when he came in that form

In *Ṣaḥeeḥayn* (Bukhaari and Muslim) it is narrated that 'Umar ibn al-Khaṭṭaab said:

"Whilst we were sitting with the Messenger of Allah (ﷺ) one day, a man came to us whose clothes were exceedingly white and whose hair was exceedingly black. There were no signs of travel on him and none of us knew him. He sat down in front of the Prophet (ﷺ), with his knees touching his, and put his hands on his thighs, and said, 'O Muhammad, tell me about Islam...'" The hadith states that he asked him about

²⁵ *Al-Bidaayah wan-Nihaayah*, 1/43

eemaan (faith), *iḥsaan* and the Hour and its signs.²⁶

Then the Messenger (ﷺ) stated that the one who asked these questions was Jibreel, and that he had come to teach the *Ṣaḥaabah* their religion.

‘Aa’ishah saw the Messenger (ﷺ) patting the head of Duḥyah al-Kalbi’s horse and speaking to him. When she asked him about that, he (ﷺ) said, “That was Jibreel, and he sends *salaam* to you.”²⁷

The Messenger (ﷺ) told us of a man who killed ninety-nine persons, and when he set out repentant, death came to him when he was half-way to the land to which he was migrating. The angels of mercy and the angels of punishment disputed concerning him, and they referred the matter to an angel who came to them in human form. He (ﷺ) said: “An angel in human form came to them, and they appointed him (to arbitrate) between them. He said, ‘Measure the distance between the two lands (the evil place he was leaving and the good place to which he was headed), and whichever one he is closer to is where he belongs.’” No doubt they appointed him as an arbitrator by the command of Allah, and Allah sent this angel to them in human form. The story is narrated in *Ṣaḥeeḥ Muslim*, in *Baab at-Tawbah* (chapter on repentance).²⁸

In the story of the three people from among the Children of Israel whom Allah tested, the leper, the bald man and the blind man, we will see that an angel appeared to them in human form.

Some of the scholars indulged in discussions of how the angels change their form from a rational point of view, and they came up with ideas that are of no value. They should not have indulged in this discussion of this matter of the unseen. Allah has told us that the angels may take on

²⁶ Muslim, 1/37, hadith no. 8. Bukhaari from Abu Hurayrah, 1/114, hadith no. 49. This version is narrated by Muslim.

²⁷ Aḥmad in *Musnad*, Ibn Sa’d in *Aṭ-Ṭabaqaat*, with a *ḥasan isnaad*. The hadith about Jibreel sending *salaams* to ‘Aa’ishah without her seeing him, is narrated by Bukhaari in his *Ṣaḥeeḥ*, 6/305, hadith no. 3217; 7/106, hadith no. 3768.

²⁸ Muslim, 4/2118, hadith no. 2766.

different forms, but He has not told us how they do so. These scholars should have been content with what the Messenger of Allah and his Companions were content with, and they should have stopped where they stopped. If you want to read some of the discussions on this issue, see the book by Suyooti, *Al-Habaa'ik fi Akhbaar al-Malaa'ik*.²⁹

(2) Their great speed

The greatest speed known to humans is the speed of light, which is 186,000 miles per second.

But the speed of the angels is greater than that. It cannot be measured by human standards. A questioner would come to the Messenger (ﷺ) and would hardly have finished asking his question before Jibreel would come with the answer from the Lord of Glory, may He be exalted. Today there is no vehicle that can travel at the speed of light, and it would take millions of light years to reach some of the stars that exist in the horizons of this vast universe.

(3) Their knowledge

The angels have great knowledge that they have been taught by Allah, but they do not have the ability that man has been given, to find out about things:

﴿وَعَلَّمَ آدَمَ الْأَسْمَاءَ كُلَّهَا ثُمَّ عَرَضَهُمْ عَلَى الْمَلَائِكَةِ فَقَالَ أَنْبِئُونِي بِأَسْمَاءِ هَؤُلَاءِ إِنْ كُنْتُمْ صَادِقِينَ ﴿٣١﴾ قَالُوا سُبْحَنَكَ لَا عِلْمَ لَنَا إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ ﴿٣٢﴾﴾

«And He taught Adam all the names [of everything], then He showed them to the angels and said, 'Tell Me the names of these if you are truthful.'»

They [angels] said: 'Glory is to You, we have no knowledge except what you have taught us. Verily, it is You, the All-Knower, the All-Wise.'» (Qur'an 2:31-32)

²⁹ Pp. 261.

Man is distinguished by his ability to find out about things, and to discover the laws of the universe. The angels know that because they learn it directly from Allah. But what Allah teaches them is far more than what man knows. Among the knowledge that they have been given is the knowledge of writing:

﴿وَإِنَّ عَلَيْكُمْ لَحَافِظِينَ ۖ كِرَامًا كُنِينَ ﴿١٢﴾ يَعْمُونَ مَا نَقْعُولُونَ ﴿١٣﴾﴾

﴿But verily, over you [are appointed angels in charge of mankind] to watch you,

Kiraaman [Honourable] *Kaatibeen* – writing down [your deeds],

They know all that you do.﴾ (Qur'an 82:10-12)

We will discuss this in more detail under the heading of *The Angels and Man*.

The dispute of the hosts on high

The angels discuss amongst themselves matters of the revelation of their Lord which are not clear to them. In *Sunan at-Tirmidhi* and *Musnad Ahmad* it is narrated from Ibn 'Abbaas that the Messenger (ﷺ) said: "Last night my Lord – may He be blessed and exalted – came to me in the most beautiful form – he (the narrator) said: I think he said, in a dream – and He said: 'O Muhammad, do you know what the hosts on high dispute about?' I said, 'No.' He put His hand (on my back), between my shoulders, until I could feel its coolness on my chest, and I knew what was in the heavens and what was on earth.

Then He said, 'O Muhammad, do you know what the hosts on high dispute about?' I said, 'Yes, about expiations and actions that raise a person's status. The expiations are staying in the mosque after the prayer, walking on foot to join congregational prayers and doing *wudoo* ' properly at the time of hardship; and the actions that raise a person's status are spreading *salaam*, feeding people, and praying at night when people are asleep.'

He said, 'You have spoken the truth, Whoever does that will live in goodness and die in peace, and he will be free from any sin, as pure as a

newborn baby.’

He said, ‘O Muhammad, when you pray, say, “*Allahumma inni as ‘aluka fal al-khayraat wa tark al-munkaraat, wa hubb al-masaakeen, wa an taghfir li, wa tarhamni, wa tatoob ‘alaaya, wa idha aradta bi ‘ibaadika fitnah, fa ‘qbidni ilayka ghayr maftoon* [O Allah, I ask you for good deeds, avoidance of evil deeds, and love for the poor. (I ask You) to forgive me and to have mercy on me, and to accept my repentance. If You want to test Your slaves, then take me to You (i.e., cause me to die) without being tested].”³⁰

Ibn Katheer said, after quoting this hadith: “This is the famous hadith about the dream. Whoever thinks it happened when the Prophet (ﷺ) was awake is mistaken. It is narrated with different *isnaads* in *As-Sunan*. This hadith is also narrated by At-Tirmidhi from Jahdam ibn ‘Abd-Allah al-Yamaami.

Al-Hasan said: (it is) *ṣaḥeeḥ*. This dispute is not the dispute mentioned in the Qur’an, where Allah says:

﴿مَا كَانَ لِي مِنْ عِلْمٍ بِالْمَلَأِ الْأَعْلَىٰ إِذْ يَخْتَصِمُونَ ۚ إِنَّ يُوْحَىٰ إِلَىٰ إِبْرَٰهِيمَ أَنَّمَا أَنَا نَذِيرٌ مُّبِينٌ﴾

‘I had no knowledge of the chiefs [angels] on high when they were disputing and discussing [about the creation of Adam].

Only this has been revealed to me, that I am a plain warner.’﴿

(Qur’an 38:69-70)

The dispute mentioned in the hadith has been explained by the Messenger (ﷺ).

With regard to the dispute mentioned in the Qur’an, it is explained in the following *aayaat*:

³⁰ *Saḥeeḥ Sunan at-Tirmidhi*, 3/9, no. 2580, 2581

﴿إِذْ قَالَ رَبُّكَ لِلْمَلَائِكَةِ إِنِّي خَالِقٌ بَشَرًا مِّن طِينٍ ﴿٧١﴾ فَإِذَا سَوَّيْتُهُ وَنَفَخْتُ فِيهِ مِن رُّوحِي فَقَعُوا لَهُم سَاجِدِينَ ﴿٧٢﴾ فَسَجَدَ الْمَلَائِكَةُ كُلُّهُمْ أَجْمَعُونَ ﴿٧٣﴾ إِلَّا إِبْلِيسَ أَسْكَرَ وَكَانَ مِنَ الْكَافِرِينَ ﴿٧٤﴾﴾

«[Remember] when your Lord said to the angels: ‘Truly, I am going to create man from clay.

So when I have fashioned him and breathed into him [his] soul created by Me, then you fall down prostrate to him.’

So the angels prostrated themselves, all of them,

Except *Iblees* [Satan], he was proud and was one of the disbelievers.» (Qur'an 38:71-74)

The dispute mentioned in the Qur'an was concerning Adam (ﷺ) and the refusal of *Iblees* to prostrate to him, and how he (*Iblees*) argued with his Lord concerning His preferring Adam over him.”³¹

(4) They are disciplined and organized in all their affairs

The angels are disciplined in their worship. The Messenger (ﷺ) urged us to follow their example in that. He said, “Why do you not form your rows as the angels form their rows before their Lord?” They said, “O Messenger of Allah, how do the angels form their rows before their Lord?” He said, “They complete the rows and do not leave any gaps.”³²

On the Day of Resurrection, they will come in organized ranks:

﴿وَجَاءَ رَبُّكَ وَالْمَلَكُ صَفًّا صَفًّا ﴿٢٢﴾﴾

«And your Lord comes with the angels in rows.»

(Qur'an 89:22)

And they will stand in rows before Allah:

³¹ See *Tafseer Ibn Katheer*, 6/73-74.

³² Muslim, 1/322. hadith no. 430.

﴿يَوْمَ يَقُومُ الرُّوحُ وَالْمَلَائِكَةُ صَفًّا لَا يَتَكَلَّمُونَ إِلَّا مَنْ أَذِنَ لَهُ الرَّحْمَنُ وَقَالَ صَوَابًا﴾

«The Day that *Ar-Rooḥ* [Jibreel (Gabriel), or another angel] and the angels will stand forth in rows, they will not speak except him whom the Most Gracious [Allah] allows, and he will speak what is right.»
(Qur'an 78:38)

Ar-Rooḥ here refers to Jibreel.

Look at how precisely they carry out commands. In *Ṣaḥeeḥ Muslim* and *Musnad Aḥmad* it is narrated from Anas (رضي الله عنه) that the Prophet (ﷺ) said: “I will come to the gate of Paradise and ask for it to be opened. The gatekeeper will say, ‘Who are you?’ I will say, ‘Muhammad.’ He will say, ‘I was commanded not to open it for anyone before you.’”³³

We may note how precisely they carry out commands by looking at the hadith about the *Israa’*. When Jibreel asked for permission to enter each of the heavens, it was not opened for him until after it was found out who was seeking admission.

(5) The infallibility of the angels

Suyooti narrated from Al-Qaaḍi ‘Iyaaḍ that “Muslims are unanimously agreed that the angels are virtuous believers, and the Imaams of the Muslims are agreed that our belief about the messengers among them is like our belief about the Prophets with regard to their infallibility in the issues which we have referred to above, and that their responsibilities towards the Prophets are like the responsibilities of the Prophets towards their nations.”

Some scholars differed concerning the angels who are not messengers. Some were of the view that all the angels are infallible in the sense that they do not commit sin, based on the *aayaat*:

³³ Muslim, 1/188, hadith no. 197.

﴿يَأْتِيهَا الَّذِينَ ءَامَنُوا فَوْاْ أَنفُسَكُمْ وَأَهْلِيكُمْ نَارًا وَقُودُهَا النَّاسُ وَالْحِجَارَةُ عَلَيْهَا مَلَائِكَةٌ غِلَاطٌ شِدَادٌ لَا يَعْصُونَ اللَّهَ مَا أَمَرَهُمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ ﴿٦٦﴾﴾

«O you who believe! Ward off yourselves and your families against a Fire [Hell] whose fuel is men and stones, over which are [appointed] angels stern [and] severe, who disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.»

(Qur'an 66:6)

﴿وَمَا مِنَّا إِلَّا لَهُ مَقَامٌ مَّعْلُومٌ ﴿١٦٤﴾ وَإِنَّا لَنَحْنُ الصَّافُّونَ ﴿١٦٥﴾ وَإِنَّا لَنَحْنُ الْمُسِحُّونَ ﴿١٦٦﴾﴾

«And there is not one of us [angels] but has his known place [or position]:

And verily, we [angels], we stand in rows [for the prayers as you Muslims stand in rows for your prayers];

And verily, we [angels], indeed are those who glorify [Allah's Praises, i.e. perform prayers].»

(Qur'an 37:164-166)

﴿وَمَنْ عِنْدَهُ لَا يَسْتَكْبِرُونَ عَنْ عِبَادَتِهِ وَلَا يَسْتَحْسِرُونَ ﴿١٩﴾ يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ ﴿٢٠﴾﴾

«To Him belongs whosoever is in the heavens and on earth. And those who are near Him [i.e. the angels] are not too proud to worship Him, nor are they weary [of His worship].

They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].»

(Qur'an 21:19-20)

﴿بِأَيْدِي سَفَرَةٍ ﴿١٥﴾ كِرَامٍ بَرَرَةٍ ﴿١٦﴾﴾

«In the hands of scribes [angels].

Honourable and obedient.»

(Qur'an 80:15-16)

﴿لَا يَمَسُّهُ إِلَّا الْمُطَهَّرُونَ ﴿٧٩﴾﴾

«Which [that Book with Allah] none can touch but the purified [i.e. the angels].»

(Qur'an 56:79)

And there are many similar reports.

Another group was of the view that this applies only to the messengers among them and those who are close to Allah, and they cited as evidence the story of Haaroot and Maaroot, and the story of *Iblees*. The correct view is that all of them are infallible and that we should think of all of them as being above anything that could undermine their position and high status.

He said: "The answer to the story of Haaroot and Maaroot is that there is no report, sound or otherwise, about that from the Messenger of Allah (ﷺ). Concerning the story of *Iblees*, most scholars deny that he was one of the angels, and they say that he is the father of the jinn, as Adam is the father of mankind."³⁴

This issue was discussed by Aṣ-Ṣafawī al-Armawī, as quoted from him by Suyootī. He said: "The angels are infallible, and the evidence for that is as follows:

(i) Allah says concerning them:

﴿وَيَفْعَلُونَ مَا يُؤْمَرُونَ﴾

«[They] do that which they are commanded.» (Qur'an 66:6)

﴿وَهُمْ بِأَمْرِهٖ يَعْمَلُونَ﴾

«And they act on His Command.» (Qur'an 21:27)

These two *aayaat* include doing what is commanded and abstaining from what is forbidden, because a prohibition is a command to abstain, from doing something. The context here is that of praising."

(ii) Allah says:

﴿يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ﴾

«They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].» (Qur'an 21: 20)

³⁴ *Al-Habaa'ik min Akhbaar al-Malaa'ik* by Suyooti, Pp. 252

This is an eloquent description of their efforts in worship.

(iii) The angels are messengers of Allah, because Allah says:

﴿جَاعِلِ الْمَلٰٓئِكَةِ رُسُلًا ۝۱﴾

﴿Who made the angels messengers﴾

(*Qur'an* 35:1)

The angels are infallible, because Allah says, praising them,

﴿اَللّٰهُ اَعْلَمُ حَيْثُ يَجْعَلُ رِسَالَتَهُ ۝۱۲۴﴾

﴿Allah knows best with whom to place His Message.﴾

(*Qur'an* 6:124)

This *ayah* refers to their perfection in their work.³⁵

³⁵ *Al-Habaa'ik min Akhbaar al-Malaa'ik*, Pp. 253.

CHAPTER TWO

THE WORSHIP OF THE ANGELS

A LOOK AT THE NATURE OF THE ANGELS

The angels instinctively worship Allah. They do not have the ability to disobey Him.

﴿مَلَكُكُمْ غَلَاظٌ شِدَادٌ لَا يَعْصُونَ اللَّهَ مَا أَمَرَهُمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ﴾

«[They] disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.»

(*Qur'an* 66:6)

Their abstaining from sin and doing acts of obedience is part of their nature, and it does not require any effort on their part, because they have no desires (that could prevent them from doing so).

Perhaps this is the reason why a group of scholars said that the angels are not accountable, and that they are not included in the promises (of Paradise) and threats (of Hell).¹

What we can say is that the angels are not accountable in the same manner as the sons of Adam are, but saying that they are not accountable at all is a view that is to be rejected. They are commanded to worship and obey Allah:

﴿يَخَافُونَ رَبَّهُمْ مِنْ فَوْقِهِمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ﴾

«They fear their Lord above them, and they do what they are commanded.»

(*Qur'an* 16:50)

This *ayah* shows that they fear their Lord, and this fear is one of the responsibilities enjoined by shari'ah; indeed it is one of the highest forms of 'uboodiyyah (being a slave of Allah in the fullest sense), as Allah says of the angels:

¹ *Lawaami' al-Anwaar al-Bahiyyah*, 2/409.

﴿وَهُمْ مِنْ خَشْيَتِهِ مُشْفِقُونَ﴾ (٢٨)

﴿And they stand in awe for fear of Him.﴾ (Qur'an 21:28)

THE STATUS OF THE ANGELS

The best manner in which the angels are described is slaves of Allah, but they are honoured slaves. We have already referred to the fact that the claim made by the *mushrikeen* – that the angels were daughters of Allah – is a false one with no element of truth. Allah showed those who believed this as liars, and described the true nature of the angels and their status in more than one place (in the Qur'an). He said:

﴿وَقَالُوا اتَّخَذَ الرَّحْمَنُ وَلَدًا سُبْحَنَهُ بَلْ عِبَادٌ مُكْرَمُونَ ﴿٢٧﴾ لَا يَسْئَلُونَهُ بِالْقَوْلِ وَهُمْ بِأَمْرِهِ يَعْمَلُونَ ﴿٢٨﴾ يَعْلَمُ مَا بَيْنَ أَيْدِيهِمْ وَمَا خَلْفَهُمْ وَلَا يَشْفَعُونَ إِلَّا لِمَنْ أَرَادَ وَهُمْ مِنْ خَشْيَتِهِ مُشْفِقُونَ ﴿٢٩﴾ وَمَنْ يَقُلْ مِنْهُمْ إِنِّي إِلَهٌ مِنْ دُونِهِ فَلْيَنْكُرْ جَهَنَّمَ كَذَلِكَ نَجْزِي الظَّالِمِينَ ﴿٣٠﴾﴾

﴿And they say: 'The Most Gracious [Allah] has begotten a son [or children].' Glory to Him! They [whom they call children of Allah i.e. the angels, 'Eesa son of Maryam, 'Uzayr (Ezra)], are but honoured slaves.

They speak not until He has spoken, and they act on His Command. He knows what is before them, and what is behind them, and they cannot intercede except for him with whom He is pleased. And they stand in awe for fear of Him.

And if any of them should say: 'Verily, I am an *ilaah* [a god] besides Him [Allah],' such a one We should recompense with Hell. Thus We recompense the *Zaalimoon* [polytheists and wrongdoers].﴾

(Qur'an 21:26-29)

The angels are slaves who bear all the characteristics of '*uhoodiyyah*': they serve Allah and carry out His instructions. The knowledge of Allah encompasses them, and they cannot go beyond what He commands them to do or go against the instructions that are given to them. They are in fear and awe of Allah, and if it so happened that one of them were to

overstep the mark, Allah would punish him for his rebellion.

One aspect of the *'uboodiyyah* of the angels is that they do not make suggestions before their Lord, and they do not oppose any of His commands. Rather they do as they are commanded and hasten to respond.

﴿لَا يَسْقُفُونَهُ بِالْقَوْلِ وَهُمْ بِأَمْرِهِ يَعْمَلُونَ﴾

﴿They speak not until He has spoken, and they act on His Command.﴾
(Qur'an 21:27)

They do not do anything except that which they are commanded. The command motivates them, and the command makes them stop. In *Ṣaḥeeḥ al-Bukhaari* it is narrated that Ibn 'Abbaas² said: the Messenger of Allah (ﷺ) said to Jibreel, "Why do you not visit us more often?" Then the *aayah* was revealed:

﴿وَمَا نَنْزِلُ إِلَّا بِأَمْرِ رَبِّكَ لَهُ مَا بَيْنَ أَيْدِينَا وَمَا خَلْفَنَا وَمَا بَيْنَ ذَلِكَ وَمَا كَانَ رَبُّكَ نَسِيًّا﴾

﴿And we [angels] descend not except by the Command of your Lord [O Muhammad]. To Him belongs what is before us and what is behind us, and what is between those two; and your Lord is never forgetful.﴾
(Qur'an 19:64)

Examples of their worship

The angels are slaves of Allah whose responsibility is to worship Him. They fulfil this responsibility and worship Him with the greatest of ease. We will describe here some of the acts of worship done by the angels which Allah and His Messenger (ﷺ) have told us about.

(1) *Tasbeeh* (Glorifying Allah)

The angels remember Allah (*dhikr*), and the greatest *dhikr* is *Tasbeeh*. The bearers of the Throne glorify Him, may He be exalted:

² Bukhaari, 6/305, hadith no. 3218.

﴿الَّذِينَ يَحْمِلُونَ الْعَرْشَ وَمَنْ حَوْلَهُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ﴾

«Those [angels] who bear the Throne [of Allah] and those around it glorify the praises of their Lord.»
(*Qur'an* 40:7)

And all the angels glorify Him:

﴿وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ﴾

«And the angels glorify the praises of their Lord.»
(*Qur'an* 42:5)

They glorify Allah constantly, without ceasing, either at night or during the day:

﴿يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ﴾

«They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].»
(*Qur'an* 21:20)

Because they glorify Allah so much, they are indeed those who truly glorify Allah's praises, and they have the right to be proud of that:

﴿وَإِنَّا لَنَحْنُ الصَّافُونَ﴾

«And verily, we [angels], stand in rows [for the prayers as you Muslims stand in rows for your prayers];
And verily, we [angels], indeed are those who glorify [Allah's Praises, i.e. perform prayers].»
(*Qur'an* 37:165-166)

They glorify Allah so much because *Tasbeeh* is the greatest form of *dhikr*. Muslim narrated in his *Shaḥeeḥ* that Abu Dharr said: "The Messenger of Allah (ﷺ) was asked what kind of *dhikr* is the best. He said: 'That which Allah has chosen for His angels or His slaves: *Subḥān Allāhi wa bi ḥamdihi* (Glory and praise be to Allah).'"³

(2) Standing in rows

We have already mentioned the hadith in which the Messenger (ﷺ) urged his Companions to follow the example of the angels in making

³ Muslim, 4/2093, hadith no. 2731.

straight rows for the prayer: “Why do you not form rows as the angels form rows before their Lord?” When he was asked about how they form rows, he said: “They complete the rows, and do not leave any gaps.” This is narrated by Muslim.⁴

In the Qur'an it says of the angels:

﴿وَإِنَّا لَنَحْنُ الصَّافُّونَ﴾

﴿And verily, we [angels], stand in rows [for the prayers as you Muslims stand in rows for your prayers].﴾ (Qur'an 37:165)

They stand, bow and prostrate. In *Mushkil al-Aathaar* by Aṭ-Ṭahḥaawi, and in *Al-Mu'jam al-Kabeer* by Aṭ-Ṭabaraani, it is narrated that Ḥakeem ibn Ḥuzaam said:

“When the Messenger of Allah (ﷺ) was with his Companions, he said to them, ‘Do you not hear what I hear?’ They said, ‘We do not hear anything.’ He said, ‘I can hear the creaking of the heavens, and no wonder they creak, for there is not a spot the size of a handspan, but there is an angel on it, prostrating or standing (in worship).’”⁵

(3) Ḥajj

The angels have a Ka'bah in the seventh heaven to which they go on Ḥajj. This Ka'bah is that which Allah called *Al-Bayt al-Ma'moor* (the Much-Frequented House), and swore by it in *Soorat at-Ṭoor*:

﴿وَالْبَيْتِ الْمَعْمُورِ﴾

﴿And by *Al-Bayt al Ma'moor* [the house over the heavens parallel to the Ka'bah at Makkah, continuously visited by the angels].﴾

(Qur'an 52:4)

Ibn Katheer said in his commentary on this *aayah*: “It is reported in *Al-Ṣaḥeeḥayn* that the Messenger of Allah (ﷺ) said in the hadith about the

⁴ Muslim, 1/322, hadith no. 430.

⁵ Al-Albaani said: it is *ṣaḥeeḥ* according to the conditions of Muslim. *Silsilat al-Aḥadeeth aṣ-Ṣaḥeeḥah*, hadith no. 852.

Israa', after he had passed the seventh heaven: 'Then I was taken up to the Much-Frequented House. Every day seventy thousand angels enter it, and they never return to it, and when they leave another seventy thousand come'⁶ – i.e., they worship there, and they perform *Ṭawaaf* around it just as the people of this earth perform *Ṭawaaf* around their Ka'bah. The Much-Frequented House is the Ka'bah of the inhabitants of the seventh heaven, hence the Prophet (ﷺ) found Ibraaheem (عليه السلام) leaning back against the Much-Frequented House, because he was the builder of the earthly Ka'bah, and the reward should fit the action."

Ibn Katheer mentioned that the Much-Frequented House is parallel to the Ka'bah, i.e., it is above it, and if it were to fall it would fall on top of it. He said that in each of the heavens there is a House in which its inhabitants worship Allah, and in the direction of which they offer their prayers. The one which is in the first heaven is called *Bayt al- 'Izzah* (the House of Glory).

What Ibn Katheer said about the Much-Frequented House being parallel to the Ka'bah is narrated from 'Ali ibn Abi Ṭaalib. Ibn Jareer narrated on the authority of Khaalid ibn 'Ar'arah that a man said to 'Ali (عليه السلام), "What is the Much-Frequented House?" He said, "It is a House in the heavens parallel to the Ka'bah. Its sanctity in the heavens is like the sanctity of the Ka'bah on earth. Every day seventy thousand angels enter it, and they never return to it."⁷

Shaykh Naaṣir ad-Deen al-Albaani⁸ said concerning this hadith: its men are *thiqaat* apart from Khaalid ibn 'Ar'arah, who is *mastoor*... Then he stated that there is a corroborating *mursal ṣaḥeeḥ* report narrated from Qataadah, who said: "He mentioned to us that one day the Prophet (ﷺ)

⁶ Bukhaari, 6/103, hadith no. 2207; Muslim, 1/147, hadith no. 162. This version differs somewhat from that narrated in *Aṣ-Ṣaḥeeḥayn*.

⁷ Ibn Ḥajar narrated this from Aṭ-Ṭabari and Ishaaq in *Fath al-Baari*, 6/308, where he spoke at length about its *isnaad*.

⁸ *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, 1/236.

said to his Companions, 'Do you know what the Much-Frequented House is?' They said, 'Allah and His Messenger know best.' He said: 'It is a mosque in the heavens, beneath which is the Ka'bah. If it were to fall it would fall on top of it...'"

The editor (Al-Albaani) said: "In conclusion we may note that this phrase (that the Much-Frequented House is parallel to the Ka'bah) is proven when all the *isnaads* are combined."

(4) Their fear of Allah

Because the angels have such a great knowledge of their Lord, their veneration of Him and their fear of Him are very great. Allah says of them:

﴿وَهُمْ مِّنْ خَشْيَتِهِ مُشْفِقُونَ﴾

﴿And they stand in awe for fear of Him.﴾ (Qur'an 21:28)

How great their fear of their Lord is, is apparent from the hadith narrated by Bukhaari from Abu Hurayrah, who said that the Prophet (ﷺ) said: "When Allah decrees a matter in the heavens, the angels beat their wings in submission to what He has said, (with a sound like) a chain striking a rock."

'Ali and others said:

"The sound reaches them, and when fear is banished from their (angels') hearts, they (angels) say: 'What is it that your Lord has said?' They say: 'The truth. And He is the Most High, the Most Great' (cf. Qur'an 34:23)."⁹

In *Mu'jam at-Tabaraani al-Awsat* it is narrated with a *hasan isnaad* from Jaabir (رضي الله عنه) that the Messenger of Allah (ﷺ) said: "On the night on which I was taken on the Night Journey (*Israa'*), I passed by the hosts on high, and Jibreel was like a worn mat, from his fear of Allah."¹⁰

⁹ Bukhaari, 3/380, hadith no. 4701

¹⁰ *Ṣaḥeeḥ al-Jaami'*, 5/206

CHAPTER THREE

THE ANGELS AND MAN

1 - THE ANGELS AND ADAM

When Allah wanted to create Adam, He informed His angels of that. They asked Him the reason behind that, because they knew that the sons of Adam would cause corruption and shed blood, and they would disobey Allah and disbelieve. He told them that there were reasons for the creation of Adam which they did not know:

﴿وَإِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّیْ جَاعِلٌ فِی الْاَرْضِ خَلِیْفَةًۭۙ قَالُوْۤا اَتَجْعَلُ فِیْهَا مَنْ یُّفْسِدُ فِیْهَا وَیَسْفِكُ الدِّمَآءَ وَیَخُنُۢ نُسُبَکَۙ وَیُفْسِدُ لَکَۙ قَالَ اِنِّیْۤ اَعْلَمُ مَا لَا تَعْلَمُوْنَۙ﴾

«And [remember] when your Lord said to the angels: ‘Verily, I am going to place viceroy [mankind] on earth.’ They said: ‘Will You place therein those who will make mischief therein and shed blood, – while we glorify You with praises and thanks and sanctify You.’ He [Allah] said: ‘I know that which you know not.’» (Qur'an 2:30)

Their prostration to Adam when he was created

Allah commanded His angels to prostrate to Adam when He had completed his creation and breathed his soul into him:

﴿اِذْ قَالَ رَبُّکَ لِلْمَلٰٓئِكَةِ اِنِّیْ خَلَقْتُۤ اِنْسَآءًۭۙ مِنْ طِیْنٍ ﴿۷۱﴾ فَاِذَا سَوَّیْتُهُمْ وَنَفَخْتُ فِیْهِمْ مِنْ رُّوْحِیْ فَقَعُوْۤا لَہُمْۙ سَجْدًاۙ﴾

«[Remember] when your Lord said to the angels: ‘Truly, I am going to create man from clay.

So when I have fashioned him and breathed into him [his] soul created by Me, then you fall down prostrate to him.’»

(Qur'an 38:71-72)

They responded to the command, except for *Iblees*:

﴿فَسَجَدَ الْمَلَائِكَةُ كُلُّهُمْ أَجْمَعُونَ ﴿٧٦﴾ إِلَّا إِبْلِيسَ أَسْتَكْبَرَ وَكَانَ مِنَ الْكَافِرِينَ ﴿٧٧﴾﴾

«So the angels prostrated themselves, all of them.

Except *Iblees* [Satan], he was proud and was one of the disbelievers.»

(*Qur'an* 38:73-74)¹

How the angels taught Adam

It is narrated that Abu Hurayrah (رضي الله عنه) said: The Messenger of Allah (ﷺ) said: “Allah created Adam in His image², and he was sixty cubits tall. When He had created him, He said, ‘Go and greet them – a group of angels who were sitting – and listen to how they respond, for that will be your greeting and the greeting of your descendents.’ So he said, ‘*As-Salaamu ‘alaykum* (peace be upon you),’ and they said, ‘*As-Salaamu ‘alayka wa rahmat-Allahi* (peace be upon you, and the mercy of Allah).’” So they added the words *wa rahmat-Allah*.³

The angels washed Adam when he died

When Adam died, his children did not know what they should do with his body, so the angels taught them. In *Mustadrak al-Haakim* and *Mu'jam at-Tabaraani al-Awsat*, it is narrated with a *shaheeh isnaad* from Ubayy (رضي الله عنه) that the Prophet (ﷺ) said: “When Adam died, the angels washed his body with water an odd number of times, then they

¹ This *aayah* clearly indicates that all the angels prostrated to Adam. This offers a refutation of the view of those who say that those who prostrated were only some of the angels, or that they were only the angels of this earth. The report attributed to Ibn ‘Abbaas which says that they were the angels of this earth is *munkar and maqtoo'* (i.e., it is not a strong report). Ibn Taymiyah stated that the *aayah* is a clear text which is not open to interpretation and it is not permitted to believe the opposite of what is stated in this *aayah*.

² In his footnote on this hadith, Dr. Muhammad Muhsin Khan notes that this means that Adam has been granted life, knowledge, power of understanding etc., which are also attributes of Allah, but that only the names are the same and there is no comparison between the Creator and the created being. See *The Translation of the Meanings of Shaheeh al-Bukhaari*, Vol. 8, Pp. 161. (Translator)

³ Bukhaari, 11/3, no. 6227. Also narrated by Muslim, 4/2184, hadith no. 2841

buried him in a grave with a niche (*lahd*), and said: This is the way of the sons of Adam.”⁴

It is narrated in the *ṣaḥeeh aḥaadeeth* that the angels washed a *shaheed* from this ummah, Ḥanzalah ibn Abi ‘Aamir, who was martyred in the battle of Uhud. The Messenger (ﷺ) said to his Companions after Ḥanzalah was killed: “The angels are washing your companion” meaning Ḥanzalah. The *Ṣaḥaabah* asked his wife, and she said that he had gone out when he heard the call to arms, and he was *junub* (in a state of ritual impurity following marital relations). The Messenger of Allah (ﷺ) said, “That is why the angels washed his body.”

This is narrated by Al-Ḥaakim and Al-Bayhaqi with a *ḥasan isnaad*. Ibn ‘Asaakir stated with a *ṣaḥeeh isnaad* that (the tribe of) Al-Aws were proud of the fact that one of their member, Ḥanzalah ibn Abi ‘Aamir, had been washed by the angels.⁵

2 - THE ANGELS AND THE SONS OF ADAM

The connection between the angels and the descendents of Adam is very strong. They are there when a person is created, they guard him/her after he/she emerges into this world. They bring the *wahy* (revelation) from Allah and they watch over people’s actions and behaviour. And they bring a person’s soul forth from his body when his appointed time (of death) comes.

(1) Their role in the creation of man

Muslim narrated in his *Ṣaḥeeh* that Abu Dharr said: “I heard the Messenger of Allah (ﷺ) say: ‘When forty-two nights are passed, Allah sends an angel to the *nutfah* (embryo) and he gives it shape, forming its hearing and sight, its skin, flesh and bones. Then he says: ‘O Lord, male or female?’ Then your Lord decrees whatever He wills and the angel writes it down.”⁶

⁴ *Ṣaḥeeh al-Jaami*, 5/48

⁵ *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, hadith no 326

⁶ Muslim, 4/2037, hadith no 2645

It is narrated that Ibn Mas‘ood said: “The Messenger of Allah (ﷺ), who is the most truthful one, told us: ‘Each one of you comes together in mother’s womb for forty days, then becomes an *‘alaqah* (clot) for a similar period of time. Then he becomes a *mudghah* (chewed lump of flesh) for a similar length of time. Then Allah sends an angel to him, who is commanded with four things. It is said to him: Write down his deeds, his provision, and whether he is doomed (destined for Hell) or blessed (destined for Paradise). Then the soul is breathed into him.’”⁷

It is narrated in *Ṣaḥeeḥayn* (Bukhaari and Muslim) from Anas that the Prophet (ﷺ) said: “Allah has appointed an angel over the womb, and he says, ‘O Lord, a *nutfah* (mixed discharge from male and female); O Lord, an *‘alaqah* (clot); O Lord, a *mudghah* (chewed lump of flesh).’ And when Allah wants to decree his creation, he says: ‘O Lord, male or female? Doomed or blessed? What is his provision? What is his lifespan?’ All of that is written when he is in his mother’s womb.”⁸

(2) The angels guard the sons of Adam

Allah says:

﴿سَوَاءٌ مِنْكُمْ مَنْ أَسَرَ الْقَوْلَ وَمَنْ جَهَرَ بِهِ، وَمَنْ هُوَ مُسْتَخْفٍ بِاللَّيْلِ وَسَارِبٌ بِالنَّهَارِ﴾ (١٠) لَمْ يُعَقِّبَتْ مِنْ بَيْنِ يَدَيْهِ وَمِنْ خَلْفِهِ يَحْفَظُونَهُ مِنْ أَمْرِ اللَّهِ ﴿١١﴾

﴿It is the same [to Him] whether any of you conceals his speech or declares it openly, whether he be hid by night or goes forth freely by day.

For him [each person], there are angels in succession, before and behind him. They guard him by the Command of Allah.﴾

(*Qur'an* 13:10-11)

The interpreter of the Qur'an (*turjumaan al-Qur'an*), Ibn ‘Abbaas, has explained that the word *Al-Mu‘aqqibaat* (translated here as “angels in

⁷ Bukhaari, 6/303, hadith no. 3208. Also narrated by Muslim, 4/2036, hadith no. 2643.

⁸ Bukhaari, 11/477, hadith no. 6595. Also narrated by Muslim, 4/2038, hadith no. 2646. This version is narrated by Bukhaari.

succession”) refers to the angels whom Allah appoints to guard a person from before and from behind. Then when the decree of Allah comes, which Allah wills should befall him, they withdraw from him.

Mujaahid said: “There is no person who does not have an angel appointed to protect him when he is asleep and when he is awake, from the jinn, other men and savage beasts. None of these come to him, but the angel tells it, ‘Keep away!’ except for that which Allah has given permission to befall him.”

A man said to ‘Ali ibn Abi Tāalib, “A group from Muraad want to kill you.” He (‘Ali) said, “With every man there are angels guarding him from whatever has not been decreed for him. When the decree comes, they move away from him and let it reach him. Your fixed lifespan (decreed by Allah) is a protection for you.”⁹

The angels in succession - *Al-Mu‘aqqibaat* - mentioned in the *aayah* of *Soorat al-Ra‘d* are also those referred to in another *aayah*:

﴿وَهُوَ الْقَاهِرُ فَوْقَ عِبَادِهِ وَيُرْسِلُ عَلَيْكُمْ حَفَظَةً حَتَّىٰ إِذَا جَاءَ أَحَدَكُمُ الْمَوْتُ تَوَفَّتْهُ رُسُلُنَا وَهُمْ لَا يُفْرِطُونَ﴾ (١١)

«He is the Irresistible [Supreme], over His slaves, and He sends guardians [angels guarding and writing all of one’s good and bad deeds] over you, until when death approaches one of you, Our messengers [angel of death and his assistants] take his soul, and they never neglect their duty.»

(*Qur’an* 6:61)

These guardians are sent by Allah to protect His slaves until the decreed time of death comes to them.

(3) The emissaries of Allah to His Messengers and Prophets

Allah has told us that Jibreel is the only one who carries out this mission:

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَىٰ قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِّمَا بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَىٰ لِلْمُؤْمِنِينَ﴾ (٩٧)

⁹ *Al-Bidaayah wan-Nihaayah*, 1/54.

﴿Say [O Muhammad]: ‘Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur’an] down to your heart by Allah’s Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and...’﴾

(*Qur’an* 2:97)

﴿نَزَلَ بِهِ الرُّوحُ الْأَمِينُ ﴿١٩٣﴾ عَلَى قَلْبِكَ لِتَكُونَ مِنَ الْمُنْذِرِينَ ﴿١٩٤﴾﴾

﴿Which the trustworthy *Rooh* [Jibreel (Gabriel)] has brought down Upon your heart [O Muhammad] that you may be [one] of the warners.﴾

(*Qur’an* 26:193-194)

Wahy (revelation) may be brought by angels other than Jibreel, but this happens rarely – as stated in the hadith narrated by Muslim from Ibn ‘Abbaas, who said: “Whilst Jibreel was sitting with the Prophet (ﷺ), he heard a creaking sound above him, and he raised his head. He said, ‘This is a door in the heaven which has been opened today, and it has never been opened before today, and an angel has come down through it. This is an angel who has come down to the earth, and he never came down before today. He [that angel] gave the greeting of *salaam* and said: Rejoice, for you have been granted two lights which have not been given to any Prophet before you: the Opening of the Book (*Soorat al-Faatiḥah*) and the closing verses of *Soorat al-Baqarah*. You will not read even one letter of them but you will be granted reward.’”¹⁰

In *At-Taareekh* by Ibn ‘Asaakir, it is narrated from Ḥudhayfah that the Messenger of Allah (ﷺ) said: “An angel came to me and greeted me with *salaams* – he came down from the heavens and he had never come down before – and he gave me the glad tidings that Al-Ḥasan and Al-Ḥusayn would be the leaders of the youth of Paradise, and that Faatimah would be the leader of the women of Paradise.”¹¹

In *Musnad Aḥmad* and *Sunan an-Nisaa’i* it is narrated from Ḥudhayfah that the Messenger of Allah (ﷺ) said: “Did you not see what happened

¹⁰ Muslim, 1/554, hadith no. 806.

¹¹ *Saḥeeḥ al-Jaami’*, 1/80

to me just?" They said, "Yes." He said, "It was one of the angels who had never come down to the earth before tonight. He asked his Lord for permission to greet me, and to tell me that Al-Ḥasan and Al-Ḥusayn will be the leaders of the youth of Paradise, and that Faaṭimah will be the leader of the women of Paradise."¹²

Not everyone to whom an angel comes is a Messenger or a Prophet

Not everyone to whom an angel comes can be counted as a Messenger or a Prophet. This is an illusion. Allah sent Jibreel to Maryam, as He sent him to the mother of Ismaa'eel when she ran out of food and drink. (And it is known that neither of them were Prophetess).

The *Ṣaḥābah* saw Jibreel in the form of a Bedouin. And Allah sent an angel to that man who visited a brother of his for the sake of Allah, to tell him that Allah loved him because he loved his brother... This happened a lot, and the reason was to make a point.

How did the *Wahy* (revelation) come to the Messenger (ﷺ)?

It is narrated in Bukhaari from 'Aa'ishah (may Allah be pleased with her) that Al-Ḥarith ibn Hishaam (رضي الله عنه) asked the Messenger (ﷺ), "O Messenger of Allah, how does the *Wahy* come to you?"

The Messenger (ﷺ) said: "Sometimes it comes to me like the ringing of a bell, and that is the hardest for me. Then it departs from me, and I understand what has been said. Sometimes the angel comes to me in the form of a man who speaks to me, and I understand what he says."¹³

Jibreel used to come to the Messenger (ﷺ) in his angelic form. This was difficult for the Messenger (ﷺ). At other times Jibreel would change from his angelic form and take on human form, and this was easier for the Messenger (ﷺ).

The Messenger (ﷺ) saw Jibreel twice in the form in which Allah created him:

¹² *Musnad Ahmad*, 5/391; this version is narrated by him. *Ṣaḥeeḥ Sunan an-Nasaa'i*, 3/226, hadith no. 2975.

¹³ Bukhaari. 1/18, hadith no. 2.

(i) Three years after the beginning of his (ﷺ) Mission

It is narrated in Bukhaari from Jaabir ibn ‘Abd-Allah that the Messenger of Allah (ﷺ) said: “Whilst I was walking, I heard a voice from the heavens. I raised my head and saw the angel who had come to me in (the cave of) Hīraa’, sitting on a throne between the heavens and the earth. I was scared of him, and I went back and said, ‘Cover me!’”¹⁴

(ii) When he was taken up into the heavens (the *Mi’raaj*)

These two occasions were mentioned in *Soorat al-Najm*, where Allah says:

﴿عَلَّمُ سَيِّدُ الْقَوَى ۝ ذُو مِرَّةٍ فَاسْتَوَى ۝ وَهُوَ بِالْأُفُقِ الْأَعْلَى ۝ ثُمَّ دَنَا ۝ فَتَدَلَّى ۝ فَكَانَ قَابَ قَوْسَيْنِ أَوْ أَدْنَى ۝ فَأَوْحَىٰ إِلَىٰ عَبْدِهِ مَا أَوْحَىٰ ۝ مَا كَذَبَ الْفُؤَادُ مَا رَأَىٰ ۝ أَفَتَسْمُرُونَ عَلَىٰ مَا بَرَىٰ ۝ وَلَقَدْ رَآهُ نَزْلَةً أُخْرَىٰ ۝ عِنْدَ سِدْرَةِ الْمُنْتَهَىٰ ۝ عِنْدَهَا جَنَّةُ الْمَأْوَىٰ ۝ إِذْ يَغْشَى السِّدْرَةَ مَا يَغْشَىٰ ۝ مَا زَاغَ الْبَصَرُ وَمَا طَغَىٰ ۝﴾

«He has been taught [this Qur’an] by one mighty in power [Jibreel (Gabriel)].

One free from any defect in body and mind then he [Jibreel – Gabriel in his real shape as created by Allah] rose and became stable.

While he [Jibreel (Gabriel)] was in the highest part of the horizon, [Tafseer Ibn Katheer]

Then he [Jibreel (Gabriel)] approached and came closer,

And was at a distance of two bows’ length or [even] nearer.

So [Allah] revealed to His slave [Muhammad through Jibreel (Gabriel)] whatever He revealed.

The [Prophet’s] heart lied not in what he [Muhammad] saw.

Will you then dispute with him [Muhammad] about what he saw [during the *Mi’raaj*: (Ascent of the Prophet to the seven heavens)].

And indeed he [Muhammad] saw him [Jibreel (Gabriel)] at a second descent [i.e. another time].

¹⁴ Bukhaari, 1/27, hadith no. 4.

Near *Sidrat-ul-Muntaha* [a lote tree of the utmost boundary over the seventh heaven beyond which none can pass].

Near it is the Paradise of Abode.

When that covered the lote tree which did cover it!

The sight [of Prophet Muhammad] turned not aside [right or left], nor it transgressed beyond the limit [ordained for it]. ﴿

(*Qur'an* 53:5-17)

The mission of Jibreel is not restricted only to conveying the *Wahy*

The mission of Jibreel is not restricted only to conveying the *Wahy* from Allah. He used to come to the Prophet (ﷺ) every year in Ramaḍaan, on every night of that month, to teach him the Qur'an. According to the hadith narrated by Bukhaari in his *Ṣaḥeeḥ* from Ibn 'Abbaas, "The Messenger of Allah (ﷺ) was the most generous of people, and he was at his most in generosity during Ramaḍaan, when he used to meet Jibreel, and he used to meet him every night during Ramaḍaan, to study the Qur'an with him. The Messenger of Allah was more generous in doing good than the wind when it blows."¹⁵

His leading the Messenger in prayer

Jibreel led the Messenger (ﷺ) in prayer, so that he could learn the prayer as Allah wanted it to be performed. In *Ṣaḥeeḥ al-Bukhaari* and *Sunan an-Nasaa'i* it is narrated from Abu Mas'ood that the Messenger (ﷺ) said: "Jibreel came down and led me in prayer, so I prayed with him, then I prayed with him, then I prayed with him, then I prayed with him, then I prayed with him" – and he counted them off on his fingers five times.¹⁶

In *As-Sunan* it is narrated from Ibn 'Abbaas that the Messenger (ﷺ) said: "Jibreel led me in prayer at the Ka'bah twice. He led me in praying *Zuḥr* when the sun had passed its zenith by the length of a sandal-thong, and he led me in praying *'Aṣr* when the shadow of

¹⁵ Bukhaari, 1/30, hadith no, 6.

¹⁶ Bukhaari, 6/305, hadith no. 3221. *Ṣaḥeeḥ Sunan an-Nasaa'i*, 1/108, no. 480.

every object was the same length as the object itself. He led me – in praying *Maghrib* – at the time when the fasting person breaks his fast. He led me in praying '*Ishaa*' when the twilight had ended. And he led me in praying *Fajr* at the time when food and drink become *haraam* for the one who is fasting.

On the following day, he led me in praying *Zuhr* when the shadow of an object was the same length as the object itself. He led me in praying '*Aṣr*' when the shadow of an object was twice as long as the object itself. He led me in praying *Maghrib* at the time when the fasting person breaks his fast. He led me in praying '*Ishaa*' when a third of the night had passed. And he led me in praying *Fajr* when there was a fair amount of light. Then he turned to me and said: 'O Muhammad, these are the times (observed by) the Prophets before you, and the time (for each prayer) is anywhere between these two times (mentioned in each case).''¹⁷

The *ruqyah* of Jibreel for the Messenger (ﷺ)

Muslim narrated on the authority of Abu Sa'eed that Jibreel came to the Prophet (ﷺ) and said, "O Muhammad, are you ill?" He said, "Yes." He said, "In the name of Allah I perform *ruqyah* for you, from everything that is troubling you. From the evil of every living being, or every envious eye, may Allah heal you, in the name of Allah I perform *ruqyah* for you."¹⁸

Other actions

Among other things, Jibreel fought alongside the Messenger (ﷺ) at Badr and *Al-Khandaq* (the Ditch), and he accompanied the Messenger on the Night Journey (the *Israa'*), etc.

¹⁷ *Ṣaḥeeḥ Sunan Abi Dawood*, 1/79, no. 377 - this version is narrated by him.

Ṣaḥeeḥ Sunan at-Tirmidhi, 1/50, no. 127. *Ṣaḥeeḥ Sunan an-Nasaa'i*, narrating from Abu Hurayrah, 1/109, no. 477.

¹⁸ Muslim, 4/1718, hadith no. 2186.

Why did Allah not send Messengers from among the angels?

Allah did not send Messengers from among the angels because the nature of the angels is different from the nature of man, and so it is not easy for man to be in contact with the angels. It was very difficult for the Prophet (ﷺ) when Jibreel came to him in his angelic form, as we have noted above. When he saw Jibreel in his true form, he was scared, and he went to his wife and said, "Cover me, cover me!"

Because their nature is different, Allah willed that He should send mankind Messengers of their own kind. If the inhabitants of the earth had been angels, He would have sent down to them an angel as a Messenger. Allah, the Exalted, says:

﴿قُلْ لَوْ كَانِ فِي الْأَرْضِ مَلَائِكَةٌ يَمْشُونَ مُطْمَئِنِّينَ لَنَزَّلْنَا عَلَيْهِمْ مِنَ السَّمَاءِ مَلَكًا رَسُولًا﴾ (95)

«Say: 'If there were on the earth, angels walking about in peace and security, We should certainly have sent down for them from the heaven an angel as a Messenger.'» (Qur'an 17:95)

Even if we assume that Allah had chosen some of the angels to be His Messengers to mankind, He could not have sent them down in their angelic form. He would have had to make them appear in human form, so that the people could have learned from them:

﴿وَقَالُوا لَوْلَا أُنْزِلَ عَلَيْهِ مَلَكٌ وَلَوْ أَنزَلْنَا مَلَكًا لَفُضِيَ الْأَمْرُ ثُمَّ لَا يُنْظَرُونَ ﴿٨﴾ وَلَوْ جَعَلْنَاهُ مَلَكًا لَجَعَلْنَاهُ رَجُلًا وَلَلَبَسْنَا عَلَيْهِمْ مَا يَلْبِسُونَ ﴿٩﴾﴾

«And they say: 'Why has not an angel been sent down to him?' Had We sent down an angel, the matter would have been judged at once, and no respite would be granted to them.

And had We appointed him an angel, We indeed would have made him a man, and We would have certainly confused them in which they are already confused [i.e. the Message of Prophet Muhammad].» (Qur'an 6:8-9)

Allah tells us that the *kaafirs* 'demand to see the angels, and to have a Messenger from among the angels come to them, was no more than stubbornness on their part. It was not a request for guidance, and even if it were to happen, they would never believe:

﴿وَلَوْ أَنَّا زَلَّلْنَا إِلَيْهِمُ الْمَلَائِكَةَ وَكَلَّمَهُمُ الْمَوْتَى وَحَشَرْنَا عَلَيْهِمْ كُلَّ شَيْءٍ قُبُلًا مَا كَانُوا لِيُؤْمِنُوا إِلَّا أَنْ يَشَاءَ اللَّهُ وَلَكِنْ أَكْثَرُهُمْ يَجْهَلُونَ﴾

﴿And even if We had sent down unto them angels, and the dead had spoken unto them, and We had gathered together all things before their very eyes, they would not have believed, unless Allah willed, but most of them behave ignorantly.﴾ (Qur'an 6:111)

(4) Stirring up good motives in human hearts

Allah has appointed for each person a *qareen* (constant companion) from among the angels, and another from among the jinn. In *Shaheeh Muslim* it is narrated that Ibn Mas'ood said: "The Messenger of Allah (ﷺ) said: "There is no one among you but there has been appointed for him one *qareen* from among the jinn and another from among the angels." They said, "For you too, O Messenger of Allah?" He said, "For me too, but Allah has helped me against him (the jinn companion) and he has become Muslim, so he does not tell me to do anything but good."¹⁹

This angelic companion is probably different from the angels who are commanded to record a person's deeds; Allah has appointed him to guide the person.

A person's *qareen* from among the angels and his *qareen* from among the jinn have an influence upon him. The latter tells him and encourages him to do evil, and the former urges and encourages him to do good. It is narrated from Ibn Mas'ood (رضي الله عنه) that the Messenger of Allah (ﷺ) said: "The devil has a hold over the son of Adam, and the angel has a hold over him. The hold of the devil tempts man to do evil and deny the truth. The

¹⁹ Muslim, 4/2168, hadith no. 2814.

hold of the angel encourages man to do good and believe in the truth. Whoever experiences anything of this sort, let him know that it is from Allah, and let him praise Allah. Whoever experiences anything of the other, let him seek refuge with Allah from the accursed *Shayṭaan*, then recite:

﴿الشَّيْطَانُ يَعِدُكُمُ الْفَقْرَ وَيَأْمُرُكُم بِالْفَحْشَاءِ وَاللَّهُ يَعِدُكُم مَّغْفِرَةً مِّنْهُ وَفَضْلًا وَاللَّهُ وَاسِعٌ عَلِيمٌ﴾

﴿*Shayṭaan* [Satan] threatens you with poverty and orders you to commit *Fahshaa*’ [evil deeds, illegal sexual intercourse, sins]; whereas Allah promises you forgiveness from Himself and bounty, and Allah is All-Sufficient for His creatures’ needs, All-Knower.﴾”
(*Qur’an* 2:268)

Ibn Katheer said, after quoting this hadith: “This is how it is narrated by At-Tirmidhi and An-Nasaa’i in the books of *Tafseer* in their *Sunans*, from Hanaad ibn al-Sirri. It is also narrated by Ibn Ḥibbaan in his *Ṣaḥeeh*, from Abu Ya’laa al-Moṣuli, also from Hanaad. At-Tirmidhi said: (it is) *ḥasan ghareeb*, and it is the hadith of Abu’l-Aḥwaṣ, i.e., Salaam ibn Saleem...”

Look at the following hadith to see how the jinn-companion and the angel-companion compete with each other to direct a person. Al-Ḥaafiz Abu Moosa narrated from Abu az-Zubayr that Jaabir said: “The Messenger of Allah (ﷺ) said: ‘When a person goes to bed, an angel and a devil hasten towards him. The angel says, ‘End your day with good,’ and the devil says, “End your day with evil.” If he remembers Allah until (sleep) overtakes him, the angel expels the devil and spends the night watching over him.

When he wakes up, an angel and a devil hasten towards him. The angel says, “Start (your day) with good,’ and the devil says, ‘Start (your day) with evil.’ If he says, ‘Praise be to Allah who has brought my soul back to life after causing it to die, and has not caused me to die during my sleep. Praise be to Allah Who has detained the souls whom He decreed should die, and has sent back the others until an appointed time. Praise

be to Allah Who grasps the heavens and the earth lest they move away from their places, and if they were to move away from their places, there is not one that could grasp them after Him (cf. 35:41), and Praise be to Allah Who holds up the heavens so that they cannot fall on the earth except by His leave,' – then the angel expels the devil and spends the day watching over him."²⁰

These *aḥaadeeth* encourage us to do a lot of good deeds in order to reform ourselves, so that the angels come near to us. There is a great deal of good in having the angels near to us. We have mentioned above the hadith of Ibn 'Abbaas, which describes the effect of the Messenger's meeting with Jibreel during the month of Ramaḍaan, to study the Qur'an, and how the Messenger (ﷺ) at that time was "more generous in doing good than the wind when it blows."²¹

(5) Recording the good and bad deeds of the sons of Adam

The angels are appointed to record the deeds of the sons of Adam, both good and bad. These are the angels referred to in the *aayah*:

﴿وَأَن عَلَيكُم لَّحَافِظِينَ ﴿١٠﴾ كِرَامًا كُنِينٍ ﴿١١﴾ يَعْلَمُونَ مَا تَفْعَلُونَ ﴿١٢﴾﴾

﴿But verily, over you [are appointed angels in charge of mankind] to watch you,

Kiraaman [Honourable] *Kaatibeen* – writing down [your deeds],
They know all that you do.﴾ (Qur'an 82:10-12)

For every person, Allah has appointed two angels who are always present and who never leave him; they record in detail all that he does

²⁰ The editor of *Al-Waabil aṣ-Ṣayyib* said, commenting on this hadith: Something similar is narrated by Ibn Hibbaan, no. 2362, Mawaarid, and Al-Ḥaakim, 1/548. Al-Ḥaakim classed it as *ṣaḥeeḥ* and Adh-Dhahabi agreed with him. Its men are *thiqaat*. It is also mentioned by Al-Haythami in *Majma' az-Zawaa'id*, 10/120. He said: it is narrated by Abu Ya'laa, and its men are the men of *ṣaḥeeḥ*, apart from Ibraaheem ash-Shaami, who is *thiqah*. We say the correct name is Ibraaheem ibn al-Ḥajjaaj al-Saami, not Ash-Shaami.

²¹ Bukhaari, 1/30, hadith no. 6.

and says:

﴿وَلَقَدْ خَلَقْنَا الْإِنْسَانَ وَنَعْلَمُ مَا نُوسُوهُ بِهِ نَفْسُهُ وَحَنَّا أَقْرَبُ إِلَيْهِ مِنْ حَبْلِ الْوَرِيدِ ﴿١٦﴾ إِذْ يَبْلُغُ الْمُلْقِيَانِ الْعَيْنِ وَعَنِ الشِّمَالِ قَعِيدٌ ﴿١٧﴾ مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَنِدٌ ﴿١٨﴾﴾

«And indeed We have created man, and We know what his own self whispers to him. And We are nearer to him than his jugular vein [by Our Knowledge].

[Remember] that the two receivers [recording angels] receive [each human being], one sitting on the right and one on the left [to note his or her actions].

Not a word does he [or she] utter but there is a watcher by him ready [to record it].»

(Qur'an 50:16-18)

The word *qa'eed* (translated here as “sitting”) means watching, and *raqeeb* ‘ateed [translated here as “a watcher by him ready (to record it)"] means always ready to do that, and he never misses a single word.

The apparent meaning is that the angels who are appointed to watch a person write down everything that he does or says, and they do not leave anything out, because Allah says: «Not a word does he [or she] utter but...»

Hence each person will find that his book contains everything that he said or did. When the *kuffaar* see their books of deeds on the Day of Resurrection, they will cry out:

﴿يَوَيْلُنَا مَا لَ هَذَا الْكِتَابِ لَا يَغَادِرُ صَغِيرَةً وَلَا كَبِيرَةً إِلَّا أَحْصَاهَا وَجَدُوا مَا عَمِلُوا حَاضِرًا وَلَا يَظْلِمُ رَبُّكَ أَحَدًا ﴿١٩﴾﴾

«Woe to us! What sort of Book is this that leaves neither a small thing nor a big thing, but has recorded it with numbers!’ And they will find all that they did, placed before them, and your Lord treats no one with injustice.»

(Qur'an 18:49)

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah (رضي الله عنه) that he heard the Messenger of Allah (ﷺ) say: “A person may say something that is pleasing to Allah but he does not realize it, and Allah raises his

status by many degrees because of it, and a person may say something that angers Allah, but he does not realize it, and for that he may be thrown deep into Hell.”²²

Ibn Katheer mentioned in his *Tafseer* that Al-Ḥasan al-Baṣri recited this *aayah*:

﴿إِذْ يُلْقَى الْمَلَأَيْنِ عَنِ الْيَمِينِ وَعَنِ الشَّمَالِ فَعِيدٌ﴾

﴿...One sitting on the right and one on the left...﴾

(*Qur'an* 50:17)

Then he said: “O son of Adam, the page has been spread out for you (i.e., to record your deeds), and two noble angels have been appointed over you, one on your right and the other on your left. The one on your right records your good deeds, and the one on your left records your bad deeds. So do what you want, less or more. When you die, your book will be rolled up and tied to your neck in your grave, until you emerge on the Day of Resurrection. Then Allah will say:

﴿وَكُلَّ إِنْسَانٍ أَلْزَمْنَاهُ طَلْعُهُ فِي عُنُقِهِ وَنُخْرِجُ لَهُ يَوْمَ الْقِيَمَةِ كِتَابًا يَلْقَاهُ مَنشُورًا﴾ ﴿١٣﴾ أَفَرَأَى كُنْتَبَكَ كَفَى بِنَفْسِكَ الْيَوْمَ عَلَيْكَ حَسِيبًا﴾ ﴿١٤﴾

﴿And We have fastened every man's deeds to his neck, and on the Day of Resurrection, We shall bring out for him a book which he will find wide open.

[It will be said to him]: ‘Read your book. You yourself are sufficient as a reckoner against you this Day.’﴾ (*Qur'an* 17:13-14)

Then Al-Ḥasan said: “By Allah, He is being fair towards you, as He will make you a reckoner against yourself.”

Ibn Katheer also narrated concerning the *aayah* –

﴿مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَتِيدٌ﴾

﴿Not a word does he [or she] utter but there is a watcher by him ready [to record it].﴾ (*Qur'an* 50: 18) -

²² Bukhaari, 11/308, hadith no. 6478.

that Ibn ‘Abbaas said: “Everything that you say, good or bad, is written down. Even when a person says, ‘I ate’, ‘I drank’, ‘I went,’ ‘I came,’ ‘I saw’. Then every Thursday all that a person did or said is examined, and whatever is good or bad is recorded, and the rest is erased. This is what is referred to in the *aayah* where Allah says:

﴿يَمْحُو اللَّهُ مَا يَشَاءُ وَيُثَبِّتُ وَعِنْدَهُ أُمُّ الْكِتَابِ﴾

«Allah blots out what He wills and confirms [what He wills]. And with Him is the Mother of the Book [*Al-Lawḥ al-Mahfooz*].»

(*Qur'an* 13:39)

Ibn Katheer mentioned that Imaam Aḥmad used to moan when he was sick. Then he heard that Ṭaawoos said, “Everything is written down, even (a person’s) moans.” After that, Aḥmad never moaned until he died, may Allah have mercy on him.

The angel on the right records good deeds and that on the left records bad deeds

In *Mu'jam at-Ṭabaraani al-Kabeer* it is narrated with a *ḥasan isnaad* from Abu Umaamah that the Messenger of Allah (ﷺ) said: “The angel on the left holds up his pen (refrains from writing down) for six hours after a Muslim commits a sin. If the person regrets it and asks Allah for forgiveness, he casts it aside (does not write it down), otherwise he writes it down as one (*sayi'ah*).”²³

Do the angels record deeds of the heart (one’s thoughts: good intentions and evil suggestions)?²⁴

The commentator on *Aṭ-Ṭaḥḥaawiyah*²⁵ stated that the angels do record the actions of the heart on the basis of the *aayah* –

﴿يَعْلَمُونَ مَا تَفْعَلُونَ﴾

²³ *Ṣaḥeeḥ al-Jaami'*, 2/212.

²⁴ Deeds of the heart, i.e., ideas, feelings and emotions [Translator].

²⁵ *Sharḥ al-'Aqeedah at-Ṭaḥḥaawiyah*, Pp. 438.

﴿They know all that you do.﴾

(*Qur'an* 82: 12) -

which includes both outward and inward deeds.

He also quoted as evidence the hadith narrated by Muslim from Abu Hurayrah, who said: "The Messenger of Allah (ﷺ) said: 'Allah says, 'When My slave intends to do an evil action, do not record it. If he does it, then write it down as one *sayi'ah*. If he intends to do a good deed and does not do it, then write it down as one *hasanah*, and if he does it, then write it down as ten''"²⁶

According to another hadith whose authenticity is agreed upon by both Bukhaari and Muslim, which is also narrated from Abu Hurayrah, the Messenger of Allah (ﷺ) said: "The angels say, 'O Lord, Your slave wants to do something bad,' although He knows best about him. So Allah says, 'Watch him. If he does it then write it down as it is. If he does not do it, then write it down as one *hasanah* for him, for he is abstaining from it because of Me.'"²⁷

Question:

It could be asked: doesn't the idea that the angels know what a person is intending to do contradict the *aayah*,

﴿يَعْلَمُ خَائِنَةَ الْأَعْيُنِ وَمَا تُخْفِي الصُّدُورُ﴾

﴿Allah knows the fraud of the eyes, and all that the breasts conceal.﴾
(*Qur'an* 40:19)

The answer is: that this is not one of the matters which is known exclusively to Allah. Even though it is hidden from mankind, and a person does not know what is in his brother's heart, it does not mean that it is hidden from the angels.

It could be said that the angels know some of what is in people's hearts: good intentions and evil suggestions. With regard to other things, such

²⁶ Muslim, 1/117, hadith no. 128.

²⁷ Muslim, 1/117, hadith no. 129. This version is narrated by him. It is also narrated by Bukhaari, 13/465, hadith no. 7501.

as people's beliefs, there is no evidence that the angels know that.

The angels call people to do good

It is narrated by both Bukhaari and Muslim on the authority of Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: "No day comes but two angels come down (to the earth) in the morning. One of them says, 'O Allah, compensate the one who spends (for Your sake)' and the other says, 'O Allah, destroy the one who withholds (from spending for Your sake).'"²⁸

(6) Testing the sons of Adam

Allah may send some of His angels to try the sons of Adam and put them to the test. In Bukhaari and Muslim it is narrated from Abu Hurayrah (رضي الله عنه) that he heard the Prophet (ﷺ) say: "Allah willed to test three of the Children of Israel – a leper, a bald-headed man and a blind man. So He sent an angel to them.

The angel came to the leper and said, 'What thing do you like most?' He said, 'A good colour and good skin, for the people have a strong aversion to me.' The angel touched him and his illness was cured, and he was given a good colour and beautiful skin. The angel asked him, 'What kind of property do you like best?' He replied, 'Camels (or cows).' [Ishaaq (the narrator) was not sure; either the leper or the bald-headed man asked for camels and the other asked for cows, or vice versa]. So he (i.e. the leper) was given a she-camel which was ten months pregnant, and the angel said (to him), 'May Allah bless it for you.'

Then the angel went to the bald-headed man and said, 'What thing do you like most?' He said, 'Good hair, and to be rid of this that causes the people to have an aversion to me.' The angel touched him and his illness was cured, and he was given good hair. The angel asked (him), 'What kind of property do you like best?' He replied, 'Cows.' The angel gave him a pregnant cow and said, 'May Allah bless it for you.'

²⁸ Bukhaari, 3/304, hadith no. 1442. Also narrated by Muslim, 2/700, hadith no. 1010.

Then the angel went to the blind man and asked, 'What thing do you like best?' He said, 'For my eyesight to be restored to me, so that I may see the people.' The angel touched his eyes and Allah gave him back his eyesight. The angel asked him, 'What kind of property do you like best?' He replied, 'Sheep.' The angel gave him a pregnant sheep.

Afterwards, all three pregnant animals gave birth to young ones, and multiplied and brought forth so much that one of the (three) men had a herd of camels filling a valley, and one had a herd of cows filling a valley, and one had a flock of sheep filling a valley.

Then the angel came to the leper in the form of a man with leprosy, and said, 'I am a poor man, who has lost all means of completing my journey. So none will satisfy my need except Allah and then you. In the Name of Him Who has given you such a nice colour and beautiful skin, and so much property, I ask you to give me a camel so that I may reach my destination.' The man replied, 'I have many obligations (so I cannot give to you).' The angel said, 'I think I know you; were you not a leper to whom the people had a strong aversion? Weren't you a poor man, and then Allah gave you (all this property).' He replied, '(This is all wrong), I got this property through inheritance from my fore-fathers.' The angel said, 'If you are telling a lie, then may Allah make you as you were before.'

Then the angel came to the bald man in the form of a man who was bald, and said to him the same as he had said to the first one, and he too answered in the same way as the first one did. The angel said, 'If you are telling a lie, then may Allah make you as you were before.'

Then the angel went to the blind man in the form of a man who was blind and said, 'I am a poor man and a traveler, who has lost all means of completing my journey. I have nobody to help me except Allah and then you. I ask you in the Name of Him Who has given you back your eyesight to give me a sheep, so that with its help, I may complete my journey.' The man said, 'No doubt, I was blind and Allah gave me back my eye-sight, so take anything you wish from my property and leave

whatever you wish. By Allah, I will not stop you from taking anything (you need) of my property which you may take for Allah's sake.' The angel replied, 'Keep your property. You (i.e. you three men) have been tested and Allah is pleased with you only and is angry with your two companions.'"²⁹

(7) The angels take the soul from the body when the appointed time of death comes

Allah has appointed some of His angels to pull the souls out of people's bodies when their appointed time comes which has been decreed for them by Allah. Allah says:

﴿قُلْ يَتُوفَنَكُم مَّلَكُ الْمَوْتِ الَّذِي وُكِّلَ بِكُمْ ثُمَّ إِلَىٰ رَبِّكُمْ تُرْجَعُونَ﴾

«Say: 'The angel of death, who is set over you, will take your souls. Then you shall be brought to your Lord'.» (Qur'an 32:11)

There is more than one angel who takes the soul of the dying:

﴿وَهُوَ الْقَاهِرُ فَوْقَ عِبَادِهِ وَيُرْسِلُ عَلَيْكُمْ حَفَظَةً حَتَّىٰ إِذَا جَاءَ أَحَدَكُمُ الْمَوْتُ تَوَفَّتْهُ رُسُلُنَا وَهُمْ لَا يُفْرِطُونَ﴾^(١٦) ثُمَّ رُدُّوْا إِلَى اللَّهِ مَوْلَاهُمُ الْحَقُّ أَلَا لَهُ الْحُكْمُ وَهُوَ أَسْرَعُ الْحَاسِبِينَ﴾^(١٧)

«He is the Irresistible [Supreme], over His slaves, and He sends guardians [angels guarding and writing all of one's good and bad deeds] over you, until when death approaches one of you, Our messengers [angel of death and his assistants] take his soul, and they never neglect their duty.

Then they are returned to Allah, their True *Maulaa* [True Master (God), the Just Lord (to reward hem)]. Surely, for Him is the judgement and He is the Swiftest in taking account.»

(Qur'an 6:61-62)

²⁹ Bukhaari, 6/500, hadith no. 3464. Also narrated by Muslim, 4/2275, hadith no. 2964. This version is narrated by Muslim.

The angels take the souls of the *kuffaar* and sinners in a harsh and severe manner, with no gentleness or kindness:

﴿وَلَوْ تَرَىٰ إِذِ الظَّالِمُونَ فِي غَمَرَاتِ الْمَوْتِ وَالْمَلَائِكَةُ بَاسِطُوا أَيْدِيهِمْ أَخْرِجُوا أَنفُسَكُمُ الْيَوْمَ تُجْزَوْنَ عَذَابَ الْهُونِ﴾ (٤٩)

﴿And if you could but see when the *Zaalimoon* [polytheists and wrongdoers] are in the agonies of death, while the angels are stretching forth their hands [saying]: ‘Deliver your souls! This day you shall be recompensed with the torment of degradation.’﴾

(*Qur'an* 6:93)

﴿وَلَوْ تَرَىٰ إِذِ يَتَوَفَّى الَّذِينَ كَفَرُوا الْمَلَائِكَةُ يَضْرِبُونَ وُجُوهَهُمْ وَأَدْبَارَهُمْ وَذُوقُوا عَذَابَ الْحَرِيقِ﴾ (٥٠)

﴿And if you could see when the angels take away the souls of those who disbelieve [at death]; they smite their faces and their backs, [saying]: ‘Taste the punishment of the blazing Fire.’﴾

(*Qur'an* 8:50)

﴿فَكَيْفَ إِذَا تَوَفَّتْهُمُ الْمَلَائِكَةُ يَضْرِبُونَ وُجُوهَهُمْ وَأَدْبَارَهُمْ﴾ (٧٧)

﴿Then how [will it be] when the angels will take their souls at death, smiting their faces and their backs?﴾

(*Qur'an* 47:27)

But when the angels take the souls of the believers, it is done with kindness and gentleness.

The angels give the believers glad tidings when they take their souls

When death comes to the believing slave, the angels come down to him, give him glad tidings and support him:

﴿إِنَّ الَّذِينَ قَالُوا رَبُّنَا اللَّهُ ثُمَّ اسْتَقَمُوا تَتَنَزَّلُ عَلَيْهِمُ الْمَلَائِكَةُ أَلَّا تَخَافُوا وَلَا تَحْزَنُوا وَأَبْشِرُوا بِالْجَنَّةِ الَّتِي كُنتُمْ تُوعَدُونَ﴾ (٢١) ﴿نَحْنُ أَوْلِيَائُكُمْ فِي الْحَيَاةِ الدُّنْيَا وَفِي الْآخِرَةِ وَلَكُمْ فِيهَا مَا تَشْتَهَى أَنفُسُكُمْ وَلَكُمْ فِيهَا مَا تَدْعُونَ﴾ (٢٢)

﴿Verily, those who say: “Our Lord is Allah [Alone],” and then they

stand firm, on them the angels will descend [at the time of their death] [saying]: ‘Fear not, nor grieve! But receive the glad tidings of Paradise which you have been promised!

We have been your friends in the life of this world and are [so] in the Hereafter. Therein you shall have [all] that your inner-selves desire, and therein you shall have [all] for which you ask.’»

(*Qur'an* 41:30-31)

But they give the *kuffaar* the tidings of Hell and the anger of the Compeller (Allah), and they say to them:

﴿أَخْرِجُوا أَنْفُسَكُمُ الْيَوْمَ تُجْزَوْنَ عَذَابَ الْهُونِ﴾

‘Deliver your souls! This day you shall be recompensed with the torment of degradation.’»

(*Qur'an* 6:93)

Moosa took out the eye of the Angel of Death

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) said: “The Messenger of Allah (ﷺ) said: ‘The Angel of Death came to Moosa (عليه السلام) and said, ‘Answer your Lord.’ And Moosa slapped the Angel of Death in the eye and took out his eye. The Angel went back to Allah and said, ‘You sent me to a slave of Yours who does not want to die, and he has took out my eye.’ So Allah restored his eye, and said, “Go back to My slave and say, ‘Do you want to live? If you want to live, put your hand on the back of a bull, and whatever number of hairs your hand touches, you will live for that number of years.’” (Moosa) said, “Then what?” He said, “Then you die.” He said, “Now is better.”³⁰ “The Angel of Death used to come to people face to face, so when he came to Moosa, he slapped him and took out his eye.”³¹

Ibn Hajar al-‘Asqallaani mentioned that some of the followers of *bid‘ah* rejected this hadith. In refuting them, he said: “Moosa slapped the Angel

³⁰ Bukhaari, 3/206, hadith no. 1339. Also narrated by Muslim, 4/1843, hadith no. 2373. This version is narrated by Muslim.

³¹ This is narrated by Ahmad in his *Musnad*, and by Aṭ-Ṭabari. See *Fath al-Baari*, 6/442.

of Death, because he saw a man who had entered his house without permission. He did not know that this was the Angel of Death. The shari‘ah allows to take out the eye of a person who looks into a Muslim’s home without his permission. The angels came to the Prophet Ibraaheem (Abraham) and to the Prophet Loot (Lot) in the form of humans and they did not know who they were at first. If Ibraaheem had known, he would not have offered them food, and if Loot had known, he would not have feared for them with regard to his people.”³²

Rejecting on purely rational grounds the *ṣaḥeeḥ aḥaadeeth* which speak of the unseen goes against *eemaan* (faith). The first attribute of the pious is that they believe in the unseen, as Allah says at the beginning of *Soorat al-Baqarah* (The Cow). If a report from Allah or from His Messenger is *ṣaḥeeḥ*, then there is no option but to believe it:

﴿وَالرَّاسِخُونَ فِي الْعِلْمِ يَقُولُونَ ءَامَنَّا بِهِ كُلٌّ مِّنْ عِندِ رَبِّنَا وَمَا يَذَّكَّرُ إِلَّا أُولُو الْأَلْبَابِ﴾

«And those who are firmly grounded in knowledge say: “We believe in it; the whole of it [clear and unclear Verses] are from our Lord.” And none receive admonition except men of understanding.»

(*Qur’ān* 3:7)

(8) The relationship of the angels with man in the grave, on the Day of Resurrection and in the Hereafter

In our book on belief in the Hereafter we will, *insha Allah*, look at what the angels have to do with mankind after death, such as the two angels – Munkar and Nakeer – questioning a person in his grave. There are angels who bless people in their graves, and others who punish the *kuffaar* (disbelievers) and the sinners (from among the believers). There are angels who will receive the believers on the Day of Resurrection. Israafeel will blow the Trumpet, and other angels will gather the people for the Reckoning. Angels will drive the *kuffaar* to Hell and lead the believers to Paradise. They will punish the *kuffaar* in Hell and will greet the believers with *salaam* in Paradise.

³² *Fath al-Baari*, 6/442.

3 - THE ANGELS AND THE BELIEVERS

In the previous section, we discussed the duties which Allah has enjoined upon the angels with regard to all the sons of Adam, believers and *kuffaar* alike. What we have mentioned about them forming the *nutfah*, protecting people, conveying revelation, accompanying people, writing down people's deeds and taking their souls at death, does not apply only to some of the sons of Adam and not others, or only to believers and not *kuffaar*.

But beyond that the angels play different roles with the believers and the *kuffaar*. We will discuss in more detail the role that they play with each group.

(1) The role of the angels with the believers

(i) Their love for the believers

Bukhaari and Muslim narrated in their *Ṣaḥeeḥs* from Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: "When Allah loves a person, He calls to Jibreel and tells him, 'Allah loves so and so, so love him.' Then Jibreel loves him and calls out to the inhabitants of the heavens, 'Allah loves so and so, so love him.' So the inhabitants of the heavens love him, and he will find acceptance on earth."³³

(ii) Guiding the believers

Bukhaari narrated in his *Ṣaḥeeḥ* from Ḥassaan ibn Thaabit that the Messenger of Allah (ﷺ) prayed for him and said, "O Allah, support him with *Rooh al-Qudus*."³⁴

It is also narrated that Abu Hurayrah said: "Sulaymaan (عليه السلام) said, 'Tonight I will go around to one hundred of my women, and each of them will bear a son who will fight for the sake of Allah.' The angel said to him, 'Say, *insha Allah*.' But he did not say it, and he forgot. So he

³³ Bukhaari, 6/303, hadith no. 3209. Also narrated by Muslim, 4/2030, hadith no. 2637.

³⁴ Bukhaari, 6/304.

went around to them (his women) but none of them bore a child, except for one who gave birth to a half formed infant.” The Prophet (ﷺ) said: “If he had said *Insha Allah*, he would not have broken his oath and he would have had more hope of fulfilling his need.”³⁵

The angel was guiding the Prophet of Allah Sulaymaan to the way which is appropriate, correct and more perfect.

(iii) Their sending blessings on the believers

Allah tells us that the angels send blessings on the Messenger (ﷺ):

﴿إِنَّ اللَّهَ وَمَلَائِكَتَهُ يُصَلُّونَ عَلَى النَّبِيِّ ۚ﴾

﴿Allah sends His *Ṣalaah* [Graces, Honours, Blessings, Mercy] on the Prophet [Muhammad], and also His angels [ask Allah to bless and forgive him].﴾
(*Qur'an* 33:56)

And they also send blessings on the believers:

﴿هُوَ الَّذِي يُصَلِّي عَلَيْكُمْ وَمَلَائِكَتُهُ لِيُخْرِجَكُم مِّنَ الظُّلُمَاتِ إِلَى النُّورِ ۚ وَكَانَ بِالْمُؤْمِنِينَ رَحِيمًا ۝﴾

﴿He it is Who sends *Ṣalaah* [His blessings] on you, and His angels too [ask Allah to bless and forgive you], that He may bring you out from darkness [of disbelief and polytheism] into light [of Belief and Islamic Monotheism]. And He is Ever Most Merciful to the believers.﴾
(*Qur'an* 33:43)

Ṣalaah (blessings) from Allah means that He praises His slave before His angels. This is narrated by Bukhaari from Abu'l-'Aaliyah. Someone else said: *Ṣalaah* (blessings) from Allah means mercy. It may be said that

³⁵ Bukhaari, 9/339, hadith no. 5242. Ibn Hajar said (*Fath al-Baari*, 6/460) what may be summed up as follows: According to the report of Al-Mugheerah, it was seventy women. According to the report of Shu'ayb in *Al-Aymaan wan-Nudhoor*, it was ninety. The author thought that this was more likely? This is also narrated by Muslim in his *Ṣaḥeeḥ* (3/1276, hadith no. 1654); in one report it says sixty and in the other it says seventy. In a third report it says ninety.

there is no contradiction between the two views.

Ṣalaah (blessings) from the angels means that they pray for people and seek forgiveness for them. This is what we will discuss in more detail below.

Examples of deeds for which the angels send blessings upon a person

(a) Teaching people good things

At-Tirmidhi narrated in his *Sunan* from Abu Umaamah that the Messenger (ﷺ) said: “Allah and His angels, and the inhabitants of the heavens and the earth, even the ant in its hole, and even the fish, send blessings upon the one who teaches the people good things.”³⁶

(b) Those who wait for prayer in congregation

In *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘The angels send blessings on any one of you so long as he stays where he is sitting. They say, ‘O Allah, forgive him, O Allah, have mercy on him,’ so long as he does not break his *wuḍoo*’.”³⁷

(c) Those who pray in the first row

In *Sunan Abi Dawood* it is narrated from Al-Baraa’ ibn ‘Aazib (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “Allah and His angels send blessings on the first rows.”³⁸

In *Sunan an-Nasaa’i* it says: “... on the front rows.”³⁹

In *Sunan Ibn Maajah* it is narrated from the hadith of Al-Baraa’ and the hadith of ‘Abd ar-Rahmaan ibn ‘Awf that “Allah and His angels send blessings on the first row.”⁴⁰

³⁶ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/343, no. 2161.

³⁷ Bukhaari, 2/131, hadith no. 647. Also narrated by Muslim, 1/459, hadith no. 639. This version is narrated by Muslim.

³⁸ *Ṣaḥeeḥ Sunan Abi Dawood*, 1/120, no. 618.

³⁹ *Ṣaḥeeḥ Sunan an-Nasaa’i*, 1/175, no. 781.

⁴⁰ *Ṣaḥeeḥ Sunan Ibn Maajah*, 1/164, no. 816.

(d) Those who fill the gaps in the rows

In *Sunan Ibn Maajah* it is narrated that ‘Aa’ishah said: “The Messenger of Allah (ﷺ) said: ‘Allah and His angels send blessings on those who complete the rows, and whoever fills a gap (in a row), Allah will raise his status because of it.’”⁴¹

(e) Those who eat *suḥoor*

In *Ṣaḥeeḥ Ibn Hibbaan* and *Mu‘jam at-Ṭabaraani al-Awsaṭ* it is narrated with a *ḥasan isnaad* from Ibn ‘Umar (may Allah be pleased with them both) that the Messenger of Allah (ﷺ) said: “Allah and His angels send blessings upon those who eat *suḥoor*.”⁴²

(f) Those who send blessings upon the Prophet (ﷺ)

Aḥmad narrated in his *Musnad* and Al-Diyaa’ narrated in *Al-Mukhtaarah* from ‘Aamir ibn Rabee‘ah with a *ḥasan isnaad* that the Messenger of Allah (ﷺ) said: “There is no person who sends blessings on me, but the angels send blessings on him so long as he sends blessings on me. So let a person do a little of that or a lot.”⁴³

(g) Those who visit the sick

Abu Dawood narrated from ‘Ali ibn Abi Ṭaalib (رضي الله عنه) that the Prophet (ﷺ) said: “There is no man who visits a sick person in the evening, but seventy thousand angels go out with him, and pray for forgiveness for him until the morning, and he will have provision in Paradise. And whoever goes to him in the morning, seventy thousand angels go with him, and they pray for forgiveness for him until the evening, and he will have provision in Paradise.”⁴⁴

⁴¹ *Ṣaḥeeḥ Sunan Ibn Maajah*, 1/164, no. 814.

⁴² *Ṣaḥeeḥ al-Jaami‘*, 2/135.

⁴³ *Ṣaḥeeḥ al-Jaami‘*, 5/174.

⁴⁴ *Ṣaḥeeḥ Sunan Abi Dawood*, 2/598, no. 2655. Abu Dawood stated that it is *ṣaḥeeḥ marfoo‘*, he also narrated a *ṣaḥeeḥ mawqoof* report from ‘Ali.

Does the angels' sending blessings on us have any effect?

Allah, the Almighty, says:

﴿هُوَ الَّذِي يُصَلِّي عَلَيْكُمْ وَمَلَائِكَتُهُ لِيُخْرِجَكُم مِّنَ الظُّلُمَاتِ إِلَى النُّورِ﴾ (24)

«He it is Who sends *Ṣalaah* [His blessings] on you, and His angels too [ask Allah to bless and forgive you], that He may bring you out from darkness [of disbelief and polytheism] into light [of Belief and Islamic Monotheism].» (Qur'an 33:43)

This *aayah* tells us that when Allah mentions us to the hosts on high, and when the angels pray for the believers and ask for forgiveness for them, this has the effect of guiding us and ridding us of the darkness of *kuf*r and *shirk* and sin, leading us to the light which means the right way and the path of truth, which is Islam. Thus we learn what Allah wants of us, and gives us the light by which we will be guided to righteous words and deeds and people.

(iv) Saying “*Ameen*” to the *du‘aa’* of the believers

The angels say “*ameen*” to the *du‘aa’* of the believer, thus making the *du‘aa’* more likely to be answered. In *Ṣaḥeeḥ Muslim* and *Sunan Ibn Maajah* it is narrated from Abu’d-Dardaa’ that the Prophet (ﷺ) said: “The *du‘aa’* of a person for his Muslim brother in his absence will be answered. At his head there is an angel, and every time he prays for him for something good, the angel who has been appointed to be with him says, ‘*Ameen*, and may you have likewise.’”⁴⁵

Because a believer’s prayer against himself is very likely to be answered, the believer should not pray against himself. In *Ṣaḥeeḥ Muslim* it is narrated that Umm Salamah said: “The Messenger of Allah (ﷺ) said: ‘Do not pray for anything but good for yourselves, for the angels say “*ameen*” to whatever you say.’”⁴⁶

⁴⁵ Muslim, 4/2094, hadith no. 2733; *Ṣaḥeeḥ Sunan Ibn Maajah*, 2/149, no. 2340. This version is narrated by Muslim.

⁴⁶ Muslim, 2/634, hadith no. 920.

(v) Their prayers for forgiveness for the believers

Allah tells us that the angels pray for forgiveness for those who are on earth:

﴿تَكَادُ السَّمَوَاتُ يَنْفَطَرْنَ مِنْ فَوْقِهِنَّ وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ وَيَسْتَغْفِرُونَ لِمَنْ فِي الْأَرْضِ ۚ إِنَّ اللَّهَ هُوَ الْغَفُورُ الرَّحِيمُ ﴿٥﴾﴾

«Nearly the heavens might be rent asunder from above them [by His Majesty], and the angels glorify the praises of their Lord, and ask for forgiveness for those on the earth. Verily, Allah is the Oft-Forgiving, the Most Merciful.» (Qur'an 42:5)

In *Soorah Ghaafir*, Allah tells us that the bearers of the Throne and the angels who are around the Throne glorify their Lord and submit themselves to Him, and they pray for forgiveness especially for the believers who repent. They pray that Allah will save them from the Fire and admit them to Paradise, and keep them from committing sins and acts of disobedience:

﴿الَّذِينَ يَحْمِلُونَ الْعَرْشَ وَمَنْ حَوْلَهُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ وَيُؤْمِنُونَ بِهِ وَيَسْتَغْفِرُونَ لِلَّذِينَ آمَنُوا رَبَّنَا وَسِعْتَ كُلَّ شَيْءٍ رَحْمَةً وَعِلْمًا فَاغْفِرْ لِلَّذِينَ تَابُوا وَاتَّبَعُوا سَبِيلَكَ وَقِهِمْ عَذَابَ الْجَحِيمِ ﴿٧﴾ رَبَّنَا وَأَدْخِلْهُمْ جَنَّاتٍ عَدْنٍ الَّتِي وَعَدْتَهُمْ وَمَنْ صَلَحَ مِنْ آبَائِهِمْ وَأَزْوَاجِهِمْ وَذُرِّيَّاتِهِمْ إِنَّكَ أَنْتَ الْعَزِيزُ الْحَكِيمُ ﴿٨﴾ وَقِهِمُ السَّيِّئَاتِ وَمَنْ تَقِ السَّيِّئَاتِ يَوْمَئِذٍ فَقَدْ رَحِمْتُمْ وَذَلِكَ هُوَ الْفَوْزُ الْعَظِيمُ ﴿٩﴾﴾

«Those [angels] who bear the Throne [of Allah] and those around it glorify the praises of their Lord, and believe in Him, and ask forgiveness for those who believe [in the Oneness of Allah] [saying]: 'Our Lord! You comprehend all things in mercy and knowledge, so forgive those who repent and follow Your way, and save them from the torment of the blazing Fire!

Our Lord! And make them enter the 'Adn [Eden] Paradise [everlasting Gardens] which you have promised them – and to the righteous among their fathers, their wives, and their offspring!

Verily, You are the All-Mighty, the All-Wise.
And save them from [the punishment for what they did of] the sins,
and whomsoever You save from [the punishment for what he did of]
the sins [i.e. pardon him] that Day, him verily, You have taken into
mercy.’ And that is the supreme success.﴾ (Qur'an 40:7-9)

(vi) They attend gatherings of knowledge and circles of *dhikr*, and surround those present with their wings

In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah (رضي الله عنه) said: “The Messenger of Allah (ﷺ) said: ‘Allah has angels who go around the highways and byways, seeking out the people of *dhikr*. If they find some people who are remembering Allah, they call out, ‘Come to what you are looking for!’ And they encompass them with their wings up to the first heaven.”⁴⁷

In *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah (رضي الله عنه) said: “The Messenger of Allah (ﷺ) said: ‘No people gather in one of the houses of Allah to recite the Book of Allah and teach it to one another, but tranquillity descends upon them, mercy overshadows them and the angels surround them, and Allah mentions them to those who are with Him.”⁴⁸

In *Sunan at-Tirmidhi* it is narrated that Abu'd-Dardaa' said: “I heard the Messenger of Allah (ﷺ) say, ‘The angels extend their wings (out of humbleness) towards the seeker of knowledge, because they are pleased with what he is doing.”⁴⁹

Righteous deeds, as you can see, bring the angels closer to us and bring us closer to them. If people were able to maintain a high spiritual state they would reach the level of actually seeing the angels and shaking hands with them, as is in the hadith narrated by Muslim from Ḥanzalah al-Usaydi (رضي الله عنه) who said that the Prophet (ﷺ) said:

⁴⁷ Bukhaari, 11/208, hadith no. 6408. Also narrated by Muslim, 4/2069, hadith no. 2689. This version is narrated by Bukhaari.

⁴⁸ Muslim, 4/2074, hadith no. 2699.

⁴⁹ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/342, no. 2159

“By the One in Whose hand is my soul, if you remained in the state in which you are when you are with me, and you continued to remember Allah, the angels would shake hands with you in your beds and on the street.”⁵⁰

According to a report narrated by At-Tirmidhi from Ḥanzalah, he said, “The Messenger of Allah (ﷺ) said: ‘If you continued to be as you are with me, the angels would shade you with their wings.’”⁵¹

(vii) The angels record those who attend *Jumu‘ah*

These angels record some of the deeds of people, and they record those who go to Friday prayers in order of attendance. It is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘When Friday comes, the angels stand at the door of the mosque and write down who comes first. When the Imaam comes out, they close their records and sit down to listen to the *dhikr*.’” Agreed upon by Bukhaari and Muslim.⁵²

They record whatever people say of good things. In *Ṣaḥeeḥ al-Bukhaari* and elsewhere it is narrated that Rifaa‘ah ibn Raafi‘ al-Zarqi said: “One day we were praying behind the Prophet (ﷺ) and when he raised his head from *rukoo*’, he said, ‘*Sami‘ Allahu liman ḥamidah* (Allah hears those who praise Him).’ A man behind him said, *Rabbanaa wa laka ‘l-ḥamd ḥamdan katheeran tayyiban mubaarakan fihi* (Our Lord, to You be praise, much good and blessed praise).’ When he finished the prayer, he said, ‘Who was the one who spoke?’ The man said, ‘Me.’ He [the Prophet (ﷺ)] said, ‘I saw thirty-odd angels rushing to see which of them would write it down first.’”⁵³

These recording angels are definitely other than the two angels who write down a person’s good deeds and evil deeds, because they are described as being thirty-odd.

⁵⁰ Muslim, 4/2106, hadith no. 2750.

⁵¹ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/298, no. 1994.

⁵² *Mishkaat al-Maṣaabeeḥ*, 1/436, no. 1384.

⁵³ Bukhaari, 2/284, hadith no. 799.

(vii) The angels come and go among us

These angels who go about in the highways and byways, looking for *dhikr* and witnessing *Jumu'ah* prayers and prayers in *jamaa'ah*, come and go among us. When one group comes another group goes, and they meet at *Fajr* prayer and at *'Asr* prayer. In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated from Abu Hurayrah (رضي الله عنه) that the Messenger of Allah (ﷺ) said: "Allah has angels who come and go among you, angels at night and angels during the day. They meet at *Fajr* prayer and *'Asr* prayer. Then those who had stayed among you ascend and their Lord asks them, although He knows best about them, 'How did you leave My slaves?' They say, 'When we left them they were praying, and when we came to them they were praying.'"54

Perhaps these are the ones who take the people's actions up to their Lord. In *Ṣaḥeeḥ Muslim* it is narrated that Abu Moosa al-Ash'ari (رضي الله عنه) said: "The Messenger of Allah (ﷺ) stood up among us and told us five things. He said: 'Allah does not sleep, and it is not befitting that He should sleep. He lowers the scale and lifts it. The deeds of the night are taken up to Him before the deeds of the day, and the deeds of the day before the deeds of the night...'"55

Allah has ascribed a high status to *Fajr* prayer, because the angels witness it. He says:

﴿وَقُرْآنَ الْفَجْرِ إِنَّ قُرْآنَ الْفَجْرِ كَانَ مَشْهُودًا﴾

﴿And recite the Qur'an in the early dawn [i.e. the — *Fajr*— morning prayer]. Verily, the recitation of the Qur'an in the early dawn [i.e. the morning — *Fajr* prayer] is ever witnessed [attended by the angels in charge of mankind of the day and the night].﴾

(Qur'an 17:78)

⁵⁴ Bukhaari, 6/306, hadith no. 3223. Also narrated by Muslim, 1/439, hadith no. 632.

⁵⁵ Muslim, 1/162, hadith no. 179. According to another report by Muslim, ...four words...

(ix) They come down when a believer recites the Qur'an

Among the angels are those who come down from heaven when the Qur'an is being read. In *Ṣaḥeeḥ Muslim* it is narrated that Al-Baraa' ibn 'Aazib said: "A man read *Soorat al-Kahf*, and in the house there was an animal. It began to act nervously, (so he checked on it and saw that) there was a mist or a cloud above it. He mentioned that to the Prophet (ﷺ) and he said, 'Read such-and-such, for it is the tranquillity (*sakeenah*) that descends when the Qur'an is read, or because of the Qur'an.'"⁵⁶

It is narrated from Abu Sa'eed al-Khudri (رضي الله عنه) that whilst Usayd ibn Ḥudayr was reading Qur'an one night in his *mirbad* (place for drying dates), his horse startled. Then he read some more and his horse startled again. He read some more and his horse startled again. Usayd said: "I was afraid that it would step on Yahyaa, so I got up and went to it, and saw something like a shadow above its head, in which there were things like lights. It ascended into the sky until it disappeared."

The following morning I went to the Messenger of Allah (ﷺ) and said, 'O Messenger of Allah, last night whilst I was reading Qur'an at midnight in my *mirbad*, my horse startled.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'I read some more, and my horse got startled again.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'I read some more, and my horse got startled again.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'So I stopped. Yahyaa was near it (the horse) and I was afraid that it would step on him, then I saw something like a shadow in which were things like lights. It ascended into the sky until it disappeared.'

The Messenger of Allah (ﷺ) said: 'That was the angels who were listening to you. If you had continued to read, they would have become visible to the people in the morning and they would not have hidden from them.'⁵⁷

⁵⁶ Muslim, 1/548, hadith no. 796.

⁵⁷ Bukhaari, 9/63, hadith no. 5018, from Muhammad ibn Ibraaheem from Usayd ibn Ḥudayr. Also narrated by Muslim, 1/458, hadith no. 796. This version is narrated by Muslim.

(x) They convey the *salaams* of the ummah to the Messenger (ﷺ)

An-Nasaa'i and Ad-Daarimi narrated that 'Abd-Allah ibn Mas'ood said: "The Messenger of Allah (ﷺ) said: 'Allah has angels travelling about the earth to convey to me the *salaams* of my ummah.'"⁵⁸

(xi) They give glad tidings to the believers

They brought glad tidings to the Prophet Ibraaheem that he would be blessed with righteous offspring:

﴿هَلْ أَتَاكَ حَدِيثُ ضَيْفِ إِبْرَاهِيمَ الْمُكْرَمِينَ ﴿٢٤﴾ إِذْ دَخَلُوا عَلَيْهِ فَقَالُوا سَلَامًا قَالَ سَلَامٌ قَوْمٌ مُنْكَرُونَ ﴿٢٥﴾ فَرَأَى إِلَى أَهْلِهِ فَجَاءَ بِعِجْلٍ سَمِينٍ ﴿٢٦﴾ فَقَرَّبَهُ إِلَيْهِمْ قَالَ أَلَا تَأْكُلُونَ ﴿٢٧﴾ فَأَوْجَسَ مِنْهُمْ خِيفَةً قَالُوا لَا تَخَفْ وَبَشَرُوا بَعْلَمَ عَلَيْهِ ﴿٢٨﴾﴾

«Has the story reached you, of the honoured guests [three angels; Jibreel (Gabriel) along with another two] of Ibraaheem [Abraham]? When they came in to him and said: '*Salaam*, [peace be upon you]!' He answered: '*Salaam*, [peace be upon you],' and said: 'You are a people unknown to me.'

Then he turned to his household, and brought out a roasted calf [as the property of Ibraaheem (Abraham) was mainly cows].

And placed it before them [saying]: 'Will you not eat?'

Then he conceived fear of them [when they ate not]. They said: 'Fear not.' And they gave him glad tidings of a son having knowledge [about Allah and His religion of True Monotheism].»

(Qur'an 51:24-28)

They brought Prophet Zakariya the glad tidings of Yahyaa:

﴿فَنَادَتْهُ الْمَلَائِكَةُ وَهُوَ قَائِمٌ يُصَلِّي فِي الْمَحَارِبِ أَنَّ اللَّهَ يُبَشِّرُكَ بِيَحْيَىٰ ﴿٣٩﴾﴾

«Then the angels called him, while he was standing in prayer in *Al-Mihraab* [a praying place or a private room], [saying]: 'Allah gives you glad tidings of Yahyaa [John]'.» (Qur'an 3:39)

⁵⁸ *Mishkaat al-Maṣābeeh*, 1/291, no. 924. The editor of *Al-Mishkaat*, Shaykh Naaṣir ad-Deen al-Albaani, said: its *isnaad* is *ṣaḥeeḥ*. It is classed as *ṣaḥeeḥ* by Al-Ḥaakim and Adh-Dhahabi agreed with him.

This is not limited only to the Prophets and Messengers; the angels may also bring glad tidings to the believers. In *Ṣaḥeeḥ Muslim* it is narrated from Abu Hurayrah that the Prophet (ﷺ) said: “A man visited a brother of his in another town, and Allah sent an angel to wait for him on the road. When the man passed by him, the angel said, ‘Where are you going?’ He said, ‘To a brother of mine in this town.’ The angel said, ‘Is there a favour that you owe him?’ The man said, ‘No, but I love him for the sake of Allah.’ He said, ‘I am a messenger from Allah to you, to tell you that Allah loves you as you love him.’”⁵⁹

In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim*, it is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘Jibreel came to me and said, ‘O Messenger of Allah, Khadeejah is coming to you with a vessel in which is some food or drink. When she comes to you, convey to her greetings of *salaam* from her Lord and from me, and give her the glad tidings of a house in Paradise made of *qaṣab*,⁶⁰ in which there is no noise or exhaustion.’”⁶¹

(xii) The angels and dreams

Bukhaari narrated in his *Ṣaḥeeḥ* in *Baab at-Tahajjud*, that ‘Abd-Allah ibn ‘Umar (رضي الله عنه) said: “At the time of the Prophet (ﷺ), if a man saw a dream, he would tell it to the Messenger of Allah (ﷺ). I wished that I would see a dream so that I could tell it to the Messenger of Allah (ﷺ). I was a young lad, and I used to sleep in the mosque at the time of the Messenger of Allah (ﷺ). I saw in a dream that two angels took me and brought me to the Fire, which was built up all around like a built well, and it had two poles in it. There were some people in it whom I recognized, and I started to say, ‘I seek refuge with Allah from the Fire.’ Then I met another angel who said to me, ‘Do not be afraid.’”⁶²

⁵⁹ Muslim, 4/1988, no. 2567.

⁶⁰ *Qaṣab*: Pipes made of gold or pearls and other precious stones (The Translation of the Meanings of *Ṣaḥeeḥ al-Bukhaari*, Vol. 3, p. 12) (Translator).

⁶¹ Bukhaari, 7/133, no. 3820. Also narrated by Muslim, 4/1887, no. 232. This version is narrated by Muslim.

⁶² Bukhaari, 3/6, no. 1121. Muslim, 4/1927, no. 2479.

In *Ṣaḥeeḥ al-Bukhaari* it is narrated that ‘Aa’ishah (may Allah be pleased with her) said: “The Messenger of Allah (ﷺ) said to me, ‘I saw you in a dream. An angel brought you to me wrapped up in silk. He said to me, ‘This is your wife.’ I lifted the cloth from your face and saw that it was you. I said, ‘If this dream is from Allah then it will surely come to pass.’”⁶³

(xiii) They fight alongside the believers and support them at times of war

Allah supported the believers with many of the angels at the battle of Badr:

﴿إِذْ تَسْتَغِيثُونَ رَبَّكُمْ فَاسْتَجَابَ لَكُمْ أَنِّي مُمِدُّكُم بِأَلْفٍ مِنَ الْمَلَائِكَةِ مُرَدِّفِينَ﴾ (٩)

«[Remember] when you sought help of your Lord and He answered you [saying]: ‘I will help you with a thousand of the angels each behind the other [following one another] in succession.’»

(Qur'an 8:9)

﴿وَلَقَدْ نَصَرَكُمُ اللَّهُ بِبَدْرِ أَذَلَّهُ فَأَتَقُوا اللَّهَ لَعَلَّكُمْ تَشْكُرُونَ﴾ (١٢٢) ﴿إِذْ تَقُولُ لِلْمُؤْمِنِينَ أَلَنْ يَكْفِيَكُمْ أَنْ يُمِدَّكُمْ رَبُّكُمْ بِثَلَاثَةِ أَلْفٍ مِنَ الْمَلَائِكَةِ مُزِيلِينَ﴾ (١٢٣) ﴿بَلَىٰ إِنْ تَصْبِرُوا وَتَتَّقُوا وَيَأْتُوكُم مِّنْ فَوْرِهِمْ هَذَا يُمْدِدْكُمْ رَبُّكُمْ بِخَمْسَةِ أَلْفٍ مِنَ الْمَلَائِكَةِ مُسَوِّمِينَ﴾ (١٢٥)

«And Allah has already made you victorious at Badr, when you were a weak little force. So fear Allah much that you may be grateful. [Remember] when you [Muhammad] said to the believers, ‘Is it not enough for you that your Lord [Allah] should help you with three thousand angels sent down?»

Yes, if you hold on to patience and piety, and the enemy comes

⁶³ This version is narrated by Bukhaari in *Kitaab an-Nikaaḥ*, 9/180, no. 5125. Also narrated in *Manaaqib al-Anṣaar*, 7/223, no. 3895; and in *At-Ta'beer*, 12/399, no. 7011, 7012. Also narrated by Muslim, 4/1889, no. 2438.

rushing at you; your Lord will help you with five thousand angels having marks [of distinction].’» (Qur'an 3:123-125)

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Ibn ‘Abbaas that the Messenger (ﷺ) said on the day of Badr: “This is Jibreel who has taken up his horse’s reins and is dressed for battle.”⁶⁴

Allah has explained the reason for this angelic support, which is to strengthen the believers, to fight alongside them, and to fight the enemies of Allah and kill them by striking their necks and hands:

﴿وَمَا جَعَلَهُ اللَّهُ إِلَّا بُشْرَىٰ وَلِتَطْمَئِنَّ بِهِ قُلُوبُكُمْ وَمَا النَّصْرُ إِلَّا مِنْ عِنْدِ اللَّهِ إِنَّ اللَّهَ عَزِيزٌ حَكِيمٌ﴾ (10)

«Allah made it only as glad tidings, and that your hearts be at rest therewith. And there is no victory except from Allah. Verily, Allah is All-Mighty, All-Wise.» (Qur'an 8:10)

﴿إِذْ يُوحَىٰ رَبُّكَ إِلَى الْمَلَائِكَةِ أَنِ مَعَكُمْ فَتُنَادُوا الَّذِينَ آمَنُوا سَأُلْقِيَ فِي قُلُوبِ الَّذِينَ كَفَرُوا الرُّعْبَ فَاضْرِبُوا فَوْقَ الْأَعْنَاقِ وَاضْرِبُوا مِنْهُمْ كُلَّ بَنَانٍ﴾ (11)

«[Remember] when your Lord revealed to the angels, ‘Verily, I am with you, so keep firm those who have believed. I will cast terror into the hearts of those who have disbelieved, so strike them over the necks, and smite over all their fingers and toes.’»

(Qur'an 8:12)

And Allah says in *Soorat Aal ‘Imraan*:

﴿وَمَا جَعَلَهُ اللَّهُ إِلَّا بُشْرَىٰ لَكُمْ وَلِتَطْمَئِنَّ قُلُوبُكُمْ بِهِ وَمَا النَّصْرُ إِلَّا مِنْ عِنْدِ اللَّهِ الْعَزِيزُ الْحَكِيمُ﴾ (13) لَيَقْطَعَنَّ طَرَفًا مِّنَ الَّذِينَ كَفَرُوا أَوْ يَكْتَسِبُهُمْ فَنُفْلِتُوا خَائِبِينَ ﴿١٤﴾

«Allah made it not but as a message of good news for you and as an assurance to your hearts. And there is no victory except from Allah, the All-Mighty, the All-Wise.

That He might cut off a part of those who disbelieve, or expose them

⁶⁴ Bukhaari, 7/312, no. 3995

to infamy, so that they retire frustrated. ﴿ (Qur'an 3:126-127)

One of the Muslim fighters heard the sound of a blow struck by an angel, when he struck one of the *kuffaar*, and he heard his voice as he was urging his horse forward. In *Ṣaḥeeḥ Muslim* it is narrated that Ibn 'Abbaas said: "On that day, when one of the Muslim men was pursuing one of the *mushrikeen*, he heard the crack of a whip above his head, and the voice of a horseman saying, 'Go forth, Ḥayzam!' He looked at the *mushrik* in front of him and saw that he had fallen on his back. He looked again and saw that his nose had been cut off and his face was cut, as if it had been struck with a whip, and he had turned green. The *Anṣaari* came and told the Messenger of Allah (ﷺ) about that, and he said, 'You have spoken the truth. That was one of the troops of the third heaven.'"⁶⁵

The angels also fought in other battles. During the campaign of *Al-Khandaq* (the Ditch), Allah sent His angels:

﴿يَا أَيُّهَا الَّذِينَ آمَنُوا اذْكُرُوا نِعْمَةَ اللَّهِ عَلَيْكُمْ إِذْ جَاءَتْكُمْ جُنُودٌ فَأَرْسَلْنَا عَلَيْهِمْ رِيحًا وَجُنُودًا لَمْ تَرَوْهَا﴾

﴿O you who believe! Remember Allah's Favour to you, when there came against you hosts, and We sent against them a wind and forces that you saw not [i.e. troops of angels during the battle of *Al-Aḥzaab* (the Confederates)].﴾ (Qur'an 33:9)

What is meant by the "forces that you saw not" is the angels, as it is reported in the books of *Ṣaḥeeḥ* and elsewhere that Jibreel came to the Messenger (ﷺ) after he had returned from *Al-Khandaq* (the Ditch) and had laid down his arms and bathed. Jibreel came to him, brushing the dust from his head, and said to the Messenger (ﷺ), "Have you laid down your arms? By Allah, we (angels) have not yet laid down our arms. Go out to them." The Messenger of Allah (ﷺ) said, "Where to?" and he pointed towards Banu Qurayzah.⁶⁶

⁶⁵ Muslim, 3/1384, hadith no. 1763.

⁶⁶ Bukhaari, 7/407, no. 4117. Muslim, 3/1389, hadith no. 1769.

In *Ṣaḥeeḥ al-Bukhaari* it is narrated that Anas (رضي الله عنه) said: “It is as if I can see the dust clearly in the area of Banu Ghanam, and the troops of Jibreel when the Messenger of Allah (ﷺ) set out for Banu Qurayzah.”⁶⁷

(xiv) Their protection of the Messenger (ﷺ)

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) said: “Abu Jahl said, ‘Has Muhammad rubbed his face in the dust among you?’ They said, ‘Yes.’ He said, ‘By Al-Laat and Al-‘Uzza, if I see him doing that, I will step on his neck, or I will rub his face in the dust!’

Then he came to the Messenger of Allah (ﷺ) whilst he was praying, and announced that he was going to step on his neck. Then suddenly he turned on his heels and fled, folding his hands over his face. Someone asked him, ‘What’s wrong with you?’ He said, ‘There is a ditch of fire between me and him, and terror, and wings.’ The Messenger of Allah (ﷺ) said, ‘If he had come any closer to me, the angels would have snatched him away.’”⁶⁸

A shorter version of this is narrated by Bukhaari, in *Kitaab al-Tafseer*.⁶⁹

(xv) They protect and support righteous people, and relieve their distress

Allah may send angels to protect some of His righteous slaves other than the Prophets and Messengers. This may be what happened to a man whose story is told by Ibn Katheer. In *Tafseer Ibn Katheer*, in the commentary on the *aayah* –

﴿أَمِّنْ يُجِيبُ الْمُضْطَرَّ إِذَا دَعَاهُ﴾

«Is not He [better than your gods] Who responds to the distressed one, when he calls on Him.» (Qur'an 27:62) -

⁶⁷ Bukhaari, 7/407, hadith no. 4118.

⁶⁸ Muslim, 4/2154, hadith no. 2797.

⁶⁹ Bukhaari, 8/724, hadith no. 4958.

He said:

Al-Haafiz ibn 'Asaakir mentioned the story of a man of whom Abu Bakr Muḥammad ibn Dawood ad-Daynoori, who was known as Ad-Daqqi aṣ-Ṣoofi. This man said: "I used to transport people and their goods with a mule that belonged to me, from Damascus to Balad az-Zabadaani. One day a man rode with me, and for part of the way we were travelling off the beaten track. He said to me, 'Take this path, it is shorter.' I said, 'That's no good.' He said, 'But it is shorter.'

So we took that path, and it reached a place where it was very difficult to go, and there was a deep valley in which there were many dead bodies. He said, 'Hold the mule's head, so I can dismount.' He dismounted, then he rolled up his sleeves and gathered up his garments. Then he pulled out a knife and came towards me. I ran away from him, and he followed me. I implored him by Allah, and said, 'Take the mule and all the baggage on it!' He said, 'They are mine anyway, but I am going to kill you!' I tried to scare him by reminding him of Allah and the punishment, but he paid no heed to that.

So I surrendered to him, and I said, 'Let me pray two *rak'ahs*.' He said, 'Hurry up, then!' So I stood up to pray, but the words of the Qur'an would not come to me. I could not remember even a single letter. I remained standing, confused, and he was saying, 'Come on! Get on with it!' Then Allah enabled me to recite,

﴿أَمَّنْ يُجِيبُ الْمُضْطَرَّ إِذَا دَعَاهُ وَيَكْشِفُ السُّوءَ﴾

«Is not He [better than your gods] Who responds to the distressed one, when he calls on Him, and Who removes the evil.»

(Qur'an 27:62)

Suddenly I saw a horseman who had come from the mouth of the valley, with a spear in his hand. He threw the spear at the man, and it did not miss his heart. The man fell down dead, and I clung to the horseman and said, 'By Allah, who are you?' He said, 'I am a messenger of the One Who responds to the distressed one when he calls on Him, and Who removes the evil.' Then I took the mule and the baggage, and returned

safe and sound.”

Similarly, Allah sent Jibreel to help the mother of Ismaa‘eel in Makkah. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Ibn ‘Abbaas from the Prophet (ﷺ), in the story of Ibraaheem’s migration with Ismaa‘eel and his mother Ḥaajir to the land of Makkah – which is a long story – that the mother of Ismaa‘eel ran like a distressed person between Aṣ-Ṣafa’ and Al-Marwah seven times, looking for water. “When she looked out from Al-Marwah, she heard a voice, and she kept quiet and listened attentively. She heard the voice again and said, “O (whoever you may be)! You have made me hear your voice; have you got something to help me?” And she saw an angel at the place of Zamzam, digging the earth with his heel (or his wing), till water flowed from that place... The angel said to her, ‘Don’t be afraid of being neglected, for this is the House of Allah which will be built by this boy and his father, and Allah never neglects His people.’”⁷⁰

This angel who came to her was Jibreel. In *Al-Musnad* it is narrated from Ibn ‘Abbaas that Ubayy ibn Ka‘b said: “When Jibreel dug Zamzam with his heel, the mother of Ismaa‘eel started to scoop up the earth around it. The Prophet (ﷺ) said: ‘May Allah have mercy on Ismaa‘eel’s mother! Had she left Zamzam alone (flowing without trying to control it), Zamzam would have been a stream flowing on the surface of the earth.’”⁷¹

(xvi) The angels attend the funerals of the righteous

The Messenger (ﷺ) said concerning Sa‘d ibn Mu‘aadh, “This is the one at whose death the Throne has shaken and for whom the gates of heaven are opened. Seventy thousand angels attended his funeral, and he was squeezed (in his grave) once, then he was released.” This is narrated by An-Nasaa’i from Ibn ‘Umar.⁷²

⁷⁰ Bukhaari, 6/397, hadith no. 3364.

⁷¹ *Musnad Aḥmad*, 5/121.

⁷² The hadith about the Throne shaking at the death of Sa‘d is narrated by Muslim, 7/122, hadith no. 3802. It is narrated by Muslim from Jaabir, 4/1915, hadith no. 2466. The report about the angels attending his funeral is narrated in *Sunan an-Nasaa’i*. See *Ṣaḥeeḥ Sunan an-Nasaa’i*, 2/441, no. 1942.

(xvii) They shade the *shaheed* (martyr) with their wings

In Bukhaari it is narrated that Jaabir said: "My father was brought to the Prophet (ﷺ), and his body had been mutilated. He was placed before him [the Prophet (ﷺ)], and I went to uncover his face, my people stopped me from doing so. The sound of wailing could be heard, and it was said that it was the daughter of 'Amr, or the sister of 'Amr. The Prophet (ﷺ) said, "Why are you weeping? The angels are still shading him with their wings."

Bukhaari narrated this in a chapter entitled *Baab Zill al-Malaa'ikah 'ala'sh-Shaheed* (Chapter: The Angels' Shading of the Martyr).⁷³

(xviii) The angels who brought the Ark of the Covenant (*At-Taaboot*)

﴿وَقَالَ لَهُمْ نَبِيُّهُمْ إِنَّ آيَةَ مُلْكِهِ أَنْ يَأْتِيَكُمُ التَّابُوتُ فِيهِ سَكِينَةٌ مِّن رَّبِّكُمْ وَبَقِيَّةٌ مِّمَّا تَرَكَ آلُ مُوسَىٰ وَآلُ هَارُونَ تَحْمِلُهُ الْمَلَائِكَةُ﴾

﴿And their Prophet [Samuel] said to them: 'Verily! The sign of His kingdom is that there shall come to you *At-Taaboot* [a wooden box], wherein is *Sakeenah* [peace and reassurance] from your Lord and a remnant of that which Moosa [Moses] and Haaron [Aaron] left behind, carried by the angels.'﴾
(*Qur'an* 2:248)

What we learn from this *aayah* is that the angels brought to the Children of Israel at that time this wooden box (*taaboot*) to reassure them, so that they might know that *Taaloot* (Saul) was chosen by Allah, so they should follow him and obey him.

(xix) They will protect Makkah and Madeenah from the *Dajjaal*

When the *Dajjaal* emerges, he will enter every city except Makkah and Madeenah, because the angels are protecting them. This is reported in *Shaheeh Muslim* from Faatimah bint Qays, from the story of Tameem ad-Daari, in which it says that the *Dajjaal* said: "I am *Al-Maseeh ad-Dajjaal*

⁷³ Bukhaari, 6/32, no. 2816.

(the “Pseudo Christ”). Soon I will be granted permission to emerge and I will emerge and travel throughout the earth. There will be no town which I will not enter, during a period of forty days, apart from Makkah and ʿĪtibah. They are both forbidden for me; every time I try to enter one of them, I will be met by an angel with an unsheathed sword in his hand, who will prevent me from entering it. At every gate there is an angel guarding it.”

She (Faʿāṭimah bint Qays) said: “The Messenger of Allah (ﷺ) said, striking the *minbar* with his stick, “This is ʿĪtibah, this is ʿĪtibah, this is ʿĪtibah,” meaning Al-Madeenah.⁷⁴

Bukhaari narrated from Abu Bakrah that the Prophet (ﷺ) said: “The terror of *Al-Maseeh ad-Dajjaal* will not enter Madeenah. At that time it will have seven gates, at each of which will be two angels.”⁷⁵

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah that the Messenger (ﷺ) said: “At the gates of Madeenah there are angels; neither the plague nor the *Dajjaal* will enter it.”⁷⁶

(xx) ‘Eesa will descend in the company of the angels

In *Sunan at-Tirmidhi*, it is narrated from An-Nawaas ibn Sam‘aan that in the hadith about the *Dajjaal*, the Prophet (ﷺ) said, “Whilst he is like that, ‘Eesa ibn Maryam will come down at the white minaret, in the east of Damascus, wearing two garments lightly dyed with saffron, placing his hands on the wings of two angels.”⁷⁷

(xxi) The angels spread their wings over Ash-Shaam (Syria)

It is narrated that Zayd ibn Thaabit al-Anṣaari (رضي الله عنه) said: “I heard the Messenger of Allah (ﷺ) say, ‘How blessed is Ash-Shaam (Present day

⁷⁴ Muslim, 4/2264, hadith no. 2942.

⁷⁵ Bukhaari, 13/90, hadith no. 7125.

⁷⁶ Bukhaari, 13/101, hadith no. 7123.

⁷⁷ The descent of ‘Eesa (ﷺ) is proven in Muslim, 4/2259, hadith no. 2940. The hadith mentioned is narrated by At-Tirmidhi. See *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/249, no. 1825.

Syria, Jordan and Palestine) how blessed is Ash-Shaam!’ They said, ‘O Messenger of Allah, why is that?’ He said, ‘The angels of Allah spread their wings over Ash-Shaam.’”⁷⁸

(xxii) The reward in coinciding with the angels

It is narrated in *Ṣaḥeeḥayn* (Bukhaari and Muslim) that the Messenger of Allah (ﷺ) said: “When the Imaam says *Ameen*, say *Ameen*, for whoever’s saying *Ameen* coincides with the *Ameen* of the angels, all his previous sins will be forgiven.”⁷⁹

In *Ṣaḥeeḥ al-Bukhaari*: “If one of you says *Ameen* and the angels in heaven say *Ameen*, and they coincide with one another, all his previous sins will be forgiven.”⁸⁰

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: “When the Imaam says ‘*Sami’ Allahu liman ḥamidah,*’ say, ‘*Rabbanaa wa laka’l-ḥamd.*’ Whoever’s words coincide with those of the angels, all his previous sins will be forgiven.”⁸¹

(2) The obligations of the believers towards the angels

The angels are slaves of Allah, whom He has chosen especially, and they have a high status with their Lord. The believer who worships Allah and seeks His pleasure has no alternative but to regard the angels as friends and view them with love and respect, and to avoid anything that may

⁷⁸ Shaykh Naaṣir said, in *Takhreej Aḥaadeeth Fadaa’il ash-Shaam*, of the hadith narrated by Al-Raba’i: It is a *ṣaḥeeḥ* hadith which is narrated by At-Tirmidhi, by Al-Ḥaakim in *Al-Mustadrak*, and by Aḥmad in *Al-Musnad*. Al-Ḥaakim said, it is *ṣaḥeeḥ* according to the conditions of the two *shaykhs* Bukhaari and Muslim, and Adh-Dhahabi agreed with him. And it is as they said. Al-Mundhiri said in *At-Targheeb wat-Tarheeb*, it is narrated by Ibn Ḥibbaan in his *Ṣaḥeeḥ*, and by Aṭ-Ṭabaraani with a *ṣaḥeeḥ isnaad*.

⁷⁹ Bukhaari, 2/262, hadith no. 780. Also narrated by Muslim, 1/307, hadith no. 410.

⁸⁰ Bukhaari, 2/266, hadith no. 781.

⁸¹ Bukhaari, 2/283, hadith no. 796.

result in annoying or offending them. We will discuss this matter in further detail below:

(i) Not offending the angels

The scholars emphatically denounced those who slander the angels or speak badly of them. Al-‘Allaamah as-Suyooti (may Allah have mercy on him) said: “Al-Qaḍi ‘Iyaaḍ said in *Ash-Shifaa*: Sahnoun said: whoever insults one of the angels should be executed. Abu’l-Ḥasan al-Qaabisi said concerning a person who says of another, ‘He looks like the angry Maalik (keeper of Hell),’ if it is known that his intention was to slander the angel, he should be executed.

Al-Qaḍi ‘Iyaaḍ said: This is concerning one who insults them all in general, or who insults by name one of those who is proven to be an angel, because Allah has mentioned him in the Qur’an or we know from the *mutawaatir aḥaadeeth* that he is an angel, or it is known by definitive scholarly consensus that he is an angel, such as Jibreel, Mikaa’eel, Maalik, the keepers of Paradise and Hell, the angels of Hell, the bearers of the Throne, ‘Azraa’eel, Israafeel, Riḍwaan, the guardian angels, and Munkar and Nakeer.

But with regard to those who are not proven to be angels, and concerning whom there is no scholarly consensus that they are angels, such as Haaroot and Maaroot, this ruling does not apply. The one who disbelieves in them is not subject to the same ruling as mentioned above, because there is no definitive report to show that they have the same status as the angels.”⁸²

Suyooti quoted Al-Qaraafi al-Maaliki as saying: “Know that it is obligatory upon every accountable person to respect all of the Prophets and all of the angels. Whoever slanders their honour in any way is a *kaafir*, whether he does so implicitly or explicitly. Whoever says of a man who he thinks is very harsh, ‘He is more harsh than Maalik, the keeper of Hell,’ or of a man who is deformed, ‘He is uglier than Munkar

⁸² *Al-Habaa’ik fi Akhbaar al-Malaa’ik*, by Suyooti, 254.

and Nakeer', is a *kaafir*, if he says that in the context of condemning ugliness and harshness."⁸³

(ii) Keeping away from sin and disobedience

The things which most offend the angels are sin, disobedience to Allah, *kufir* and *shirk*. Hence the best gift that a man can give to the angels and the thing which is most pleasing to them is for a man to be sincerely devoted in his religious commitment to his Lord, and to avoid everything that angers Him.

Hence the angels do not enter places and houses where Allah is disobeyed, or in which there are things which Allah dislikes and hates, such as stone altars, statues and pictures. And they do not come near people who indulge in sin, such as drunkards.

Ibn Katheer⁸⁴ said: It is reported in the *aḥaadeeth* narrated in the books of *Ṣaḥeeḥ*, *Musnad* and *Sunan* from a group of the *Ṣaḥāabah* that the Messenger of Allah (ﷺ) said: "The angels do not enter a house in which there is an image, a dog or a person who is *junub* (in a state of ritual impurity)."

According to a report narrated from 'Aasim ibn Damurah from 'Ali, "... and not urine." According to a *marfoo'* report narrated from Abu Sa'eed: "The angels do not enter a house in which there is a dog or a statue." According to the report of Dhakwaan Abu Ṣaliḥ al-Sammaak from Abu Hurayrah, he said: "The Messenger of Allah (ﷺ) said: 'The angels do not accompany a group with whom there is a dog or a bell.'"⁸⁵

Al-Bazzaar narrated with a *ṣaḥeeḥ isnaad* from Buraydah (رضي الله عنه) that the Messenger (ﷺ) said: "There are three whom the angels do not come near: the one who is drunk, the one who is perfumed with saffron and the one who is *junub* (in a state of ritual impurity)."⁸⁶

⁸³ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, by Suyooti, 255.

⁸⁴ *Al-Bidaayah wan-Nihaayah*, 1/55.

⁸⁵ *Al-Bidaayah wan-Nihaayah*, 1/55.

⁸⁶ *Ṣaḥeeḥ al-Jaami'*, 3/70.

In *Sunan Abi Dawood* it is narrated with a *ḥasan isnaad* from ‘Ammaar ibn Yaasir that the Messenger (ﷺ) said: “There are three things which the angels do not come near: the dead body of a *kaafir*, the one who is perfumed with saffron and the person who is *junub* (in a state of ritual impurity), unless he performs *wudoo*’.”⁸⁷

(iii) The angels are offended by that which offends the sons of Adam

It is reported in the *ṣaḥeeḥ aḥaadeeth* that the angels are offended by that which offends the sons of Adam. So they are offended by offensive smells and by filth and dirt.

Bukhaari and Muslim narrated from Jaabir ibn ‘Abd-Allah that the Prophet (ﷺ) said: “Whoever eats garlic, onions or leeks, let him not come near our mosque, for the angels are offended by that which offends the sons of Adam.”⁸⁸

The matter is so serious that the Messenger (ﷺ) ordered the one who came to the mosque emanating the smell of garlic or onions to go out to *Al-Baqee*’.⁸⁹

(iv) The prohibition on spitting to the right whilst praying

The Messenger (ﷺ) forbade spitting to the right during prayer, because when a person stands up to pray, an angel stands on his right. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah that the Prophet (ﷺ) said: “When anyone of you stands up to pray, let him not spit to the front, for he is conversing with Allah so long as he is praying. And there is an angel standing to his right, so let him spit to his left or beneath his foot, then bury it.”⁹⁰

⁸⁷ *Ṣaḥeeḥ Sunan Abi Dawood*, 2/872.

⁸⁸ The *aḥaadeeth* which forbid those who have eaten onions and garlic from coming near the mosque are narrated in *Ṣaḥeeḥ al-Bukhaari*, *Ṣaḥeeḥ Muslim* and elsewhere, but this version is narrated by Muslim, 1/394, hadith no. 567.

⁸⁹ Muslim, 1/396, hadith no. 567.

⁹⁰ Bukhaari, 1/512, hadith no. 416.

(v) Befriending all the angels

The Muslim has to like all the angels without any discrimination between one angel and another in that regard, because they are all the slaves of Allah who do that which He commands and abstain from that which He prohibits. In this sense they are all the same, and they do not differ at all. The Jews claimed that they had friends and enemies among the angels; they claimed that Jibreel was an enemy to them and that Mikaa'eel was a friend to them. But Allah showed them to be liars in what they were claiming, and stated that there is no difference among the angels.

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَى قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِمَا
بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَىٰ لِلْمُؤْمِنِينَ ﴿٩٧﴾ مَنْ كَانَ عَدُوًّا لِلَّهِ وَمَلَائِكَتِهِ
وَرُسُلِهِ وَجِبْرِيلَ وَمِيكَالَ فَإِنَّ اللَّهَ عَدُوٌّ لِلْكَافِرِينَ ﴿٩٨﴾﴾

﴿Say [O Muhammad]: 'Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur'an] down to your heart by Allah's Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and guidance and glad tidings for the believers.

Whoever is an enemy to Allah, His Angels, His Messengers, Jibreel [Gabriel] and Mikaa'eel [Michael], then verily, Allah is an enemy to the disbelievers.'﴾
(*Qur'an* 2:97-98)

Allah has told us that the angels are all the same, and whoever takes one of them as an enemy has taken Allah and all the angels as enemies. Liking some of the angels and hating others is a myth which no one could accept apart from the followers of deviant *kufr* like the Jews. This Jewish opinion which is described in the Qur'an is a poor excuse which they gave for not believing. They claimed that Jibreel was their enemy because he comes with war and destruction, and if the one who had come to the Messenger (ﷺ) had been Mikaa'eel, they would have followed him.

See the texts narrated about the reasons for the revelation of this *aayah* in *Tafseer Ibn Katheer* and elsewhere.

4 - THE ANGELS AND THE *KUFFAAR* AND EVILDOERS

In the previous section, we discussed the relationship between angels and the believers. From this it is clear what their relationship with the *kuffaar* is like. They do not like the *kuffaar*, wrongdoers and criminals; rather, they take them as enemies and wage war against them, and create fear in their hearts, as happened at the battles of Badr and *Al-Ahzaab* (Confederates). This will be discussed in more detail below.

(1) Bringing the punishment down upon the *kuffaar*

When one of the Messengers was rejected and disbelieved, and his people persisted in their rejection, Allah would often send down His punishment upon them. Sometimes those who carried out the punishment were the angels.

(2) Their destruction of the people of the Prophet Loot

The angels who were commanded to punish the people of the Prophet Loot came in the form of young men with handsome faces. Prophet Loot offered them hospitality, and his people did not know about them, but Loot's wife told her people about them and they came quickly, wanting to commit evil actions with them. The Prophet Loot tried to ward them off and argue with them, but they ignored him. Then Jibreel struck them with his wing, and blinded their eyes, taking away their sight:

﴿وَلَمَّا جَاءَتْ رُسُلُنَا لُوطًا سِئَءَ بِهِمْ وَضَاقَ بِهِمْ ذَرْعًا وَقَالَ هَذَا يَوْمٌ عَصِيبٌ ﴿٧٧﴾ وَجَاءَهُمْ قَوْمُهُ مُهْرَعُونَ إِلَيْهِ وَمِنْ قَبْلُ كَانُوا يَعْمَلُونَ السَّيِّئَاتِ قَالَ يَتَقَوْمٌ هَؤُلَاءِ بَنَاتِي هُنَّ أَطْهَرُ لَكُمْ فَاتَّقُوا اللَّهَ وَلَا تُخْزَوْنَ فِي ضَيْفِي أَلَيْسَ مِنْكُمْ رَجُلٌ رَشِيدٌ ﴿٧٨﴾ قَالُوا لَقَدْ عَلِمْتَ مَا لَنَا فِي بَنَاتِكَ مِنْ حَقٍّ وَإِنَّكَ لَنَعْلَمُ مَا نُرِيدُ ﴿٧٩﴾ قَالَ لَوْ أَنَّ لِي بِكُمْ قُوَّةً أَوْ آوَى إِلَىٰ رُكْنٍ سُدِيدٍ ﴿٨٠﴾ قَالُوا يَنْلُوطُ إِنَّا رُسُلُ رَبِّكَ لَنْ يَصْلُوا إِلَيْكَ ﴿٨١﴾﴾

‘And when Our messengers came to Loot [Lot], he was grieved on account of them and felt himself straitened for them [lest the town people should approach them to commit sodomy with them]. He said: ‘This is a distressful day.’

And his people came rushing towards him, and since aforetime they used to commit crimes [sodomy], he said: 'O my people! Here are my daughters [i.e. the women of the nation], they are purer for you [if you marry them lawfully]. So fear Allah and disgrace me not with regard to my guests! Is there not among you a single rightminded man?'

They said: 'Surely, you know that we have neither any desire nor need of your daughters, and indeed you know well what we want!' He said: 'Would that I had strength [men] to overpower you, or that I could betake myself to some powerful support [to resist you].'

They [messengers] said: 'O Loot [Lot]! Verily, we are the messengers from your Lord! They shall not reach you!'

(Qur'an 11:77-81)

Ibn Katheer⁹¹ said: they mentioned that Jibreel (ﷺ) went out against them and struck their faces with the edge of his wing. He destroyed their eyes completely so that there was nothing left, not even a trace... Allah says:

﴿وَلَقَدْ رَاوَوْهُ عَنْ ضَيْفِهِ فَطَمَسْنَا أَعْيُنَهُمْ فَذُوقُوا عَذَابِي وَنُذِرِ ﴿١٧٧﴾﴾

¶And they indeed sought to shame his guest [by asking to commit sodomy with them]. So We blinded their eyes [saying], 'Then taste you My Torment and My Warnings.'

(Qur'an 54:37)

The next morning, Allah destroyed them:

﴿فَلَمَّا جَاءَ أَمْرُنَا جَعَلْنَا عَلَىٰهَا سَاقِطًا وَأَمْطَرْنَا عَلَيْهَا حِجَارَةً مِّن سِجِّيلٍ ﴿٨٢﴾ مَّنضُودٍ ﴿٨٣﴾ مُّسَوَّمَةً عِندَ رَبِّكَ وَمَا هِيَ مِنَ الظَّالِمِينَ بِبَعِيدٍ ﴿٨٤﴾﴾

¶So when Our Commandment came, We turned [the towns of Sodom in Palestine] upside down, and rained on them stones of baked clay, in a well-arranged manner one after another;

Marked from your Lord; and they are not ever far from the *Zaalimoon* [polytheists, evildoers].

(Qur'an 11:82-83)

⁹¹ Al-Bidaayah wan-Nihaayah, 1/197.

Ibn Katheer said in his *Tafseer*: “Mujaahid said: ‘Jibreel seized the people of the Prophet Loot from their fields and houses, and carried them with their flocks and possessions. He lifted them up until the inhabitants of heaven heard the barking of their dogs, then he turned them upside down. He carried them on the coverts of his right wing.’ He mentioned other similar thing, but he did not narrate any hadith to support that.”

(3) Their cursing of the *kuffaar*

Allah, the Almighty, says:

﴿كَيْفَ يَهْدِي اللَّهُ قَوْمًا كَفَرُوا بَعْدَ إِيمَانِهِمْ وَشَهِدُوا أَنَّ الرُّسُولَ حَقٌّ وَجَاءَهُمُ الْبَيِّنَاتُ وَاللَّهُ لَا يَهْدِي الْقَوْمَ الظَّالِمِينَ ﴿٨٧﴾ أُولَٰئِكَ جَزَاءُهُمْ أَنْ عَلَيْهِمْ لَعْنَةُ اللَّهِ وَالْمَلَائِكَةِ وَالنَّاسِ أَجْمَعِينَ ﴿٨٨﴾﴾

«How shall Allah guide a people who disbelieved after their Belief and after they bore witness that the Messenger [Muhammad] is true and after clear proofs had come unto them? And Allah guides not the people who are *Zaalimoon* [polytheists and wrongdoers].

They are those whose recompense is that on them [rests] the Curse of Allah, of the angels, and of all mankind.» (Qur'an 3:86-87)

﴿إِنَّ الَّذِينَ كَفَرُوا وَمَاتُوا وَهُمْ كُفَّارٌ أُولَٰئِكَ عَلَيْهِمْ لَعْنَةُ اللَّهِ وَالْمَلَائِكَةِ وَالنَّاسِ أَجْمَعِينَ ﴿١٦١﴾﴾

«Verily, those who disbelieve, and die while they are disbelievers, it is they on whom is the Curse of Allah and of the angels and of mankind, combined.» (Qur'an 2:161)

The angels do not only curse the *kuffaar*. They may also curse those who commit particular sins, including the following:

(a) *The angels curse a woman when she does not respond to her husband*

In *Ṣaḥeeḥ al-Bukhaari* it is narrated on the authority of Abu Hurayrah that: “The Messenger of Allah (ﷺ) said: ‘When a man calls his wife to his bed and she refuses to come, the angels curse her until morning

comes.”⁹² According to another report, “...until she changes her mind.”⁹³

(b) They curse the one who points towards his brother with a weapon

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) reported: “Abu’l-Qaasim said: ‘Whoever points towards his brother with a weapon is cursed by the angels, even if it is his brother through his father and his mother.’”⁹⁴

The curse of the angels indicates that this action is *ḥaraam*, because it involves frightening one’s brother, and because the *Shayṭaan* could tempt one to kill one’s brother, especially if the weapon is of the modern type which could go off for the slightest mistake or unintentional touch. How often has such a thing happened.

(c) They curse those who slander the Companions of the Messenger

In *Mu’jam at-Ṭabaraani al-Kabeer* it is narrated from Ibn ‘Abbaas with a *ḥasan isnaad* that the Messenger (ﷺ) said: “Whoever slanders my companions, may there be upon him the curse of Allah, the angels and all of mankind.”

How strange it is that some people make slandering the Companions of the Messenger (ﷺ) a religious ritual by means of which they seek to draw closer to Allah, although their punishment is what the Messenger (ﷺ) mentioned in this hadith, and it is a frightening punishment.

(d) They curse those who prevent the shari’ah of Allah from being implemented

In *Sunan an-Nasaa’i* and *Sunan Ibn Maajah* it is narrated with a *ṣaḥeeḥ isnaad* from Ibn ‘Abbaas (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “Whoever kills (a person) deliberately should be killed in return,

⁹² Bukhaari, 9/293, hadith no. 5193.

⁹³ *Ibid.*, 9/294, hadith no. 5194.

⁹⁴ Muslim, 4/2020, hadith no. 2616.

and whoever tries to prevent that, may he be cursed by Allah, the angels and all of mankind.”⁹⁵ The one who tries, by means of his wealth or position, to prevent the ruling of Allah from being carried out on one who has deliberately killed another, will be subject to this curse, so how about those who try to prevent the shari‘ah from being implemented altogether?

(e) They curse those who give sanctuary to innovators or criminals

Among those who are cursed by the angels and by Allah are those who innovate heresies in Allah’s religion and violate His laws, or protect those who do so. It says in a *ṣaḥeeḥ* hadith: “Whoever innovates a heresy or gives sanctuary to an innovator or criminal, may there be upon him the curse of Allah, the angels and all of mankind.”⁹⁶

Innovation and criminal actions in Madeenah are even more serious. In *Ṣaḥeeḥayn* (Bukhaari and Muslim) it is narrated that ‘Ali ibn Abi Ṭaalib said: “The Prophet (ﷺ) said: ‘Madeenah is a sanctuary, from ‘Ayr to Thawr (two mountains in Madeenah). Whoever innovates a heresy or commits a crime in (Madeenah), or gives shelter to such a person, may there be upon him the curse of Allah and the angels, and all of mankind, and none of his compulsory or optional good deeds will be accepted on the Day of Resurrection.”⁹⁷

(4) The demand of the *kuffaar* to see the angels

The *kuffaar* - disbelievers - demanded to see the angels as proof that what the Messenger (ﷺ) said was true. But Allah told them that the Day on which they would see the angels would be a bad day for them. For the *kuffaar* will see the angels when the punishment is about to befall them,

⁹⁵ *Ṣaḥeeḥ Sunan an-Nasaa’i*, 3/492, no. 4456, 4457. *Ṣaḥeeḥ Sunan Ibn Maajah*, 2/96, no. 2131.

⁹⁶ *Ṣaḥeeḥ Sunan Abi Dawood*, 3/859, no. 3797. *Ṣaḥeeḥ Sunan an-Nasaa’i*, 3/982, no. 4412.

⁹⁷ Bukhaari, 4/81, hadith no. 1870. Also narrated by Muslim, 2/994, hadith no. 1370. This version is narrated by Muslim.

or when death approaches and the veil is lifted:

﴿وَقَالَ الَّذِينَ لَا يَرْجُونَ لِقَاءَنَا لَوْلَا أُنْزِلَ عَلَيْنَا الْمَلٰٓئِكَةُ أَوْ نَرَىٰ رَبَّنَا لَقَدْ اسْتَكْبَرُوا فِيْٓ أَنْفُسِهِمْ وَعَتَوْا عُتُوًّا كَبِيرًا ﴿٢١﴾ يَوْمَ يَرَوْنَ الْمَلٰٓئِكَةَ لَا بُشْرٰٓى يَوْمَئِذٍ لِلْمُجْرِمِينَ وَيَقُولُونَ حِجْرًا مَّحْجُورًا ﴿٢٢﴾﴾

«And those who expect not a Meeting with Us [i.e. those who deny the Day of Resurrection and the life of the Hereafter] said: ‘Why are not the angels sent down to us, or why do we not see our Lord?’ Indeed they think too highly of themselves, and are scornful with great pride.

On the Day they will see the angels no glad tidings will there be for the *Mujrimoon* [criminals, disbelievers, polytheists, sinners] that day. And they [angels] will say: ‘All kinds of glad tidings are forbidden to you.’»
(Qur'an 25:21-22)

CHAPTER FOUR

THE ANGELS AND OTHER CREATED THINGS

In the previous chapter we discussed the relationship between the angels and the sons of Adam. This is not the only matter with which the angels have been entrusted. The angels also take care of other matters of the universe, things which we can see and things which we cannot see.

We shall limit ourselves to mentioning some of that which has been narrated in the texts.

1 - THE BEARERS OF THE THRONE

The Throne is the greatest of all created things. It encompasses the heavens and is above them, and the Most Merciful is above the Throne, which is borne by eight angels:

﴿وَيَحْمِلُ عَرْشَ رَبِّكَ فَوْقَهُمْ يَوْمَئِذٍ ثَمَنِيَّةٌ﴾

﴿And eight angels will, that Day, bear the Throne of your Lord above them.﴾
(*Qur'an* 69:17)¹

2 - THE ANGELS OF THE MOUNTAIN

There are also angels appointed over the mountains. Allah sent the angel of the mountains to His slave and Messenger Muhammad (ﷺ) to ask his permission to destroy the people of Makkah. In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated that 'Aa'ishah said to the Prophet (ﷺ): "O Messenger of Allah, did you ever experience any day that was harder than the day of Uḥud?" He said, "I suffered a great deal from your people, and the worst I suffered from them was the day of 'Aqabah²,

¹ We have already discussed their immense size in the chapter where we discussed their attributes and abilities.

² A place in Mina (Author).

when I called Ibn ‘Abd-Yaalayl ibn ‘Abd-Kallaal to Islam, and he did not agree to what I was proposing.

So I went away in distress and I did not realize where I was going until I reached Qarn ath-Tha‘aalib. Then I raised my head and saw a cloud which was shading me. I looked and I saw Jibreel in it, calling to me. He said, ‘Allah has heard what your people have said to you, and how they have responded to you. He has sent the angel of the mountains to you, so that you can command him to do whatever you want to them.’

Then the angel of the mountains called me. He greeted me with *salaams*, then he said: ‘O Muhammad, Allah has heard what your people have said to you. I am the angel of the mountains. Your Lord has sent me to you so that you may give me orders. What do you want? If you want I will crush them between Al-Akhshabayn.’³ The Prophet (ﷺ) said: ‘Rather I hope that Allah will bring forth from their loins people who will worship Allah alone, not associating any partner with Him.’”⁴

3 - THE ANGELS WHO ARE APPOINTED OVER RAIN, VEGETATION AND PROVISION

Ibn Katheer⁵ said: “Mikaa’eel is appointed over the rain and vegetation from which is created the provision of this world. He has helpers who do whatever he commands them to do by the command of his Lord. They control the winds and clouds as the Lord wills.”

Among the angels are those who are responsible for the clouds. In *Sunan at-Tirmidhi* it is narrated from Ibn ‘Abbaas that the Messenger of Allah (ﷺ) said: “Ar-Ra’d is one of the angels who is responsible for the clouds... He drives the clouds wherever Allah wills.”⁶ So rain

³ Two mountains in Makkah (Author).

⁴ Muslim, 3/1420, hadith no. 1795. This version is narrated by him. Also narrated by Bukhaari, 6/312, hadith no. 3231.

⁵ *Al-Bidaayah wan-Nihaayah*, 1/50.

⁶ *Shaheeh Sunan at-Tirmidhi*, 3/64, no. 2492.

may come to one land and not to another, or to one city and not to another.

He may be commanded to send rain on one man's crops, and no one else's, as mentioned in the hadith narrated by Muslim in his *Ṣaḥeeh* from Abu Hurayrah, according to which the Prophet (ﷺ) said: "Whilst a man was in the open country, he heard a voice in a cloud (saying), 'Send rain on the garden of so and so.' So the cloud moved and poured down its water in a stony area, and one of the channels took all that water.

He followed the water and found a man standing in his garden, using a shovel to direct the water where he wanted it. He said to him, 'O slave of Allah, what is your name?' He said, 'so and so,' mentioning the name that (the first man) had heard in the cloud. He said, 'O slave of Allah, why did you ask me my name?' He said, 'I heard a voice in the cloud from which this water came, saying, "Send rain on the garden of so and so" and it was your name. What do you do with it?' He said, 'Because you said this, I will tell you. I look at the produce of my garden, then I give one-third in charity, feed myself and my family with one-third, and I put one third back into the garden.'"⁷

Whatever the case, the angels are appointed over the heavens and on earth. Every movement in the universe stems from the angels, as Allah says:

﴿فَالْمُدَبِّرَاتِ أَمْرًا﴾

﴿And by those angels who arrange to do the Commands of their Lord.﴾
(*Qur'an* 79:5)

﴿فَالْمُقْسِمَاتِ أَمْرًا﴾

﴿And those [angels] who distribute [provisions, rain, and other blessings] by [Allah's] Command.﴾
(*Qur'an* 51:4)

⁷ Muslim, 4/2288, hadith no. 2984.

Those who reject the Messengers and disbelieve in the Creator claim that it is the stars which do all that, but the ones who do that are the angels, by the command of Allah, as He says:

﴿وَالْمُرْسَلَاتِ عُرْفًا ۝١﴾ ۞ ﴿فَالْعَصْفَاتِ ۝٢﴾ ۞ ﴿وَالنَّشِيرَاتِ شَجَرًا ۝٣﴾ ۞ ﴿فَالْفُرْقَاتِ ۝٤﴾ ۞ ﴿فَالْمُلْقِيَاتِ ذِكْرًا ۝٥﴾ ۞

﴿By the winds [or angels or the Messengers of Allah] sent forth one after another.

And by the winds that blow violently.

And by the winds that scatter clouds and rain.

And by the Verses [of the Qur'an] that separate the right from the wrong.

And by the angels that bring the Revelations to the Messengers.﴾

(Qur'an 77:1-5)

﴿وَالنَّازِعَاتِ غُرُقًا ۝١﴾ ۞ ﴿وَالنَّاشِطَاتِ نَشْطًا ۝٢﴾ ۞ ﴿وَالسَّيِّحَاتِ سَبْعًا ۝٣﴾ ۞ ﴿فَالسَّيِّدَاتِ ۝٤﴾ ۞ ﴿سَبْقًا ۝٥﴾ ۞ ﴿فَالْمُدْرَاتِ أَمْرًا ۝٦﴾ ۞

﴿By those [angels] who pull out [the souls of the disbelievers and the wicked] with great violence.

By those [angels] who gently take out [the souls of the believers].

And by those that swim along [i.e. angels or planets in their orbits].

And by those that press forward as in a race [i.e. the angels or stars or the horses].

And by those angels who arrange to do the Commands of their Lord, [so verily, you disbelievers will be called to account].﴾

(Qur'an 79:1-5)

﴿وَالْعَصْفَاتِ صَفًا ۝١﴾ ۞ ﴿فَالرَّجَرَاتِ زَجْرًا ۝٢﴾ ۞ ﴿فَالتَّلِيَّاتِ ذِكْرًا ۝٣﴾ ۞

﴿By those [angels] ranged in ranks [or rows].

By those [angels] who drive the clouds in a good way.

By those [angels] who bring the Book and the Qur'an from Allah to mankind.﴾

(Qur'an 37:1-3)

All of these *aayaat* speak of the angels when they direct the affairs of the heavens and the earth.

CHAPTER FIVE

WHO IS SUPERIOR - THE ANGELS OR THE SONS OF ADAM?

THIS IS AN ANCIENT DISPUTE

Ibn Katheer¹ said: "The people differed as to whether the angels are superior to mankind. This dispute is mostly to be found in the books of the scholars of *kalaam* (scholastiasm), and the dispute is with the *Mu'tazilah* and those who agreed with them."

The oldest discussion of this matter that I have come across is what is mentioned by Al-Ḥaafiz ibn 'Asaakir in his *Taareekh*, where he gives a biography of Umayyah ibn 'Amr ibn Sa'eed ibn al-'Aas: "He attended a gathering with 'Umar ibn 'Abd al-'Azeez, with whom there was a group. 'Umar said: 'There is no one who is dearer to Allah than the good people among the sons of Adam,' and he quoted as evidence the *ayah*,

﴿إِنَّ الَّذِينَ ءَامَنُوا وَعَمِلُوا الصَّالِحَاتِ اُولَٰئِكَ هُم خَيْرُ الْبَرِيَّةِ﴾

﴿Verily, those who believe [in the Oneness of Allah, and in His Messenger (Muhammad) including all obligations ordered by Islam] and do righteous good deeds, they are the best of creatures.﴾

(*Qur'an* 98:7)

Umayyah ibn 'Amr ibn Sa'eed agreed with him, but 'Arraak ibn Maalik said: 'There is no one dearer to Allah than His angels, who are His servants in this world and in the Hereafter, and His messengers to His Prophets.' And he quoted as evidence the *ayah*:

﴿مَا نَهَكُمَا رَبُّكُمَا عَنْ هَذِهِ الشَّجَرَةِ اِلَّا اَنْ تَكُونَا مَلَكَيْنِ اَوْ تَكُونَا مِنَ الْخَالِدِينَ﴾

﴿He [*Shaytaan*] said: 'Your Lord did not forbid you this tree save you should become angels or become of the immortals.﴾

(*Qur'an* 7:20)

¹ *Al-Bidaayah wan-Nihaayah*, 1/58.

‘Umar ibn ‘Abd al-‘Azeez said to Muhammad ibn Ka‘b al-Qurazi: ‘What do you say, O Abu Ḥamzah?’ He said, ‘Allah honoured Adam by creating him with His own hand and breathing into him the soul, making the angels prostrate to him, bringing forth from his offspring Prophets, Messengers and those whom the angels visit.’

‘Umar ibn ‘Abd al-‘Azeez agreed with this ruling, and quoted different evidence.”

What Ibn Katheer mentioned here about the discussion of ‘Umar ibn ‘Abd al-‘Azeez and his companions on this topic shows that Taaj ad-Deen al-Fazaari was mistaken when he said: “This matter is one of the *bid’ahs* of *‘Ilm al-kalaam*, which was not discussed by the early generations of the ummah or by the most knowledgeable of the Imaams after them.”² Indeed, it is reported that some of the *Ṣaḥāabah* discussed this matter. ‘Abd-Allah ibn Salaam said: “Allah never created any creation dearer to Him than Muhammad.” It was said to him, “Not even Jibreel and Mikaa’eel?” He said, “Don’t you know what Jibreel and Mikaa’eel are? They are two creatures without free will, like the sun and moon. Allah has not created any being dearer to Him than Muhammad (ﷺ).” This is narrated by Al-Ḥaakim in his *Mustadrak* and is rated as *ṣaḥeeḥ* by him and Adh-Dhahabi.³

Different views on this matter

The commentator on *Aṭ-Ṭaḥḥaawīyyah* said that the view attributed to *Ahl as-Sunnah* is that only the righteous sons of Adam and the Prophets are superior to the angels. The *Mu‘tazilah* say that the angels are better. The followers of Al-Ash‘ari are of two views; some of them say that the Prophets and *awliyaa’* are superior, and some refrain from commenting and do not say anything decisive on the matter. It is reported that some of them tended to regard the angels as superior, and this view is also narrated from some of *Ahl as-Sunnah* and some of the *Ṣufis*.

² *Sharḥ al-‘Aqeedah at-Ṭaḥḥaawīyyah*, 339.

³ See Al-Albaani’s commentary on *Sharḥ al-‘Aqeedah at-Ṭaḥḥaawīyyah*, Pp. 342.

The *Shi'ah* said that all of the Imaams are superior to all of the angels. There are other views on this issue also.

No one whose view carries any weight said that the angels are superior to some of the Prophets and not others. It is said that Abu Ḥaneefah (may Allah have mercy on him) declined to answer a question on this matter. The commentator on *Aṭ-Ṭaḥḥaawiiyyah* (may Allah have mercy on him) was also inclined to refrain from making any statement.⁴

As-Safaareeni said that Imaam Aḥmad (may Allah have mercy on him) used to say, "He is mistaken who says that the angels are better." He said, "Every believer is superior to the angels."

The point of dispute

There is no dispute that the *kuffaar* and hypocrites are not included in this discussion of superiority. They are more astray than the animals:

﴿أُولَٰئِكَ كَالْأَنْعَامِ بَلَّ هُمْ أَضَلُّ﴾

﴿They are like cattle, nay even more astray.﴾ (Qur'an 7:179)

Discussing who is superior does not mean that we are discussing whether the essence of man or the essence of the angels is better. We are discussing whether righteous human beings or angels are superior. Some people say that the angels are better than the believers, so in their case the discussion is whether the Prophets or the angels are superior.

The evidence of those who say that righteous human beings are superior to the angels

Having described the point of the discussion, we will quote the evidence given by those who say that man is superior.

- 1 - Allah commanded the angels to prostrate to Adam. If he had not been superior, He would not have commanded them to prostrate to him:

⁴ *Sharḥ al-'Aqeedah aṭ-Ṭaḥḥaawiiyyah*, 338.

﴿وَإِذْ قُلْنَا لِلْمَلَائِكَةِ اسْجُدُوا لِآدَمَ فَسَجَدُوا إِلَّا إِبْلِيسَ أَبَىٰ وَاسْتَكْبَرَ﴾

«And [remember] when We said to the angels: ‘Prostrate yourselves before Adam.’ And they prostrated except *Iblees* [Satan], he refused and was proud.» (Qur’an 2:34)

Some of them said that the prostration was to Allah, and that Adam was only a *qiblah* (direction of prostration) for them. If this was correct, Allah would have said, ‘Prostrate yourselves towards Adam’, not ‘Prostrate yourselves before [lit. to] Adam.’

If what had been meant was taking Adam as a *qiblah*, *Iblees* would not have refused to prostrate, and he would not have claimed that he was better than Adam, because the *qiblah* is only a direction, and taking it as a *qiblah* does not mean that it is regarded as superior.

It is true that the angels’ prostration to Adam was an act of worship to Allah and obedience to Him, an action by which they drew closer to Him. But it was also an act of honour, respect and veneration towards Adam.

It is not reported that Adam prostrated to the angels. Adam and his descendents are not commanded to prostrate towards anyone except Allah, the Lord of the Worlds, because they – and Allah knows best – are the noblest of all creatures, i.e., the righteous son of Adam are the noblest of all creatures. There is no one above the righteous sons of Adam who prostrate none but Allah and prostrate with the best prostrations.

2 - Allah says that *Iblees* said:

﴿أَرَأَيْتَكَ هَذَا الَّذِي كَرَّمْتَ عَلَيَّ﴾

«‘See this one whom You have honoured above me.’»

(Qur’an 17:62)

This clearly shows that Adam was honoured over *Iblees* when the latter was commanded to prostrate to him.

3 - Allah created Adam with His hand, whereas He created the angels by His word.

4 - Allah says:

﴿إِنِّي جَاعِلٌ فِي الْأَرْضِ خَلِيفَةً ۖ﴾

﴿I will create a vicegerent [khaleefah] on earth.﴾

(Qur'an 2:30 - A. Yoosuf 'Ali translation)

The one who is a *khaleefah* is superior to the one who is not a *khaleefah*. The angels asked that they might also become *khaleefahs* when they said,

﴿أَجْعَلْ فِيهَا مَن يُفْسِدُ فِيهَا وَيَسْفِكُ الدِّمَاءَ﴾

﴿Will You place therein those who will make mischief therein and shed blood...?﴾

(Qur'an 2:30)

If being a *khaleefah* had not been a high status, higher than their own, they would not have asked for it and felt envious of the one who had this status.

5 - The sons of Adam are superior to the angels in terms of knowledge. When Allah asked them (the angels) about the names of things, they could not answer and they acknowledged that they did not know them, and Adam told them the names. Allah says:

﴿هَلْ يَسْتَوِي الَّذِينَ يَعْلَمُونَ وَالَّذِينَ لَا يَعْلَمُونَ﴾

﴿Say: 'Are those who know equal to those who know not?'﴾

(Qur'an 39:9)

6 - Another indication of man's superiority is that man's obedience to Allah is more difficult, and that which is more difficult to fulfil is dearer when fulfilled. Man is inclined towards his physical desires, greed, anger and whims, and these things are not present in the angels.

7 - The *salaf* used to narrate *aḥaadeeth* which spoke of the superiority of righteous human beings over the angels. These reports were narrated openly to people. Had this been wrong they would have denounced it. This indicates that this was their belief.

8 - Allah praises them (righteous human beings) before His angels. Allah praises His slaves to the angels when they do anything that He has enjoined upon them or commanded them to do. When they perform an obligatory prayer, He praises them to the angels. In *Al-Musnad* and Ibn Maajah it is narrated from 'Abd-Allah that the Messenger (ﷺ) said: "Rejoice, for your Lord has opened one of the gates of heaven and is praising you to the angels. He is saying, 'Look at My slaves; they have done one duty and are waiting for the next.'"⁵

It is narrated from Abu Hurayrah that the Messenger (ﷺ) said: "Allah praises the people of 'Arafaat to the people of heaven. He says to them: 'Look at My slaves. They have come to Me dusty and dishevelled (from travel).'" Its *isnaad* is *ṣaḥeeḥ* and it is narrated by Ibn Hibbaan in his *Ṣaḥeeḥ*, and by Al-Ḥaakim and by Al-Bayhaqi in *As-Sunan*.⁶

Those who regard the angels as superior quote for example the hadith, "Whoever remembers Me to himself, I will remember him to Myself, and whoever mentions Me in a gathering, I will mention him in a gathering better than it."

They also quote as evidence the fact that there are failings and shortcomings among the sons of Adam, and that they make errors and commit mistakes. And they quote *aayaat* such as,

﴿وَلَا أَقُولُ لَكُمْ إِنِّي مَلَكٌ﴾

﴿Nor I tell you that I am an angel.﴾

(*Qur'an* 6:50)

This indicates that the angels are better than humans.

The correct view

The matter may be resolved in the manner suggested by Ibn Taymiyah, who said that righteous human beings will be better in the end, when they enter Paradise, attain near access to Allah (38:25), dwell in the

⁵ *Ṣaḥeeḥ al-Jaami'*, 1/67.

⁶ *Ṣaḥeeḥ al-Jaami'*, 2/141.

highest levels, are greeted by the Most Merciful, are brought even closer, Allah manifests Himself to them and they have the joy of looking upon His Noble Face, and the angels will stand to serve them by the permission of their Lord.

But the angels are better at the beginning, for the angels now are closer to Allah. They are above the things that the sons of Adam indulge in, and they are devoted to the worship of their Lord. Undoubtedly at this point their situation is more perfect than that of mankind.

Ibn al-Qayyim said: With this explanation the issue of superiority becomes clear and the evidence of both parties is reconciled, and the view of each is shown to be acceptable to some extent.⁷ And Allah knows best.

⁷ For more information on this matter, see: *Majmoo' al-Fataawa*, 11/350; *Lawaami' al-Anwaar al-Bahiyyah*, 2/368; *Sharh al-'Aqeedah at-Tahhaawiyyah*, 338. Suyooti's book *Al-Habaa'ik fi Akhbaar al-Malaa'ik* has also been published, in which there is a lengthy discussion (Pp. 203-251) of whether the angels or the sons of Adam are superior.

SYMBOLS' DIRECTORY

(سُبْحَانَكَ) : *Subḥaanahu wa Ta'aala* - "The Exalted."

PUBLISHER'S NOTE

All praise and thanks belong to Allah, Lord of the Universe. May Allah's blessings and peace be upon the last of the prophets and messengers Muhammad, his family, Companions, and all those who follow his footsteps till the end of time.

This is the second book of the Islamic Creed (*'aqeedah*) series by Dr. 'Umar Sulaymaan al-Ashqar. It deals with the world of the Angels, an integral part of the Islamic faith. Persons denying the existence of Angels go outside the pale of Islam.

As usual, Dr. Al-Ashqar has discussed this issue exhaustively. His arguments are based on the texts of the Qur'an and the Sunnah. He has covered all aspects of the topic: definition, origin and characteristics, kinds and their relationship with mankind and other creation. Moreover, he draws a comparison between mankind and the angels in their respective roles as determined by Allah. A number of editions of the Arabic original have been sold out.

We are pleased to present this excellent English translation of a very popular book. May Allah bless with acceptance the efforts of the author, the translator and all those associated with the publication of this work.

TRANSLATOR'S FOREWORD

In the name of Allah, the Most Gracious, the Most Merciful

Belief in the Unseen (*Al-Ghayb*) is one of the basic tenets of Islam, and forms an important part of Islamic teachings. One of the unseen worlds of which Islam tells us is the world of the angels, who are described in great detail in the Qur'an and Sunnah and who are involved with man throughout his life.

From the moment an individual is conceived in his mother's womb, until his death and beyond, angels play a role in human life. Angels accompany the human being, protecting him and keeping a record of all his deeds. Angels bring forth the soul of the deceased person/s and they bring comfort or inflict torment in the grave. An angel will sound the Trumpet on the Last Day, and angels will be present on the Day of Judgement until they accompany people to their ultimate destination in Paradise or Hell.

Almost all human cultures, ancient and modern, have some kind of belief about angels. The pre-Islamic Arabs believed them to be daughters of the Almighty. Some philosophers thought that angels were the stars in the sky. In modern times there has been a resurgence of interest in angels, and they feature prominently in movies and other forms of popular western culture. Stories featuring angels circulate on the internet and various kinds of gifts, bearing supposed images of angels, gift shops in the west.

But these myths have no role to play in the belief of the Muslim. Our beliefs are based on the teachings of the Qur'an and Sunnah, which tell us all we need to know about the reality of the unseen, including the world of the angels. Belief in the angels brings comfort to man's soul; this belief makes man feel that he is important in the sight of Allah, and that he matters a lot to Him; this belief also encourages a person to strive in the path of goodness. Hence it is of the utmost importance for the

Muslim to understand what Islam says about the angels, and what the implications of this knowledge are for his daily life. In this book, Dr. 'Umar al-Ashqar draws on the sources of Islam to give us a comprehensive picture of who the angels are, their origins, their role in the universe and their interaction with mankind in this world and the next.

May Allah reward the author for his presentation of the Islamic belief in the angels. May He guide us on the Straight Path which leads to Paradise, and may He grant us admittance to that eternal abode where the angels will welcome the believers with greetings of *salaam*. May Allah bless our Prophet Muhammad and his family and Companions, and grant them peace.

Naṣiruddīn al-Khaṭṭāb

Translator's Note:

All translations of the meaning of the Qur'anic quotations have been taken from "Translation of the Meanings of the Noble Qur'an" by Dr. Muhammad Muḥsin Khan and Dr. Muhammad Taqī-ud-Dīn al-Hilālī, unless otherwise stated.

AUTHOR'S FOREWORD

Praise be to Allah. We praise Him and seek His help, forgiveness and guidance. We seek refuge in Allah from the evil of our own selves and from our evil actions. Whomsoever Allah guides, none can lead astray, and whomsoever He leads astray, none can guide. I bear witness that there is no god except Allah alone, with no associate or partner, and I bear witness that Muhammad is His slave and Messenger.

Belief in the angels is one of the basic principles of *'aqeedah*, and faith is not complete without this belief. The angels form one of the worlds of the Unseen, belief in which is commanded by Allah, Who praises those who believe in what Allah and His Messenger (ﷺ) have told us about them.

The texts of the Qur'an and Sunnah speak in detail about all aspects of this subject. Whoever studies these texts will come to have a clear belief in the angels and realize that this is not an obscure topic. This will deepen and strengthen his faith, for detailed knowledge is stronger and firmer than general knowledge.

The only reason why the texts go into such detail on this topic is that the human mind on its own is not able to learn about the angels. Human senses are unable to see the angels or hear their conversations, but this inability is no doubt in man's best interests, for if man could hear and see everything that is going on around him, he would not be able to survive. It is sufficient for us to imagine how hard it would be for a man if he could detect all the sounds that are picked up by a radio set; the result would surely make him lose his mind.

No one should assume that studying this principle is a kind of superfluous knowledge. The facts stated in the texts which speak of this topic have a great effect in counteracting the myths and false beliefs that exist in people's minds concerning this matter. Since ancient times there has been a widespread belief that the angels are divine or that they are

the daughters of Allah, and some philosophers think that the angels are the stars which we see in space.

The facts which are stated in the texts implant in our hearts the firm belief in the One God Who is in control of all of creation, Who has appointed His troops of angels to take care of the various affairs of this universe.

The relationship of the angels with us, their role in our formation and their watching over us, speaks to man of his importance and valuable status, and it refutes the idea that human beings are insignificant and worthless. Thus man can fully appreciate his own value and strive hard to play the great role which he is required to fulfil.

If we were to count the positive effects which stem from man's belief in the angels, and to study the texts which speak of them, the introduction would turn into a lengthy article. So I will leave the reader to look at those texts which, when studied in depth, will supply him with these inspiring effects.

We ask Allah to benefit people through this book, and to make it sincerely for His sake, for He is the best of helpers and supporters.

'Umar Sulaymaan al-Ashqar

INTRODUCTION

DEFINITION OF THE ANGELS AND BELIEF IN THEM

The Angels form a world different to the world of mankind and the world of the jinn. It is a noble world, completely pure. They are noble and pious, worshipping Allah as He should be worshipped, fulfilling whatever He commands them to do and never disobeying Him.

From the texts of the Qur'an and Sunnah, we will see their attributes as described therein.

The word *malak* (angel) is derived from the root *alaka*; *ma'lakah* and *ma'lak* mean message. From this root is derived the word *malaa'ik* (angels), because they are the messengers of Allah.

It is also said that the word *malak* is derived from the root *la'aka*, and that *mal'aakah* means message. The phrase *wa'alikni ila fulaan* means 'convey to him from me.' *Al-Mal'ak* means *al-malak* (angel) because the angels convey (messages) from Allah.

Some of the scholars said *al-malak* (angel) is derived from *al-mulk* (sovereignty). He said: if one of the angels is in control of some affairs, he is described as *malak*, and if a human being is in control of some affairs, he is described as *malik* (king).¹

Belief in the angels is one of the principles of faith. A person's faith cannot be correct unless he believes in them. Allah says:

﴿ءَاْمَنَ الرَّسُوْلُ بِمَا اُنْزِلَ اِلَيْهِ مِنْ رَبِّهِ وَالْمُؤْمِنُوْنَ كُلُّ ءَاْمَنَ بِاللّٰهِ وَمَلَائِكَتِهِ
وَكُتُبِهِ وَرُسُلِهِ لَا تَفْرِقُ بَيْنَ اَحَدٍ مِنْ رُسُلِهِ﴾ (١٨٥)

﴿The Messenger [Muhammad] believes in what has been sent down to him from his Lord, and [so do] the believers. Each one believes in

¹ *Baṣaa'ir Dhawi al-Tamyeez*, by Al-Fayroozabadi, 4/524.

Allah, His Angels, His Books, and His Messengers. [They say,] ‘We make no distinction between one another of His Messengers.’ ﴿٢٨٥﴾
(*Qur'an* 2:285)

How should we believe in the angels?

Suyooti narrated that Al-Bayhaqi said in *Shu'ab al-Eemaan*: “Belief in the Angels” means the following:

1. Belief that they exist.
2. Giving each one of them his rightful status, and believing that they are the slaves of Allah, created by Him, like mankind and the jinn. They are commanded to do things and they are accountable. They are not able to do anything except that which Allah has enabled them to do. Death is possible for them, but Allah gives them a long life, and they do not die until their appointed time comes. They should not be described in any way that would imply association with Allah, and they should not be regarded as gods as they were regarded by the ancients, some traditional cultures of early people.
3. Acknowledging that among them are messengers whom Allah sends to whomsoever He wills among mankind. He may also send some of them to others. This implies acknowledging that among them are the bearers of the Throne, those who stand in ranks, the keepers of Paradise, the keepers of Hell, those who record man's deeds and those who drive the clouds. The Qur'an has mentioned all or most of them.”²

This book will describe in detail what is said in the texts (of the Qur'an and Sunnah) about belief in the angels.

² *Al-Ḥabaa'ik fī Akhbaar al-Malaa'ik* by Suyooti, Pp. 10. See *Mukhtaṣar Shu'ab al-Eemaan*, 1/405-406.

CHAPTER ONE

THEIR PHYSICAL CHARACTERISTICS, ATTRIBUTES AND ABILITIES

In this chapter we look at what we have learned from the *ṣaḥeeḥ* texts about the physical characteristics as well as the attributes of the angels, then we will discuss the abilities which Allah has granted to them.

1 - PHYSICAL CHARACTERISTICS

(1) What they were created from and when

The substance from which Allah created them is light. In *Ṣaḥeeḥ Muslim* it is narrated from ‘Aa’ishah (may Allah be pleased with her and her father) that the Messenger of Allah (ﷺ) said: “The angels were created from light, the jinn were created from smokeless fire, and Adam was created from that which has been described to you.”¹

The Messenger (ﷺ) did not explain what light this is that they were created from. Hence we cannot indulge in trying to say more about this matter, because it is the matter of the unseen concerning which no further clarification has been narrated, apart from this hadith.

It is narrated that ‘Ikrimah said: “The angels were created from the light of glory and *Iblees* was created from the fire of glory.” And it is narrated that ‘Abd-Allah ibn ‘Amr said, “Allah created the angels from the light of the arms and chest.” It is not permissible to accept these views, even if they are narrated through sound chains from these scholars, because they are not infallible, and they may have taken these ideas from the

¹ Muslim, 4/2294, hadith no. 2996.

Some of those who claim to be scholars reject this hadith and others like it, claiming that it is a hadith *aaḥaad*, and that a hadith *aaḥaad* cannot be relied on in matters of *‘aqeedah*. I have criticized this view and explained its flawed nature in a paper entitled *Aṣl al-I’tiqaad*.

Israa' eeliyyaat (reports from Jewish sources).²

Wali-Ullah ad-Dehlawi said: "The hosts on high (the angels) are of three groups: a group upon whom Allah made the system of goodness was dependent, so He created them from physical light similar to the fire of Moosa and breathed into them noble souls;

A group which was created from a mixture of very light vapour and other elements, which resulted in the emergence of great souls with a strong aversion to animalistic behaviour;

And a group of human souls who are very close to the hosts on high, who keep striving to do deeds which could save them and help them to catch up with (the angels), until they shed their physical cloaks and follow in their footsteps, and are counted as being among them."

There is no *ṣaḥeeḥ* evidence to support this definition and this division of the angels into these categories.

We do not know when the angels were created, for Allah has not informed us about that. But we do know that they were created before Adam, the father of mankind. Allah has told us that He informed the angels that He was going to create a *khaleefah* on earth:

﴿وَإِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّىْ جَاعِلٌ فِى الْاَرْضِ خَلِیْفَةًۙ﴾

«Behold, your Lord said to the angels, 'I will create a vicegerent [*khaleefah*] on earth.'» (Qur'an 2:30 - A. Yoosuf 'Ali)

What is meant by the word *khaleefah* here is Adam (ﷺ), and He commanded them to prostrate to him when He created him:

﴿فَاِذَا سَوَّيْتُهُۥ وَنَفَخْتُ فِیْهِ مِنْ رُّوْحِیْ فَقَعُوْا لَہٗ سٰجِدٰتٍۭ﴾

«So, when I have fashioned him completely and breathed into him [Adam] the soul which I created for him, then fall [you] down prostrating yourselves unto him.» (Qur'an 15:29)

² *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, 1/197.

Seeing the angels

Because the angels have bodies of light which are of a low density, mankind cannot see them, especially since Allah has not given our eyes the ability to see them.

No one among this ummah has seen the angels in their true form apart from the Messenger (ﷺ). He saw Jibreel twice in the form in which Allah created him. The texts indicate that human beings are able to see the angels when the angels appear in human form.

(2) Their great physical size

Allah says concerning the angels of Hell:

﴿يَتَأْتِيهَا الَّذِينَ ءَامَنُوا قُورًا أَنفُسُهُمْ وَأَهْلِيكَمْ نَارًا وَقُودُهَا النَّاسُ وَالْحِجَارَةُ عَلَيْهَا مَلَائِكَةٌ غِلَظٌ شِدَادٌ لَا يَعْصُونَ اللَّهَ مَا أَمَرَهُمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ ﴿٦٦﴾﴾

﴿O you who believe! Ward off yourselves and your families against a Fire [Hell] whose fuel is men and stones, over which are [appointed] angels stern [and] severe, who disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.﴾
(Qur'an 66:6)

It will be sufficient to quote the *aḥaadeeth* which speak of two noble angels.

The great size of Jibreel (عليه السلام)

The Messenger of Allah (ﷺ) saw Jibreel twice in the angelic form in which Allah created him. These two occasions are mentioned in the *aayaat*:

﴿وَلَقَدْ رَآهُ بِآلَافِ الْمِائِينَ ﴿٨١﴾﴾

﴿And indeed he [Muhammad] saw him [Jibreel] in the clear horizon [towards the east].﴾
(Qur'an 81:23)

And:

﴿وَلَقَدْ رَآهُ نَزْلَةً أُخْرَىٰ ﴿١٣﴾ عِنْدَ سِدْرَةِ الْمُنْتَهَىٰ ﴿١٤﴾ عِنْدَهَا جَنَّةُ الْمَأْوَىٰ ﴿١٥﴾﴾

﴿And indeed he [Muhammad] saw him [Jibreel] at a second descent [i.e. another time].

Near *Sidrat-ul-Muntaha* [a lote tree of the utmost boundary over the seventh heaven beyond which none can pass].

Near it is the Paradise of Abode.﴾ (Qur'an 53:13-15)

- that was when he was taken up to the highest heaven (during the *Mi'raaj*).

In *Ṣaḥeeḥ Muslim* it is narrated that 'Aa'ishah (may Allah be pleased with her) said: "I asked the Messenger of Allah (ﷺ) about these two *aayaat*. He said, 'That is Jibreel; I never saw him in the form in which Allah created him except on these two occasions. I saw him descending from the heavens, with his huge size filling the space between the heaven and the earth'"³

'Aa'ishah (رضي الله عنها) was asked about the *aayah*,

﴿ثُمَّ دَنَا فَتَدَلَّى ﴿٨﴾﴾

﴿Then he [Jibreel] approached and came closer﴾

(Qur'an 53:8)

She said, "That is Jibreel (ﷺ). He used to come to him in human form, but on this occasion he came in his real form, and he filled the horizons of the sky."⁴

It is narrated in *Ṣaḥeeḥ al-Bukhaari* that 'Abd-Allah ibn Mas'ood said: "Muhammad (ﷺ) saw Jibreel with six hundred wings."⁵

Ibn Mas'ood said concerning the *aayah* –

﴿لَقَدْ رَأَىٰ مِنْ آيَاتِ رَبِّهِ الْكُبْرَىٰ ﴿١٧﴾﴾

³ Muslim, 1/159, hadith no. 177.

⁴ Muslim, 1/160, hadith no. 177.

⁵ Bukhaari, 8/610, hadith no. 4856, 4857.

«Indeed he [Muhammad] did see of the Greatest Signs, of his Lord
[Allah]» (Qur'an 53:18) –

“This means green cushions, filling the horizons.”⁶ These cushions that filled the horizons were what Jibreel was seated upon. Ibn Hajar mentioned that An-Nasaa'i and Al-Haakim narrated with their *isnaads* from Ibn Mas'ood that he said, “The Prophet of Allah (ﷺ) saw Jibreel (ﷺ) with his own eyes, on a cushion which filled the space between heaven and earth.”⁷

Ibn Hajar mentioned that Ibn Mas'ood said, according to a report narrated by An-Nasaa'i: “Muhammad (ﷺ) saw Jibreel with six hundred wings, filling the horizon.”⁸

In *Musnad al-Imam Ahmad* it is narrated that 'Abd-Allah ibn Mas'ood said: “The Messenger of Allah (ﷺ) saw Jibreel in his true form. He had six hundred wings, each of which filled the horizon, and there were multi-coloured pearls and rubies falling from his wings.”

Ibn Katheer said, concerning this hadith, its *isnaad* is *jayyid*.⁹

Allah said, describing Jibreel:

﴿إِنَّمَا لَقَوْلُ رَسُولٍ كَرِيمٍ ذِي قُوَّةٍ عِنْدَ ذِي الْعَرْشِ مَكِينٍ مُطَاعٌ ثَمَّ أَمِينٍ﴾

«Verily, this is the Word [this Qur'an brought by] a most honourable messenger [Jibreel (Gabriel)], from Allah to Prophet Muhammad]. Owner of power, [and high rank] with [Allah], the Lord of the Throne,

Obeded [by the angels in the heavens] and trustworthy.»

(Qur'an 81:19-21)

What is meant by the “most honourable messenger” here is Jibreel, and the Lord of the Throne is the Lord of Glory, may He be glorified.

⁶ Bukhaari, 8/611, hadith no. 4858.

⁷ *Fath al-Baari*, 8/611.

⁸ *Fath al-Baari*, 8/611.

⁹ *Al-Bidaayah wan-Nihaayah*, 1/47.

The great size of the bearers of the Throne

Abu Dawood narrated from Jaabir ibn ‘Abd-Allah (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “I have been granted permission to speak to one of the angels of Allah, one of the bearers of the Throne. The distance from his earlobes to his shoulders is the distance of a seven - hundred year journey.”¹⁰

This is also narrated by Ibn Abi Haatim, who said: “... as a bird flies.” The editor of *Mishkaat al-Masaabeeh* said: its *isnaad* is *ṣaḥeeḥ*.¹¹

Ṭabaraani narrated in *Al-Mu‘jam al-Awsaṭ* with a *ṣaḥeeḥ isnaad* from Anas that he said: “The Messenger of Allah (ﷺ) said: ‘I have been granted permission to speak of an angel, one of the bearers of the Throne. His feet are in the lowest earth and the Throne is resting on his horn. The distance from his earlobe to his shoulder is like that of a bird flying for seven hundred years. That angel says, ‘Glory be to You, wherever You are.’”¹²

(3) Their most important physical characteristics

(i) The wings of the angels

The angels have wings, as Allah has informed us. Some of them have two wings, some have three or four, and some have more than that.

﴿الْحَمْدُ لِلَّهِ فَاطِرِ السَّمَوَاتِ وَالْأَرْضِ جَاعِلِ الْمَلَائِكَةِ رُسُلًا أُولَىٰ أَجْنَحَةٍ مَّنْثَىٰ وَتِلْكَ أَرْبَعٌ يُرِيدُ فِي الْخَلْقِ مَا يَشَاءُ ۚ إِنَّ اللَّهَ عَلَىٰ كُلِّ شَيْءٍ قَدِيرٌ﴾

﴿All the praises and thanks be to Allah, the [only] Originator [or the (Only) Creator] of the heavens and the earth, Who made the angels messengers with wings, two or three or four. He increases in creation what He wills. Verily, Allah is Able to do all things.﴾

(*Qur'an* 35:1)

¹⁰ *Ṣaḥeeḥ Sunan Abi Dawood*, 3/895, no. 9353.

¹¹ *Mishkaat al-Maṣāabeeh*, 3/121. See also *Silsilat al-Aḥāadeeth aṣ-Ṣaḥeeḥah*, hadith no. 151.

¹² *Ṣaḥeeḥ al-Jaami‘ aṣ-Ṣagheer*, 3rd edn., 1/208, no. 853.

What is meant by saying that Allah made them with wings is that some of them have two wings, some have three or four, and some have more than that.

We have already mentioned the hadith in which the Messenger (ﷺ) stated that Jibreel has six hundred wings.

(ii) The beauty of the angels

Allah has created them in a noble and beautiful form, as Allah says of Jibreel:

﴿عَلَّمَهُ شَدِيدُ الْقُوَى ۖ ذُو مِرَّةٍ فَاسْتَوَى ۖ﴾

«He has been taught [this Qur'an] by one mighty in power [Jibreel (Gabriel)].

One free from any defect in body and mind then he [Jibreel – Gabriel in his real shape as created by Allah] rose and became stable.»

(Qur'an 53:5-6)

Ibn 'Abbaas said: 'one free from any defect in body or mind' means one whose appearance is beautiful. Qataadah said: one whose form is tall and beautiful. And it is said that 'one free from any defect in body or mind' means one who is possessed of strength. There is no contradiction between the two views, for he is both strong and of a beautiful appearance.

The idea that angels are beautiful is well-established in people's minds, just as the idea that devils are ugly is also well-established. Hence we see them likening beautiful human beings to angels. Look at what the women said when they saw Yousuf:

﴿فَلَمَّا رَأَيْنَهُ أَكْبَرْنَهُ وَقَطَّعْنَ أَيْدِيَهُنَّ وَقُلْنَ حَاشَ لِلَّهِ مَا هَذَا بَشَرًا إِنْ هَذَا إِلَّا مَلَكٌ كَرِيمٌ﴾

«Then, when they saw him, they exalted him [at his beauty] and [in their astonishment] cut their hands. They said: 'How perfect is Allah [or Allah forbid]! No man is this! This is none other than a noble angel!'»

(Qur'an 12:31)

(iii) Is there any similarity in appearance and form between angels and humans?

Muslim narrated in his *Ṣaḥeeḥ*, and At-Tirmidhi narrated in his *Sunan* from Jaabir (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “The Prophets were shown to me, and I saw Moosa, a man of average build, looking like one of the men of (the tribe of) Shanu’ah. And I saw ‘Eesa ibn Maryam, and the person I have seen who most resembles him is ‘Urwah ibn Mas’ood. And I saw Ibraaheem, and the one who most resembles him is your Companion (meaning himself). And I saw Jibreel (عليه السلام); the person I have seen who most resembles him is Duḥyah.” According to another report: Duḥyah ibn Khaleefah.¹³

Is this a similarity between Jibreel’s true form, or the form which Jibreel took when he appeared in human form? Most likely it is the latter, because as we shall see, Jibreel often used to appear in the form of Duḥyah.

(iv) Variations in their physical shape and status

The angels are not all the same in their physical shape and status. Some of the angels have two wings, some have three, and Jibreel has six hundred wings. They vary in their status before their Lord:

﴿وَمَا مِنَّا إِلَّا لَهُ مَقَامٌ مَّعْلُومٌ﴾

﴿And there is not one of us [angels] but has his known place [or position].﴾

(*Qur’an* 37:164)

And Allah said concerning Jibreel:

﴿إِنَّمَا لَقَوْلُ رَسُولٍ كَرِيمٍ ﴿٩﴾ ذِي قُوَّةٍ عِنْدَ ذِي الْعَرْشِ مَكِينٍ ﴿١٠﴾﴾

﴿Verily, this is the Word [this Qur’an brought by] a most honourable messenger [Jibreel (Gabriel), from Allah to Prophet Muhammad]. Owner of power, [and high rank] with [Allah], the Lord of the Throne.﴾

(*Qur’an* 81:19-20)

¹³ Muslim, 1/153, hadith no. 167.

i.e., he has a high status and important rank before Allah.

The best of the angels are those who were present at the battle of Badr. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Rafaa'ah ibn Raafi' that Jibreel came to the Prophet (ﷺ) and said: "What do you think of the people of Badr among you (i.e., those among you who were present at Badr)?" He said, "They are among the best of the Muslims" or similar words. Jibreel said, "The same is true of the angels who were present at the Badr."¹⁴

(v) They cannot be described as being male or female

One of the reasons why the children of Adam go astray when speaking about the worlds of the unseen is because they subject those worlds to human criteria. So we see one of them expressing his amazement, in one of his articles, that Jibreel used to come to the Messenger (ﷺ) a few seconds after a question had been put to the Messenger (ﷺ) that needed a reply from Allah. How could he come at such an extraordinary speed? When light needs millions of light-years in order to reach nearby heavenly bodies.

This poor man did not realize that he is like a mosquito trying to measure the speed of an airplane using its own standards. If he had thought about the matter, he would have realized that the world of the angels has its own standards which are completely different from our human standards.

The *mushrik* Arabs also went astray in this regard, as they used to claim that the angels were female, and they mixed this idea, which is far removed from the truth, with an even greater myth, when they claimed that these females were the daughters of Allah.

The Qur'an refuted them on both counts. It pointed out that they had no sound evidence for their claims, and that this notion was nonsense. It is strange indeed that they attributed daughters to Allah, when they themselves hated daughters; when the news of (the birth of) a baby girl

¹⁴ Bukhaari, 7/312, hadith no. 3992.

was brought to any of them, his face would become dark, and he would be filled with inward grief, and he would hide himself from the people because of the evil of that whereof he had been informed (cf. Qur'an 16:58-59). This doomed fellow might even lose his mind and bury the newborn girl alive. Nevertheless, they attributed children to Allah, and claimed that these children were female. In this manner myths grow and take root in the minds of those whom the divine light has not reached.

Listen to these verses which tell of this myth and criticize those who believed in it:

﴿فَاسْتَفْتِهِمْ أَلِرَبِّكَ الْبَنَاتُ وَلَهُمُ الْبَنُونَ ﴿١٤٩﴾ أَمْ خَلَقْنَا الْمَلَائِكَةَ إِنَاثًا وَهُمْ شَاهِدُونَ ﴿١٥٠﴾ أَلَا إِنَّهُمْ مِنْ إِفْكِهِمْ لَيَقُولُونَ ﴿١٥١﴾ وَلَدَ اللَّهُ وَإِنَّهُمْ لَكَاذِبُونَ ﴿١٥٢﴾ أَصْطَفَى الْبَنَاتِ عَلَى الْبَنِينَ ﴿١٥٣﴾ مَا لَكُمْ كَيْفَ تَحْكُمُونَ ﴿١٥٤﴾ أَفَلَا تَذَكَّرُونَ ﴿١٥٥﴾ أَمْ لَكُمْ سُلْطَانٌ مُبِينٌ ﴿١٥٦﴾﴾

﴿Now ask them [O Muhammad]: ‘Are there [only] daughters for your Lord and sons for them?

Or did We create the angels female while they were witnesses?

Verily, it is of their falsehood that they [Quraysh pagans] say:

‘Allah has begotten [offspring – the angels being the daughters of Allah]?’ And, verily, they are liars!

Has He [then] chosen daughters rather than sons?

What is the matter with you? How do you decide?

Will you not then remember?

Or is there for you a plain authority?﴾ (Qur'an 37:149-156)

Allah will make these words a testimony for which they will be brought to account. One of the greatest of sins is to speak about Allah without knowledge:

﴿وَجَعَلُوا الْمَلَائِكَةَ الَّذِينَ هُمْ عِبْدُ الرَّحْمَنِ إِنَاثًا أَشْهَدُوا خَلَقَهُمْ سَتُكْتَبُ سَهْدُهُمْ وَهُمْ يُسْأَلُونَ ﴿١٦﴾﴾

﴿And they make the angels who themselves are slaves of the Most Gracious [Allah] females. Did they witness their creation? Their

testimony will be recorded, and they will be questioned! ﴿
(Qur'an 43:19)¹⁵

(vi) They do not eat or drink

We indicated above that the angels cannot be described as being male or female. Similarly, they do not eat or drink the type of food we (humans) eat and drink. Allah has told us that the angels came to Ibraaheem in human form, and he offered them food, but they did not stretch out their hands towards it. He felt afraid of them, but when they told him of their true identity, his fear left him.

﴿هَلْ أَتَاكَ حَدِيثُ ضَيْفِ إِبْرَاهِيمَ الْمُكْرَمِينَ ﴿٢٤﴾ إِذْ دَخَلُوا عَلَيْهِ فَقَالُوا سَلَامًا ﴿٢٥﴾ قَالَ سَلَامٌ قَوْمٌ مُنْكَرُونَ ﴿٢٦﴾ فَرَأَى إِلَيْكَ أَهْلِيهِ فَجَاءَ بِعِجْلٍ سَمِينٍ ﴿٢٧﴾ فَقَرَّبَهُ إِلَيْهِمْ قَالَ أَلَا تَأْكُلُونَ ﴿٢٨﴾ فَأَوْجَسَ مِنْهُمْ خِيفَةً قَالُوا لَا تَحْزَنْ وَبَشِّرْهُ بِعِزِّهِمْ عَلِيمٍ ﴿٢٩﴾﴾

﴿Has the story reached you, of the honoured guests [three angels; Jibreel (Gabriel) along with another two] of Ibraaheem [Abraham]? When they came in to him and said: ‘Salaam, [peace be upon you]!’ He answered: ‘Salaam, [peace be upon you],’ and said: ‘You are a people unknown to me.’

Then he turned to his household, and brought out a roasted calf [as the property of Ibraaheem [Abraham] was mainly cows].

And placed it before them [saying]: ‘Will you not eat?’

Then he conceived fear of them [when they ate not]. They said: ‘Fear not.’ And they gave him glad tidings of a son having knowledge [about Allah and His religion of True Monotheism]. ﴿

(Qur'an 51:24-28)

¹⁵ Therefore, Muslims should beware of speaking about such matters without knowledge. Those who claim that man originated from animals, monkeys or whatever, should be told the same thing: “Did they witness their creation? Their testimony will be recorded”. And Allah says, ﴿I [Allah] made them [Iblees and his offspring] not to witness [nor took their help in] the creation of the heavens and the earth and not [even] their own creation.﴾ (Qur'an 18:51)

In another *aayah* it says:

﴿فَلَمَّا رَأَوْا أَيْدِيَهُمْ لَا تَصِلُ إِلَيْهِ نَكِرَهُمْ وَأَوْجَسَ مِنْهُمْ خِيفَةً قَالُوا لَا تَحْزَنْ
إِنَّا أَرْسَلْنَا إِلَى قَوْمِ لُوطٍ﴾

﴿But when he saw their hands went not towards it [the meal], he mistrusted them, and conceived a fear of them. They said: “Fear not, we have been sent against the people of Loot [Lot].﴾

(*Qur'an* 11:70)

Suyooti narrated from Al-Fakhr ar-Raazi that scholars were agreed that the angels do not eat, drink or get married.¹⁶

(vii) They do not get bored or tired

The angels worship and obey Allah, and carry out His commands, without getting tired or bored. They do not feel what humans feel of tiredness and boredom. Allah says, describing His angels:

﴿يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ﴾

﴿They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].﴾

(*Qur'an* 21:20)

The meaning of ‘they never slacken’ is they never become weak. In another *aayah* Allah says:

﴿قَالِذِينَ عِنْدَ رَبِّكَ يُسَبِّحُونَ لَهُ بِاللَّيْلِ وَالنَّهَارِ وَهُمْ لَا يَسْأَمُونَ﴾

﴿Then there are those who are with your Lord [angels] glorify Him night and day, and never are they tired.﴾

(*Qur'an* 41:38)

Suyooti inferred that the *aayah* “(and) they never slacken (to do so)” (*Qur'an* 21:20) means that the angels do not sleep; he narrated this view from Al-Fakhr ar-Raazi.¹⁷

¹⁶ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, Pp. 264.

¹⁷ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, Pp. 264.

(viii) The dwelling-place of the angels

The abode and dwelling-place of the angels is in the heavens, as Allah says:

﴿تَكَادُ السَّمَوَاتُ يَفْقَرْنَ مِنْ فَوْقِهِنَّ وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ ﴿٥﴾﴾

﴿Nearly the heavens might be rent asunder from above them [by His Majesty], and the angels glorify the praises of their Lord.﴾

(Qur'an 42:5)

And Allah has described them as being with Him:

﴿فَإِنْ أَسْكَبُوا فَإِلَازِينَ عِنْدَ رَبِّكَ يُسَبِّحُونَ لَهُ بِاللَّيْلِ وَالنَّهَارِ وَهُمْ لَا يَسْئَمُونَ ﴿٣٨﴾﴾

﴿But if they are too proud [to do so (i.e., to prostrate to Allah)], then there are those who are with your Lord [angels] glorify Him night and day, and never are they tired.﴾

(Qur'an 41:38)

They come down to the earth by the command of Allah, to fulfil the tasks with which they have been entrusted:

﴿وَمَا نَنْزِلُ إِلَّا بِأَمْرِ رَبِّكَ ﴿١٤﴾﴾

﴿And we [angels] descend not except by the Command of your Lord [O Muhammad].﴾

(Qur'an 19:64)

They come down a lot on special occasions, such as *Laylat al-Qadr*:

﴿لَيْلَةُ الْقَدْرِ خَيْرٌ مِنْ أَلْفِ شَهْرٍ ﴿٢﴾ نَزَّلَ الْمَلَائِكَةُ وَالرُّوحُ فِيهَا بِإِذْنِ رَبِّهِمْ مِنْ كُلِّ أَمْرٍ ﴿١﴾﴾

﴿The Night of *Al-Qadr* [Decree] is better than a thousand months [i.e. worshipping Allah in that night is better than worshipping Him a thousand months, i.e. 83 years and 4 months].

Therein descend the angels and the *Rooḥ* [Jibreel (Gabriel)] by Allah's Permission with all Decrees.﴾

(Qur'an 97:3-4)

(ix) The numbers of the angels

The angels are many; no one knows how many they are except the One Who created them:

﴿And none can know the hosts of your Lord but He.﴾

(*Qur'an* 74:31)

If you want to know how many they are, listen to what Jibreel said concerning *Al-Bayt al-Ma'moor* (the Much-Frequented House), when the Messenger (ﷺ) asked him about it, when he reached it on the night of the *Israa'* : This is *Al-Bayt al-Ma'moor*; every day seventy thousand angels pray in it, and they never come back to it.”¹⁸

In *Ṣaḥeeḥ Muslim* it is narrated from ‘Abd-Allah that the Messenger of Allah (ﷺ) said: “On that Day, Hell will be brought with seventy thousand ropes, each of which will be pulled by seventy thousand angels.”¹⁹ Based on this, those who will bring forth Hell on that Day will be forty-nine million angels.

If you study the texts which have been narrated about the angels who are appointed to take care of each person, you will realize how great their number is. There is an angel who is entrusted with the *nutfah*, two angels appointed to write down the deeds of each person, angels whose task is to protect each person, and an angelic companion (*qareen*) to guide a person.

(x) The names of the angels

The angels have names, but we only know a few of those names. Below are the verses in which some of the names of angels have been mentioned:

¹⁸ Bukhaari, 6/103, hadith no. 2207. Muslim, 1/146, hadith no. 162. This version is narrated by Bukhaari.

¹⁹ Muslim, 4/2184, hadith no. 2842.

(a) Jibreel and (b) Mikaa'eel

Allah says:

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَى قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِمَا بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَى لِلْمُؤْمِنِينَ ﴿٩٧﴾ مَنْ كَانَ عَدُوًّا لِلَّهِ وَمَلَائِكَتِهِ وَرُسُلِهِ وَجِبْرِيلَ وَمِيكَالَ فَإِنَّ اللَّهَ عَدُوٌّ لِلْكَافِرِينَ ﴿٩٨﴾﴾

﴿Say [O Muhammad]: 'Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur'an] down to your heart by Allah's Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and guidance and glad tidings for the believers.

Whoever is an enemy to Allah, His Angels, His Messengers, Jibreel [Gabriel] and Mikaa'eel [Michael], then verily, Allah is an enemy to the disbelievers.'﴾

(*Qur'an* 2:97-98)

Jibreel is the trustworthy *Rooḥ* mentioned in the *aayah*:

﴿نَزَلَ بِهِ الرُّوحُ الْأَمِينُ ﴿١٩٣﴾ عَلَى قَلْبِكَ لِتَكُونَ مِنَ الْمُنْذِرِينَ ﴿١٩٤﴾﴾

﴿Which the trustworthy *Rooḥ* [Jibreel (Gabriel)] has brought down Upon your heart [O Muhammad] that you may be [one] of the warners.﴾

(*Qur'an* 26:193-194)

And he is the *Rooḥ* whom Allah sent to Maryam:

﴿فَأَرْسَلْنَا إِلَيْهَا رُوحَنَا ﴿٧﴾﴾

﴿Then We sent to her Our *Rooḥ* [angel Jibreel (Gabriel)].﴾

(*Qur'an* 19:17)

(c) Israafeel

Another of the angels is Israafeel, who will blow the Trumpet.

Jibreel, Mikaa'eel and Israafeel are the angels who were mentioned by the Messenger (ﷺ) in the *du'aa* with which he opened his prayer at night:

"Allaahumma Rabba Jibreel wa Mikaa'eel wa Israafeel, Faaṭir as-samaawaati wal-arḍ, 'Aalim al-ghaybi wal-shahaadah, anta taḥkumu

bayna 'ibaadika fima kaanu fihi yakhtalifoon, ihdinee lima ukhtulifa fihi min al-haqq bi idhnika, innaka tahdi man tasha' ila shiraatim mustaqeem (O Allah, Lord of Jibreel, Mikaa'eel and Israafeel, Creator of the heavens and the earth, Knower of the unseen and the seen, You judge among Your slaves concerning that in which they differ. Guide me by Your Leave with regard to that in which they differ concerning the truth, for You guide whomsoever You will to a straight path).²⁰

(d) Maalik

And among the angels is Maalik, the keeper of Hell:

﴿وَنَادُوا بِمَلِكٍ لِّيَقْضِيَ عَلَيْنَا رَبُّكَ قَالَ إِنَّكُمْ مَرْكُوتٌ﴾

«And they will cry: 'O Maalik [Keeper of Hell]! Let your Lord make an end of us.' He will say: 'Verily, you shall abide forever.'»

(*Qur'an* 43:77)

(e) Ridwaan

Ibn Katheer said: "The keeper of Paradise is an angel called Ridwaan, as is clearly stated in some *aḥaadeeth*."

(f) Munkar and (g) Nakeer

And among the angels whose names were mentioned by the Messenger (ﷺ) are Munkar and Nakeer. They are mentioned in the *aḥaadeeth* which talk about the questioning in the grave.

(h) Haaroot and (i) Maaroot

And among the angels are two whom Allah called Haaroot and Maaroot. Allah says:

﴿وَمَا كَفَرَ سُلَيْمَنُ وَلَكِنَّ الشَّيَاطِينَ كَفَرُوا يُعَلِّمُونَ النَّاسَ السِّحْرَ وَمَا أُنْزِلَ عَلَى الْمَلَائِكَةِ بِإِذْنِ هَارُوتَ وَمَارُوتَ وَمَا يُعَلِّمَانِ مِنْ أَحَدٍ حَتَّى يَقُولَا إِنَّمَا نَحْنُ فِتْنَةٌ فَلَا تَكْفُرْ﴾

²⁰ Muslim 1/534, hadith no. 770 from 'Aa'ishah *Umm al-Mu'mineen*.

﴿Sulaymaan did not disbelieve, but the *Shayaateen* [devils] disbelieved, teaching men magic and such things that came down at Babylon to the two angels, Haaroot and Maaroot, but neither of these two [angels] taught anyone [such things] till they had said, 'We are for trial, so disbelieve not [by learning this magic from us].'﴾

(*Qur'an* 2:102)

From the context of the *aayah* it is clear that Allah sent them as a test for mankind at some time. Many myths surround them in the books of *Tafseer* and history, for which there is no proof in the *Qur'an* and *Sunnah*. It is sufficient to know about them only what is indicated in this verse.

'Azraa'eel

According to some reports, the Angel of Death is called 'Azraa'eel. However, this name is not mentioned in the *Qur'an*, or in the *ṣaḥeeḥ aḥaadeeth*.²¹

Raqeeb and '*Ateed*

Some scholars mentioned that among the angels are two called *Raqeeb* and '*Ateed*, based on the *aayah*,

﴿إِذْ يَنْفَخُ الْمَلَفَّانِ عَنِ الْيَمِينِ وَعَنِ الشِّمَالِ قَعِيدٌ ﴿٧﴾ مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَتِيدٌ ﴿٨﴾﴾

﴿[Remember] that the two receivers [recording angels] receive [each human being], one sitting on the right and one on the left [to note his or her actions]

Not a word does he [or she] utter but there is a watcher [*raqeeb*] by him ready [*'ateed*] to record it.﴾

(*Qur'an* 50:17-18)

What they mentioned is not correct. The words *raqeeb* (watcher) and '*ateed* (ready) here are adjectives describing the two angels who are always present and witnessing, who are never away from a person. It does not mean that these are the names of the angels.

²¹ *Al-Bidaayah wan-Nihaayah*, 1/50.

(xi) The death of the angels

The angels die just as humans and jinn die. This is stated clearly in the *aayah*:

﴿وَنُفِخَ فِي الصُّورِ فَصَعِقَ مَنْ فِي السَّمَوَاتِ وَمَنْ فِي الْأَرْضِ إِلَّا مَنْ شَاءَ اللَّهُ ثُمَّ نُفِخَ فِيهِ أُخْرَىٰ فَإِذَا هُمْ قِيَامٌ يَنْظُرُونَ﴾

﴿And the Trumpet will be blown, and all who are in the heavens and all who are on the earth will swoon away, except him whom Allah wills. Then it will be blown a second time, and behold they will be standing, looking on [waiting].﴾ (Qur'an 39:68)

The angels are included in this *aayah*, because they are in the heavens. Ibn Katheer said in his commentary on this verse:

“This is the second Trumpet-blast, the blast which will cause all creatures to fall unconscious. This will cause all living beings in the heavens and on earth to die, except for those whom Allah wills, as is clearly stated in detail in the famous hadith about the Trumpet. Then He will take the souls of those who are left, and the last one to die will be the Angel of Death. Then only the Ever-Living, Self-Sustaining will be left, Who was the First, and Who Alone will be the Last, Everlasting and Eternal. He will say, ‘Whose is the Sovereignty today?’ three times, then He will answer Himself by saying,

﴿لِلَّهِ الْوَحْدُ الْقَهَّارُ﴾

﴿It is Allah's, the One, the Irresistible!﴾ (Qur'an 40:16).”

Another verse which indicates that they (the angels) will die is:

﴿كُلُّ شَيْءٍ هَالِكٌ إِلَّا وَجْهَهُ﴾

﴿Everything will perish save His Face.﴾ (Qur'an 28:88)

Will any of them die before the Trumpet is blown? We do not know the answer to that, and we cannot discuss it, because there is no text that can give us a positive or a negative answer. Everything will perish save His Face.

2 - ATTRIBUTES

The angels are honourable and obedient

Allah has described the angels as being honourable and obedient:

﴿In the hands of scribes [angels].

Honourable and obedient.﴾

(Qur'an 80:15-16)

i.e., the Qur'an is in the hands of scribes (*safarah*), i.e., the angels, because they are the emissaries (*sufaraa'*) of Allah to His Messengers and Prophets. Bukhaari said: "*Safarah* refers to the angels. The singular is *saafir*. *Safartu* means 'I reconciled between them'. So the angels, who bring down the Revelation of Allah are like emissaries who reconcile between the people."²²

Allah has described these angels as being "honourable and obedient", i.e., He has created them honourable, good and noble. Their actions are obedient, pure and perfect. Hence the one who learns the Qur'an by heart should be one whose actions and words are proper and correct.

Bukhaari narrated that 'Aa'ishah (رضي الله عنها) said: 'The Messenger of Allah (ﷺ) said: 'The one who reads the Qur'an when he knows it by heart is like the honourable scribes and the one who reads the Qur'an and tries his best, and it is hard for him, will have two rewards."²³

The modesty of the angels

Among the attributes of the angels mentioned by the Messenger (ﷺ) is their modesty. In the hadith narrated by Muslim in his *Shaheeh* from 'Aa'ishah it says that the Messenger of Allah (ﷺ) was lying down in his house with his thigh or his shin uncovered. Abu Bakr asked for permission to come in, and he let him in and spoke with him whilst he was in that state. Then 'Umar sought permission to come in, and he let

²² Bukhaari, 8/691.

²³ Bukhaari, 8/691, hadith no. 4937. Muslim, 1/549, hadith no. 798. This version is narrated by Bukhaari.

him in and spoke with him whilst he was in that state. Then ‘Uthmaan asked for permission to come in, and the Messenger (ﷺ) sat up and rearranged his garment, then he let him come in and spoke with him. When he left, ‘Aa’ishah said: “Abu Bakr came in, and you did not stir or pay too much attention. Then ‘Umar came in, and you did not stir or pay too much attention. Then ‘Uthmaan came in, and you sat up and fixed your garment.” He said, “How could I not feel shy of a man of whom the angels feel shy?”²⁴

The phrase “you did not stir” means you did not welcome him warmly.

3 - ABILITIES

(1) Their ability to take on different forms

Allah has given the angels the ability to take on forms different from their own. Allah sent Jibreel to Maryam (Mary) in human form:

﴿وَاذْكُرْ فِي الْكِتَابِ مَرْيَمَ إِذِ اتَّيَدَتْ مِنْ أَهْلِهَا مَكَانًا شَرْقِيًّا ۖ فَاتَّخَذَتْ مِنْ دُونِهِمْ حِجَابًا فَأَرْسَلْنَا إِلَيْهَا رُوحَنَا فَتَمَثَّلَ لَهَا بَشَرًا سَوِيًّا ۗ قَالَتْ إِنِّي أَعُوذُ بِالرَّحْمَنِ مِنْكَ إِنْ كُنْتَ تَقِيًّا ۚ قَالَ إِنَّمَا أَنَا رَسُولُ رَبِّكِ لِأَهَبَ لَكِ غُلَامًا زَكِيًّا ۝﴾

﴿And; mention in the Book [the Qur’an, O Muhammad, the story of] Maryam [Mary], when she withdrew in seclusion from her family to a place facing east.

She placed a screen [to screen herself] from them; then We sent to her Our *Rooh* [angel Jibreel (Gabriel)], and he appeared before her in the form of a man in all respects.

She said: ‘Verily, I seek refuge with the Most Gracious [Allah] from you, if you do fear Allah.’

[The angel] said: ‘I am only a messenger from your Lord, [to announce] to you the gift of a righteous son.’﴾

(Qur’an 19:16-19)

²⁴ Muslim, 4/1866, hadith no. 2401.

The angels came to Ibraaheem (ﷺ) in human form, and he did not know that they were angels until they told him who they really were. We have quoted above the *aayaat* which speak of that.

The angels came to the Prophet Loot (Lot) in the form of young men with handsome faces and he was grieved on account of them and feared that they may be harmed by his people, for they were an evil people who committed evil actions, and they used to commit sodomy:

﴿وَلَمَّا جَاءَتْ رُسُلُنَا لُوطًا سِيقَهُمْ وَصَافَ بِهِمْ ذُرْعًا وَقَالَ هَذَا يَوْمٌ عَصِيبٌ﴾

«And when Our messengers came to Loot [Lot], he was grieved on account of them and felt himself straitened for them [lest the town people should approach them to commit sodomy with them]. He said: 'This is a distressful day.'» (Qur'an 11:77)

Ibn Katheer said: "The angels appeared to him in the form of handsome young men as a test and a trial, so that proof might be established against the people of Loot, and Allah might seize them with a mighty punishment."²⁵

Jibreel used to come to the Messenger (ﷺ) in different forms. Sometimes he came in the form of Duhyah ibn Khaleefah al-Kalbi (a *Ṣaḥaabi* who was of handsome appearance), and sometimes in the form of a Bedouin.

Many of the *Ṣaḥaabah* saw him when he came in that form.

In *Ṣaḥeeḥayn* (Bukhaari and Muslim) it is narrated that 'Umar ibn al-Khaṭṭaab said:

"Whilst we were sitting with the Messenger of Allah (ﷺ) one day, a man came to us whose clothes were exceedingly white and whose hair was exceedingly black. There were no signs of travel on him and none of us knew him. He sat down in front of the Prophet (ﷺ), with his knees touching his, and put his hands on his thighs, and said, 'O Muhammad, tell me about Islam...'" The hadith states that he asked him about

²⁵ *Al-Bidaayah wan-Nihaayah*, 1/43.

eemaan (faith), *iḥsaan* and the Hour and its signs.²⁶

Then the Messenger (ﷺ) stated that the one who asked these questions was Jibreel, and that he had come to teach the *Ṣaḥābah* their religion.

‘Aa’ishah saw the Messenger (ﷺ) patting the head of Duḥyah al-Kalbi’s horse and speaking to him. When she asked him about that, he (ﷺ) said, “That was Jibreel, and he sends *salaam* to you.”²⁷

The Messenger (ﷺ) told us of a man who killed ninety-nine persons, and when he set out repentant, death came to him when he was half-way to the land to which he was migrating. The angels of mercy and the angels of punishment disputed concerning him, and they referred the matter to an angel who came to them in human form. He (ﷺ) said: “An angel in human form came to them, and they appointed him (to arbitrate) between them. He said, ‘Measure the distance between the two lands (the evil place he was leaving and the good place to which he was headed), and whichever one he is closer to is where he belongs.’” No doubt they appointed him as an arbitrator by the command of Allah, and Allah sent this angel to them in human form. The story is narrated in *Ṣaḥeeḥ Muslim*, in *Baab at-Tawbah* (chapter on repentance).²⁸

In the story of the three people from among the Children of Israel whom Allah tested, the leper, the bald man and the blind man, we will see that an angel appeared to them in human form.

Some of the scholars indulged in discussions of how the angels change their form from a rational point of view, and they came up with ideas that are of no value. They should not have indulged in this discussion of this matter of the unseen. Allah has told us that the angels may take on

²⁶ Muslim, 1/37, hadith no. 8. Bukhaari from Abu Hurayrah, 1/114, hadith no. 49. This version is narrated by Muslim.

²⁷ Aḥmad in *Musnad*, Ibn Sa’d in *Aṭ-Ṭabaqaat*, with a *ḥasan isnaad*. The hadith about Jibreel sending *salaams* to ‘Aa’ishah without her seeing him, is narrated by Bukhaari in his *Ṣaḥeeḥ*, 6/305, hadith no. 3217; 7/106, hadith no. 3768.

²⁸ Muslim, 4/2118, hadith no. 2766.

different forms, but He has not told us how they do so. These scholars should have been content with what the Messenger of Allah and his Companions were content with, and they should have stopped where they stopped. If you want to read some of the discussions on this issue, see the book by Suyooti, *Al-Habaa'ik fi Akhbaar al-Malaa'ik*.²⁹

(2) Their great speed

The greatest speed known to humans is the speed of light, which is 186,000 miles per second.

But the speed of the angels is greater than that. It cannot be measured by human standards. A questioner would come to the Messenger (ﷺ) and would hardly have finished asking his question before Jibreel would come with the answer from the Lord of Glory, may He be exalted. Today there is no vehicle that can travel at the speed of light, and it would take millions of light years to reach some of the stars that exist in the horizons of this vast universe.

(3) Their knowledge

The angels have great knowledge that they have been taught by Allah, but they do not have the ability that man has been given, to find out about things:

﴿وَعَلَّمَ آدَمَ الْأَسْمَاءَ كُلَّهَا ثُمَّ عَرَضَهُمْ عَلَى الْمَلَائِكَةِ فَقَالَ أَنْبِئُونِي بِأَسْمَاءِ هَؤُلَاءِ إِنْ كُنْتُمْ صَادِقِينَ ﴿٣١﴾ قَالُوا سُبْحَنَكَ لَا عِلْمَ لَنَا إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ ﴿٣٢﴾﴾

﴿And He taught Adam all the names [of everything], then He showed them to the angels and said, 'Tell Me the names of these if you are truthful.'﴾

They [angels] said: 'Glory is to You, we have no knowledge except what you have taught us. Verily, it is You, the All-Knower, the All-Wise.'﴾

(Qur'an 2:31-32)

²⁹ Pp. 261.

Man is distinguished by his ability to find out about things, and to discover the laws of the universe. The angels know that because they learn it directly from Allah. But what Allah teaches them is far more than what man knows. Among the knowledge that they have been given is the knowledge of writing:

﴿وَإِنَّا عَلَيْكُمْ لَحَافِظِينَ ۖ كِرَامًا كُنِينٌ ۖ يَعْلَمُونَ مَا تَفْعَلُونَ﴾

﴿But verily, over you [are appointed angels in charge of mankind] to watch you,

Kiraaman [Honourable] *Kaatibeen* – writing down [your deeds],

They know all that you do.﴾ (Qur'an 82:10-12)

We will discuss this in more detail under the heading of *The Angels and Man*.

The dispute of the hosts on high

The angels discuss amongst themselves matters of the revelation of their Lord which are not clear to them. In *Sunan at-Tirmidhi* and *Musnad Ahmad* it is narrated from Ibn 'Abbaas that the Messenger (ﷺ) said: "Last night my Lord – may He be blessed and exalted – came to me in the most beautiful form – he (the narrator) said: I think he said, in a dream – and He said: 'O Muhammad, do you know what the hosts on high dispute about?' I said, 'No.' He put His hand (on my back), between my shoulders, until I could feel its coolness on my chest, and I knew what was in the heavens and what was on earth.

Then He said, 'O Muhammad, do you know what the hosts on high dispute about?' I said, 'Yes, about expiations and actions that raise a person's status. The expiations are staying in the mosque after the prayer, walking on foot to join congregational prayers and doing *wudoo*' properly at the time of hardship; and the actions that raise a person's status are spreading *salaam*, feeding people, and praying at night when people are asleep.'

He said, 'You have spoken the truth, Whoever does that will live in goodness and die in peace, and he will be free from any sin, as pure as a

newborn baby.’

He said, ‘O Muhammad, when you pray, say, “*Allahumma inni as’aluka fal al-khayraat wa tark al-munkaraat, wa hubb al-masaakeen, wa an taghfir li, wa tarhamni, wa tatoob ‘alaaya, wa idha aradta bi ‘ibaadika fitnah, fa’qbidni ilayka ghayr maftoon* [O Allah, I ask you for good deeds, avoidance of evil deeds, and love for the poor. (I ask You) to forgive me and to have mercy on me, and to accept my repentance. If You want to test Your slaves, then take me to You (i.e., cause me to die) without being tested].”³⁰

Ibn Katheer said, after quoting this hadith: “This is the famous hadith about the dream. Whoever thinks it happened when the Prophet (ﷺ) was awake is mistaken. It is narrated with different *isnaads* in *As-Sunan*. This hadith is also narrated by At-Tirmidhi from Jahdam ibn ‘Abd-Allah al-Yamaami.

Al-Hasan said: (it is) *ṣaḥeeḥ*. This dispute is not the dispute mentioned in the Qur’an, where Allah says:

﴿مَا كَانَ لِي مِنْ عِلْمٍ بِالْمَلَأِ الْأَعْلَىٰ إِذْ يَخْتَصِمُونَ ﴿٦٩﴾ إِن يُوحَىٰ إِلَيَّ إِلَّا أَنَّمَا أَنَا نَذِيرٌ مُّبِينٌ ﴿٧٠﴾﴾

‘I had no knowledge of the chiefs [angels] on high when they were disputing and discussing [about the creation of Adam].

Only this has been revealed to me, that I am a plain warner.’﴿

(Qur’an 38:69-70)

The dispute mentioned in the hadith has been explained by the Messenger (ﷺ).

With regard to the dispute mentioned in the Qur’an, it is explained in the following *aayaat*:

³⁰ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 3/9, no. 2580, 2581.

﴿إِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّیْ خَلِیْقُ بَشَرًا مِّنْ طِیْنٍ ﴿٧٦﴾ فَاِذَا سَوَّیْتُهُ وَنَفَخْتُ فِیْهِ مِنْ رُّوْحِیْ فَقَعُوْا لَیْمٌ سٰجِدِیْنَ ﴿٧٧﴾ فَسَجَدَ الْمَلٰٓئِكَةُ كُلُّهُمْ اٰجَمُوْنَ ﴿٧٨﴾ اِلَّا اِبْلِیْسَ اَسْتَكْبَرَ وَكَانَ مِنَ الْكَٰفِرِیْنَ ﴿٧٩﴾﴾

«[Remember] when your Lord said to the angels: ‘Truly, I am going to create man from clay.

So when I have fashioned him and breathed into him [his] soul created by Me, then you fall down prostrate to him.’

So the angels prostrated themselves, all of them,

Except *Iblees* [Satan], he was proud and was one of the disbelievers.»

(*Qur'an* 38:71-74)

The dispute mentioned in the *Qur'an* was concerning Adam (ﷺ) and the refusal of *Iblees* to prostrate to him, and how he (*Iblees*) argued with his Lord concerning His preferring Adam over him.”³¹

(4) They are disciplined and organized in all their affairs

The angels are disciplined in their worship. The Messenger (ﷺ) urged us to follow their example in that. He said, “Why do you not form your rows as the angels form their rows before their Lord?” They said, “O Messenger of Allah, how do the angels form their rows before their Lord?” He said, “They complete the rows and do not leave any gaps.”³²

On the Day of Resurrection, they will come in organized ranks:

﴿وَجَآءَ رَبُّكَ وَالْمَلَكُ صَفًّا صَفًّا ﴿٢٢﴾﴾

«And your Lord comes with the angels in rows.»

(*Qur'an* 89:22)

And they will stand in rows before Allah:

³¹ See *Tafseer Ibn Katheer*, 6/73-74.

³² Muslim, 1/322. hadith no. 430.

﴿يَوْمَ يَقُومُ الرُّوحُ وَالْمَلَائِكَةُ صَفًّا لَا يَتَكَلَّمُونَ إِلَّا مَنْ أَذِنَ لَهُ الرَّحْمَنُ وَقَالَ صَوَابًا﴾

«The Day that *Ar-Rooḥ* [Jibreel (Gabriel), or another angel] and the angels will stand forth in rows, they will not speak except him whom the Most Gracious [Allah] allows, and he will speak what is right.»
 (Qur'an 78:38)

Ar-Rooḥ here refers to Jibreel.

Look at how precisely they carry out commands. In *Ṣaḥeeḥ Muslim* and *Musnad Aḥmad* it is narrated from Anas (رضي الله عنه) that the Prophet (ﷺ) said: "I will come to the gate of Paradise and ask for it to be opened. The gatekeeper will say, 'Who are you?' I will say, 'Muhammad.' He will say, 'I was commanded not to open it for anyone before you.'"³³

We may note how precisely they carry out commands by looking at the hadith about the *Israa'*. When Jibreel asked for permission to enter each of the heavens, it was not opened for him until after it was found out who was seeking admission.

(5) The infallibility of the angels

Suyooṭi narrated from Al-Qaaḍi 'Iyaaḍ that "Muslims are unanimously agreed that the angels are virtuous believers, and the Imaams of the Muslims are agreed that our belief about the messengers among them is like our belief about the Prophets with regard to their infallibility in the issues which we have referred to above, and that their responsibilities towards the Prophets are like the responsibilities of the Prophets towards their nations."

Some scholars differed concerning the angels who are not messengers. Some were of the view that all the angels are infallible in the sense that they do not commit sin, based on the *aayaat*:

³³ Muslim, 1/188, hadith no. 197.

﴿يَأْتِيهَا الَّذِينَ ءَامَنُوا قُرًىٰٓ أَنْفُسُهُمْ وَأَهْلِيكُمْ نَارًا وَقُودُهَا النَّاسُ وَالْحِجَارَةُ عَلَيْهَا مَلَائِكَةٌ غِلَظٌ شِدَادٌ لَا يَعْصُونَ اللَّهَ مَا أَمَرَهُمْ وَيَفْعَلُونَ مَا يُؤْمَرُونَ ﴿٦٦﴾﴾

﴿O you who believe! Ward off yourselves and your families against a Fire [Hell] whose fuel is men and stones, over which are [appointed] angels stern [and] severe, who disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.﴾

(Qur'an 66:6)

﴿وَمَا مِنَّا إِلَّا لَهُ مَقَامٌ مَّعْلُومٌ ﴿١٦٦﴾ وَإِنَّا لَنَحْنُ الصَّافُونَ ﴿١٦٧﴾ وَإِنَّا لَنَحْنُ الْمُسَبِّحُونَ ﴿١٦٨﴾﴾

﴿And there is not one of us [angels] but has his known place [or position];

And verily, we [angels], we stand in rows [for the prayers as you Muslims stand in rows for your prayers];

And verily, we [angels], indeed are those who glorify [Allah's Praises, i.e. perform prayers].﴾

(Qur'an 37:164-166)

﴿وَمَنْ عِندَهُ لَا يَسْتَكْبِرُونَ عَنْ عِبَادَتِهِ ۖ وَلَا يَسْتَحْسِرُونَ ﴿١٦٩﴾ يُسَبِّحُونَ أَتِلَ وَالنَّهَارَ لَا يَفْتُرُونَ ﴿١٧٠﴾﴾

﴿To Him belongs whosoever is in the heavens and on earth. And those who are near Him [i.e. the angels] are not too proud to worship Him, nor are they weary [of His worship].

They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].﴾

(Qur'an 21:19-20)

﴿بِأَيْدِي سَفَرَةٍ ﴿١٧٠﴾ كِرَامٍ بَرَرَةٍ ﴿١٧١﴾﴾

﴿In the hands of scribes [angels].

Honourable and obedient.﴾

(Qur'an 80:15-16)

﴿لَّا يَمَسُّهُ إِلَّا الْمُطَهَّرُونَ ﴿٧٦﴾﴾

﴿Which [that Book with Allah] none can touch but the purified [i.e. the angels].﴾

(Qur'an 56:79)

And there are many similar reports.

Another group was of the view that this applies only to the messengers among them and those who are close to Allah, and they cited as evidence the story of Haaroot and Maaroot, and the story of *Iblees*. The correct view is that all of them are infallible and that we should think of all of them as being above anything that could undermine their position and high status.

He said: "The answer to the story of Haaroot and Maaroot is that there is no report, sound or otherwise, about that from the Messenger of Allah (ﷺ). Concerning the story of *Iblees*, most scholars deny that he was one of the angels, and they say that he is the father of the jinn, as Adam is the father of mankind."³⁴

This issue was discussed by Aş-Şafawi al-Armawi, as quoted from him by Suyooti. He said: "The angels are infallible, and the evidence for that is as follows:

(i) Allah says concerning them:

﴿وَيَفْعَلُونَ مَا يُؤْمَرُونَ﴾

﴿[They] do that which they are commanded.﴾ (Qur'an 66:6)

﴿وَهُمْ بِأَمْرِهٖ يَعْمَلُونَ﴾

﴿And they act on His Command.﴾ (Qur'an 21:27)

These two *aayaat* include doing what is commanded and abstaining from what is forbidden, because a prohibition is a command to abstain, from doing something. The context here is that of praising."

(ii) Allah says:

﴿يُسَبِّحُونَ اللَّيْلَ وَالنَّهَارَ لَا يَفْترُونَ﴾

﴿They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].﴾ (Qur'an 21: 20)

³⁴ *Al-Habaa'ik min Akhbaar al-Malaa'ik* by Suyooti, Pp. 252.

This is an eloquent description of their efforts in worship.

(iii) The angels are messengers of Allah, because Allah says:

﴿جَاعِلِ الْمَلٰٓئِكَةِ رُسُلًا ۝۱﴾

﴿Who made the angels messengers﴾

(*Qur'an* 35:1)

The angels are infallible, because Allah says, praising them,

﴿اَللّٰهُ اَعْلَمُ حَيْثُ يَجْعَلُ رِسَالَتَهُ ۝۱۲۴﴾

﴿Allah knows best with whom to place His Message.﴾

(*Qur'an* 6:124)

This *aayah* refers to their perfection in their work.³⁵

³⁵ *Al-Habaa'ik min Akhbaar al-Malaa'ik*, Pp. 253.

CHAPTER TWO

THE WORSHIP OF THE ANGELS

A LOOK AT THE NATURE OF THE ANGELS

The angels instinctively worship Allah. They do not have the ability to disobey Him.

﴿مَلٰٓئِكُهُ غَلَاظٌ شِدَادٌ لَا يَعْصُونَ اِلٰهَ مَا اَمَرَهُمْ وَيَفْعَلُوْنَ مَا يُؤْمَرُوْنَ﴾

«[They] disobey not, [from executing] the Commands they receive from Allah, but do that which they are commanded.»

(*Qur'an* 66:6)

Their abstaining from sin and doing acts of obedience is part of their nature, and it does not require any effort on their part, because they have no desires (that could prevent them from doing so).

Perhaps this is the reason why a group of scholars said that the angels are not accountable, and that they are not included in the promises (of Paradise) and threats (of Hell).¹

What we can say is that the angels are not accountable in the same manner as the sons of Adam are, but saying that they are not accountable at all is a view that is to be rejected. They are commanded to worship and obey Allah:

﴿يَخَافُوْنَ رَبَّهُمْ مِّنْ فَوْقِهِمْ وَيَفْعَلُوْنَ مَا يُؤْمَرُوْنَ﴾

«They fear their Lord above them, and they do what they are commanded.»

(*Qur'an* 16:50)

This *ayah* shows that they fear their Lord, and this fear is one of the responsibilities enjoined by shari'ah; indeed it is one of the highest forms of 'uboodiyyah (being a slave of Allah in the fullest sense), as Allah says of the angels:

¹ Lawaami' al-Anwaar al-Bahiyyah, 2/409.

﴿وَهُمْ مِنْ خَشْيَتِهِ مُشْفِقُونَ﴾ (٢٨)

﴿And they stand in awe for fear of Him.﴾ (Qur'an 21:28)

THE STATUS OF THE ANGELS

The best manner in which the angels are described is slaves of Allah, but they are honoured slaves. We have already referred to the fact that the claim made by the *mushrikeen* – that the angels were daughters of Allah – is a false one with no element of truth. Allah showed those who believed this as liars, and described the true nature of the angels and their status in more than one place (in the Qur'an). He said:

﴿وَقَالُوا اتَّخَذَ الرَّحْمَنُ وَلَدًا سُبْحَنَهُ بَلْ عِبَادٌ مُكْرَمُونَ ﴿٢٧﴾ لَا يَسْئِفُونَهُ بِالْقَوْلِ وَهُمْ بِأَمْرِهِ يَعْمَلُونَ ﴿٢٨﴾ يَعْلَمُ مَا بَيْنَ أَيْدِيهِمْ وَمَا خَلْفَهُمْ وَلَا يَشْفَعُونَ إِلَّا لِمَنِ ارْتَضَىٰ وَهُمْ مِنْ خَشْيَتِهِ مُشْفِقُونَ ﴿٢٩﴾ وَمَنْ يَقُلْ مِنْهُمْ إِنِّي إِلَهٌ مِنْ دُونِهِ فَلْيَنْكُرْ جَهَنَّمَ كَذَلِكَ نَجْزِي الظَّالِمِينَ ﴿٣٠﴾﴾

﴿And they say: 'The Most Gracious [Allah] has begotten a son [or children].' Glory to Him! They [whom they call children of Allah i.e. the angels, 'Eesa son of Maryam, 'Uzayr (Ezra)], are but honoured slaves.

They speak not until He has spoken, and they act on His Command. He knows what is before them, and what is behind them, and they cannot intercede except for him with whom He is pleased. And they stand in awe for fear of Him.

And if any of them should say: 'Verily, I am an *ilaah* [a god] besides Him [Allah], such a one We should recompense with Hell. Thus We recompense the *Zaalimoon* [polytheists and wrongdoers].﴾

(Qur'an 21:26-29)

The angels are slaves who bear all the characteristics of *'uboodiyyah*: they serve Allah and carry out His instructions. The knowledge of Allah encompasses them, and they cannot go beyond what He commands them to do or go against the instructions that are given to them. They are in fear and awe of Allah, and if it so happened that one of them were to

overstep the mark, Allah would punish him for his rebellion.

One aspect of the 'uboodiyyah of the angels is that they do not make suggestions before their Lord, and they do not oppose any of His commands. Rather they do as they are commanded and hasten to respond.

﴿لَا يَسْأَلُونَكَ بِالْقَوْلِ وَهُمْ بِأَمْرِهِ يَعْمَلُونَ﴾ (٢٧)

«They speak not until He has spoken, and they act on His Command.»
(Qur'an 21:27)

They do not do anything except that which they are commanded. The command motivates them, and the command makes them stop. In *Ṣaḥeeḥ al-Bukhaari* it is narrated that Ibn 'Abbaas² said: the Messenger of Allah (ﷺ) said to Jibreel, "Why do you not visit us more often?" Then the *aayah* was revealed:

﴿وَمَا نَنْزِلُ إِلَّا بِأَمْرِ رَبِّكَ لَهُ مَا بَيْنَ أَيْدِينَا وَمَا خَلْفَنَا وَمَا بَيْنَ ذَلِكَ وَمَا كَانَ رَبُّكَ نَسِيًّا﴾ (١٩)

«And we [angels] descend not except by the Command of your Lord [O Muhammad]. To Him belongs what is before us and what is behind us, and what is between those two; and your Lord is never forgetful.»
(Qur'an 19:64)

Examples of their worship

The angels are slaves of Allah whose responsibility is to worship Him. They fulfil this responsibility and worship Him with the greatest of ease. We will describe here some of the acts of worship done by the angels which Allah and His Messenger (ﷺ) have told us about.

(1) *Tasbeeh* (Glorifying Allah)

The angels remember Allah (*dhikr*), and the greatest *dhikr* is *Tasbeeh*. The bearers of the Throne glorify Him, may He be exalted:

² Bukhaari, 6/305, hadith no. 3218.

﴿الَّذِينَ يَحْمِلُونَ الْعَرْشَ وَمَنْ حَوْلَهُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ﴾

«Those [angels] who bear the Throne [of Allah] and those around it glorify the praises of their Lord.» (Qur'an 40:7)

And all the angels glorify Him:

﴿وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ﴾

«And the angels glorify the praises of their Lord.» (Qur'an 42:5)

They glorify Allah constantly, without ceasing, either at night or during the day:

﴿يُسَبِّحُونَ أَلَيْلَ وَالنَّهَارَ لَا يَفْتُرُونَ﴾

«They [i.e. the angels] glorify His Praises night and day, [and] they never slacken [to do so].» (Qur'an 21:20)

Because they glorify Allah so much, they are indeed those who truly glorify Allah's praises, and they have the right to be proud of that:

﴿وَإِنَّا لَنَحْنُ الصَّافُونَ﴾ ﴿وَإِنَّا لَنَحْنُ الْمُسَبِّحُونَ﴾

«And verily, we [angels], stand in rows [for the prayers as you Muslims stand in rows for your prayers];

And verily, we [angels], indeed are those who glorify [Allah's Praises, i.e. perform prayers].» (Qur'an 37:165-166)

They glorify Allah so much because *Tasbeeh* is the greatest form of *dhikr*. Muslim narrated in his *Shaheeh* that Abu Dharr said: "The Messenger of Allah (ﷺ) was asked what kind of *dhikr* is the best. He said: 'That which Allah has chosen for His angels or His slaves: *Subhaan Allahi wa bi hamdihi* (Glory and praise be to Allah).'"³

(2) Standing in rows

We have already mentioned the hadith in which the Messenger (ﷺ) urged his Companions to follow the example of the angels in making

³ Muslim, 4/2093, hadith no. 2731.

straight rows for the prayer: “Why do you not form rows as the angels form rows before their Lord?” When he was asked about how they form rows, he said: “They complete the rows, and do not leave any gaps.” This is narrated by Muslim.⁴

In the Qur’an it says of the angels:

﴿وَأِنَّا لَنَحْنُ الصَّافُّونَ﴾

﴿And verily, we [angels], stand in rows [for the prayers as you Muslims stand in rows for your prayers].﴾ (Qur’an 37:165)

They stand, bow and prostrate. In *Mushkil al-Aathaar* by Aṭ-Ṭaḥḥaawi, and in *Al-Mu‘jam al-Kabeer* by Aṭ-Ṭabaraani, it is narrated that Ḥakeem ibn Ḥuzaam said:

“When the Messenger of Allah (ﷺ) was with his Companions, he said to them, ‘Do you not hear what I hear?’ They said, ‘We do not hear anything.’ He said, ‘I can hear the creaking of the heavens, and no wonder they creak, for there is not a spot the size of a handspan, but there is an angel on it, prostrating or standing (in worship).’”⁵

(3) Ḥajj

The angels have a Ka‘bah in the seventh heaven to which they go on Ḥajj. This Ka‘bah is that which Allah called *Al-Bayt al-Ma‘moor* (the Much-Frequented House), and swore by it in *Soorat at-Ṭoor*:

﴿وَالْبَيْتِ الْمَعْمُورِ﴾

﴿And by *Al-Bayt al Ma‘moor* [the house over the heavens parallel to the Ka‘bah at Makkah, continuously visited by the angels].﴾

(Qur’an 52:4)

Ibn Katheer said in his commentary on this *aayah*: “It is reported in *Al-Ṣaḥeeḥayn* that the Messenger of Allah (ﷺ) said in the hadith about the

⁴ Muslim, 1/322, hadith no. 430.

⁵ Al-Albaani said: it is *ṣaḥeeḥ* according to the conditions of Muslim. *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, hadith no. 852.

Israa', after he had passed the seventh heaven: 'Then I was taken up to the Much-Frequented House. Every day seventy thousand angels enter it, and they never return to it, and when they leave another seventy thousand come'⁶ – i.e., they worship there, and they perform *Tawaaf* around it just as the people of this earth perform *Tawaaf* around their Ka'bah. The Much-Frequented House is the Ka'bah of the inhabitants of the seventh heaven, hence the Prophet (ﷺ) found Ibraaheem (عليه السلام) leaning back against the Much-Frequented House, because he was the builder of the earthly Ka'bah, and the reward should fit the action."

Ibn Katheer mentioned that the Much-Frequented House is parallel to the Ka'bah, i.e., it is above it, and if it were to fall it would fall on top of it. He said that in each of the heavens there is a House in which its inhabitants worship Allah, and in the direction of which they offer their prayers. The one which is in the first heaven is called *Bayt al-'Izzah* (the House of Glory).

What Ibn Katheer said about the Much-Frequented House being parallel to the Ka'bah is narrated from 'Ali ibn Abi Taa'lib. Ibn Jareer narrated on the authority of Khaalid ibn 'Ar'arah that a man said to 'Ali (عليه السلام), "What is the Much-Frequented House?" He said, "It is a House in the heavens parallel to the Ka'bah. Its sanctity in the heavens is like the sanctity of the Ka'bah on earth. Every day seventy thousand angels enter it, and they never return to it."⁷

Shaykh Naaṣir ad-Deen al-Albaani⁸ said concerning this hadith: its men are *thiqaat* apart from Khaalid ibn 'Ar'arah, who is *mastoor*... Then he stated that there is a corroborating *mursal ṣaḥeeḥ* report narrated from Qataadah, who said: "He mentioned to us that one day the Prophet (ﷺ)

⁶ Bukhaari, 6/103, hadith no. 2207; Muslim, 1/147, hadith no. 162. This version differs somewhat from that narrated in *Aṣ-Ṣaḥeeḥayn*.

⁷ Ibn Hajar narrated this from Aṭ-Ṭabari and Ishaaq in *Fath al-Baari*, 6/308, where he spoke at length about its *isnaad*.

⁸ *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, 1/236.

said to his Companions, ‘Do you know what the Much-Frequented House is?’ They said, ‘Allah and His Messenger know best.’ He said: ‘It is a mosque in the heavens, beneath which is the Ka‘bah. If it were to fall it would fall on top of it...’”

The editor (Al-Albaani) said: “In conclusion we may note that this phrase (that the Much-Frequented House is parallel to the Ka‘bah) is proven when all the *isnaads* are combined.”

(4) Their fear of Allah

Because the angels have such a great knowledge of their Lord, their veneration of Him and their fear of Him are very great. Allah says of them:

﴿وَهُمْ مِّنْ خَشْيَةِٰ مُّشْفِقُونَ﴾

﴿And they stand in awe for fear of Him.﴾ (Qur'an 21:28)

How great their fear of their Lord is, is apparent from the hadith narrated by Bukhaari from Abu Hurayrah, who said that the Prophet (ﷺ) said: “When Allah decrees a matter in the heavens, the angels beat their wings in submission to what He has said, (with a sound like) a chain striking a rock.”

‘Ali and others said:

“The sound reaches them, and when fear is banished from their (angels’) hearts, they (angels) say: ‘What is it that your Lord has said?’ They say: ‘The truth. And He is the Most High, the Most Great’ (cf. Qur’an 34:23).”⁹

In *Mu‘jam at-Tabaraani al-Awsat* it is narrated with a *hasan isnaad* from Jaabir (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “On the night on which I was taken on the Night Journey (*Israa*’), I passed by the hosts on high, and Jibreel was like a worn mat, from his fear of Allah.”¹⁰

⁹ Bukhaari, 3/380, hadith no. 4701.

¹⁰ *Ṣaḥeeḥ al-Jaami*, 5/206.

CHAPTER THREE THE ANGELS AND MAN

1 - THE ANGELS AND ADAM

When Allah wanted to create Adam, He informed His angels of that. They asked Him the reason behind that, because they knew that the sons of Adam would cause corruption and shed blood, and they would disobey Allah and disbelieve. He told them that there were reasons for the creation of Adam which they did not know:

﴿وَإِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّیْ جَاعِلٌ فِی الْاَرْضِ خَلِیْفَةًۭۙ قَالُوْۤا اَنْتَ جَعَلُۭۤا فِیْهَا مَنْ یُّفْسِدُ فِیْهَا وَیَسْفِكُ الدِّمَآءَ وَنَحْنُ نُسَبِّحُ بِحَمْدِكَ وَنُقَدِّسُ لَكَۙ قَالَ اِنِّیْۤ اَعْلَمُ مَا لَا تَعْلَمُوْنَۙ﴾

﴿And [remember] when your Lord said to the angels: ‘Verily, I am going to place viceroy [mankind] on earth.’ They said: ‘Will You place therein those who will make mischief therein and shed blood, – while we glorify You with praises and thanks and sanctify You.’ He [Allah] said: ‘I know that which you know not.’﴾ (Qur’an 2:30)

Their prostration to Adam when he was created

Allah commanded His angels to prostrate to Adam when He had completed his creation and breathed his soul into him:

﴿اِذْ قَالَ رَبُّكَ لِلْمَلٰٓئِكَةِ اِنِّیْ خَالِقٌۭۙ بَشَرًاۚ مِّنْ طِیْنٍۙ ﴿۷۶﴾ فَاِذَا سَوَّيْتُمْ وَنَفَخْتُ فِیْهِ مِنْ رُّوْحِیْ فَقَعُوْۤا لِّیۡ سَاجِدِیْنَۙ ﴿۷۷﴾﴾

﴿[Remember] when your Lord said to the angels: ‘Truly, I am going to create man from clay.

So when I have fashioned him and breathed into him [his] soul created by Me, then you fall down prostrate to him.’﴾

(Qur’an 38:71-72)

They responded to the command, except for *Iblees*:

﴿فَسَجَدَ الْمَلَائِكَةُ كُلُّهُمْ أَجْمَعُونَ ﴿٧٦﴾ إِلَّا إِبْلِيسَ اسْتَكْبَرَ وَكَانَ مِنَ الْكَافِرِينَ ﴿٧٧﴾﴾

«So the angels prostrated themselves, all of them,
Except *Iblees* [Satan], he was proud and was one of the
disbelievers.» (Qur'an 38:73-74)¹

How the angels taught Adam

It is narrated that Abu Hurayrah (رضي الله عنه) said: The Messenger of Allah (ﷺ) said: "Allah created Adam in His image², and he was sixty cubits tall. When He had created him, He said, 'Go and greet them – a group of angels who were sitting – and listen to how they respond, for that will be your greeting and the greeting of your descendents.' So he said, '*As-Salaamu 'alaykum* (peace be upon you),' and they said, '*As-Salaamu 'alayka wa rahmat-Allahi* (peace be upon you, and the mercy of Allah).'" So they added the words *wa rahmat-Allah*.³

The angels washed Adam when he died

When Adam died, his children did not know what they should do with his body, so the angels taught them. In *Mustadrak al-Haakim* and *Mu'jam at-Tabaraani al-Awsat*, it is narrated with a *ṣaḥeeḥ isnaad* from Ubayy (رضي الله عنه) that the Prophet (ﷺ) said: "When Adam died, the angels washed his body with water an odd number of times, then they

¹ This *aayah* clearly indicates that all the angels prostrated to Adam. This offers a refutation of the view of those who say that those who prostrated were only some of the angels, or that they were only the angels of this earth. The report attributed to Ibn 'Abbaas which says that they were the angels of this earth is *munkar and maqṭoo'* (i.e., it is not a strong report). Ibn Taymiyah stated that the *aayah* is a clear text which is not open to interpretation and it is not permitted to believe the opposite of what is stated in this *aayah*.

² In his footnote on this hadith, Dr. Muhammad Muḥsin Khan notes that this means that Adam has been granted life, knowledge, power of understanding etc., which are also attributes of Allah, but that only the names are the same and there is no comparison between the Creator and the created being. See *The Translation of the Meanings of Ṣaḥeeḥ al-Bukhaari*, Vol. 8, Pp. 161. (Translator)

³ Bukhaari, 11/3, no. 6227. Also narrated by Muslim, 4/2184, hadith no. 2841.

buried him in a grave with a niche (*lahd*), and said: This is the way of the sons of Adam.”⁴

It is narrated in the *ṣaḥeeḥ aḥaadeeth* that the angels washed a *shaheed* from this ummah, Ḥanzalah ibn Abi ‘Aamir, who was martyred in the battle of Uḥud. The Messenger (ﷺ) said to his Companions after Ḥanzalah was killed: “The angels are washing your companion” – meaning Ḥanzalah. The *Ṣaḥaabah* asked his wife, and she said that he had gone out when he heard the call to arms, and he was *junub* (in a state of ritual impurity following marital relations). The Messenger of Allah (ﷺ) said, “That is why the angels washed his body.”

This is narrated by Al-Ḥaakim and Al-Bayhaqi with a *ḥasan isnaad*. Ibn ‘Asaakir stated with a *ṣaḥeeḥ isnaad* that (the tribe of) Al-Aws were proud of the fact that one of their member, Ḥanzalah ibn Abi ‘Aamir, had been washed by the angels.⁵

2 - THE ANGELS AND THE SONS OF ADAM

The connection between the angels and the descendents of Adam is very strong. They are there when a person is created, they guard him/her after he/she emerges into this world. They bring the *wahy* (revelation) from Allah and they watch over people’s actions and behaviour. And they bring a person’s soul forth from his body when his appointed time (of death) comes.

(1) Their role in the creation of man

Muslim narrated in his *Ṣaḥeeḥ* that Abu Dharr said: “I heard the Messenger of Allah (ﷺ) say: ‘When forty-two nights are passed, Allah sends an angel to the *nutfah* (embryo) and he gives it shape, forming its hearing and sight, its skin, flesh and bones. Then he says: ‘O Lord, male or female?’ Then your Lord decrees whatever He wills and the angel writes it down.’”⁶

⁴ *Ṣaḥeeḥ al-Jaami*, 5/48.

⁵ *Silsilat al-Aḥaadeeth aṣ-Ṣaḥeeḥah*, hadith no. 326.

⁶ Muslim, 4/2037, hadith no. 2645.

It is narrated that Ibn Mas‘ood said: “The Messenger of Allah (ﷺ), who is the most truthful one, told us: ‘Each one of you comes together in mother’s womb for forty days, then becomes an *‘alaqah* (clot) for a similar period of time. Then he becomes a *mudghah* (chewed lump of flesh) for a similar length of time. Then Allah sends an angel to him, who is commanded with four things. It is said to him: Write down his deeds, his provision, and whether he is doomed (destined for Hell) or blessed (destined for Paradise). Then the soul is breathed into him.’”⁷

It is narrated in *Ṣaḥeeḥayn* (Bukhaari and Muslim) from Anas that the Prophet (ﷺ) said: “Allah has appointed an angel over the womb, and he says, ‘O Lord, a *nutfah* (mixed discharge from male and female); O Lord, an *‘alaqah* (clot); O Lord, a *mudghah* (chewed lump of flesh).’ And when Allah wants to decree his creation, he says: ‘O Lord, male or female? Doomed or blessed? What is his provision? What is his lifespan?’ All of that is written when he is in his mother’s womb.”⁸

(2) The angels guard the sons of Adam

Allah says:

﴿سَوَاءٌ مِّنْكُمْ مَنْ أَسَرَ الْقَوْلَ وَمَنْ جَهَرَ بِهِ. وَمَنْ هُوَ مُسْتَخْفٍ بِأَيْلٍ وَسَارِبٍ
بِالنَّهَارِ ۚ لَمْ يَعْصِبْتُ مِنْ بَيْنِ يَدَيْهِ وَمِنْ خَلْفِهِ. يَحْفَظُونَهُ مِنْ أَمْرِ اللَّهِ ۚ﴾ (١٧)

«It is the same [to Him] whether any of you conceals his speech or declares it openly, whether he be hid by night or goes forth freely by day.

For him [each person], there are angels in succession, before and behind him. They guard him by the Command of Allah.»

(*Qur’an* 13:10-11)

The interpreter of the Qur’an (*turjumaan al-Qur’an*), Ibn ‘Abbaas, has explained that the word *Al-Mu‘aqqibaat* (translated here as “angels in

⁷ Bukhaari, 6/303, hadith no. 3208. Also narrated by Muslim, 4/2036, hadith no. 2643.

⁸ Bukhaari, 11/477, hadith no. 6595. Also narrated by Muslim, 4/2038, hadith no. 2646. This version is narrated by Bukhaari.

succession”) refers to the angels whom Allah appoints to guard a person from before and from behind. Then when the decree of Allah comes, which Allah wills should befall him, they withdraw from him.

Mujaahid said: “There is no person who does not have an angel appointed to protect him when he is asleep and when he is awake, from the jinn, other men and savage beasts. None of these come to him, but the angel tells it, ‘Keep away!’ except for that which Allah has given permission to befall him.”

A man said to ‘Ali ibn Abi Taalib, “A group from Muraad want to kill you.” He (‘Ali) said, “With every man there are angels guarding him from whatever has not been decreed for him. When the decree comes, they move away from him and let it reach him. Your fixed lifespan (decreed by Allah) is a protection for you.”⁹

The angels in succession - *Al-Mu‘aqqibaat* - mentioned in the *aayah* of *Soorat al-Ra‘d* are also those referred to in another *aayah*:

﴿وَهُوَ الْغَافِرُ فَوْقَ عِبَادِهِ وَيُرْسِلُ عَلَيْكُمْ حَفَظَةً حَتَّىٰ إِذَا جَاءَ أَحَدَكُمُ الْمَوْتُ تَوَفَّتْهُ رُسُلُنَا وَهُمْ لَا يُفَرِّطُونَ﴾^(١١)

﴿He is the Irresistible [Supreme], over His slaves, and He sends guardians [angels guarding and writing all of one’s good and bad deeds] over you, until when death approaches one of you, Our messengers [angel of death and his assistants] take his soul, and they never neglect their duty.﴾

(*Qur’an* 6:61)

These guardians are sent by Allah to protect His slaves until the decreed time of death comes to them.

(3) The emissaries of Allah to His Messengers and Prophets

Allah has told us that Jibreel is the only one who carries out this mission:

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَىٰ قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِّمَا بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَىٰ لِلْمُؤْمِنِينَ﴾^(١٢)

⁹ *Al-Bidaayah wan-Nihaayah*, 1/54.

«Say [O Muhammad]: ‘Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur’an] down to your heart by Allah’s Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and...’»

(*Qur’an* 2:97)

﴿نَزَلَ بِهِ الرُّوحُ الْأَمِينُ ﴿١٩٣﴾ عَلَى قَلْبِكَ لِتَكُونَ مِنَ الْمُنذِرِينَ ﴿١٩٤﴾﴾

«Which the trustworthy *Rooḥ* [Jibreel (Gabriel)] has brought down Upon your heart [O Muhammad] that you may be [one] of the warners.»

(*Qur’an* 26:193-194)

Wahy (revelation) may be brought by angels other than Jibreel, but this happens rarely – as stated in the hadith narrated by Muslim from Ibn ‘Abbaas, who said: “Whilst Jibreel was sitting with the Prophet (ﷺ), he heard a creaking sound above him, and he raised his head. He said, ‘This is a door in the heaven which has been opened today, and it has never been opened before today, and an angel has come down through it. This is an angel who has come down to the earth, and he never came down before today. He [that angel] gave the greeting of *salaam* and said: Rejoice, for you have been granted two lights which have not been given to any Prophet before you: the Opening of the Book (*Soorat al-Faatiḥah*) and the closing verses of *Soorat al-Baqarah*. You will not read even one letter of them but you will be granted reward.’”¹⁰

In *At-Taareekh* by Ibn ‘Asaakir, it is narrated from Ḥudhayfah that the Messenger of Allah (ﷺ) said: “An angel came to me and greeted me with *salaams* – he came down from the heavens and he had never come down before – and he gave me the glad tidings that Al-Ḥasan and Al-Ḥusayn would be the leaders of the youth of Paradise, and that Faatimah would be the leader of the women of Paradise.”¹¹

In *Musnad Ahmad* and *Sunan an-Nisaa’i* it is narrated from Ḥudhayfah that the Messenger of Allah (ﷺ) said: “Did you not see what happened

¹⁰ Muslim, 1/554, hadith no. 806.

¹¹ *Ṣaḥeeḥ al-Jaami’*, 1/80.

to me just?" They said, "Yes." He said, "It was one of the angels who had never come down to the earth before tonight. He asked his Lord for permission to greet me, and to tell me that Al-Ḥasan and Al-Ḥusayn will be the leaders of the youth of Paradise, and that Faaṭimah will be the leader of the women of Paradise."¹²

Not everyone to whom an angel comes is a Messenger or a Prophet

Not everyone to whom an angel comes can be counted as a Messenger or a Prophet. This is an illusion. Allah sent Jibreel to Maryam, as He sent him to the mother of Ismaa'eel when she ran out of food and drink. (And it is known that neither of them were Prophetess).

The *Ṣaḥaabah* saw Jibreel in the form of a Bedouin. And Allah sent an angel to that man who visited a brother of his for the sake of Allah, to tell him that Allah loved him because he loved his brother... This happened a lot, and the reason was to make a point.

How did the *Wahy* (revelation) come to the Messenger (ﷺ)?

It is narrated in Bukhaari from 'Aa'ishah (may Allah be pleased with her) that Al-Ḥarith ibn Hishaam (رضي الله عنه) asked the Messenger (ﷺ), "O Messenger of Allah, how does the *Wahy* come to you?"

The Messenger (ﷺ) said: "Sometimes it comes to me like the ringing of a bell, and that is the hardest for me. Then it departs from me, and I understand what has been said. Sometimes the angel comes to me in the form of a man who speaks to me, and I understand what he says."¹³

Jibreel used to come to the Messenger (ﷺ) in his angelic form. This was difficult for the Messenger (ﷺ). At other times Jibreel would change from his angelic form and take on human form, and this was easier for the Messenger (ﷺ).

The Messenger (ﷺ) saw Jibreel twice in the form in which Allah created him:

¹² *Musnad Aḥmad*, 5/391; this version is narrated by him. *Ṣaḥeeḥ Sunan an-Nasaa'i*, 3/226, hadith no. 2975.

¹³ Bukhaari, 1/18, hadith no. 2.

(i) Three years after the beginning of his (ﷺ) Mission

It is narrated in Bukhaari from Jaabir ibn ‘Abd-Allah that the Messenger of Allah (ﷺ) said: “Whilst I was walking, I heard a voice from the heavens. I raised my head and saw the angel who had come to me in (the cave of) Hira’a’, sitting on a throne between the heavens and the earth. I was scared of him, and I went back and said, ‘Cover me!’”¹⁴

(ii) When he was taken up into the heavens (the *Mi‘raaj*)

These two occasions were mentioned in *Soorat al-Najm*, where Allah says:

﴿عَلَّمَهُ شَدِيدُ الْقُوَى ۝ ذُو مِرَّةٍ فَاسْتَوَى ۝ وَهُوَ بِالْأُفُقِ الْأَعْلَى ۝ ثُمَّ دَنَا ۝ فَتَدَلَّى ۝ فَكَانَ قَابَ قَوْسَيْنِ أَوْ أَدْنَى ۝ فَأَوْحَى إِلَى عَبْدِهِ مَا أَوْحَى ۝ مَا كَذَبَ الْفُؤَادُ مَا رَأَى ۝ أَفَتَمْنُونَهُ عَلَىٰ مَا يَرَى ۝ وَلَقَدْ رَآهُ نَزْلَةً أُخْرَى ۝ عِنْدَ سِدْرَةِ الْمُنْتَهَى ۝ عِنْدَهَا جَنَّةُ الْمَأْوَى ۝ إِذْ يَغْشَى السِّدْرَةَ مَا يَغْشَى ۝ مَا زَاغَ الْبَصَرُ وَمَا طَغَى ۝﴾

﴿He has been taught [this Qur’an] by one mighty in power [Jibreel (Gabriel)].

One free from any defect in body and mind then he [Jibreel – Gabriel in his real shape as created by Allah] rose and became stable.

While he [Jibreel (Gabriel)] was in the highest part of the horizon, [Tafseer Ibn Katheer]

Then he [Jibreel (Gabriel)] approached and came closer,

And was at a distance of two bows’ length or [even] nearer.

So [Allah] revealed to His slave [Muhammad through Jibreel (Gabriel)] whatever He revealed.

The [Prophet’s] heart lied not in what he [Muhammad] saw.

Will you then dispute with him [Muhammad] about what he saw [during the *Mi‘raaj*: (Ascent of the Prophet to the seven heavens)].

And indeed he [Muhammad] saw him [Jibreel (Gabriel)] at a second descent [i.e. another time].

¹⁴ Bukhaari, 1/27, hadith no. 4.

Near *Sidrat-ul-Muntaha* [a lote tree of the utmost boundary over the seventh heaven beyond which none can pass].

Near it is the Paradise of Abode.

When that covered the lote tree which did cover it!

The sight [of Prophet Muhammad] turned not aside [right or left], nor it transgressed beyond the limit [ordained for it]. ﴿

(*Qur'an* 53:5-17)

The mission of Jibreel is not restricted only to conveying the *Wahy*

The mission of Jibreel is not restricted only to conveying the *Wahy* from Allah. He used to come to the Prophet (ﷺ) every year in Ramaḍaan, on every night of that month, to teach him the Qur'an. According to the hadith narrated by Bukhaari in his *Ṣaḥeeḥ* from Ibn 'Abbaas, "The Messenger of Allah (ﷺ) was the most generous of people, and he was at his most in generosity during Ramaḍaan, when he used to meet Jibreel, and he used to meet him every night during Ramaḍaan, to study the Qur'an with him. The Messenger of Allah was more generous in doing good than the wind when it blows."¹⁵

His leading the Messenger in prayer

Jibreel led the Messenger (ﷺ) in prayer, so that he could learn the prayer as Allah wanted it to be performed. In *Ṣaḥeeḥ al-Bukhaari* and *Sunan an-Nasaa'i* it is narrated from Abu Mas'ood that the Messenger (ﷺ) said: "Jibreel came down and led me in prayer, so I prayed with him, then I prayed with him, then I prayed with him, then I prayed with him, then I prayed with him" – and he counted them off on his fingers five times.¹⁶

In *As-Sunan* it is narrated from Ibn 'Abbaas that the Messenger (ﷺ) said: "Jibreel led me in prayer at the Ka'bah twice. He led me in praying *Zuḥr* when the sun had passed its zenith by the length of a sandal-thong, and he led me in praying *'Aṣr* when the shadow of

¹⁵ Bukhaari, 1/30, hadith no, 6.

¹⁶ Bukhaari, 6/305, hadith no. 3221. *Ṣaḥeeḥ Sunan an-Nasaa'i*, 1/108, no. 480.

every object was the same length as the object itself. He led me – in praying *Maghrib* – at the time when the fasting person breaks his fast. He led me in praying '*Ishaa*' when the twilight had ended. And he led me in praying *Fajr* at the time when food and drink become *haraam* for the one who is fasting.

On the following day, he led me in praying *Zuhr* when the shadow of an object was the same length as the object itself. He led me in praying '*Aṣr*' when the shadow of an object was twice as long as the object itself. He led me in praying *Maghrib* at the time when the fasting person breaks his fast. He led me in praying '*Ishaa*' when a third of the night had passed. And he led me in praying *Fajr* when there was a fair amount of light. Then he turned to me and said: 'O Muhammad, these are the times (observed by) the Prophets before you, and the time (for each prayer) is anywhere between these two times (mentioned in each case).'"¹⁷

The *ruqyah* of Jibreel for the Messenger (ﷺ)

Muslim narrated on the authority of Abu Sa'eed that Jibreel came to the Prophet (ﷺ) and said, "O Muhammad, are you ill?" He said, "Yes." He said, "In the name of Allah I perform *ruqyah* for you, from everything that is troubling you. From the evil of every living being, or every envious eye, may Allah heal you, in the name of Allah I perform *ruqyah* for you."¹⁸

Other actions

Among other things, Jibreel fought alongside the Messenger (ﷺ) at Badr and *Al-Khandaq* (the Ditch), and he accompanied the Messenger on the Night Journey (the *Israa*'), etc.

¹⁷ *Ṣaḥeeḥ Sunan Abi Dawood*, 1/79, no. 377 - this version is narrated by him. *Ṣaḥeeḥ Sunan at-Tirmidhi*, 1/50, no. 127. *Ṣaḥeeḥ Sunan an-Nasaa'i*, narrating from Abu Hurayrah, 1/109, no. 477.

¹⁸ Muslim, 4/1718, hadith no. 2186.

Why did Allah not send Messengers from among the angels?

Allah did not send Messengers from among the angels because the nature of the angels is different from the nature of man, and so it is not easy for man to be in contact with the angels. It was very difficult for the Prophet (ﷺ) when Jibreel came to him in his angelic form, as we have noted above. When he saw Jibreel in his true form, he was scared, and he went to his wife and said, "Cover me, cover me!"

Because their nature is different, Allah willed that He should send mankind Messengers of their own kind. If the inhabitants of the earth had been angels, He would have sent down to them an angel as a Messenger. Allah, the Exalted, says:

﴿قُلْ لَوْ كَانَ فِي الْأَرْضِ مَلَائِكَةٌ يَمْشُونَ مُطْمَئِنِّينَ لَنَزَّلْنَا عَلَيْهِمْ مِنَ السَّمَاءِ مَلَكًا رَسُولًا﴾ (٩٥)

﴿Say: 'If there were on the earth, angels walking about in peace and security, We should certainly have sent down for them from the heaven an angel as a Messenger.'﴾ (Qur'an 17:95)

Even if we assume that Allah had chosen some of the angels to be His Messengers to mankind, He could not have sent them down in their angelic form. He would have had to make them appear in human form, so that the people could have learned from them:

﴿وَقَالُوا لَوْلَا أُنْزِلَ عَلَيْهِ مَلَكٌ وَلَوْ أَنزَلْنَا مَلَكًا لَقُضِيَ الْأَمْرُ ثُمَّ لَا يُنْظَرُونَ ﴿٨﴾ وَلَوْ جَعَلْنَاهُ مَلَكًا لَجَعَلْنَاهُ رَجُلًا وَلَلَبَسْنَا عَلَيْهِمْ مَا يَلِيسُونَ ﴿٩﴾﴾

﴿And they say: 'Why has not an angel been sent down to him?' Had We sent down an angel, the matter would have been judged at once, and no respite would be granted to them.

And had We appointed him an angel, We indeed would have made him a man, and We would have certainly confused them in which they are already confused [i.e. the Message of Prophet Muhammad].﴾ (Qur'an 6:8-9)

Allah tells us that the *kaafirs*' demand to see the angels, and to have a Messenger from among the angels come to them, was no more than stubbornness on their part. It was not a request for guidance, and even if it were to happen, they would never believe:

﴿وَلَوْ أَنَّا زَلَّلْنَا إِلَيْهِمُ الْمَلَائِكَةَ وَكَلَّمَهُمُ الْمَوْتُ وَحَشَرْنَا عَلَيْهِمْ كُلَّ شَيْءٍ قُبُلًا مَا كَانُوا لِيُؤْمِنُوا إِلَّا أَنْ يَشَاءَ اللَّهُ وَلَكِنْ أَكْثَرُهُمْ يَجْهَلُونَ﴾

﴿And even if We had sent down unto them angels, and the dead had spoken unto them, and We had gathered together all things before their very eyes, they would not have believed, unless Allah willed, but most of them behave ignorantly.﴾ (Qur'an 6:111)

(4) Stirring up good motives in human hearts

Allah has appointed for each person a *qareen* (constant companion) from among the angels, and another from among the jinn. In *Shaḥeeḥ Muslim* it is narrated that Ibn Mas'ood said: "The Messenger of Allah (ﷺ) said: "There is no one among you but there has been appointed for him one *qareen* from among the jinn and another from among the angels." They said, "For you too, O Messenger of Allah?" He said, "For me too, but Allah has helped me against him (the jinn companion) and he has become Muslim, so he does not tell me to do anything but good."¹⁹

This angelic companion is probably different from the angels who are commanded to record a person's deeds; Allah has appointed him to guide the person.

A person's *qareen* from among the angels and his *qareen* from among the jinn have an influence upon him. The latter tells him and encourages him to do evil, and the former urges and encourages him to do good. It is narrated from Ibn Mas'ood (رضي الله عنه) that the Messenger of Allah (ﷺ) said: "The devil has a hold over the son of Adam, and the angel has a hold over him. The hold of the devil tempts man to do evil and deny the truth. The

¹⁹ Muslim, 4/2168, hadith no. 2814.

hold of the angel encourages man to do good and believe in the truth. Whoever experiences anything of this sort, let him know that it is from Allah, and let him praise Allah. Whoever experiences anything of the other, let him seek refuge with Allah from the accursed *Shayṭaan*, then recite:

﴿الشَّيْطَانُ يَعِدُكُمُ الْفَقْرَ وَيَأْمُرُكُم بِالْفَحْشَاءِ وَاللَّهُ يَعِدُكُم مَّغْفِرَةً مِنْهُ وَفَضْلًا وَاللَّهُ وَاسِعٌ عَلِيمٌ﴾

«*Shayṭaan* [Satan] threatens you with poverty and orders you to commit *Fahshaa'* [evil deeds, illegal sexual intercourse, sins]; whereas Allah promises you forgiveness from Himself and bounty, and Allah is All-Sufficient for His creatures' needs, All-Knower.»

(*Qur'an* 2:268)

Ibn Katheer said, after quoting this hadith: "This is how it is narrated by At-Tirmidhi and An-Nasaa'i in the books of *Tafseer* in their *Sunans*, from Hanaad ibn al-Sirri. It is also narrated by Ibn Hibbaan in his *Ṣaḥeeḥ*, from Abu Ya'laa al-Moṣuli, also from Hanaad. At-Tirmidhi said: (it is) *ḥasan ghareeb*, and it is the hadith of Abu'l-Aḥwaṣ, i.e., Salaam ibn Saleem..."

Look at the following hadith to see how the jinn-companion and the angel-companion compete with each other to direct a person. Al-Ḥaafiz Abu Moosa narrated from Abu az-Zubayr that Jaabir said: "The Messenger of Allah (ﷺ) said: 'When a person goes to bed, an angel and a devil hasten towards him. The angel says, 'End your day with good,' and the devil says, "End your day with evil." If he remembers Allah until (sleep) overtakes him, the angel expels the devil and spends the night watching over him.

When he wakes up, an angel and a devil hasten towards him. The angel says, "Start (your day) with good,' and the devil says, 'Start (your day) with evil.' If he says, 'Praise be to Allah who has brought my soul back to life after causing it to die, and has not caused me to die during my sleep. Praise be to Allah Who has detained the souls whom He decreed should die, and has sent back the others until an appointed time. Praise

be to Allah Who grasps the heavens and the earth lest they move away from their places, and if they were to move away from their places, there is not one that could grasp them after Him (cf. 35:41), and Praise be to Allah Who holds up the heavens so that they cannot fall on the earth except by His leave,’ – then the angel expels the devil and spends the day watching over him.”²⁰

These *aḥaadeeth* encourage us to do a lot of good deeds in order to reform ourselves, so that the angels come near to us. There is a great deal of good in having the angels near to us. We have mentioned above the hadith of Ibn ‘Abbaas, which describes the effect of the Messenger’s meeting with Jibreel during the month of Ramaḍaan, to study the Qur’an, and how the Messenger (ﷺ) at that time was “more generous in doing good than the wind when it blows.”²¹

(5) Recording the good and bad deeds of the sons of Adam

The angels are appointed to record the deeds of the sons of Adam, both good and bad. These are the angels referred to in the *aayah*:

﴿وَإِنَّ عَلَيْكُمْ لَحَافِظِينَ ﴿١٠﴾ كِرَامًا كُنِينِ ﴿١١﴾ يَعْلَمُونَ مَا تَفْعَلُونَ ﴿١٢﴾﴾

﴿But verily, over you [are appointed angels in charge of mankind] to watch you,

Kiraaman [Honourable] *Kaatibeen* – writing down [your deeds],
They know all that you do.﴾ (Qur’an 82:10-12)

For every person, Allah has appointed two angels who are always present and who never leave him; they record in detail all that he does

²⁰ The editor of *Al-Waabil aṣ-Ṣayyib* said, commenting on this hadith: Something similar is narrated by Ibn Hibbaan, no. 2362, Mawaarid, and Al-Ḥaakim, 1/548. Al-Ḥaakim classed it as *ṣaḥeeḥ* and Adh-Dhahabi agreed with him. Its men are *thiqaat*. It is also mentioned by Al-Haythami in *Majma‘ az-Zawaa‘id*, 10/120. He said: it is narrated by Abu Ya‘laa, and its men are the men of *ṣaḥeeḥ*, apart from Ibraaheem ash-Shaami, who is *thiqaḥ*. We say the correct name is Ibraaheem ibn al-Hajjaaj al-Saami, not Ash-Shaami.

²¹ Bukhaari, 1/30, hadith no. 6.

and says:

﴿وَلَقَدْ خَلَقْنَا الْإِنْسَانَ وَنَعْلَمُ مَا تُوَسْوِسُ بِهِ نَفْسُهُ وَنَحْنُ أَقْرَبُ إِلَيْهِ مِنْ حَبْلِ الْوَرِيدِ ﴿١٦﴾ إِذْ يَتَلَقَّى الْمُتَلَقِّيَانِ عَنِ الْيَمِينِ وَعَنِ الشِّمَالِ قَعِيدٌ ﴿١٧﴾ مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَتِيدٌ ﴿١٨﴾﴾

﴿And indeed We have created man, and We know what his own self whispers to him. And We are nearer to him than his jugular vein [by Our Knowledge].

[Remember] that the two receivers [recording angels] receive [each human being], one sitting on the right and one on the left [to note his or her actions].

Not a word does he [or she] utter but there is a watcher by him ready [to record it].﴾ (Qur'an 50:16-18)

The word *qa'eed* (translated here as “sitting”) means watching, and *raqeeb 'ateed* [translated here as “a watcher by him ready (to record it)"] means always ready to do that, and he never misses a single word.

The apparent meaning is that the angels who are appointed to watch a person write down everything that he does or says, and they do not leave anything out, because Allah says: ﴿Not a word does he [or she] utter but...﴾

Hence each person will find that his book contains everything that he said or did. When the *kuffaar* see their books of deeds on the Day of Resurrection, they will cry out:

﴿يَوَيْلُنَا مَا لَ هَذَا الْكِتَابِ لَا يَغَادِرُ صَغِيرَةً وَلَا كَبِيرَةً إِلَّا أَحْصَاهَا وَوَجَدُوا مَا عَمِلُوا حَاضِرًا وَلَا يَظْلِمُ رَبُّكَ أَحَدًا ﴿٤٩﴾﴾

﴿‘Woe to us! What sort of Book is this that leaves neither a small thing nor a big thing, but has recorded it with numbers!’ And they will find all that they did, placed before them, and your Lord treats no one with injustice.﴾ (Qur'an 18:49)

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah (رضي الله عنه) that he heard the Messenger of Allah (ﷺ) say: “A person may say something that is pleasing to Allah but he does not realize it, and Allah raises his

status by many degrees because of it, and a person may say something that angers Allah, but he does not realize it, and for that he may be thrown deep into Hell.”²²

Ibn Katheer mentioned in his *Tafseer* that Al-Ḥasan al-Baṣri recited this *ayah*:

﴿إِذْ يَلْقَى الْمُتَلَفِّيَانِ عَنِ الْيَمِينِ وَعَنِ الشِّمَالِ قَعِيدٌ ﴿٧﴾﴾

﴿...One sitting on the right and one on the left...﴾

(*Qur'an* 50:17)

Then he said: “O son of Adam, the page has been spread out for you (i.e., to record your deeds), and two noble angels have been appointed over you, one on your right and the other on your left. The one on your right records your good deeds, and the one on your left records your bad deeds. So do what you want, less or more. When you die, your book will be rolled up and tied to your neck in your grave, until you emerge on the Day of Resurrection. Then Allah will say:

﴿وَكُلَّ إِنْسَانٍ أَلْزَمْنَاهُ طَلْعُهُ فِي عُنُقِهِ وَنُخْرِجُ لَهُ يَوْمَ الْقِيَمَةِ كِتَابًا يَلْقَاهُ مَنشُورًا ﴿١٣﴾ أَقْرَأَ كُتُبَكَ كَفَى بِنَفْسِكَ الْيَوْمَ عَلَيْكَ حَسِيبًا ﴿١٤﴾﴾

﴿And We have fastened every man's deeds to his neck, and on the Day of Resurrection, We shall bring out for him a book which he will find wide open.

[It will be said to him]: ‘Read your book. You yourself are sufficient as a reckoner against you this Day.’﴾ (*Qur'an* 17:13-14)

Then Al-Ḥasan said: “By Allah, He is being fair towards you, as He will make you a reckoner against yourself.”

Ibn Katheer also narrated concerning the *ayah* –

﴿مَا يَلْفِظُ مِنْ قَوْلٍ إِلَّا لَدَيْهِ رَقِيبٌ عَتِيدٌ ﴿٨﴾﴾

﴿Not a word does he [or she] utter but there is a watcher by him ready [to record it].﴾ (*Qur'an* 50: 18) -

²² Bukhaari, 11/308, hadith no. 6478.

that Ibn ‘Abbaas said: “Everything that you say, good or bad, is written down. Even when a person says, ‘I ate’, ‘I drank’, ‘I went,’ ‘I came,’ ‘I saw’. Then every Thursday all that a person did or said is examined, and whatever is good or bad is recorded, and the rest is erased. This is what is referred to in the *aayah* where Allah says:

﴿يَمْحُو اللَّهُ مَا يَشَاءُ وَيُثَبِّتُ وَعِنْدَهُ أُمُّ الْكِتَابِ﴾

«Allah blots out what He wills and confirms [what He wills]. And with Him is the Mother of the Book [*Al-Lawḥ al-Mahfooz*].»

(*Qur'an* 13:39)

Ibn Katheer mentioned that Imaam Aḥmad used to moan when he was sick. Then he heard that Ṭaawoos said, “Everything is written down, even (a person’s) moans.” After that, Aḥmad never moaned until he died, may Allah have mercy on him.

The angel on the right records good deeds and that on the left records bad deeds

In *Mu’jam at-Ṭabaraani al-Kabeer* it is narrated with a *ḥasan isnaad* from Abu Umaamah that the Messenger of Allah (ﷺ) said: “The angel on the left holds up his pen (refrains from writing down) for six hours after a Muslim commits a sin. If the person regrets it and asks Allah for forgiveness, he casts it aside (does not write it down), otherwise he writes it down as one (*sayi’ah*).”²³

Do the angels record deeds of the heart (one’s thoughts: good intentions and evil suggestions)?²⁴

The commentator on *Aṭ-Ṭaḥḥaawiiyyah*²⁵ stated that the angels do record the actions of the heart on the basis of the *aayah* –

﴿يَعْلَمُونَ مَا تَفْعَلُونَ﴾

²³ *Ṣaḥeeḥ al-Jaami*, 2/212.

²⁴ Deeds of the heart, i.e., ideas, feelings and emotions [Translator].

²⁵ *Sharḥ al-‘Aqeedah at-Ṭaḥḥaawiiyyah*, Pp. 438.

﴿They know all that you do.﴾

(*Qur'an* 82: 12) -

which includes both outward and inward deeds.

He also quoted as evidence the hadith narrated by Muslim from Abu Hurayrah, who said: "The Messenger of Allah (ﷺ) said: 'Allah says, 'When My slave intends to do an evil action, do not record it. If he does it, then write it down as one *sayi'ah*. If he intends to do a good deed and does not do it, then write it down as one *hasanah*, and if he does it, then write it down as ten''"²⁶

According to another hadith whose authenticity is agreed upon by both Bukhaari and Muslim, which is also narrated from Abu Hurayrah, the Messenger of Allah (ﷺ) said: "The angels say, 'O Lord, Your slave wants to do something bad,' although He knows best about him. So Allah says, 'Watch him. If he does it then write it down as it is. If he does not do it, then write it down as one *hasanah* for him, for he is abstaining from it because of Me.'"²⁷

Question:

It could be asked: doesn't the idea that the angels know what a person is intending to do contradict the *aayah*,

﴿يَعْلَمُ خَائِنَةَ الْأَعْيُنِ وَمَا تُخْفِي الصُّدُورُ﴾

﴿Allah knows the fraud of the eyes, and all that the breasts conceal.﴾
(*Qur'an* 40:19)

The answer is: that this is not one of the matters which is known exclusively to Allah. Even though it is hidden from mankind, and a person does not know what is in his brother's heart, it does not mean that it is hidden from the angels.

It could be said that the angels know some of what is in people's hearts: good intentions and evil suggestions. With regard to other things, such

²⁶ Muslim, 1/117, hadith no. 128.

²⁷ Muslim, 1/117, hadith no. 129. This version is narrated by him. It is also narrated by Bukhaari, 13/465, hadith no. 7501.

as people's beliefs, there is no evidence that the angels know that.

The angels call people to do good

It is narrated by both Bukhaari and Muslim on the authority of Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: "No day comes but two angels come down (to the earth) in the morning. One of them says, 'O Allah, compensate the one who spends (for Your sake)' and the other says, 'O Allah, destroy the one who withholds (from spending for Your sake).'"²⁸

(6) Testing the sons of Adam

Allah may send some of His angels to try the sons of Adam and put them to the test. In Bukhaari and Muslim it is narrated from Abu Hurayrah (رضي الله عنه) that he heard the Prophet (ﷺ) say: "Allah willed to test three of the Children of Israel – a leper, a bald-headed man and a blind man. So He sent an angel to them.

The angel came to the leper and said, 'What thing do you like most?' He said, 'A good colour and good skin, for the people have a strong aversion to me.' The angel touched him and his illness was cured, and he was given a good colour and beautiful skin. The angel asked him, 'What kind of property do you like best?' He replied, 'Camels (or cows).' [Ishaq (the narrator) was not sure; either the leper or the bald-headed man asked for camels and the other asked for cows, or vice versa]. So he (i.e. the leper) was given a she-camel which was ten months pregnant, and the angel said (to him), 'May Allah bless it for you.'

Then the angel went to the bald-headed man and said, 'What thing do you like most?' He said, 'Good hair, and to be rid of this that causes the people to have an aversion to me.' The angel touched him and his illness was cured, and he was given good hair. The angel asked (him), 'What kind of property do you like best?' He replied, 'Cows.' The angel gave him a pregnant cow and said, 'May Allah bless it for you.'

²⁸ Bukhaari, 3/304, hadith no. 1442. Also narrated by Muslim, 2/700, hadith no. 1010.

Then the angel went to the blind man and asked, 'What thing do you like best?' He said, 'For my eyesight to be restored to me, so that I may see the people.' The angel touched his eyes and Allah gave him back his eyesight. The angel asked him, 'What kind of property do you like best?' He replied, 'Sheep.' The angel gave him a pregnant sheep.

Afterwards, all three pregnant animals gave birth to young ones, and multiplied and brought forth so much that one of the (three) men had a herd of camels filling a valley, and one had a herd of cows filling a valley, and one had a flock of sheep filling a valley.

Then the angel came to the leper in the form of a man with leprosy, and said, 'I am a poor man, who has lost all means of completing my journey. So none will satisfy my need except Allah and then you. In the Name of Him Who has given you such a nice colour and beautiful skin, and so much property, I ask you to give me a camel so that I may reach my destination.' The man replied, 'I have many obligations (so I cannot give to you).' The angel said, 'I think I know you; were you not a leper to whom the people had a strong aversion? Weren't you a poor man, and then Allah gave you (all this property).' He replied, '(This is all wrong), I got this property through inheritance from my fore-fathers.' The angel said, 'If you are telling a lie, then may Allah make you as you were before.'

Then the angel came to the bald man in the form of a man who was bald, and said to him the same as he had said to the first one, and he too answered in the same way as the first one did. The angel said, 'If you are telling a lie, then may Allah make you as you were before.'

Then the angel went to the blind man in the form of a man who was blind and said, 'I am a poor man and a traveler, who has lost all means of completing my journey. I have nobody to help me except Allah and then you. I ask you in the Name of Him Who has given you back your eyesight to give me a sheep, so that with its help, I may complete my journey.' The man said, 'No doubt, I was blind and Allah gave me back my eye-sight, so take anything you wish from my property and leave

whatever you wish. By Allah, I will not stop you from taking anything (you need) of my property which you may take for Allah's sake.' The angel replied, 'Keep your property. You (i.e. you three men) have been tested and Allah is pleased with you only and is angry with your two companions.'"²⁹

(7) The angels take the soul from the body when the appointed time of death comes

Allah has appointed some of His angels to pull the souls out of people's bodies when their appointed time comes which has been decreed for them by Allah. Allah says:

﴿قُلْ يَنفَعُكُم مَّلَكُ الْمَوْتِ الَّذِي وُكِّلَ بِكُمْ ثُمَّ إِلَىٰ رَبِّكُمْ تُرْجَعُونَ﴾

﴿Say: 'The angel of death, who is set over you, will take your souls. Then you shall be brought to your Lord'.﴾ (Qur'an 32:11)

There is more than one angel who takes the soul of the dying:

﴿وَهُوَ الْقَاهِرُ فَوْقَ عِبَادِهِ وَيُرْسِلُ عَلَيْكُمْ حَفَظَةً حَتَّىٰ إِذَا جَاءَ أَحَدَكُمْ الْمَوْتُ تَوَفَّتْهُ رُسُلُنَا وَهُمْ لَا يُفْرِطُونَ﴾ ﴿١١﴾ ﴿ثُمَّ رُدُّوهُ إِلَى اللَّهِ مَوْلَاهُمُ الْحَقُّ أَلَا لَهُ الْحُكْمُ وَهُوَ أَسْرَعُ الْحَاسِبِينَ﴾ ﴿١٢﴾

﴿He is the Irresistible [Supreme], over His slaves, and He sends guardians [angels guarding and writing all of one's good and bad deeds] over you, until when death approaches one of you, Our messengers [angel of death and his assistants] take his soul, and they never neglect their duty.

Then they are returned to Allah, their True *Maulaa* [True Master (God), the Just Lord (to reward him)]. Surely, for Him is the judgement and He is the Swiftest in taking account.﴾

(Qur'an 6:61-62)

²⁹ Bukhaari, 6/500, hadith no. 3464. Also narrated by Muslim, 4/2275, hadith no. 2964. This version is narrated by Muslim.

The angels take the souls of the *kuffaar* and sinners in a harsh and severe manner, with no gentleness or kindness:

﴿وَلَوْ تَرَىٰ إِذِ الظَّالِمُونَ فِي غَمَرَاتِ الْمَوْتِ وَالْمَلَائِكَةُ بَاسِطُوا أَيْدِيهِمْ أَخْرِجُوا أَنْفُسَكُمُ الْيَوْمَ تُجْزَوْنَ عَذَابَ الْهُونِ﴾ (١٤)

﴿And if you could but see when the *Zaalimoon* [polytheists and wrongdoers] are in the agonies of death, while the angels are stretching forth their hands [saying]: ‘Deliver your souls! This day you shall be recompensed with the torment of degradation.’﴾

(*Qur'an* 6:93)

﴿وَلَوْ تَرَىٰ إِذِ يَتَوَفَّى الَّذِينَ كَفَرُوا الْمَلَائِكَةُ يَضْرِبُونَ وُجُوهَهُمْ وَأَدْبَارَهُمْ وَذُوقُوا عَذَابَ الْحَرِيقِ﴾ (٥٥)

﴿And if you could see when the angels take away the souls of those who disbelieve [at death]; they smite their faces and their backs, [saying]: ‘Taste the punishment of the blazing Fire.’﴾

(*Qur'an* 8:50)

﴿فَكَيْفَ إِذَا تَوَفَّتْهُمُ الْمَلَائِكَةُ يَضْرِبُونَ وُجُوهَهُمْ وَأَدْبَارَهُمْ﴾ (٧٧)

﴿Then how [will it be] when the angels will take their souls at death, smiting their faces and their backs?﴾

(*Qur'an* 47:27)

But when the angels take the souls of the believers, it is done with kindness and gentleness.

The angels give the believers glad tidings when they take their souls

When death comes to the believing slave, the angels come down to him, give him glad tidings and support him:

﴿إِنَّ الَّذِينَ قَالُوا رَبُّنَا اللَّهُ ثُمَّ اسْتَفْتَمُوا نَنْزِلَ عَلَيْهِمُ الْمَلَائِكَةُ أَلَّا تَخَافُوا وَلَا تَحْزَنُوا وَأَبْشِرُوا بِالْجَنَّةِ الَّتِي كُنتُمْ تُوعَدُونَ﴾ (٣١) ﴿نَحْنُ أَوْلِيَائُكُمْ فِي الْحَيَاةِ الدُّنْيَا وَفِي الْآخِرَةِ وَلَكُمْ فِيهَا مَا تَشْتَهُ أَنْفُسُكُمْ وَلَكُمْ فِيهَا مَا تَدْعُونَ﴾ (٣٢)

﴿Verily, those who say: “Our Lord is Allah [Alone],” and then they

stand firm, on them the angels will descend [at the time of their death] [saying]: ‘Fear not, nor grieve! But receive the glad tidings of Paradise which you have been promised!

We have been your friends in the life of this world and are [so] in the Hereafter. Therein you shall have [all] that your inner-selves desire, and therein you shall have [all] for which you ask.’ ﴿

(Qur'an 41:30-31)

But they give the *kuffaar* the tidings of Hell and the anger of the Compeller (Allah), and they say to them:

﴿أَخْرِجُوا أَنْفُسَكُمُ الْيَوْمَ تُجْزَوْنَ عَذَابَ الْهُونِ﴾

‘Deliver your souls! This day you shall be recompensed with the torment of degradation.’ ﴿

(Qur'an 6:93)

Moosa took out the eye of the Angel of Death

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) said: “The Messenger of Allah (ﷺ) said: ‘The Angel of Death came to Moosa (عليه السلام) and said, ‘Answer your Lord.’ And Moosa slapped the Angel of Death in the eye and took out his eye. The Angel went back to Allah and said, ‘You sent me to a slave of Yours who does not want to die, and he has took out my eye.’ So Allah restored his eye, and said, “Go back to My slave and say, ‘Do you want to live? If you want to live, put your hand on the back of a bull, and whatever number of hairs your hand touches, you will live for that number of years.’” (Moosa) said, “Then what?” He said, “Then you die.” He said, “Now is better.”³⁰ “The Angel of Death used to come to people face to face, so when he came to Moosa, he slapped him and took out his eye.”³¹

Ibn Hajar al-‘Asqallaani mentioned that some of the followers of *bid‘ah* rejected this hadith. In refuting them, he said: “Moosa slapped the Angel

³⁰ Bukhaari, 3/206, hadith no. 1339. Also narrated by Muslim, 4/1843, hadith no. 2373. This version is narrated by Muslim.

³¹ This is narrated by Aḥmad in his *Musnad*, and by Aṭ-Ṭabari. See *Fath al-Baari*, 6/442.

of Death, because he saw a man who had entered his house without permission. He did not know that this was the Angel of Death. The shari'ah allows to take out the eye of a person who looks into a Muslim's home without his permission. The angels came to the Prophet Ibraaheem (Abraham) and to the Prophet Loot (Lot) in the form of humans and they did not know who they were at first. If Ibraaheem had known, he would not have offered them food, and if Loot had known, he would not have feared for them with regard to his people."³²

Rejecting on purely rational grounds the *ṣaḥeeḥ aḥaadeeth* which speak of the unseen goes against *eemaan* (faith). The first attribute of the pious is that they believe in the unseen, as Allah says at the beginning of *Soorat al-Baqarah* (The Cow). If a report from Allah or from His Messenger is *ṣaḥeeḥ*, then there is no option but to believe it:

﴿وَالَّذِينَ هُمْ فِي الْغَايِبِ يَقُولُونَ ءَامَنَّا بِهِ كُلٌّ مِّنْ عِندِ رَبِّنَا وَمَا يَذَّكَّرُ إِلَّا أُولُو الْأَلْبَابِ﴾

«And those who are firmly grounded in knowledge say: "We believe in it; the whole of it [clear and unclear Verses] are from our Lord."
And none receive admonition except men of understanding.»

(*Qur'an* 3:7)

(8) The relationship of the angels with man in the grave, on the Day of Resurrection and in the Hereafter

In our book on belief in the Hereafter we will, *insha Allah*, look at what the angels have to do with mankind after death, such as the two angels – Munkar and Naakeer – questioning a person in his grave. There are angels who bless people in their graves, and others who punish the *kuffaar* (disbelievers) and the sinners (from among the believers). There are angels who will receive the believers on the Day of Resurrection. Israafeel will blow the Trumpet, and other angels will gather the people for the Reckoning. Angels will drive the *kuffaar* to Hell and lead the believers to Paradise. They will punish the *kuffaar* in Hell and will greet the believers with *salaam* in Paradise.

³² *Fath al-Baari*, 6/442.

3 - THE ANGELS AND THE BELIEVERS

In the previous section, we discussed the duties which Allah has enjoined upon the angels with regard to all the sons of Adam, believers and *kuffaar* alike. What we have mentioned about them forming the *nuffah*, protecting people, conveying revelation, accompanying people, writing down people's deeds and taking their souls at death, does not apply only to some of the sons of Adam and not others, or only to believers and not *kuffaar*.

But beyond that the angels play different roles with the believers and the *kuffaar*. We will discuss in more detail the role that they play with each group.

(1) The role of the angels with the believers

(i) Their love for the believers

Bukhaari and Muslim narrated in their *Ṣaḥeeḥs* from Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: "When Allah loves a person, He calls to Jibreel and tells him, 'Allah loves so and so, so love him.' Then Jibreel loves him and calls out to the inhabitants of the heavens, 'Allah loves so and so, so love him.' So the inhabitants of the heavens love him, and he will find acceptance on earth."³³

(ii) Guiding the believers

Bukhaari narrated in his *Ṣaḥeeḥ* from Ḥassaan ibn Thaabit that the Messenger of Allah (ﷺ) prayed for him and said, "O Allah, support him with *Rooḥ al-Qudus*."³⁴

It is also narrated that Abu Hurayrah said: "Sulaymaan (ﷺ) said, 'Tonight I will go around to one hundred of my women, and each of them will bear a son who will fight for the sake of Allah.' The angel said to him, 'Say, *insha Allah*.' But he did not say it, and he forgot. So he

³³ Bukhaari, 6/303, hadith no. 3209. Also narrated by Muslim, 4/2030, hadith no. 2637.

³⁴ Bukhaari, 6/304.

went around to them (his women) but none of them bore a child, except for one who gave birth to a half formed infant.” The Prophet (ﷺ) said: “If he had said *Insha Allah*, he would not have broken his oath and he would have had more hope of fulfilling his need.”³⁵

The angel was guiding the Prophet of Allah Sulaymaan to the way which is appropriate, correct and more perfect.

(iii) Their sending blessings on the believers

Allah tells us that the angels send blessings on the Messenger (ﷺ):

﴿إِنَّ اللَّهَ وَمَلَائِكَتَهُ يُصَلُّونَ عَلَى النَّبِيِّ ۚ﴾ (٥٦)

«Allah sends His *Salaah* [Graces, Honours, Blessings, Mercy] on the Prophet [Muhammad], and also His angels [ask Allah to bless and forgive him].» (Qur'an 33:56)

And they also send blessings on the believers:

﴿هُوَ الَّذِي يُصَلِّي عَلَيْكُمْ وَمَلَائِكَتُهُ لِيُخْرِجَكُم مِّنَ الظُّلُمَاتِ إِلَى النُّورِ ۚ وَكَانَ بِالْمُؤْمِنِينَ رَحِيمًا ۝﴾ (٤٣)

«He it is Who sends *Salaah* [His blessings] on you, and His angels too [ask Allah to bless and forgive you], that He may bring you out from darkness [of disbelief and polytheism] into light [of Belief and Islamic Monotheism]. And He is Ever Most Merciful to the believers.» (Qur'an 33:43)

Salaah (blessings) from Allah means that He praises His slave before His angels. This is narrated by Bukhaari from Abu'l-'Aaliyah. Someone else said: *Salaah* (blessings) from Allah means mercy. It may be said that

³⁵ Bukhaari, 9/339, hadith no. 5242. Ibn Hajar said (*Fath al-Baari*, 6/460) what may be summed up as follows: According to the report of Al-Mugheerah, it was seventy women. According to the report of Shu'ayb in *Al-Aymaan wan-Nudhoor*, it was ninety. The author thought that this was more likely? This is also narrated by Muslim in his *Shaheeh* (3/1276, hadith no. 1654); in one report it says sixty and in the other it says seventy. In a third report it says ninety.

there is no contradiction between the two views.

Salaah (blessings) from the angels means that they pray for people and seek forgiveness for them. This is what we will discuss in more detail below.

Examples of deeds for which the angels send blessings upon a person

(a) Teaching people good things

At-Tirmidhi narrated in his *Sunan* from Abu Umaamah that the Messenger (ﷺ) said: “Allah and His angels, and the inhabitants of the heavens and the earth, even the ant in its hole, and even the fish, send blessings upon the one who teaches the people good things.”³⁶

(b) Those who wait for prayer in congregation

In *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘The angels send blessings on any one of you so long as he stays where he is sitting. They say, ‘O Allah, forgive him, O Allah, have mercy on him,’ so long as he does not break his *wudoo*’.”³⁷

(c) Those who pray in the first row

In *Sunan Abi Dawood* it is narrated from Al-Baraa’ ibn ‘Aazib (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “Allah and His angels send blessings on the first rows.”³⁸

In *Sunan an-Nasaa’i* it says: “... on the front rows.”³⁹

In *Sunan Ibn Maajah* it is narrated from the hadith of Al-Baraa’ and the hadith of ‘Abd ar-Rahmaan ibn ‘Awf that “Allah and His angels send blessings on the first row.”⁴⁰

³⁶ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/343, no. 2161.

³⁷ Bukhaari, 2/131, hadith no. 647. Also narrated by Muslim, 1/459, hadith no. 639. This version is narrated by Muslim.

³⁸ *Ṣaḥeeḥ Sunan Abi Dawood*, 1/120, no. 618.

³⁹ *Ṣaḥeeḥ Sunan an-Nasaa’i*, 1/175, no. 781.

⁴⁰ *Ṣaḥeeḥ Sunan Ibn Maajah*, 1/164, no. 816.

(d) Those who fill the gaps in the rows

In *Sunan Ibn Maajah* it is narrated that ‘Aa’ishah said: “The Messenger of Allah (ﷺ) said: ‘Allah and His angels send blessings on those who complete the rows, and whoever fills a gap (in a row), Allah will raise his status because of it.’”⁴¹

(e) Those who eat *suḥoor*

In *Ṣaḥeeḥ Ibn Hibbaan* and *Mu‘jam at-Ṭabaraani al-Awsaṭ* it is narrated with a *ḥasan isnaad* from Ibn ‘Umar (may Allah be pleased with them both) that the Messenger of Allah (ﷺ) said: “Allah and His angels send blessings upon those who eat *suḥoor*.”⁴²

(f) Those who send blessings upon the Prophet (ﷺ)

Aḥmad narrated in his *Musnad* and Al-Diyaa’ narrated in *Al-Mukhtaarah* from ‘Aamir ibn Rabee‘ah with a *ḥasan isnaad* that the Messenger of Allah (ﷺ) said: “There is no person who sends blessings on me, but the angels send blessings on him so long as he sends blessings on me. So let a person do a little of that or a lot.”⁴³

(g) Those who visit the sick

Abu Dawood narrated from ‘Ali ibn Abi Ṭaalib (رضي الله عنه) that the Prophet (ﷺ) said: “There is no man who visits a sick person in the evening, but seventy thousand angels go out with him, and pray for forgiveness for him until the morning, and he will have provision in Paradise. And whoever goes to him in the morning, seventy thousand angels go with him, and they pray for forgiveness for him until the evening, and he will have provision in Paradise.”⁴⁴

⁴¹ *Ṣaḥeeḥ Sunan Ibn Maajah*, 1/164, no. 814.

⁴² *Ṣaḥeeḥ al-Jaami’*, 2/135.

⁴³ *Ṣaḥeeḥ al-Jaami’*, 5/174.

⁴⁴ *Ṣaḥeeḥ Sunan Abi Dawood*, 2/598, no. 2655. Abu Dawood stated that it is *ṣaḥeeḥ marfoo’*, he also narrated a *ṣaḥeeḥ mawqoof* report from ‘Ali.

Does the angels' sending blessings on us have any effect?

Allah, the Almighty, says:

﴿هُوَ الَّذِي يُصَلِّي عَلَيْكُمْ وَمَلَائِكَتُهُ لِيُخْرِجَكُم مِّنَ الظُّلُمَاتِ إِلَى النُّورِ﴾

﴿He it is Who sends *Ṣalaah* [His blessings] on you, and His angels too [ask Allah to bless and forgive you], that He may bring you out from darkness [of disbelief and polytheism] into light [of Belief and Islamic Monotheism].﴾

(*Qur'an* 33:43)

This *aayah* tells us that when Allah mentions us to the hosts on high, and when the angels pray for the believers and ask for forgiveness for them, this has the effect of guiding us and ridding us of the darkness of *kufr* and *shirk* and sin, leading us to the light which means the right way and the path of truth, which is Islam. Thus we learn what Allah wants of us, and gives us the light by which we will be guided to righteous words and deeds and people.

(iv) Saying “*Ameen*” to the *du‘aa*’ of the believers

The angels say “*ameen*” to the *du‘aa*’ of the believer, thus making the *du‘aa*’ more likely to be answered. In *Ṣaḥeeḥ Muslim* and *Sunan Ibn Maajah* it is narrated from Abu’d-Dardaa’ that the Prophet (ﷺ) said: “The *du‘aa*’ of a person for his Muslim brother in his absence will be answered. At his head there is an angel, and every time he prays for him for something good, the angel who has been appointed to be with him says, ‘*Ameen*, and may you have likewise.’”⁴⁵

Because a believer’s prayer against himself is very likely to be answered, the believer should not pray against himself. In *Ṣaḥeeḥ Muslim* it is narrated that Umm Salamah said: “The Messenger of Allah (ﷺ) said: ‘Do not pray for anything but good for yourselves, for the angels say “*ameen*” to whatever you say.’”⁴⁶

⁴⁵ Muslim, 4/2094, hadith no. 2733; *Ṣaḥeeḥ Sunan Ibn Maajah*, 2/149, no. 2340. This version is narrated by Muslim.

⁴⁶ Muslim, 2/634, hadith no. 920.

(v) Their prayers for forgiveness for the believers

Allah tells us that the angels pray for forgiveness for those who are on earth:

﴿تَكَادُ السَّمَوَاتُ يَتَفَطَّرْنَ مِنْ فَوْقِهِنَّ وَالْمَلَائِكَةُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ وَيَسْتَغْفِرُونَ لِمَنْ فِي الْأَرْضِ ۚ إِنَّ اللَّهَ هُوَ الْغَفُورُ الرَّحِيمُ ۝﴾

«Nearly the heavens might be rent asunder from above them [by His Majesty], and the angels glorify the praises of their Lord, and ask for forgiveness for those on the earth. Verily, Allah is the Oft-Forgiving, the Most Merciful.»
(*Qur'an* 42:5)

In *Soorah Ghaafir*, Allah tells us that the bearers of the Throne and the angels who are around the Throne glorify their Lord and submit themselves to Him, and they pray for forgiveness especially for the believers who repent. They pray that Allah will save them from the Fire and admit them to Paradise, and keep them from committing sins and acts of disobedience:

﴿الَّذِينَ يَحْمِلُونَ الْعَرْشَ وَمَنْ حَوْلَهُ يُسَبِّحُونَ بِحَمْدِ رَبِّهِمْ وَيُؤْمِنُونَ بِهِ وَيَسْتَغْفِرُونَ لِلَّذِينَ آمَنُوا رَبَّنَا وَسِعْتَ كُلَّ شَيْءٍ رَحْمَةً وَعِلْمًا فَاغْفِرْ لِلَّذِينَ تَابُوا وَاتَّبَعُوا سَبِيلَكَ وَقِهِمْ عَذَابَ الْجَحِيمِ ۝ رَبَّنَا وَأَدْخِلْهُمْ جَنَّاتٍ عَدْنٍ الَّتِي وَعَدْتَهُمْ وَمَنْ صَلَحَ مِنْ آبَائِهِمْ وَأَزْوَاجِهِمْ وَذُرِّيَّاتِهِمْ إِنَّكَ أَنْتَ الْعَزِيزُ الْحَكِيمُ ۝ وَقِهِمُ السَّيِّئَاتِ وَمَنْ تَقِ السَّيِّئَاتِ يَوْمَئِذٍ فَقَدْ رَحِمْتَهُ وَذَلِكَ هُوَ الْفَوْزُ الْعَظِيمُ ۝﴾

«Those [angels] who bear the Throne [of Allah] and those around it glorify the praises of their Lord, and believe in Him, and ask forgiveness for those who believe [in the Oneness of Allah] [saying]: 'Our Lord! You comprehend all things in mercy and knowledge, so forgive those who repent and follow Your way, and save them from the torment of the blazing Fire!

Our Lord! And make them enter the 'Adn [Eden] Paradise [everlasting Gardens] which you have promised them – and to the righteous among their fathers, their wives, and their offspring!

Verily, You are the All-Mighty, the All-Wise.

And save them from [the punishment for what they did of] the sins, and whomsoever You save from [the punishment for what he did of] the sins [i.e. pardon him] that Day, him verily, You have taken into mercy.' And that is the supreme success.﴾ (Qur'an 40:7-9)

(vi) They attend gatherings of knowledge and circles of *dhikr*, and surround those present with their wings

In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah (رضي الله عنه) said: "The Messenger of Allah (ﷺ) said: 'Allah has angels who go around the highways and byways, seeking out the people of *dhikr*. If they find some people who are remembering Allah, they call out, 'Come to what you are looking for!' And they encompass them with their wings up to the first heaven.'"⁴⁷

In *Ṣaḥeeḥ Muslim* it is narrated that Abu Hurayrah (رضي الله عنه) said: "The Messenger of Allah (ﷺ) said: 'No people gather in one of the houses of Allah to recite the Book of Allah and teach it to one another, but tranquillity descends upon them, mercy overshadows them and the angels surround them, and Allah mentions them to those who are with Him.'"⁴⁸

In *Sunan at-Tirmidhi* it is narrated that Abu'd-Dardaa' said: "I heard the Messenger of Allah (ﷺ) say, 'The angels extend their wings (out of humbleness) towards the seeker of knowledge, because they are pleased with what he is doing.'"⁴⁹

Righteous deeds, as you can see, bring the angels closer to us and bring us closer to them. If people were able to maintain a high spiritual state they would reach the level of actually seeing the angels and shaking hands with them, as is in the hadith narrated by Muslim from Ḥanzalah al-Uyaydi (رضي الله عنه) who said that the Prophet (ﷺ) said:

⁴⁷ Bukhaari, 11/208, hadith no. 6408. Also narrated by Muslim, 4/2069, hadith no. 2689. This version is narrated by Bukhaari.

⁴⁸ Muslim, 4/2074, hadith no. 2699.

⁴⁹ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/342, no. 2159

“By the One in Whose hand is my soul, if you remained in the state in which you are when you are with me, and you continued to remember Allah, the angels would shake hands with you in your beds and on the street.”⁵⁰

According to a report narrated by At-Tirmidhi from Ḥanẓalah, he said, “The Messenger of Allah (ﷺ) said: ‘If you continued to be as you are with me, the angels would shade you with their wings.’”⁵¹

(vii) The angels record those who attend *Jumu‘ah*

These angels record some of the deeds of people, and they record those who go to Friday prayers in order of attendance. It is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘When Friday comes, the angels stand at the door of the mosque and write down who comes first. When the Imaam comes out, they close their records and sit down to listen to the *dhikr*.’” Agreed upon by Bukhaari and Muslim.⁵²

They record whatever people say of good things. In *Ṣaḥeeḥ al-Bukhaari* and elsewhere it is narrated that Rifaa‘ah ibn Raafi‘ al-Zarqi said: “One day we were praying behind the Prophet (ﷺ) and when he raised his head from *rukoo*’, he said, ‘*Sami‘ Allahu liman ḥamidah* (Allah hears those who praise Him).’ A man behind him said, *Rabbanaa wa laka ‘l-ḥamd ḥamdan katheeran tayyiban mubaarakan fihi* (Our Lord, to You be praise, much good and blessed praise).’ When he finished the prayer, he said, ‘Who was the one who spoke?’ The man said, ‘Me.’ He [the Prophet (ﷺ)] said, ‘I saw thirty-odd angels rushing to see which of them would write it down first.’”⁵³

These recording angels are definitely other than the two angels who write down a person’s good deeds and evil deeds, because they are described as being thirty-odd.

⁵⁰ Muslim, 4/2106, hadith no. 2750.

⁵¹ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/298, no. 1994.

⁵² *Mishkaat al-Maṣaabeeḥ*, 1/436, no. 1384.

⁵³ Bukhaari, 2/284, hadith no. 799.

(vii) The angels come and go among us

These angels who go about in the highways and byways, looking for *dhikr* and witnessing *Jumu'ah* prayers and prayers in *jamaa'ah*, come and go among us. When one group comes another group goes, and they meet at *Fajr* prayer and at *'Aṣr* prayer. In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated from Abu Hurayrah (رضي الله عنه) that the Messenger of Allah (ﷺ) said: "Allah has angels who come and go among you, angels at night and angels during the day. They meet at *Fajr* prayer and *'Aṣr* prayer. Then those who had stayed among you ascend and their Lord asks them, although He knows best about them, 'How did you leave My slaves?' They say, 'When we left them they were praying, and when we came to them they were praying.'" ⁵⁴

Perhaps these are the ones who take the people's actions up to their Lord. In *Ṣaḥeeḥ Muslim* it is narrated that Abu Moosa al-Ash'ari (رضي الله عنه) said: "The Messenger of Allah (ﷺ) stood up among us and told us five things. He said: 'Allah does not sleep, and it is not befitting that He should sleep. He lowers the scale and lifts it. The deeds of the night are taken up to Him before the deeds of the day, and the deeds of the day before the deeds of the night...'" ⁵⁵

Allah has ascribed a high status to *Fajr* prayer, because the angels witness it. He says:

﴿وَقُرْآنَ الْفَجْرِ إِنَّ قُرْآنَ الْفَجْرِ كَانَ مَشْهُودًا﴾

«And recite the Qur'an in the early dawn [i.e. the — *Fajr*— morning prayer]. Verily, the recitation of the Qur'an in the early dawn [i.e. the morning — *Fajr* prayer] is ever witnessed [attended by the angels in charge of mankind of the day and the night].»

(*Qur'an* 17:78)

⁵⁴ Bukhaari, 6/306, hadith no. 3223. Also narrated by Muslim, 1/439, hadith no. 632.

⁵⁵ Muslim, 1/162, hadith no. 179. According to another report by Muslim, ...four words...

(ix) They come down when a believer recites the Qur'an

Among the angels are those who come down from heaven when the Qur'an is being read. In *Ṣaḥeeḥ Muslim* it is narrated that Al-Baraa' ibn 'Aazib said: "A man read *Soorat al-Kahf*, and in the house there was an animal. It began to act nervously, (so he checked on it and saw that) there was a mist or a cloud above it. He mentioned that to the Prophet (ﷺ) and he said, 'Read such-and-such, for it is the tranquillity (*sakeenah*) that descends when the Qur'an is read, or because of the Qur'an.'"⁵⁶

It is narrated from Abu Sa'eed al-Khudri (رضي الله عنه) that whilst Usayd ibn Ḥudayr was reading Qur'an one night in his *mirbad* (place for drying dates), his horse startled. Then he read some more and his horse startled again. He read some more and his horse startled again. Usayd said: "I was afraid that it would step on Yahyaa, so I got up and went to it, and saw something like a shadow above its head, in which there were things like lights. It ascended into the sky until it disappeared."

The following morning I went to the Messenger of Allah (ﷺ) and said, 'O Messenger of Allah, last night whilst I was reading Qur'an at midnight in my *mirbad*, my horse startled.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'I read some more, and my horse got startled again.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'I read some more, and my horse got startled again.' The Messenger of Allah said, 'Read, O son of Ḥudayr.' He said, 'So I stopped. Yahyaa was near it (the horse) and I was afraid that it would step on him, then I saw something like a shadow in which were things like lights. It ascended into the sky until it disappeared.'

The Messenger of Allah (ﷺ) said: 'That was the angels who were listening to you. If you had continued to read, they would have become visible to the people in the morning and they would not have hidden from them.'⁵⁷

⁵⁶ Muslim, 1/548, hadith no. 796.

⁵⁷ Bukhaari, 9/63, hadith no. 5018, from Muhammad ibn Ibraaheem from Usayd ibn Ḥudayr. Also narrated by Muslim, 1/458, hadith no. 796. This version is narrated by Muslim.

(x) They convey the *salaams* of the ummah to the Messenger (ﷺ)

An-Nasaa'i and Ad-Daarimi narrated that 'Abd-Allah ibn Mas'ood said: "The Messenger of Allah (ﷺ) said: 'Allah has angels travelling about the earth to convey to me the *salaams* of my ummah.'"⁵⁸

(xi) They give glad tidings to the believers

They brought glad tidings to the Prophet Ibraaheem that he would be blessed with righteous offspring:

﴿هَلْ أَتَاكَ حَدِيثُ ضَيْفِ إِبْرَاهِيمَ الْمُكْرَمِينَ ﴿١٤﴾ إِذْ دَخَلُوا عَلَيْهِ فَقَالُوا سَلَامًا قَالَ سَلَامٌ قَوْمٌ مُنْكَرُونَ ﴿١٥﴾ فَرَأَى إِلَهُهٖ فَنَجَّىٰ فَنَجَّىٰ سَمِينَ ﴿١٦﴾ فَنَزَلَهُ إِلَهُهُمُ قَالَ أَلَا تَأْكُلُونَ ﴿١٧﴾ فَأَوْجَسَ مِنْهُمْ خِيفَةً قَالُوا لَا تَحْزَنْ وَبَشِّرْهُ بِعَلِيمٍ عَلِيمٍ ﴿١٨﴾﴾

«Has the story reached you, of the honoured guests [three angels; Jibreel (Gabriel) along with another two] of Ibraaheem [Abraham]? When they came in to him and said: '*Salaam*, [peace be upon you]!' He answered: '*Salaam*, [peace be upon you],' and said: 'You are a people unknown to me.'

Then he turned to his household, and brought out a roasted calf [as the property of Ibraaheem (Abraham) was mainly cows].

And placed it before them [saying]: 'Will you not eat?'

Then he conceived fear of them [when they ate not]. They said: 'Fear not.' And they gave him glad tidings of a son having knowledge [about Allah and His religion of True Monotheism].»

(*Qur'an* 51:24-28)

They brought Prophet Zakariya the glad tidings of Yahyaa:

﴿فَنَادَتْهُ الْمَلَائِكَةُ وَهُوَ قَائِمٌ يُصَلِّي فِي الْمِحْرَابِ أَنَّ اللَّهَ يُبَشِّرُكَ بِيَحْيَىٰ ﴿٣٩﴾﴾

«Then the angels called him, while he was standing in prayer in *Al-Mihraab* [a praying place or a private room], [saying]: 'Allah gives you glad tidings of Yahyaa [John]'.»

(*Qur'an* 3:39)

⁵⁸ *Mishkaat al-Maṣāabeeh*, 1/291, no. 924. The editor of *Al-Mishkaat*, Shaykh Naasir ad-Deen al-Albaani, said: its *isnaad* is *ṣaḥeeḥ*. It is classed as *ṣaḥeeḥ* by Al-Haakim and Adh-Dhahabi agreed with him.

This is not limited only to the Prophets and Messengers; the angels may also bring glad tidings to the believers. In *Ṣaḥeeḥ Muslim* it is narrated from Abu Hurayrah that the Prophet (ﷺ) said: “A man visited a brother of his in another town, and Allah sent an angel to wait for him on the road. When the man passed by him, the angel said, ‘Where are you going?’ He said, ‘To a brother of mine in this town.’ The angel said, ‘Is there a favour that you owe him?’ The man said, ‘No, but I love him for the sake of Allah.’ He said, ‘I am a messenger from Allah to you, to tell you that Allah loves you as you love him.’”⁵⁹

In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim*, it is narrated that Abu Hurayrah said: “The Messenger of Allah (ﷺ) said: ‘Jibreel came to me and said, ‘O Messenger of Allah, Khadeejah is coming to you with a vessel in which is some food or drink. When she comes to you, convey to her greetings of *salaam* from her Lord and from me, and give her the glad tidings of a house in Paradise made of *qaṣab*,⁶⁰ in which there is no noise or exhaustion.’”⁶¹

(xii) The angels and dreams

Bukhaari narrated in his *Ṣaḥeeḥ in Baab at-Tahajjud*, that ‘Abd-Allah ibn ‘Umar (رضي الله عنه) said: “At the time of the Prophet (ﷺ), if a man saw a dream, he would tell it to the Messenger of Allah (ﷺ). I wished that I would see a dream so that I could tell it to the Messenger of Allah (ﷺ). I was a young lad, and I used to sleep in the mosque at the time of the Messenger of Allah (ﷺ). I saw in a dream that two angels took me and brought me to the Fire, which was built up all around like a built well, and it had two poles in it. There were some people in it whom I recognized, and I started to say, ‘I seek refuge with Allah from the Fire.’ Then I met another angel who said to me, ‘Do not be afraid.’”⁶²

⁵⁹ Muslim, 4/1988, no. 2567.

⁶⁰ *Qaṣab*: Pipes made of gold or pearls and other precious stones (The Translation of the Meanings of *Ṣaḥeeḥ al-Bukhaari*, Vol. 3, p. 12) (Translator).

⁶¹ Bukhaari, 7/133, no. 3820. Also narrated by Muslim, 4/1887, no. 232. This version is narrated by Muslim.

⁶² Bukhaari, 3/6, no. 1121. Muslim, 4/1927, no. 2479.

In *Ṣaḥeeḥ al-Bukhaari* it is narrated that ‘Aa’ishah (may Allah be pleased with her) said: “The Messenger of Allah (ﷺ) said to me, ‘I saw you in a dream. An angel brought you to me wrapped up in silk. He said to me, ‘This is your wife.’ I lifted the cloth from your face and saw that it was you. I said, ‘If this dream is from Allah then it will surely come to pass.’”⁶³

(xiii) They fight alongside the believers and support them at times of war

Allah supported the believers with many of the angels at the battle of Badr:

﴿إِذْ تَسْتَغِيثُونَ رَبَّكُمْ فَاسْتَجَابَ لَكُمْ أَنِّي مُمِدُّكُم بِأَلْفٍ مِنَ الْمَلَائِكَةِ مُرَدِّفِينَ﴾

«[Remember] when you sought help of your Lord and He answered you [saying]: ‘I will help you with a thousand of the angels each behind the other [following one another] in succession.’»

(Qur'an 8:9)

﴿وَلَقَدْ نَصَرَكُمُ اللَّهُ بِبَدْرِ وَأَنْتُمْ أَذِلَّةٌ فَاتَّقُوا اللَّهَ لَعَلَّكُمْ تَشْكُرُونَ﴾ ﴿١٣٣﴾ إِذْ يَقُولُ
لِلْمُؤْمِنِينَ أَلَنْ يَكْفِيَكُمْ أَنِ يُمِدَّكُمْ رَبُّكُمْ بِثَلَاثَةِ آَلَفٍ مِنَ الْمَلَائِكَةِ مُنَزَّلِينَ ﴿١٣٤﴾
بَلَىٰ إِن تَصْبِرُوا وَتَتَّقُوا وَيَأْتُوكُم مِّنْ فَوْرِهِمْ هَذَا يُمِدِّدْكُمْ رَبُّكُمْ بِخَمْسَةِ آَلَفٍ مِنَ
الْمَلَائِكَةِ مُسَوِّمِينَ ﴿١٣٥﴾﴾

«And Allah has already made you victorious at Badr, when you were a weak little force. So fear Allah much that you may be grateful. [Remember] when you [Muhammad] said to the believers, ‘Is it not enough for you that your Lord [Allah] should help you with three thousand angels sent down?

Yes, if you hold on to patience and piety, and the enemy comes

⁶³ This version is narrated by Bukhaari in *Kitaab an-Nikah*, 9/180, no. 5125. Also narrated in *Manaaqib al-Ansaar*, 7/223, no. 3895; and in *At-Ta'beer*, 12/399, no. 7011, 7012. Also narrated by Muslim, 4/1889, no. 2438.

rushing at you; your Lord will help you with five thousand angels having marks [of distinction].’ ﴿١٢٥﴾ (Qur'an 3:123-125)

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Ibn ‘Abbaas that the Messenger (ﷺ) said on the day of Badr: “This is Jibreel who has taken up his horse’s reins and is dressed for battle.”⁶⁴

Allah has explained the reason for this angelic support, which is to strengthen the believers, to fight alongside them, and to fight the enemies of Allah and kill them by striking their necks and hands:

﴿وَمَا جَعَلَهُ اللَّهُ إِلَّا بُشْرَىٰ وَلِتَطْمَئِنَّ بِهِ قُلُوبُكُمْ وَمَا النَّصْرُ إِلَّا مِنْ عِنْدِ اللَّهِ ۚ إِنَّ اللَّهَ عَزِيزٌ حَكِيمٌ﴾ ﴿١٠﴾

﴿Allah made it only as glad tidings, and that your hearts be at rest therewith. And there is no victory except from Allah. Verily, Allah is All-Mighty, All-Wise.﴾ (Qur'an 8:10)

﴿إِذْ يُوحَىٰ رَبُّكَ إِلَى الْمَلَائِكَةِ أَنِي مَعَكُمْ فَثَبِّتُوا الَّذِينَ ءَامَنُوا سَالَتْنِي قُلُوبُ الَّذِينَ كَفَرُوا الرُّعْبَ فَأَضْرِبُوا فَوْقَ الْأَعْنَاقِ وَأَضْرِبُوا مِنْهُمْ كُلَّ بَنَانٍ﴾ ﴿١٢﴾

﴿[Remember] when your Lord revealed to the angels, ‘Verily, I am with you, so keep firm those who have believed. I will cast terror into the hearts of those who have disbelieved, so strike them over the necks, and smite over all their fingers and toes.’﴾

(Qur'an 8:12)

And Allah says in *Soorat Aal ‘Imraan*:

﴿وَمَا جَعَلَهُ اللَّهُ إِلَّا بُشْرَىٰ لَكُمْ وَلِتَطْمَئِنَّ قُلُوبُكُمْ بِهِ ۚ وَمَا النَّصْرُ إِلَّا مِنْ عِنْدِ اللَّهِ ۚ الْعَزِيزُ الْحَكِيمُ﴾ ﴿١٢٧﴾ لِيَقْطَعَ طَرَفًا مِّنَ الَّذِينَ كَفَرُوا أَوْ يَكْبِتَهُمْ فَيَنْقَلِبُوا خَاسِرِينَ ﴿١٢٨﴾

﴿Allah made it not but as a message of good news for you and as an assurance to your hearts. And there is no victory except from Allah, the All-Mighty, the All-Wise.

That He might cut off a part of those who disbelieve, or expose them

⁶⁴ Bukhaari, 7/312, no. 3995.

to infamy, so that they retire frustrated.﴾ (Qur'an 3:126-127)

One of the Muslim fighters heard the sound of a blow struck by an angel, when he struck one of the *kuffaar*, and he heard his voice as he was urging his horse forward. In *Ṣaḥeeḥ Muslim* it is narrated that Ibn 'Abbaas said: "On that day, when one of the Muslim men was pursuing one of the *mushrikeen*, he heard the crack of a whip above his head, and the voice of a horseman saying, 'Go forth, Ḥayzam!' He looked at the *mushrik* in front of him and saw that he had fallen on his back. He looked again and saw that his nose had been cut off and his face was cut, as if it had been struck with a whip, and he had turned green. The *Anṣaari* came and told the Messenger of Allah (ﷺ) about that, and he said, 'You have spoken the truth. That was one of the troops of the third heaven.'"⁶⁵

The angels also fought in other battles. During the campaign of *Al-Khandaq* (the Ditch), Allah sent His angels:

﴿يَا أَيُّهَا الَّذِينَ آمَنُوا اذْكُرُوا نِعْمَةَ اللَّهِ عَلَيْكُمْ إِذْ جَاءَتْكُمْ جُنُودٌ فَأَرْسَلْنَا عَلَيْهِمْ رِيحًا وَجُنُودًا لَمْ تَرَوْهَا﴾

﴿O you who believe! Remember Allah's Favour to you, when there came against you hosts, and We sent against them a wind and forces that you saw not [i.e. troops of angels during the battle of *Al Aḥzaab* (the Confederates)].﴾ (Qur'an 33:9)

What is meant by the "forces that you saw not" is the angels, as it is reported in the books of *Ṣaḥeeḥ* and elsewhere that Jibreel came to the Messenger (ﷺ) after he had returned from *Al-Khandaq* (the Ditch) and had laid down his arms and bathed. Jibreel came to him, brushing the dust from his head, and said to the Messenger (ﷺ), "Have you laid down your arms? By Allah, we (angels) have not yet laid down our arms. Go out to them." The Messenger of Allah (ﷺ) said, "Where to?" and he pointed towards Banu Qurayzah.⁶⁶

⁶⁵ Muslim, 3/1384, hadith no. 1763.

⁶⁶ Bukhaari, 7/407, no. 4117. Muslim, 3/1389, hadith no. 1769.

In *Ṣaḥeeḥ al-Bukhaari* it is narrated that Anas (رضي الله عنه) said: “It is as if I can see the dust clearly in the area of Banu Ghanam, and the troops of Jibreel when the Messenger of Allah (ﷺ) set out for Banu Qurayzah.”⁶⁷

(xiv) Their protection of the Messenger (ﷺ)

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) said: “Abu Jahl said, ‘Has Muhammad rubbed his face in the dust among you?’ They said, ‘Yes.’ He said, ‘By Al-Laat and Al-‘Uzza, if I see him doing that, I will step on his neck, or I will rub his face in the dust!’

Then he came to the Messenger of Allah (ﷺ) whilst he was praying, and announced that he was going to step on his neck. Then suddenly he turned on his heels and fled, folding his hands over his face. Someone asked him, ‘What’s wrong with you?’ He said, ‘There is a ditch of fire between me and him, and terror, and wings.’ The Messenger of Allah (ﷺ) said, ‘If he had come any closer to me, the angels would have snatched him away.’”⁶⁸

A shorter version of this is narrated by Bukhaari, in *Kitaab al-Tafseer*.⁶⁹

(xv) They protect and support righteous people, and relieve their distress

Allah may send angels to protect some of His righteous slaves other than the Prophets and Messengers. This may be what happened to a man whose story is told by Ibn Katheer. In *Tafseer Ibn Katheer*, in the commentary on the *aayah* –

﴿أَمَّنْ يُجِيبُ الْمُضْطَرَّ إِذَا دَعَاهُ﴾

﴿Is not He [better than your gods] Who responds to the distressed one, when he calls on Him.﴾

(*Qur'an* 27:62) -

⁶⁷ Bukhaari, 7/407, hadith no. 4118.

⁶⁸ Muslim, 4/2154, hadith no. 2797

⁶⁹ Bukhaari, 8/724, hadith no. 4958.

He said:

Al-Haafiz ibn 'Asaakir mentioned the story of a man of whom Abu Bakr Muḥammad ibn Dawood ad-Daynoori, who was known as Ad-Daqqi aṣ-Ṣoofi. This man said: "I used to transport people and their goods with a mule that belonged to me, from Damascus to Balad az-Zabadaani. One day a man rode with me, and for part of the way we were travelling off the beaten track. He said to me, 'Take this path, it is shorter.' I said, 'That's no good.' He said, 'But it is shorter.'

So we took that path, and it reached a place where it was very difficult to go, and there was a deep valley in which there were many dead bodies. He said, 'Hold the mule's head, so I can dismount.' He dismounted, then he rolled up his sleeves and gathered up his garments. Then he pulled out a knife and came towards me. I ran away from him, and he followed me. I implored him by Allah, and said, 'Take the mule and all the baggage on it!' He said, 'They are mine anyway, but I am going to kill you!' I tried to scare him by reminding him of Allah and the punishment, but he paid no heed to that.

So I surrendered to him, and I said, 'Let me pray two *rak'ahs*.' He said, 'Hurry up, then!' So I stood up to pray, but the words of the Qur'an would not come to me. I could not remember even a single letter. I remained standing, confused, and he was saying, 'Come on! Get on with it!' Then Allah enabled me to recite,

﴿أَمَّنْ يُجِيبُ الْمُضْطَرَّ إِذَا دَعَاهُ وَيَكْشِفُ السُّوءَ﴾

«Is not He [better than your gods] Who responds to the distressed one, when he calls on Him, and Who removes the evil.»

(Qur'an 27:62)

Suddenly I saw a horseman who had come from the mouth of the valley, with a spear in his hand. He threw the spear at the man, and it did not miss his heart. The man fell down dead, and I clung to the horseman and said, 'By Allah, who are you?' He said, 'I am a messenger of the One Who responds to the distressed one when he calls on Him, and Who removes the evil.' Then I took the mule and the baggage, and returned

safe and sound.”

Similarly, Allah sent Jibreel to help the mother of Ismaa‘eel in Makkah. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Ibn ‘Abbaas from the Prophet (ﷺ), in the story of Ibraaheem’s migration with Ismaa‘eel and his mother Ḥaajir to the land of Makkah – which is a long story – that the mother of Ismaa‘eel ran like a distressed person between Aṣ-Ṣafa’ and Al-Marwah seven times, looking for water. “When she looked out from Al-Marwah, she heard a voice, and she kept quiet and listened attentively. She heard the voice again and said, “O (whoever you may be)! You have made me hear your voice; have you got something to help me?” And she saw an angel at the place of Zamzam, digging the earth with his heel (or his wing), till water flowed from that place... The angel said to her, ‘Don’t be afraid of being neglected, for this is the House of Allah which will be built by this boy and his father, and Allah never neglects His people.’”⁷⁰

This angel who came to her was Jibreel. In *Al-Musnad* it is narrated from Ibn ‘Abbaas that Ubayy ibn Ka‘b said: “When Jibreel dug Zamzam with his heel, the mother of Ismaa‘eel started to scoop up the earth around it. The Prophet (ﷺ) said: ‘May Allah have mercy on Ismaa‘eel’s mother! Had she left Zamzam alone (flowing without trying to control it), Zamzam would have been a stream flowing on the surface of the earth.’”⁷¹

(xvi) The angels attend the funerals of the righteous

The Messenger (ﷺ) said concerning Sa‘d ibn Mu‘aadh, “This is the one at whose death the Throne has shaken and for whom the gates of heaven are opened. Seventy thousand angels attended his funeral, and he was squeezed (in his grave) once, then he was released.” This is narrated by An-Nasaa’i from Ibn ‘Umar.⁷²

⁷⁰ Bukhaari, 6/397, hadith no. 3364.

⁷¹ *Musnad Ahmad*, 5/121.

⁷² The hadith about the Throne shaking at the death of Sa‘d is narrated by Muslim, 7/122, hadith no. 3802. It is narrated by Muslim from Jaabir, 4/1915, hadith no. 2466. The report about the angels attending his funeral is narrated in *Sunan an-Nasaa’i*. See *Ṣaḥeeḥ Sunan an-Nasaa’i*, 2/441, no. 1942.

(xvii) They shade the *shaheed* (martyr) with their wings

In Bukhaari it is narrated that Jaabir said: “My father was brought to the Prophet (ﷺ), and his body had been mutilated. He was placed before him [the Prophet (ﷺ)], and I went to uncover his face, my people stopped me from doing so. The sound of wailing could be heard, and it was said that it was the daughter of ‘Amr, or the sister of ‘Amr. The Prophet (ﷺ) said, “Why are you weeping? The angels are still shading him with their wings.”

Bukhaari narrated this in a chapter entitled *Baab Zill al-Malaa'ikah 'ala sh-Shaheed* (Chapter: The Angels' Shading of the Martyr).⁷³

(xviii) The angels who brought the Ark of the Covenant (*At-Taaboot*)

﴿وَقَالَ لَهُمْ نَبِيُّهُمْ إِنَّ آيَةَ مُلْكِهِ أَنْ يَأْتِيَكُمُ التَّابُوتُ فِيهِ سَكِينَةٌ مِّنْ رَبِّكُمْ وَبَقِيَّةٌ مِّمَّا تَرَكَ آلُ مُوسَىٰ وَآلُ هَارُونَ تَحْمِلُهُ الْمَلَائِكَةُ﴾

﴿And their Prophet [Samuel] said to them: ‘Verily! The sign of His kingdom is that there shall come to you *At-Taaboot* [a wooden box], wherein is *Sakeenah* [peace and reassurance] from your Lord and a remnant of that which Moosa [Moses] and Haaron [Aaron] left behind, carried by the angels.’﴾ (Qur'an 2:248)

What we learn from this *aayah* is that the angels brought to the Children of Israel at that time this wooden box (*taaboot*) to reassure them, so that they might know that *Taaloot* (Saul) was chosen by Allah, so they should follow him and obey him.

(xix) They will protect Makkah and Madeenah from the *Dajjaal*

When the *Dajjaal* emerges, he will enter every city except Makkah and Madeenah, because the angels are protecting them. This is reported in *Shaheeh Muslim* from Faaṭimah bint Qays, from the story of Tameem ad-Daari, in which it says that the *Dajjaal* said: “I am *Al-Maseeh ad-Dajjaal*

⁷³ Bukhaari, 6/32, no. 2816.

(the “Pseudo Christ”). Soon I will be granted permission to emerge and I will emerge and travel throughout the earth. There will be no town which I will not enter, during a period of forty days, apart from Makkah and ʿĪtibah. They are both forbidden for me; every time I try to enter one of them, I will be met by an angel with an unsheathed sword in his hand, who will prevent me from entering it. At every gate there is an angel guarding it.”

She (Faaʿimah bint Qays) said: “The Messenger of Allah (ﷺ) said, striking the *minbar* with his stick, “This is ʿĪtibah, this is ʿĪtibah, this is ʿĪtibah,” meaning Al-Madeenah.”⁷⁴

Bukhaari narrated from Abu Bakrah that the Prophet (ﷺ) said: “The terror of *Al-Maseeh ad-Dajjaal* will not enter Madeenah. At that time it will have seven gates, at each of which will be two angels.”⁷⁵

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah that the Messenger (ﷺ) said: “At the gates of Madeenah there are angels; neither the plague nor the *Dajjaal* will enter it.”⁷⁶

(xx) ‘Eesa will descend in the company of the angels

In *Sunan at-Tirmidhi*, it is narrated from An-Nawaas ibn Sam’aan that in the hadith about the *Dajjaal*, the Prophet (ﷺ) said, “Whilst he is like that, ‘Eesa ibn Maryam will come down at the white minaret, in the east of Damascus, wearing two garments lightly dyed with saffron, placing his hands on the wings of two angels.”⁷⁷

(xxi) The angels spread their wings over Ash-Shaam (Syria)

It is narrated that Zayd ibn Thaabit al-Anṣaari (رضي الله عنه) said: “I heard the Messenger of Allah (ﷺ) say, ‘How blessed is Ash-Shaam (Present day

⁷⁴ Muslim, 4/2264, hadith no. 2942.

⁷⁵ Bukhaari, 13/90, hadith no. 7125.

⁷⁶ Bukhaari, 13/101, hadith no. 7123.

⁷⁷ The descent of ‘Eesa (عليه السلام) is proven in Muslim, 4/2259, hadith no. 2940. The hadith mentioned is narrated by At-Tirmidhi. See *Ṣaḥeeḥ Sunan at-Tirmidhi*, 2/249, no. 1825.

Syria, Jordan and Palestine) how blessed is Ash-Shaam!' They said, 'O Messenger of Allah, why is that?' He said, 'The angels of Allah spread their wings over Ash-Shaam.'"⁷⁸

(xxii) The reward in coinciding with the angels

It is narrated in *Ṣaḥeeḥayn* (Bukhaari and Muslim) that the Messenger of Allah (ﷺ) said: "When the Imaam says *Ameen*, say *Ameen*, for whoever's saying *Ameen* coincides with the *Ameen* of the angels, all his previous sins will be forgiven."⁷⁹

In *Ṣaḥeeḥ al-Bukhaari*: "If one of you says *Ameen* and the angels in heaven say *Ameen*, and they coincide with one another, all his previous sins will be forgiven."⁸⁰

In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah (رضي الله عنه) that the Prophet (ﷺ) said: "When the Imaam says '*Sami' Allahu liman ḥamidah*,' say, '*Rabbanaa wa laka 'l-ḥamd*.' Whoever's words coincide with those of the angels. all his previous sins will be forgiven."⁸¹

(2) The obligations of the believers towards the angels

The angels are slaves of Allah, whom He has chosen especially, and they have a high status with their Lord. The believer who worships Allah and seeks His pleasure has no alternative but to regard the angels as friends and view them with love and respect, and to avoid anything that may

⁷⁸ Shaykh Naasir said, in *Takhreej Aḥaadeeth Fadaa'il ash-Shaam*, of the hadith narrated by Al-Raba'i: It is a *ṣaḥeeḥ* hadith which is narrated by At-Tirmidhi, by Al-Ḥaakim in *Al-Mustadrak*, and by Aḥmad in *Al-Musnad*. Al-Ḥaakim said, it is *ṣaḥeeḥ* according to the conditions of the two *shaykhs* Bukhaari and Muslim, and Adh-Dhahabi agreed with him. And it is as they said. Al-Mundhiri said in *At-Targheeb wat-Tarheeb*, it is narrated by Ibn Ḥibbaan in his *Ṣaḥeeḥ*, and by Aṭ-Ṭabaraani with a *ṣaḥeeḥ isnaad*.

⁷⁹ Bukhaari, 2/262, hadith no. 780. Also narrated by Muslim, 1/307, hadith no. 410.

⁸⁰ Bukhaari, 2/266, hadith no. 781.

⁸¹ Bukhaari, 2/283, hadith no. 796.

result in annoying or offending them. We will discuss this matter in further detail below:

(i) Not offending the angels

The scholars emphatically denounced those who slander the angels or speak badly of them. Al-‘Allaamah as-Suyooṭi (may Allah have mercy on him) said: “Al-Qaḍi ‘Iyaaḍ said in *Ash-Shifaa’*: Sahnoon said: whoever insults one of the angels should be executed. Abu’l-Ḥasan al-Qaabisi said concerning a person who says of another, ‘He looks like the angry Maalik (keeper of Hell),’ if it is known that his intention was to slander the angel, he should be executed.

Al-Qaḍi ‘Iyaaḍ said: This is concerning one who insults them all in general, or who insults by name one of those who is proven to be an angel, because Allah has mentioned him in the Qur’aan or we know from the *mutawaatir aḥaadeeth* that he is an angel, or it is known by definitive scholarly consensus that he is an angel, such as Jibreel, Mikaa’eel, Maalik, the keepers of Paradise and Hell, the angels of Hell, the bearers of the Throne, ‘Azraa’eel, Israafeel, Riḍwaan, the guardian angels, and Munkar and Nakeer.

But with regard to those who are not proven to be angels, and concerning whom there is no scholarly consensus that they are angels, such as Haaroot and Maaroot, this ruling does not apply. The one who disbelieves in them is not subject to the same ruling as mentioned above, because there is no definitive report to show that they have the same status as the angels.”⁸²

Suyooṭi quoted Al-Qaraafi al-Maaliki as saying: “Know that it is obligatory upon every accountable person to respect all of the Prophets and all of the angels. Whoever slanders their honour in any way is a *kaafir*, whether he does so implicitly or explicitly. Whoever says of a man who he thinks is very harsh, ‘He is more harsh than Maalik, the keeper of Hell,’ or of a man who is deformed, ‘He is uglier than Munkar

⁸² *Al-Ḥabaa’ik fi Akhbaar al-Malaa’ik*, by Suyooṭi, 254.

and Nakeer', is a *kaafir*, if he says that in the context of condemning ugliness and harshness."⁸³

(ii) Keeping away from sin and disobedience

The things which most offend the angels are sin, disobedience to Allah, *kufr* and *shirk*. Hence the best gift that a man can give to the angels and the thing which is most pleasing to them is for a man to be sincerely devoted in his religious commitment to his Lord, and to avoid everything that angers Him.

Hence the angels do not enter places and houses where Allah is disobeyed, or in which there are things which Allah dislikes and hates, such as stone altars, statues and pictures. And they do not come near people who indulge in sin, such as drunkards.

Ibn Katheer⁸⁴ said: It is reported in the *aḥaadeeth* narrated in the books of *Ṣaḥeeḥ*, *Musnad* and *Sunan* from a group of the *Ṣaḥaabah* that the Messenger of Allah (ﷺ) said: "The angels do not enter a house in which there is an image, a dog or a person who is *junub* (in a state of ritual impurity)."

According to a report narrated from 'Aasim ibn Damurah from 'Ali, "... and not urine." According to a *marfoo'* report narrated from Abu Sa'eed: "The angels do not enter a house in which there is a dog or a statue." According to the report of Dhakwaan Abu Ṣaliḥ al-Sammaak from Abu Hurayrah, he said: "The Messenger of Allah (ﷺ) said: 'The angels do not accompany a group with whom there is a dog or a bell.'"⁸⁵

Al-Bazaar narrated with a *ṣaḥeeḥ isnaad* from Buraydah (رضي الله عنه) that the Messenger (ﷺ) said: "There are three whom the angels do not come near: the one who is drunk, the one who is perfumed with saffron and the one who is *junub* (in a state of ritual impurity)."⁸⁶

⁸³ *Al-Habaa'ik fi Akhbaar al-Malaa'ik*, by Suyooti, 255.

⁸⁴ *Al-Bidaayah wan-Nihaayah*, 1/55.

⁸⁵ *Al-Bidaayah wan-Nihaayah*, 1/55.

⁸⁶ *Ṣaḥeeḥ al-Jaami'*, 3/70.

In *Sunan Abi Dawood* it is narrated with a *hasan isnaad* from ‘Ammaar ibn Yaasir that the Messenger (ﷺ) said: “There are three things which the angels do not come near: the dead body of a *kaafir*, the one who is perfumed with saffron and the person who is *junub* (in a state of ritual impurity), unless he performs *wuḍoo’*.”⁸⁷

(iii) The angels are offended by that which offends the sons of Adam

It is reported in the *ṣaḥeeḥ aḥaadeeth* that the angels are offended by that which offends the sons of Adam. So they are offended by offensive smells and by filth and dirt.

Bukhaari and Muslim narrated from Jaabir ibn ‘Abd-Allah that the Prophet (ﷺ) said: “Whoever eats garlic, onions or leeks, let him not come near our mosque, for the angels are offended by that which offends the sons of Adam.”⁸⁸

The matter is so serious that the Messenger (ﷺ) ordered the one who came to the mosque emanating the smell of garlic or onions to go out to *Al-Baqee’*.⁸⁹

(iv) The prohibition on spitting to the right whilst praying

The Messenger (ﷺ) forbade spitting to the right during prayer, because when a person stands up to pray, an angel stands on his right. In *Ṣaḥeeḥ al-Bukhaari* it is narrated from Abu Hurayrah that the Prophet (ﷺ) said: “When anyone of you stands up to pray, let him not spit to the front, for he is conversing with Allah so long as he is praying. And there is an angel standing to his right, so let him spit to his left or beneath his foot, then bury it.”⁹⁰

⁸⁷ *Ṣaḥeeḥ Sunan Abi Dawood*, 2/872.

⁸⁸ The *aḥaadeeth* which forbid those who have eaten onions and garlic from coming near the mosque are narrated in *Ṣaḥeeḥ al-Bukhaari*, *Ṣaḥeeḥ Muslim* and elsewhere, but this version is narrated by Muslim, 1/394, hadith no. 567.

⁸⁹ Muslim, 1/396, hadith no. 567.

⁹⁰ Bukhaari, 1/512, hadith no. 416.

(v) Befriending all the angels

The Muslim has to like all the angels without any discrimination between one angel and another in that regard, because they are all the slaves of Allah who do that which He commands and abstain from that which He prohibits. In this sense they are all the same, and they do not differ at all. The Jews claimed that they had friends and enemies among the angels; they claimed that Jibreel was an enemy to them and that Mikaa'eel was a friend to them. But Allah showed them to be liars in what they were claiming, and stated that there is no difference among the angels.

﴿قُلْ مَنْ كَانَ عَدُوًّا لِجِبْرِيلَ فَإِنَّهُ نَزَّلَهُ عَلَى قَلْبِكَ بِإِذْنِ اللَّهِ مُصَدِّقًا لِمَا
بَيْنَ يَدَيْهِ وَهُدًى وَبُشْرَى لِلْمُؤْمِنِينَ ﴿٩٧﴾ مَنْ كَانَ عَدُوًّا لِلَّهِ وَمَلَائِكَتِهِ
وَرُسُلِهِ وَجِبْرِيلَ وَمِيكَالَ فَإِنَّ اللَّهَ عَدُوٌّ لِلْكَافِرِينَ ﴿٩٨﴾﴾

﴿Say [O Muhammad]: 'Whoever is an enemy to Jibreel [Gabriel] [let him die in his fury], for indeed he has brought it [this Qur'an] down to your heart by Allah's Permission, confirming what came before it [i.e. the *Tawraat* (Torah) and the *Injeel* (Gospel)] and guidance and glad tidings for the believers.

Whoever is an enemy to Allah, His Angels, His Messengers, Jibreel [Gabriel] and Mikaa'eel [Michael], then verily, Allah is an enemy to the disbelievers.'﴾ (Qur'an 2:97-98)

Allah has told us that the angels are all the same, and whoever takes one of them as an enemy has taken Allah and all the angels as enemies. Liking some of the angels and hating others is a myth which no one could accept apart from the followers of deviant *kufir* like the Jews. This Jewish opinion which is described in the Qur'an is a poor excuse which they gave for not believing. They claimed that Jibreel was their enemy because he comes with war and destruction, and if the one who had come to the Messenger (ﷺ) had been Mikaa'eel, they would have followed him.

See the texts narrated about the reasons for the revelation of this *aayah* in *Tafseer Ibn Katheer* and elsewhere.

4 - THE ANGELS AND THE *KUFFAAR* AND EVILDOERS

In the previous section, we discussed the relationship between angels and the believers. From this it is clear what their relationship with the *kuffaar* is like. They do not like the *kuffaar*, wrongdoers and criminals; rather, they take them as enemies and wage war against them, and create fear in their hearts, as happened at the battles of Badr and *Al-Ahzaab* (Confederates). This will be discussed in more detail below.

(1) Bringing the punishment down upon the *kuffaar*

When one of the Messengers was rejected and disbelieved, and his people persisted in their rejection, Allah would often send down His punishment upon them. Sometimes those who carried out the punishment were the angels.

(2) Their destruction of the people of the Prophet Loot

The angels who were commanded to punish the people of the Prophet Loot came in the form of young men with handsome faces. Prophet Loot offered them hospitality, and his people did not know about them, but Loot's wife told her people about them and they came quickly, wanting to commit evil actions with them. The Prophet Loot tried to ward them off and argue with them, but they ignored him. Then Jibreel struck them with his wing, and blinded their eyes, taking away their sight:

﴿وَلَمَّا جَاءَتْ رُسُلُنَا لُوطًا سِيقَهُمْ وَصَاقَ بِهِمْ ذَرْعًا وَقَالَ هَذَا يَوْمٌ عَصِيبٌ ﴿٧٧﴾ وَجَاءَهُمْ قَوْمُهُ بُهْرَعُونَ إِلَيْهِ وَمِنْ قَبْلُ كَانُوا يَعْمَلُونَ السَّيِّئَاتِ قَالَ يَتَقَوَّمُ هَؤُلَاءِ بَنَاتِي هُنَّ أَطْهَرُ لَكُمْ فَاتَّقُوا اللَّهَ وَلَا تُخْزَوْنَ فِي صَیْحَتِ الْإِنْسِ مِنْكُمْ رَجُلٌ رَشِيدٌ ﴿٧٨﴾ قَالُوا لَقَدْ عَلِمْتَ مَا لَنَا فِي بَنَاتِكَ مِنْ حَقٍّ وَإِنَّكَ لَنَعْلَمُ مَا تُرِيدُ ﴿٧٩﴾ قَالَ لَوْ أَنَّ لِي بِكُمْ قُوَّةٌ أَوْ آوَايَ إِلَىٰ رُكْنٍ شَدِيدٍ ﴿٨٠﴾ قَالُوا يَلُوطُ إِنَّا رُسُلُ رَبِّكَ لَنْ يَصْلَوْا إِلَيْكَ ﴿٨١﴾﴾

﴿And when Our messengers came to Loot [Lot], he was grieved on account of them and felt himself straitened for them [lest the town people should approach them to commit sodomy with them]. He said: 'This is a distressful day.'﴾

And his people came rushing towards him, and since aforetime they used to commit crimes [sodomy], he said: 'O my people! Here are my daughters [i.e. the women of the nation], they are purer for you [if you marry them lawfully]. So fear Allah and disgrace me not with regard to my guests! Is there not among you a single rightminded man?'

They said: 'Surely, you know that we have neither any desire nor need of your daughters, and indeed you know well what we want!' He said: 'Would that I had strength [men] to overpower you, or that I could betake myself to some powerful support [to resist you].'

They [messengers] said: 'O Loot [Lot]! Verily, we are the messengers from your Lord! They shall not reach you!'

(Qur'an 11:77-81)

Ibn Katheer⁹¹ said: they mentioned that Jibreel (ﷺ) went out against them and struck their faces with the edge of his wing. He destroyed their eyes completely so that there was nothing left, not even a trace... Allah says:

﴿وَلَقَدْ رَاودُوهُ عَنْ ضَيْفِهِ فَطَمَسْنَا أَعْيُنَهُمْ فَذُوقُوا عَذَابِي وَنُذِرِ ﴿٧٧﴾﴾

﴿And they indeed sought to shame his guest [by asking to commit sodomy with them]. So We blinded their eyes [saying], 'Then taste you My Torment and My Warnings.'﴾ (Qur'an 54:37)

The next morning, Allah destroyed them:

﴿فَلَمَّا جَاءَ أَمْرُنَا جَعَلْنَا عَلَىٰهَا سَائِلَهَا وَأَمْطَرْنَا عَلَيْهَا حِجَارَةً مِّن سِجِّيلٍ ﴿٨٢﴾ مَّنْضُودٍ ﴿٨٣﴾ مُّسَوِّمَةً عِندَ رَبِّكَ وَمَا هِيَ مِنَ الظَّالِمِينَ بِبَعِيدٍ ﴿٨٤﴾﴾

﴿So when Our Commandment came, We turned [the towns of Sodom in Palestine] upside down, and rained on them stones of baked clay, in a well-arranged manner one after another; Marked from your Lord; and they are not ever far from the Zaalimoon [polytheists, evildoers].﴾ (Qur'an 11:82-83)

⁹¹ Al-Bidaayah wan-Nihaayah, 1/197.

Ibn Katheer said in his *Tafseer*: “Mujaahid said: ‘Jibreel seized the people of the Prophet Loot from their fields and houses, and carried them with their flocks and possessions. He lifted them up until the inhabitants of heaven heard the barking of their dogs, then he turned them upside down. He carried them on the coverts of his right wing.’ He mentioned other similar thing, but he did not narrate any hadith to support that.”

(3) Their cursing of the *kuffaar*

Allah, the Almighty, says:

﴿كَيْفَ يَهْدِي اللَّهُ قَوْمًا كَفَرُوا بَعْدَ إِيمَانِهِمْ وَشَهِدُوا أَنَّ الرَّسُولَ حَقٌّ وَجَاءَهُمُ الْبَيِّنَاتُ وَاللَّهُ لَا يَهْدِي الْقَوْمَ الظَّالِمِينَ﴾ (٨٦)
 ﴿أُولَٰئِكَ جَزَاؤُهُمْ أَنَّ عَلَيْهِمْ لَعْنَةَ اللَّهِ وَالْمَلَائِكَةِ وَالنَّاسِ أَجْمَعِينَ﴾ (٨٧)

﴿How shall Allah guide a people who disbelieved after their Belief and after they bore witness that the Messenger [Muhammad] is true and after clear proofs had come unto them? And Allah guides not the people who are *Zaalimoon* [polytheists and wrongdoers].

They are those whose recompense is that on them [rests] the Curse of Allah, of the angels, and of all mankind.﴾ (Qur'an 3:86-87)

﴿إِنَّ الَّذِينَ كَفَرُوا وَمَاتُوا وَهُمْ كُفَّارٌ أُولَٰئِكَ عَلَيْهِمْ لَعْنَةُ اللَّهِ وَالْمَلَائِكَةِ وَالنَّاسِ أَجْمَعِينَ﴾ (٨٨)

﴿Verily, those who disbelieve, and die while they are disbelievers, it is they on whom is the Curse of Allah and of the angels and of mankind, combined.﴾ (Qur'an 2:161)

The angels do not only curse the *kuffaar*. They may also curse those who commit particular sins, including the following:

(a) *The angels curse a woman when she does not respond to her husband*

In *Shaḥeeḥ al-Bukhaari* it is narrated on the authority of Abu Hurayrah that: “The Messenger of Allah (ﷺ) said: ‘When a man calls his wife to his bed and she refuses to come, the angels curse her until morning

comes.”⁹² According to another report, “...until she changes her mind.”⁹³

(b) They curse the one who points towards his brother with a weapon

Muslim narrated in his *Ṣaḥeeḥ* that Abu Hurayrah (رضي الله عنه) reported: “Abu’l-Qaasim said: ‘Whoever points towards his brother with a weapon is cursed by the angels, even if it is his brother through his father and his mother.’”⁹⁴

The curse of the angels indicates that this action is *ḥaraam*, because it involves frightening one’s brother, and because the *Shayṭaan* could tempt one to kill one’s brother, especially if the weapon is of the modern type which could go off for the slightest mistake or unintentional touch. How often has such a thing happened.

(c) They curse those who slander the Companions of the Messenger

In *Mu’jam at-Ṭabaraani al-Kabeer* it is narrated from Ibn ‘Abbaas with a *ḥasan isnaad* that the Messenger (ﷺ) said: “Whoever slanders my companions, may there be upon him the curse of Allah, the angels and all of mankind.”

How strange it is that some people make slandering the Companions of the Messenger (ﷺ) a religious ritual by means of which they seek to draw closer to Allah, although their punishment is what the Messenger (ﷺ) mentioned in this hadith, and it is a frightening punishment.

(d) They curse those who prevent the shari‘ah of Allah from being implemented

In *Sunan an-Nasaa’i* and *Sunan Ibn Maajah* it is narrated with a *ṣaḥeeḥ isnaad* from Ibn ‘Abbaas (رضي الله عنه) that the Messenger of Allah (ﷺ) said: “Whoever kills (a person) deliberately should be killed in return,

⁹² Bukhaari, 9/293, hadith no. 5193.

⁹³ *Ibid.*, 9/294, hadith no. 5194.

⁹⁴ Muslim, 4/2020, hadith no. 2616.

and whoever tries to prevent that, may he be cursed by Allah, the angels and all of mankind.”⁹⁵ The one who tries, by means of his wealth or position, to prevent the ruling of Allah from being carried out on one who has deliberately killed another, will be subject to this curse, so how about those who try to prevent the shari‘ah from being implemented altogether?

(e) They curse those who give sanctuary to innovators or criminals

Among those who are cursed by the angels and by Allah are those who innovate heresies in Allah’s religion and violate His laws, or protect those who do so. It says in a *ṣaḥeeḥ* hadith: “Whoever innovates a heresy or gives sanctuary to an innovator or criminal, may there be upon him the curse of Allah, the angels and all of mankind.”⁹⁶

Innovation and criminal actions in Madeenah are even more serious. In *Ṣaḥeeḥayn* (Bukhaari and Muslim) it is narrated that ‘Ali ibn Abi Ṭaalib said: “The Prophet (ﷺ) said: ‘Madeenah is a sanctuary, from ‘Ayr to Thawr (two mountains in Madeenah). Whoever innovates a heresy or commits a crime in (Madeenah), or gives shelter to such a person, may there be upon him the curse of Allah and the angels, and all of mankind, and none of his compulsory or optional good deeds will be accepted on the Day of Resurrection.”⁹⁷

(4) The demand of the *kuffaar* to see the angels

The *kuffaar* - disbelievers - demanded to see the angels as proof that what the Messenger (ﷺ) said was true. But Allah told them that the Day on which they would see the angels would be a bad day for them. For the *kuffaar* will see the angels when the punishment is about to befall them,

⁹⁵ *Ṣaḥeeḥ Sunan an-Nasaa’i*, 3/492, no. 4456, 4457. *Ṣaḥeeḥ Sunan Ibn Maajah*, 2/96, no. 2131.

⁹⁶ *Ṣaḥeeḥ Sunan Abi Dawood*, 3/859, no. 3797. *Ṣaḥeeḥ Sunan an-Nasaa’i*, 3/982, no. 4412.

⁹⁷ Bukhaari, 4/81, hadith no. 1870. Also narrated by Muslim, 2/994, hadith no. 1370. This version is narrated by Muslim.

or when death approaches and the veil is lifted:

﴿وَقَالَ الَّذِينَ لَا يَرْجُونَ لِقَاءَنَا لَوْلَا أُنْزِلَ عَلَيْنَا الْمَلٰٓئِكَةُ أَوْ نَرَىٰ رَبَّنَا لَفَدَّ
 اَسْتَكْبَرُوا فِيْ اَنْفُسِهِمْ وَعَتَوْا عُتُوًا كَبِيْرًا ﴿٢١﴾ يَوْمَ يَرَوْنَ الْمَلٰٓئِكَةَ لَا بُشْرٰى
 يَوْمَئِذٍ لِلْمُجْرِمِيْنَ وَيَقُولُوْنَ حِجْرًا مَّحْجُوْرًا ﴿٢٢﴾﴾

«And those who expect not a Meeting with Us [i.e. those who deny the Day of Resurrection and the life of the Hereafter] said: 'Why are not the angels sent down to us, or why do we not see our Lord?' Indeed they think too highly of themselves, and are scornful with great pride.

On the Day they will see the angels no glad tidings will there be for the *Mujrimoon* [criminals, disbelievers, polytheists, sinners] that day. And they [angels] will say: 'All kinds of glad tidings are forbidden to you.'»
 (Qur'an 25:21-22)

CHAPTER FOUR

THE ANGELS AND OTHER CREATED THINGS

In the previous chapter we discussed the relationship between the angels and the sons of Adam. This is not the only matter with which the angels have been entrusted. The angels also take care of other matters of the universe, things which we can see and things which we cannot see.

We shall limit ourselves to mentioning some of that which has been narrated in the texts.

1 - THE BEARERS OF THE THRONE

The Throne is the greatest of all created things. It encompasses the heavens and is above them, and the Most Merciful is above the Throne, which is borne by eight angels:

﴿وَيَحْمِلُ عَرْشَ رَبِّكَ فَوْقَهُمْ يَوْمَئِذٍ ثَمَنِيَّةٌ﴾

﴿And eight angels will, that Day, bear the Throne of your Lord above them.﴾
(*Qur'an* 69:17)¹

2 - THE ANGELS OF THE MOUNTAIN

There are also angels appointed over the mountains. Allah sent the angel of the mountains to His slave and Messenger Muhammad (ﷺ) to ask his permission to destroy the people of Makkah. In *Ṣaḥeeḥ al-Bukhaari* and *Ṣaḥeeḥ Muslim* it is narrated that ‘Aa’ishah said to the Prophet (ﷺ): “O Messenger of Allah, did you ever experience any day that was harder than the day of Uḥud?” He said, “I suffered a great deal from your people, and the worst I suffered from them was the day of ‘Aqabah²,

¹ We have already discussed their immense size in the chapter where we discussed their attributes and abilities.

² A place in Mina (Author).

when I called Ibn ‘Abd-Yaalayl ibn ‘Abd-Kallaal to Islam, and he did not agree to what I was proposing.

So I went away in distress and I did not realize where I was going until I reached Qarn ath-Tha‘aalib. Then I raised my head and saw a cloud which was shading me. I looked and I saw Jibreel in it, calling to me. He said, ‘Allah has heard what your people have said to you, and how they have responded to you. He has sent the angel of the mountains to you, so that you can command him to do whatever you want to them.’

Then the angel of the mountains called me. He greeted me with *salaams*, then he said: ‘O Muhammad, Allah has heard what your people have said to you. I am the angel of the mountains. Your Lord has sent me to you so that you may give me orders. What do you want? If you want I will crush them between Al-Akhshabayn.’³ The Prophet (ﷺ) said: ‘Rather I hope that Allah will bring forth from their loins people who will worship Allah alone, not associating any partner with Him.’”⁴

3 - THE ANGELS WHO ARE APPOINTED OVER RAIN, VEGETATION AND PROVISION

Ibn Katheer⁵ said: “Mikaa’eel is appointed over the rain and vegetation from which is created the provision of this world. He has helpers who do whatever he commands them to do by the command of his Lord. They control the winds and clouds as the Lord wills.”

Among the angels are those who are responsible for the clouds. In *Sunan at-Tirmidhi* it is narrated from Ibn ‘Abbaas that the Messenger of Allah (ﷺ) said: “Ar-Ra’d is one of the angels who is responsible for the clouds... He drives the clouds wherever Allah wills.”⁶ So rain

³ Two mountains in Makkah (Author).

⁴ Muslim, 3/1420, hadith no. 1795. This version is narrated by him. Also narrated by Bukhaari, 6/312, hadith no. 3231.

⁵ *Al-Bidaayah wan-Nihaayah*, 1/50.

⁶ *Ṣaḥeeḥ Sunan at-Tirmidhi*, 3/64, no. 2492.

may come to one land and not to another, or to one city and not to another.

He may be commanded to send rain on one man's crops, and no one else's, as mentioned in the hadith narrated by Muslim in his *Ṣaḥeeḥ* from Abu Hurayrah, according to which the Prophet (ﷺ) said: "Whilst a man was in the open country, he heard a voice in a cloud (saying), 'Send rain on the garden of so and so.' So the cloud moved and poured down its water in a stony area, and one of the channels took all that water.

He followed the water and found a man standing in his garden, using a shovel to direct the water where he wanted it. He said to him, 'O slave of Allah, what is your name?' He said, 'so and so,' mentioning the name that (the first man) had heard in the cloud. He said, 'O slave of Allah, why did you ask me my name?' He said, 'I heard a voice in the cloud from which this water came, saying, "Send rain on the garden of so and so" and it was your name. What do you do with it?' He said, 'Because you said this, I will tell you. I look at the produce of my garden, then I give one-third in charity, feed myself and my family with one-third, and I put one third back into the garden.'"⁷

Whatever the case, the angels are appointed over the heavens and on earth. Every movement in the universe stems from the angels, as Allah says:

﴿فَالْمُدْرِبَاتِ أَمْرًا﴾

﴿And by those angels who arrange to do the Commands of their Lord.﴾

(*Qur'an* 79:5)

﴿فَالْمَقْسِمَاتِ أَمْرًا﴾

﴿And those [angels] who distribute [provisions, rain, and other blessings] by [Allah's] Command.﴾

(*Qur'an* 51:4)

⁷ Muslim, 4/2288, hadith no. 2984.

Those who reject the Messengers and disbelieve in the Creator claim that it is the stars which do all that, but the ones who do that are the angels, by the command of Allah, as He says:

﴿وَالْمُرْسَلَاتِ عُرْفًا ﴿١﴾ فَالْعَصْفَاتِ عَصْفًا ﴿٢﴾ وَالنَّشِيرَاتِ شَرْرًا ﴿٣﴾ فَالْفَرْقَاتِ فَرْقًا ﴿٤﴾ فَالْمُفْقِرَاتِ دَكْرًا ﴿٥﴾﴾

﴿By the winds [or angels or the Messengers of Allah] sent forth one after another.

And by the winds that blow violently.

And by the winds that scatter clouds and rain.

And by the Verses [of the Qur'an] that separate the right from the wrong.

And by the angels that bring the Revelations to the Messengers.﴾

(Qur'an 77:1-5)

﴿وَالنَّازِعَاتِ غُرًّا ﴿١﴾ وَالنَّشِيطَاتِ شَطًّا ﴿٢﴾ وَالسَّيِّحَاتِ سَبًّا ﴿٣﴾ فَالسَّيِّفَاتِ سَبًّا ﴿٤﴾ فَالْمُدِيرَاتِ أَمْرًا ﴿٥﴾﴾

﴿By those [angels] who pull out [the souls of the disbelievers and the wicked] with great violence.

By those [angels] who gently take out [the souls of the believers].

And by those that swim along [i.e. angels or planets in their orbits].

And by those that press forward as in a race [i.e. the angels or stars or the horses].

And by those angels who arrange to do the Commands of their Lord, [so verily, you disbelievers will be called to account].﴾

(Qur'an 79:1-5)

﴿وَالصَّافَّاتِ صَفًّا ﴿١﴾ فَالزَّاجِرَاتِ زَجْرًا ﴿٢﴾ فَالتَّالِيَاتِ ذِكْرًا ﴿٣﴾﴾

﴿By those [angels] ranged in ranks [or rows].

By those [angels] who drive the clouds in a good way.

By those [angels] who bring the Book and the Qur'an from Allah to mankind.﴾

(Qur'an 37:1-3)

All of these *aayaat* speak of the angels when they direct the affairs of the heavens and the earth.

CHAPTER FIVE

WHO IS SUPERIOR - THE ANGELS OR THE SONS OF ADAM?

THIS IS AN ANCIENT DISPUTE

Ibn Katheer¹ said: “The people differed as to whether the angels are superior to mankind. This dispute is mostly to be found in the books of the scholars of *kalaam* (scholastiasm), and the dispute is with the *Mu‘tazilah* and those who agreed with them.”

The oldest discussion of this matter that I have come across is what is mentioned by Al-Ḥaafiz ibn ‘Asaakir in his *Taareekh*, where he gives a biography of Umayyah ibn ‘Amr ibn Sa‘eed ibn al-‘Aas: “He attended a gathering with ‘Umar ibn ‘Abd al-‘Azeez, with whom there was a group. ‘Umar said: ‘There is no one who is dearer to Allah than the good people among the sons of Adam,’ and he quoted as evidence the *aayah*,

﴿إِنَّ الَّذِينَ ءَامَنُوا وَعَمِلُوا الصَّالِحَاتِ أُولَٰئِكَ هُمْ خَيْرُ الْبَرِيَّةِ﴾

‘Verily, those who believe [in the Oneness of Allah, and in His Messenger (Muhammad) including all obligations ordered by Islam] and do righteous good deeds, they are the best of creatures.’﴾

(*Qur‘an* 98:7)

Umayyah ibn ‘Amr ibn Sa‘eed agreed with him, but ‘Arraak ibn Maalik said: ‘There is no one dearer to Allah than His angels, who are His servants in this world and in the Hereafter, and His messengers to His Prophets.’ And he quoted as evidence the *aayah*:

﴿مَا نَهَكُمَا رَبُّكُمَا عَنْ هَذِهِ الشَّجَرَةِ إِلَّا أَن نَّكُونَ مَلَائِكَةً أَوْ نَكُونَ مِنَ الْخَالِدِينَ﴾

‘He [*Shaytaan*] said: ‘Your Lord did not forbid you this tree save you should become angels or become of the immortals.’﴾

(*Qur‘an* 7:20)

¹ *Al-Bidaayah wan-Nihaayah*, 1/58.

‘Umar ibn ‘Abd al-‘Azeez said to Muhammad ibn Ka‘b al-Quraḏi: ‘What do you say, O Abu Ḥamzah?’ He said, ‘Allah honoured Adam by creating him with His own hand and breathing into him the soul, making the angels prostrate to him, bringing forth from his offspring Prophets, Messengers and those whom the angels visit.’

‘Umar ibn ‘Abd al-‘Azeez agreed with this ruling, and quoted different evidence.”

What Ibn Katheer mentioned here about the discussion of ‘Umar ibn ‘Abd al-‘Azeez and his companions on this topic shows that Taaj ad-Deen al-Fazaari was mistaken when he said: “This matter is one of the *bid’ahs* of *‘Ilm al-kalaam*, which was not discussed by the early generations of the ummah or by the most knowledgeable of the Imaams after them.”² Indeed, it is reported that some of the *Ṣaḥaabah* discussed this matter. ‘Abd-Allah ibn Salaam said: “Allah never created any creation dearer to Him than Muhammad.” It was said to him, “Not even Jibreel and Mikaa’eel?” He said, “Don’t you know what Jibreel and Mikaa’eel are? They are two creatures without free will, like the sun and moon. Allah has not created any being dearer to Him than Muhammad (ﷺ).” This is narrated by Al-Ḥaakim in his *Mustadrak* and is rated as *ṣaḥeeḥ* by him and Adh-Dhahabi.³

Different views on this matter

The commentator on *Aṭ-Ṭaḥḥaawiiyyah* said that the view attributed to *Ahl as-Sunnah* is that only the righteous sons of Adam and the Prophets are superior to the angels. The *Mu’tazilah* say that the angels are better. The followers of Al-Ash‘ari are of two views; some of them say that the Prophets and *awliyyaa’* are superior, and some refrain from commenting and do not say anything decisive on the matter. It is reported that some of them tended to regard the angels as superior, and this view is also narrated from some of *Ahl as-Sunnah* and some of the *Ṣufis*.

² *Sharḥ al-‘Aqeedah aṭ-Ṭaḥḥaawiiyyah*, 339.

³ See Al-Albaani’s commentary on *Sharḥ al-‘Aqeedah aṭ-Ṭaḥḥaawiiyyah*, Pp. 342.

The *Shi'ah* said that all of the Imaams are superior to all of the angels. There are other views on this issue also.

No one whose view carries any weight said that the angels are superior to some of the Prophets and not others. It is said that Abu Ḥaneefah (may Allah have mercy on him) declined to answer a question on this matter. The commentator on *Aṭ-Ṭaḥḥaawiyah* (may Allah have mercy on him) was also inclined to refrain from making any statement.⁴

As-Safaareeni said that Imaam Aḥmad (may Allah have mercy on him) used to say, "He is mistaken who says that the angels are better." He said, "Every believer is superior to the angels."

The point of dispute

There is no dispute that the *kuffaar* and hypocrites are not included in this discussion of superiority. They are more astray than the animals:

﴿أُولَئِكَ كَالْأَنْعَامِ بَلَّ هُمْ أَضَلُّ﴾

﴿They are like cattle, nay even more astray.﴾ (Qur'an 7:179)

Discussing who is superior does not mean that we are discussing whether the essence of man or the essence of the angels is better. We are discussing whether righteous human beings or angels are superior. Some people say that the angels are better than the believers, so in their case the discussion is whether the Prophets or the angels are superior.

The evidence of those who say that righteous human beings are superior to the angels

Having described the point of the discussion, we will quote the evidence given by those who say that man is superior.

- 1 - Allah commanded the angels to prostrate to Adam. If he had not been superior, He would not have commanded them to prostrate to him:

⁴ *Sharḥ al-'Aqeedah at-Ṭaḥḥaawiyah*, 338.

﴿وَإِذْ قُلْنَا لِلْمَلَائِكَةِ اسْجُدُوا لِآدَمَ فَسَجَدُوا إِلَّا إِبْلِيسَ أَبَىٰ وَاسْتَكْبَرَ﴾

﴿And [remember] when We said to the angels: 'Prostrate yourselves before Adam.' And they prostrated except *Iblees* [Satan], he refused and was proud.﴾
(*Qur'an* 2:34)

Some of them said that the prostration was to Allah, and that Adam was only a *qiblah* (direction of prostration) for them. If this was correct, Allah would have said, 'Prostrate yourselves towards Adam', not ﴿Prostrate yourselves before [lit. to] Adam.﴾

If what had been meant was taking Adam as a *qiblah*, *Iblees* would not have refused to prostrate, and he would not have claimed that he was better than Adam, because the *qiblah* is only a direction, and taking it as a *qiblah* does not mean that it is regarded as superior.

It is true that the angels' prostration to Adam was an act of worship to Allah and obedience to Him, an action by which they drew closer to Him. But it was also an act of honour, respect and veneration towards Adam.

It is not reported that Adam prostrated to the angels. Adam and his descendents are not commanded to prostrate towards anyone except Allah, the Lord of the Worlds, because they – and Allah knows best – are the noblest of all creatures, i.e., the righteous son of Adam are the noblest of all creatures. There is no one above the righteous sons of Adam who prostrate none but Allah and prostrate with the best prostrations.

2 - Allah says that *Iblees* said:

﴿أَرَأَيْتَكَ هَذَا الَّذِي كَرَّمْتُ عَلَىٰ﴾

﴿See this one whom You have honoured above me.﴾

(*Qur'an* 17:62)

This clearly shows that Adam was honoured over *Iblees* when the latter was commanded to prostrate to him.

3 - Allah created Adam with His hand, whereas He created the angels by His word.

4 - Allah says:

﴿إِنِّي جَاعِلٌ فِي الْأَرْضِ خَلِيفَةً ۖ﴾

«I will create a vicegerent [*khaleefah*] on earth.»

(Qur'an 2:30 - A. Yoosuf 'Ali translation)

The one who is a *khaleefah* is superior to the one who is not a *khaleefah*. The angels asked that they might also become *khaleefahs* when they said,

﴿أَتَجْعَلُ فِيهَا مَن يُفْسِدُ فِيهَا وَيَسْفِكُ الدِّمَاءَ﴾

«Will You place therein those who will make mischief therein and shed blood...?»

(Qur'an 2:30)

If being a *khaleefah* had not been a high status, higher than their own, they would not have asked for it and felt envious of the one who had this status.

5 - The sons of Adam are superior to the angels in terms of knowledge. When Allah asked them (the angels) about the names of things, they could not answer and they acknowledged that they did not know them, and Adam told them the names. Allah says:

﴿هَلْ يَسْتَوِي الَّذِينَ يَعْلَمُونَ وَالَّذِينَ لَا يَعْلَمُونَ﴾

«Say: 'Are those who know equal to those who know not?」

(Qur'an 39:9)

6 - Another indication of man's superiority is that man's obedience to Allah is more difficult, and that which is more difficult to fulfil is dearer when fulfilled. Man is inclined towards his physical desires, greed, anger and whims, and these things are not present in the angels.

7 - The *salaf* used to narrate *aḥaadeeth* which spoke of the superiority of righteous human beings over the angels. These reports were narrated openly to people. Had this been wrong they would have denounced it. This indicates that this was their belief.

8 - Allah praises them (righteous human beings) before His angels. Allah praises His slaves to the angels when they do anything that He has enjoined upon them or commanded them to do. When they perform an obligatory prayer, He praises them to the angels. In *Al-Musnad* and Ibn Maajah it is narrated from 'Abd-Allah that the Messenger (ﷺ) said: "Rejoice, for your Lord has opened one of the gates of heaven and is praising you to the angels. He is saying, 'Look at My slaves; they have done one duty and are waiting for the next.'"⁵

It is narrated from Abu Hurayrah that the Messenger (ﷺ) said: "Allah praises the people of 'Arafaat to the people of heaven. He says to them: 'Look at My slaves. They have come to Me dusty and dishevelled (from travel).'" Its *isnaad* is *ṣaḥeeḥ* and it is narrated by Ibn Hibbaan in his *Ṣaḥeeḥ*, and by Al-Ḥaakim and by Al-Bayhaqi in *As-Sunan*.⁶

Those who regard the angels as superior quote for example the hadith, "Whoever remembers Me to himself, I will remember him to Myself, and whoever mentions Me in a gathering, I will mention him in a gathering better than it."

They also quote as evidence the fact that there are failings and shortcomings among the sons of Adam, and that they make errors and commit mistakes. And they quote *aayaat* such as,

﴿وَلَا أَقُولُ لَكُمْ إِنِّي مَلَكٌ﴾

﴿Nor I tell you that I am an angel.﴾

(*Qur'an* 6:50)

This indicates that the angels are better than humans.

The correct view

The matter may be resolved in the manner suggested by Ibn Taymiyah, who said that righteous human beings will be better in the end, when they enter Paradise, attain near access to Allah (38:25), dwell in the

⁵ *Ṣaḥeeḥ al-Jaami'*, 1/67.

⁶ *Ṣaḥeeḥ al-Jaami'*, 2/141.

highest levels, are greeted by the Most Merciful, are brought even closer, Allah manifests Himself to them and they have the joy of looking upon His Noble Face, and the angels will stand to serve them by the permission of their Lord.

But the angels are better at the beginning, for the angels now are closer to Allah. They are above the things that the sons of Adam indulge in, and they are devoted to the worship of their Lord. Undoubtedly at this point their situation is more perfect than that of mankind.

Ibn al-Qayyim said: With this explanation the issue of superiority becomes clear and the evidence of both parties is reconciled, and the view of each is shown to be acceptable to some extent.⁷ And Allah knows best.

⁷ For more information on this matter, see: *Majmoo' al-Fataawa*, 11/350; *Lawaami' al-Anwaar al-Bahiyyah*, 2/368; *Sharh al-'Aqeedah at-Tahhaawiyyah*, 338. Suyooti's book *Al-Habaa'ik fi Akhbaar al-Malaa'ik* has also been published, in which there is a lengthy discussion (Pp. 203-251) of whether the angels or the sons of Adam are superior.

SYMBOLS' DIRECTORY

(ﷻ) : *Subḥaanahu wa Ta'aala* - "The Exalted."

(ﷺ) : *Ṣalla-Allahu 'Alayhi wa Sallam* -
"Blessings and Peace be upon him."

(ﷺ) : *'Alayhis-Salaam* - "May Peace be upon him."

(ﷻ) : *Raḍi-Allahu 'Anhu* - "May Allah be pleased with him."

(ﷻ) : *Raḍi-Allahu 'Anha* - "May Allah be pleased with her."

GLOSSARY

<i>Al-Ghayb</i>	الغيب	: The unseen
<i>'Aqeedah</i>	العقيدة	: Faith, Creed
<i>Al-Mulk</i>	المُلْك	: Sovereignty
<i>Al-Qadar</i>	القدر	: Divine decree, predestination
<i>Al-Bayt</i> <i>al-Ma'moor</i>	البيت المعمور	: The much-frequented house; Ka'bah for the angels in the heaven above the Ka'bah in Makkah
<i>'Ateed</i>	عتيد	: Ready
<i>Assalamu 'Alaykum</i>	السلام عليكم	: Peace be upon you
<i>'Alaqah</i>	علقة	: Clot
<i>'Aṣr</i>	عصر	: Afternoon, time, Afternoon prayer
